Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

M

[continued]

Martín y Coll, Antonio (*d* ?Madrid, after 1733). Spanish composer, theorist and organist. Of Castilian origin, he lived from an early age at the monastery of S Diego, Alcalá. He studied the rudiments of music and later learnt the organ with Andrés Lorente. He entered the Franciscan order and remained at S Diego for several more years as organist. Some time after 1707 he became first organist of the monastery of S Francisco el Grande, Madrid, where he remained until his death.

Martín y Coll wrote two treatises about liturgical practices: *Arte de canto llano* (Madrid, 1714; 2/1719 and 3/1728, both with the addition of *Arte de canto de órgano*); and *Breve suma de todas las reglas de canto llano y su explicación* (Madrid, 1734). He also compiled, between 1706 and 1709, four large, important manuscripts of organ music (*E-Mn* 1357–60) under the general title *Flores de música*. Nearly every piece is anonymous: Corelli, Denis Gaultier and Hardel are the only composers named, although works by Aguilera de Heredia, Cabanilles, Antonio de Cabezón and Frescobaldi have been identified. It has been suggested that some of the music may have been taken from the *Melodías músicas* of his teacher Lorente, which was announced for publication but of which no trace has been found. The collection covers mass movements, hymns, settings of the *Magnificat*, versets and almost every possible type of secular composition. Martín y Coll devoted a fifth manuscript, *Ramillete oloroso: suabes flores de música para órgano* (1709, *Mn* 2267), to his own works – the only music definitely known to be by him. It contains 225 versets, 17 *canciónes*, one *sinfonía al clarín*, one *Pange lingua* and one other item; they are mostly of a pedestrian nature (selected works ed. J. Sagasta Galdos, *Tonos de palacio y canciones comunes*, Madrid, 1984–6).

BARTON HUDSON

Martín y Soler, (Atanasio Martín Ignacio) Vicente (Tadeo Francisco Pellegrin) [Martini, Vincenzo, lo Spagnuolo (il Valenziano); Martini, Ignaz] (*b* Valencia, 2 May 1754; *d* St Petersburg, 30 Jan/10 Feb 1806. Spanish composer.

1. Life. Born and raised in Valencia, he composed his first opera in 1775 for the court of Madrid, but he may not have entered the service of the Prince of Asturias, the future Charles IV of Spain, until 1780. By November 1777 he was working in Naples, where he wrote ballets and then serious operas for Ferdinand I of the Two Sicilies, brother of the Prince of Asturias, and Maria Carolina, sister of Emperor Joseph II; among them was the festive opera on the state visit in 1782 of Pavel Petrovich, the future Paul I of Russia.

Martín moved to Venice in 1782 and henceforth, with a single exception, he wrote only comic operas. He may have become acquainted with Nancy Storace in Venice, but she did not sing in either of his Venetian operas (as Kelly reports). In 1783 the court theatre in Turin chose Martín's *In amor ci vuol destrezza* (retitled *L'accorta cameriera*) for the state visit of Archduke Ferdinand, Joseph II's brother. Another court commission came from the Duke of Parma, cousin of the Prince of Asturias, and his consort Maria Amalia, sister of Joseph II. In 1785 Martín moved to Vienna, where he received three commissions for comic operas from the court theatre. Contrary to what is often stated, the wife of the Spanish ambassador played no part in his coming to Vienna, as she herself only arrived there in August 1786, although she supported him then. Martín's Viennese period represents the peak of his career, as well as the high point in the Italian opera established by Joseph II; *Il burbero di buon cuore* (1786), *Una cosa rara* (1786) and *L'arbore di Diana* (1787) are artistic triumphs associated with Joseph's regime (fig.1). The second and third were immensely popular, and *L'arbore di Diana* was the most performed Italian opera of the 70 given at the Burgtheater between 1783 and 1792. Da Ponte credited the launching of his career as a librettist to his first collaboration with Martín.

Before the première of *L'arbore di Diana*, Martín had been appointed Kapellmeister to the Russian court, a position apparently created for him by Catherine the Great. Felicitous though the appointment was in terms of prestige and financial security, it spelt the end of his artistic growth; except for his brief excursion to London, he composed nothing further of any consequence. Cimarosa was the court opera composer, so when Martín took up his position in 1788 he had no association with the Italian opera company but provided music for the royal residence. This included productions of *Una cosa rara* and *L'arbore di Diana* in Russian, and also commissions for comic operas in Russian. In 1789 Martín wrote a comic opera in Russian, to a libretto by Catherine herself

1. Vicente Martín y Soler: engraving by Jakob Adam after Joseph Kreutzinger, 1787; the music is the duet 'Pace, caro mio sposo' from 'Una cosa rara'

(a satire on her enemy, the Swedish king Gustavus III), and another the following year. His apparent success in setting the Russian language led to a four-year contract in October 1790 as director and composer of the Russian opera, but in the event he wrote only ballets. In 1793 Sarti replaced Cimarosa as the principal Italian opera composer, and Martín left St Petersburg in August 1794.

His destination was London, where he resumed collaboration with Da Ponte, now librettist at the King's Theatre. Martín composed two operas for the 1795 season. The first, *La scuola dei maritati*, was one of the most frequently performed operas that season. The second, *L'isola del piacere*, fared less well; Da Ponte recounted that during composition their collaboration broke down, and it received only four performances. For its second performance, a benefit concert for himself, Martín assembled an intermezzo, *Le nozze de' contadini spagnuoli*, performed only once and consisting of nine numbers, including the overture of *L'arbore di Diana* and five pieces from *Una cosa rara*. By early 1796 Martín was back in St Petersburg. He wrote his last opera for Paul I, who had succeeded Catherine, and thereafter Martín supported himself with teaching and administrative work until his death.

2. Works. Martín's contemporaries perceived a distinctive quality in his music. The term 'song style' perhaps captures the essence of his personal manner: its main features are melody-dominated, three-voice texture, periodicity in rhythm, phrasing and form, and above all a non-dramatic or lyrical nature. Within the limitations of this style, he showed a much-admired skill for variety and unexpected charm, devising endless patterns of textual and musical repetition, particularly in combination with underlying dance rhythms. Here his music departs from what has been described as the 'pretty 6/8 tunes of the "Here we go round the mulberry bush" type'. Perhaps most striking was his blending of styles, his ability to impart varying degrees of lyricism to the *buffo* and *seria* numbers while staying within their conventions. His contemporaries consistently used the words 'sweet' and 'graceful' to describe his music. The melodies take the shape of an arch or a turn, remain solidly diatonic and often rely on the structural interval of a 3rd (ex.1) or a

Ex.1 *Una cosa rara*, Act 1 scene iv, bars 1–2

['Calm your anguish']

recurring pitch that functions as a brief internal pedal point (ex.2). This, and elsewhere the use of drones,

Ex.2 *Una cosa rara*, Act 1 scene v, bars 11–15

['Whiter than a lily, fresher than a rose']

suggests a pastoral quality in the music. Many of his melodies are in the 'rustic' metres of the contredanse or in 6/8 time, as in Mozart's allusion to Martín's style in the dinner music of *Don Giovanni*. Martín's fondness for delicate orchestral colouring finds gratification in the characteristic *amoroso* winds of the pastoral.

Martín's operatic style developed in collaboration with Da Ponte, who provided him with librettos suitable to his lyrical genius, but this was not as yet the case in their first joint effort, *Il burbero di buon cuore*. For this libretto, after a Goldoni comedy of character (revolving around an elderly bachelor who suddenly finds himself at the head of a family), Martín provided a conventional musical setting with a mixture of *buffo* and *seria* numbers and two arias in song style. However, with their second opera, *Una cosa rara*, a tale of faithfulness in love, they found their formula for success. Da Ponte promoted the use of song style by expanding on the pastoral tendencies of his literary model, and Martín experimented with the blending of styles in addition to traditional *buffo* and *seria* numbers. Encouraged by the opera's overwhelming success (fig.2), Da Ponte constructed *L'arbore di Diana* as a typical pastoral, and Martín composed almost all the numbers in song style and blended style. Along with the increasing use of song style, the proportion of ensembles to solo numbers increased over the course of the three operas. As the number of ensembles increases, so does the number of single-tempo ensembles. Many of them are in song style, in the manner of an aria *a* 3 for example, or a chorus of voices in the same range. In *L'arbore di Diana* like-voice grouping is built into the libretto; the characters are presented in sets of three nymphs and three youths, which recombine to form other sets. Such groupings form

2. Title-page of Martín y Soler's 'Lilla, oder Schönheit und Tugend' (Munich: M. Götz, c1790); this German translation of 'Una cosa rara' by J. André was first performed in 1787

the basis of the ensemble writing in the opera, either as trios or as the nucleus of larger ensembles. A quartet, for example, is conceived as a three-voice chorus to which an independent fourth voice is added.

For their London opera *La scuola dei maritati*, Da Ponte wrote a Goldoniesque comedy of character about the marriage of an older man to a young, second wife. Martín composed half the numbers in a lyrically modified *buffo* style and half in song style. For *L'isola del piacere*, Martín and Da Ponte produced a pastoral opera modelled on *L'arbore di Diana*. This time Arcadia is located on a Turkish island, giving rise to some 'Turkish' music. As in *L'arbore*, the like-voice groupings again account for the nature of the ensemble writing as well as the large number of ensembles.

Martín's contemporaries uniformly identified him as a composer for the amateur, usually approvingly. That he catered to the taste of the public, whose approbation in turn encouraged him to develop his lyrical style, is borne out by the publication of favourite numbers which were uniformly in song style. These included the vocal canons, the presence of which in *Una cosa rara*, *Il sogno*, *L'arbore di Diana* and *La scuola dei maritati* can be understood in this context.

WORKS

STAGE

Il tutore burlato [La Madrileña] (ob, 3, after P. Mililotti: *La finta semplice*), Madrid, Real Sitio de la Granja de S Ildefonso, 1775, *E-Mm*

DOROTHEA LINK

Martirano, Salvatore (*b* Yonkers, NY, 12 Jan 1927; *d* Urbana, IL, 17 Nov 1995). American composer. He studied with Elwell at the Oberlin College Conservatory (1947–51), with Rogers at the Eastman School (1952) and with Dallapiccola in Florence (1952–4). From 1956 to 1959 he was in Rome as a Fellow of the American Academy, and in 1960 he received a Guggenheim Fellowship and an award from the American Academy of Arts and Letters. At this time he had works commissioned by the Koussevitzky and Fromm foundations. He was a professor of composition at the University of Illinois at Urbana-Champaign from 1963 until his retirement in 1995. During these years he was also in residence at the NSW Conservatorium of Music in Sydney (1979), IRCAM in Paris (1982) and the California Institute of the Arts (1993). He was the recipient of numerous grants and awards for composition.

Until the late 1950s Martirano followed dodecaphonic principles in his compositions, a style represented by the Mass for double chorus (1952–5). By 1958 he had begun to incorporate elements of jazz and popular music, as in the choral work O, O, O, O, *that Shakespeherian Rag*. At the University of Illinois he became one of the first to work with computers in composition. His first computer-generated piece, *123–456* (1964), was followed by the computer-aided work *Underworld* (1964–5). This led to the political and theatrical mixed-media work *L.'s G. A.* (Lincoln's Gettysburg Address), which was Martirano's most famous and controversial work of the 1960s and which received many performances during the 1960s and 70s.

From 1968 he concentrated on developing hybrid sound systems consisting of analogue modules driven by digital circuits, notably the Sal-Mar Construction, completed in 1971, and its successor, the yahaSALmaMAC. These instruments permit the simultaneous creation and

performance of improvisatory compositions. In 1983 Martirano received a grant from IRCAM to complete a program for computer-aided composition to simulate algorithms utilized in the Sal-Mar Construction. Throughout the latter half of his professional career Martirano toured extensively in the US and abroad demonstrating his electronic composing/performing systems.

Martirano's compositions from the 1970s onwards are characterized by the use of a wide variety of styles and media. The electronic tape works *Fifty One* (1978) and *In memoriam Luigi Dallapiccola* (1978) were developed using the Sal-Mar Construction; among other works, *Sampler* (1985), *Three Not Two* (1987), *Four Not Two* (1988), *PHLEU* (1988), *undisNONcon* (1990) and *MEAND'ER* (1995) utilized the yahaSALmaMAC. *Fantasy* (1980) employs the techniques of *musique concrète*. Unlike many of his works after *Underworld*, *Stuck on Stella* (1979), *THROWN* (1984), *LON/dons* (1989) and his last major work, *Isabela* for orchestra (1993), use standard notation.

GILBERT CHASE, JEAN GEIL

Martland, Steve (*b* Liverpool, 10 Oct 1959). English composer. He studied at Liverpool University (1978–81) and then with Andriessen at the Hague Conservatory (1982–5). On his return to Britain he gained notoriety through his outspoken political views which lambasted current Thatcherite tendencies; he proposed a confrontational music which could serve 'as a weapon against despair'. These concerns are reflected in his commitment to music education. Like his politics, his music is deeply influenced by that of his teacher whose vital fusion of American minimalism and vernacular styles provided Martland with an obvious model. Although Martland later followed Andriessen in rejecting the orchestra on social grounds, the large-scale orchestral work *Babi Yar* (1983) remains a potent example of his early manner. More typical of his later style are *Principia* (1989) and *Dance Works* (1993), both of which demonstrate his penchant for amplified, wind-dominated ensembles consisting of performers steeped in the mix of traditions favoured by the composer himself. The Steve Martland Band became the major exponent of his work from 1992 onwards; the ensemble's willingness to rework facets of jazz and rock languages mirrors the composer's own stylistic journey.

Martland has worked in many genres including song, purely instrumental work, tape, film and video, while the more openly popular dimensions of his approach found an outlet in the late 1980s and early 90s with his work with the jazz group Loose Tubes. Many of his works have been used by choreographers. Despite his self-stated aversion to classical models, he has turned to the Western tradition with works such as the string quartet *Patrol* (1992) in which the energies of popular models are combined with a sophisticated formal approach.

KEITH POTTER

Marton [née Heinrich], **Eva** (*b* Budapest, 18 June 1943). Hungarian soprano. She studied in Budapest, making her début there in 1967 as Kate Pinkerton at the Margaret Island Festival. With the Hungarian State Opera (1968–72), she sang the Queen of Shemakha (*The Golden Cockerel*), Rodelinda, Countess Almaviva and Tatyana. From 1972 to 1977 she was engaged at Frankfurt; she made her Metropolitan début in 1976 as Eva, returning as Chrysothemis, La Gioconda, the Empress (*Die Frau ohne Schatten*), Elsa, Ortrud, Tosca, Salome and Turandot, and at Bayreuth sang Elisabeth and Venus (1977–8). Marton's repertory also includes Donna Anna, Aida, Elisabeth de Valois, Leonora (in both *Il trovatore* and *La forza del destino*), Maddalena (*Andrea Chénier*), Fedora, Brünnhilde, Ariadne and Beethoven's Leonore, which she sang at Salzburg in 1982; she returned to Salzburg in 1992 as the Dyer's Wife (*Die Frau ohne Schatten*). Having made a notable Covent Garden début as Turandot in 1987, she sang Strauss's Electra there in 1994. She has recorded many of her most successful roles, including Turandot, Electra, Salome, Minnie (*La fanciulla del West*), Leonora (*Il trovatore*), Ortrud, Brünnhilde, Maddalena and Fedora. Although at times prone to stridency, her powerful, incisive voice, with its gleaming top register, is equally impressive in the Italian spinto repertory and the heavier Wagner and Strauss roles.

ELIZABETH FORBES

Martopangrawit, Radèn Ngabéi [Radèn Lurah] (*b* Surakarta, Java, 4 April 1914; *d* Surakarta, 17 April 1986). Javanese gamelan musician, composer, writer on music and teacher. Born to a family of court musicians, he studied the gamelan with his father and grandfather and was accepted as a court musician at the Surakarta court at the age of only 13. In 1951 he became a teacher and researcher at the Konservatori Karawitan Indonesia, Surakarta, the first academy for performing arts in Indonesia. From 1964 until his death he was a lecturer at the Akademi Seni Karawitan Indonesia (later Sekolah Tinggi Seni Indonesia) in Surakarta. In addition to his writings on theory and notation, he was a prolific composer of gamelan music for listening pleasure ('*klenèngan*') and dance; his output also included some experimental works. In recognition of his accomplishments, he was named Warga Teladan ('Exemplary Citizen') of Surakarta in 1973, and he received the prestigious Anugerah Seni ('Arts Award') of Indonesia in 1977. In 1984 he was awarded the rank of Bupati Anom Anon-anon at the Surakarta court, along with the name and title Radèn Tumenggung Martodipura. For at least the three decades before his death he was widely recognized as the supreme authority on the gamelan music of Surakarta. He was also considered an important and inventive composer; his works, which number over 100, include *Ladrang Biwadhapraja* (1939), *Ladrang Cikar Bobrok* (1943), *Ketawang ASKI, Ladrang Asri* (1946), *Ladrang Gandasuli* (1946), *Ladrang Lo Kowe Nang* (1954), *Lancaran Kebat* (1961), *Lancaran Uyal-uyel* (1962), *Ketawang Pamegatsih* (1966), *Nglara Ati* (1970), *Mijil Anglir Medung* (1981), *Gending Parisuka* (1982) and *Ra Ngandel* (1986).

R. ANDERSON SUTTON

Martoretta, Giandominico. *See* LA MARTORETTA, GIANDOMINICO.

Marttinen, Tauno (*b* Helsinki, 27 Sept 1912). Finnish composer. He attended the Viipuri Music College from 1920 to 1937, and also in the 1930s studied the piano at the Helsinki Conservatory and composition with Palmgren privately. He was director of the Hämeenlinna City Orchestra (1949–58) and of the music college there (1950–75). In 1969 he was awarded the Kalevala Jubilee Prize and in 1972 an honorary professorship. He rejected his early Romantic works, changed his style and started his opus catalogue again from no.1, beginning with his award-winning *Kokko, ilman lintu* ('Eagle, Bird of the Air', 1956) for mezzo-soprano and orchestra. This work shows Marttinen at his most typical: colourful, illustrative scoring, fantasia-like, loose, episodic form, static repetitions and ostinatos. Studies with Wladimir Vogel in Switzerland (1958) heralded a five-year commitment to dodecaphony that yielded the first three symphonies, an expressive Violin Concerto, the strong orchestral variations *Linnunrata* ('The Milky Way') and the opera *Päällysviitta* ('The Mantle').

Although his prolific output of nearly 300 compositions does contain works of a symphonic nature, Marttinen is more familiar and at ease with orchestral fantasies and operas. The national epic, the Kalevala, is the main source of motifs for his descriptive orchestral works combining freely tonal melodies with aleatory techniques (*Kalevala Trilogy*, 1981–4). Most of his operas are concise, in both length and scoring; the smaller-scale operas are mainly comic, the larger serious. All of his operas have been staged in the provinces, with the exception of *Poltettu oranssi* ('Burnt Orange'), the performances of which on television (1971) and at the Finnish National Opera

(1976) were Marttinen's greatest successes. Another of Marttinen's main works is the ballet *Päivänpäästö* ('The Release of the Sun', 1975–7, revised 1983), which displays his neo-classical and Slavic inclinations.

WORKS
(*selective list*)

Ops: Päällysviitta [The Mantle] (Marttinen, after N. Gogol), 1962–3; Kihlaus [The Betrothal] (Marttinen, after A. Kivi), 1964; Tulitikkuja lainaamassa [Borrowing Matches] (Marttinen, after M. Lassila), 1965; Lea (Marttinen, after Kivi), 1966; Poltettu oranssi [Burnt Orange] (Marttinen, after E.-L. Manner), 1968; Mestari Patelin [Monsieur Patelin] (Marttinen, after old Fr. play), 1972; Psykiatri [The Psychiatrist] (Marttinen), 1974; Laestadiuksen saarna [Laestadius's Sermon] (N. MIKKO HEINIÖ

Martucci, Giuseppe (*b* Capua, 6 Jan 1856; *d* Naples, 1 June 1909). Italian composer, pianist and conductor. He was the most important non-operatic composer in late 19th-century Italy and played a versatile, highly influential part in the resurgence of Italian concert life after a period when it had been at a low ebb.

1. LIFE. He had his first music lessons from his father Gaetano Martucci, a trumpeter and bandmaster in the Neapolitan army who in 1860 turned to teaching, after Garibaldi's conquest of southern Italy. When the boy and his younger sister Teresa showed precocious promise as pianists, Gaetano brought them before the public in a series of local concerts, starting with one in Pozzuoli in December 1864. They played in Naples for the first time in 1866, and in April of the following year the young Giuseppe gave the first known performance of a piece of his own – a polka entitled *Il genio* which his father immediately had published (along with three other juvenile compositions) by the small Neapolitan firm Del Monaco. By this time the boy's extraordinary gifts had come to the notice of the eminent pianist and teacher Beniamino Cesi, a pupil of Thalberg. Cesi persuaded Gaetano to let his son become an external and, from 1868, an internal student at the Reale Collegio (later Conservatorio) di S Pietro a Majella, Naples, even though college rules prevented him from playing in public again until 1871.

At the Reale Collegio his main teachers were Cesi for piano and Paolo Serrao for composition. Cesi, who was a great champion of Beethoven and Schumann, had a particularly beneficial effect on his increasingly serious tastes and outlook: the seeds of his lifelong – though far from exclusive – devotion to 19th-century Austro-German traditions were sown at this early stage. However, in 1872 his father, whose financial position remained precarious, insisted on prematurely curtailing the boy's formal studies and launching him without delay as a concert virtuoso. Prudent and useful links had been established with the local aristocracy, who were to do much to further Martucci's career during the next few years. Soon his fame began to spread to other Italian cities, and in 1874 he gave at least one public concert in Rome, where he won praise from Liszt and was invited to the Quirinale by the highly musical Princess (later Queen) Margherita, who was to remain one of his fervent admirers. His first Milan concert, in April 1875, won (according to the influential Filippo Filippi, writing in *La perseveranza*) 'a success surpassing any we can remember since Rubinstein'; it also induced Tito Ricordi the elder to acquire the right to publish all Martucci's music, though the exclusiveness of that agreement was to last only a few years. In June 1875 Martucci gave at least two concerts in London and one in Dublin.

The years 1877–8 were crucial in a number of respects. They saw the completion (in the summer of 1877) of Martucci's first unquestionably major work, the Piano Quintet op.45, which he entered for competitions in both Milan and St Petersburg. In February 1878 he was awarded the Milan prize, and evidently would also have won in St Petersburg if he had not felt bound to withdraw from that competition after his victory in the other (Perrino, 1992, pp.148–9). Meanwhile the most munificent of his Neapolitan patrons, Francesco Milano, Prince of Ardore, had founded (in 1877) an orchestra for Martucci to conduct and develop, which from small beginnings gradually grew into the widely admired Orchestra Napoletana. In 1878 Martucci also spent four months in Paris, where he was again much praised both as pianist and as composer, widened his musical horizons considerably, and made personal contact with several leading French musicians, including Gounod, Saint-Saëns and Massenet.

After long, painstaking preparations in private, the Orchestra Napoletana – which shared many players with the S Carlo opera house – gave its first fully public concert on 23 January 1881. By that time Martucci had become

a piano teacher at the Reale Collegio, despite the interruption of his studies when he had been a student there, and from then his travels as pianist were curtailed (though not wholly discontinued) because of his growing local commitments as conductor and teacher. From the start his orchestral repertory was wide-ranging and idealistic by Italian standards: even his preference for playing Beethoven symphonies in their entireties reached out beyond what was then normal for orchestras south of the Alps, and he was also soon conducting music by Berlioz, Wagner and (from December 1882) the Second Symphony of Brahms, then wholly new to Italy. Meanwhile his repertory, both as conductor and as pianist, also stretched backwards in time to include music by composers such as J.S. Bach, Rameau and Domenico Scarlatti. By the time Martucci's orchestra contributed three to a total of 34 concerts given by various Italian orchestras at the Esposizione Generale Italiana at Turin in 1884, it was possible for several critics, including Ippolito Valetta in the *Gazzetta piemontese*, to declare it decisively the best in Italy.

A natural consequence of Martucci's conducting activities was a growing urge to write major works for orchestral forces: the first important result was the Second Piano Concerto (the only one he himself saw fit to publish) which had its première, with the composer as pianist, in Naples on 31 January 1886. This powerfully conceived, rather Brahmsian work, which he subsequently played in various other cities, added further to his prestige, although some Italians were puzzled by its size and complexity. Another crucial event in 1886 was his appointment, almost simultaneously, to three major posts in Bologna, following Luigi Mancinelli's sudden desertion of all of them to settle in England. Martucci left Naples reluctantly, and not, as things turned out, finally; but his appointment, as director of the Bologna Liceo Musicale was obviously a big step forward in his public career. He was also put in charge of music for the *cappella musicale* at S Petronio and of Bologna's so-called Società del Quartetto, which (like its counterparts in other Italian cities) by then also ran orchestral concerts.

Martucci's Bologna period was in many ways the culmination of his public career. On 2 June 1888 he brought his championing of Wagner to a climax with the Italian première of *Tristan und Isolde*: this was the first time he ever conducted an opera performance. Another notable pioneering venture was his introduction to Italy in 1895 of Schumann's *Szenen aus Goethes Faust*. In 1898 he conducted in London and Brussels, and his programmes explored an ever-wider foreign repertory. On 24 April 1898 he even introduced the Bologna public to music by Sullivan, Stanford, Parry, Mackenzie and Cowen: Stanford (whose *Irish Symphony* he performed repeatedly) became a personal friend, and reciprocated by twice conducting the Italian composer's First Symphony in London. By now Martucci's French repertory included music by Franck and d'Indy, and in 1888 his fervent interest in the music of Brahms was rewarded by a meeting with the great German, who was passing through Bologna: it is said that since neither of them knew the other's language, they communicated by singing to each other (Fano, 1950, p.30).

Though Martucci's interest in opera (other than Wagner) remained limited, he was willing to commemorate Verdi in 1901 with a one-composer concert. His teaching activities, meanwhile, had a beneficial influence on a new generation of composers: his pupils at Bologna included Respighi, who undoubtedly learnt much from his example. More broadly, the entire range of his activities helped to create a climate in which it became easier for young Italian musicians to win success outside the opera house. The young Alfredo Casella, though never his pupil, benefited considerably from the older composer's well-established friendship with his parents; yet it was Martucci who, knowing too well the continuing limitations of the Italian musical environment, first advised them to send their son to study abroad. In 1902, having never completely lost touch with Neapolitan musical life (although it had languished somewhat during his absence), Martucci was invited to become director of the Conservatorio (formerly Reale Collegio) where he had previously studied and taught: he accepted, and remained in the post for the rest of his life. Though his health was already declining and his period of maximum impact on the Italian musical world had passed, in 1904 he completed his most original large-scale orchestral work, the Second Symphony. As a conductor he continued to explore: at one of his last Naples concerts (May 1908) he performed the *Prélude à l'après-midi d'un faune* at a time when Debussy's very name was unfamiliar to most Italians. He also introduced *Tristan und Isolde* and *Götterdämmerung* to the Neapolitan public: the strain of conducting the latter in December 1908 may have accelerated his death. Though his senior by two years, his musically gifted widow Maria (whom he had married in 1879) survived him by 36 years and remained a tireless defender of his achievement. Their son Paolo (1883–1980) became a pianist and piano teacher, and emigrated to the USA in 1911 after several years in England.

2. WORKS. Although as a student Martucci composed a few works for larger forces (including a so-called *Messa a grande orchestra*), his early published output consists mainly of short piano pieces, which at first reflected the tastes of the salon audiences of the time. Yet even such juvenilia as the *Pensieri* op.8 (on themes from *Un ballo in maschera*) show that at the age of 17 Martucci could use fashionable idioms with real verve and technical skill. By the time he wrote the compact Violin Sonata op.22 he had absorbed important lessons from Mendelssohn, without losing a recognizably Italian melodiousness seen at its best in the charming central movement. The Piano Sonata op.34 is more ambitious and perhaps less convincing, whereas the Scherzino op.29 (originally entitled *La caccia*) is a good example of the neat, terse vivacity of which he was capable by 1876 in smaller pieces: one can already hear signs of his lasting fondness for Domenico Scarlatti. His most substantial work of that year, however, is the D minor Fantasia op.32, which makes skilful use of the two-piano medium and won high praise from some of the major critics of the time, especially for its impressive final fugue.

In 1877 Martucci wrote almost nothing apart from the Piano Quintet op.45, whose importance as a major step towards maturity was immediately recognized. However, despite its aforesaid success in winning a prestigious prize, the work was not published until 1893, by which time the composer had revised it to an extent which may never be known: the unmodified first version seems not to have survived. Yet even if the available version's originality may have been enhanced in the light of later experience,

Martucci's vivid personal response to the examples of Mendelssohn and especially Schumann must surely have been there from the start, and the rhythmic and textural subtlety of the more contemplative sections is too pervasive to have been purely an afterthought. By comparison the First Piano Concerto, his first attempt at orchestral writing since his student days, seems cautious and unenterprising, and his decision to withdraw rather than revise it is understandable: the work was to remain unpublished for over a century.

In the best of Martucci's numerous piano pieces of the early 1880s his continuing responsiveness to the examples of Mendelssohn, Schumann, Chopin and others did not prevent an increasingly persuasive individual voice from emerging. His southern Italian sensibility and experience found justly popular expression in the exuberant yet shapely Tarantella op.44 no.6 – one of the first of the several piano compositions that he later orchestrated. A different but no less widely played product of the 'Mediterranean' side of his character is the Giga op.61 no.3, which again reflects his predilection for Scarlatti, even if the subsequent orchestral arrangement has a more Mendelssohnian colouring. The nimble-textured Scherzos op.53, though they too have recognizable non-Italian precursors, evoke a quintessentially Martuccian atmosphere particularly in the mellow, lyrical imagery of their trio sections. Finest of all, perhaps, is the Barcarola op.64 no.3, whose rapt, meditative outer sections (flanking a more turbulent centre) epitomize a characteristic mood that recurs in much of Martucci's best music.

His largest piano work of these years, the Theme and Variations op.58, may not be quite so unfailingly individual, yet it provides a balanced compendium of his various ways of writing for the piano, and its importance for him is confirmed by his decision to adapt it later, both (abortively) for piano and orchestra and (effectively) for two pianos. The early 1880s also saw the births of three of his very best chamber compositions. The continuing Schumannesque background, now combined with growing awareness of Brahms, does not prevent the Cello Sonata and the two piano trios from speaking with an authority of their own, especially in passages of sustained lyricism or caprice. Nor do these works lack distinctive Italian characteristics: there are suggestions of Neapolitan bagpipes in the middle sections of the scherzos of the Cello Sonata and the First Trio, and Scarlatti's example, though less obvious here than in certain piano pieces, may again have had a clarifying and vivifying effect on some of the textures.

However, the most ambitious work that Martucci completed before moving to Bologna is the Second Piano Concerto, which is incomparably richer and more intense than the repudiated First. The influences of Brahms and Schumann are strong but by no means all-pervading: the huge first movement includes substantial lyrical sections where the composer's own voice is very clearly audible, as it is (still more) in the beautiful central movement. Though it is less original than at least one of the symphonies, the concerto has attracted wider attention, over the years, than any of Martucci's other large-scale instrumental works.

During his Bologna period, when his public career was at its height, Martucci had only limited time for composition. Even in the field of piano music his productivity was drastically reduced, though there is absolutely no falling off of quality. The Notturno op.70 no.1 has rightly become one of his most frequently played compositions, in its piano and, still more, in its subsequent orchestral version: the latter in due course became linked to the later Novelletta op.82 no.2, to form a diptych of exquisitely scored short pieces that remained familiar to Italian music lovers even when most of the rest of Martucci's output was neglected. These pieces may suggest an unexpected kinship with Elgar, though in the Notturno this is likely to be coincidental except perhaps where its 1901 orchestration is concerned. The Notturno op.70 no.2 is less well known, but it too deserves attention despite a continuing debt to Chopin; whereas Brahmsian harmonic and pianistic refinements have had a beneficial effect, for example, on the Capriccio and Toccata op.77. Some piano pieces composed around 1900, such as the substantial, highly pianistic Caprices op.80, make further advances into a subtle chromaticism in which kinships with French music too – Franck, Fauré, even perhaps an occasional touch of Debussy – can at times be detected. Yet these changing stylistic associations rarely if ever degenerate into mere imitation, such is the skill with which Martucci adapts them to his own expressive purposes.

The chamber compositions of the Bologna years are few and relatively unassuming in structure, though lyrically expansive: the second piece from op.69 was later converted into an eloquently sustained Andante for cello and orchestra. However, the supreme manifestation of Martucci's more purely lyrical side is the song cycle *La canzone dei ricordi* (originally for voice and piano but in due course admirably orchestrated), whose outstandingly successful blend of italianate cantabile with delicate harmonic and textural richness, in which Brahmsian and Wagnerian associations freely mingle, has won special attention in the Martucci revival that has recently transformed his reputation. By comparison the First Symphony may, as a whole, seem selfconscious, perhaps reflecting the unusually long time that he took to write it. Yet it contains much that is persuasive, and here too the composer's individuality is seldom wholly submerged. For example, the inner movements may in some ways recall a Brahms slow movement and intermezzo (though the slow movement's rich chromaticism at times comes closer to Wagner); but they also have affinities with the much less Brahmsian Notturno and Novelletta.

The Second Symphony – the only large-scale piece that Martucci completed after his return to Naples in 1902 – is more truly personal. Here Brahmsian symphonic models are no more than a frame of reference, and the music (whose rhythmic and textural subtleties need careful coordination, not least in the reticent yet crucial opening bars) keeps reaching out in quietly unconventional directions. The work's relationship to Brahms may in some ways be compared to that seen in certain works by Dvořák or the young Nielsen, or indeed in the comparably long-neglected and recently revived symphonies of Parry. By 1904 this last-mentioned kinship with a British composer was no longer purely coincidental, and the Elgar-like qualities in the 1907 orchestral version of the Novelletta, too, may well reflect Martucci's known interest in presenting British music to continental audiences. The Second Symphony never became as popular as the Notturno and Novelletta or even the Second Piano Concerto: for many years it remained 'a treasure that

most Italians do not know they possess' (Fano, 1979, p.11). However, its claim to be Martucci's greatest work has been recognized by many discerning musicians: G.F. Malipiero, staunch rebel though he was against the 19th-century symphonic tradition, nevertheless as late as 1956 described Martucci as 'a genius in the fullest sense' and the Second Symphony as 'the starting-point of the renaissance of non-operatic Italian music' (*The Score*, no.15, p.7).

WORKS

published in Milan unless otherwise stated

Fuller details, including list of unpublished juvenilia, in Perrino (1992) and (1996)

ORCHESTRAL

op.	
—	Polka, band, before 1871, unpubd [MS in Centro Studi Martucciani]
40	Piano Concerto, d, 1878 (1979)
44/3	Colore orientale, 1880 (1938) [arr. of pf piece of same name, 1880]
44/6	Danza, 1908 (1908) [arr. of Tarantella, pf, 1880]
55/2	Gavotta, 1901 (1901) [arr. of Tempo di gavotta, pf, 1888]
57/2	Serenata, str, 1893, unpubd [MS in *I-Nc*; arr. of pf piece of same name, 1886]
58	Tema con variazioni, pf, orch, n.d., unpubd, inc. [MS in *I-Nc*; arr. of pf piece of same name, 1882]
61/3	Giga, 1901 (1901) [arr. of pf piece of same name, 1883]
65/2	Canzonetta, 1901 (1901) [arr. of pf piece of same name, 1884]
66	Piano Concerto, b♭, 1884–5 (Leipzig, 1886)
69/2	Andante, vc, orch, 1907 (Leipzig, 1907) [arr. of vc, pf piece of same name, 1888]
70/1	Notturno, 1901 (1901) [arr. of pf piece of same name, 1891]
75	First Symphony, d, 1889–95 (Leipzig, 1896)
81	Second Symphony, F, 1899–1904 (1907)
82/2	Novelletta, 1907 (1908) [arr. of pf piece of same name, 1905]

VOCAL

—	Unpubd juvenilia, before 1872 [MSS in Centro Studi Martucciani and private collns], incl. Messa a grande orchestra [with solo vv, chorus], 1870–71, and several smaller items
—	Alma gentil (S. Pellico), S/T, pf, 1872 (1875)
—	Samuel (F. Persico), orat, solo vv, chorus, orch, 1881; unperf., apart from 3 pts rev. 1905–6; music unpubd [MSS in *I-Nc*, Centro Studi Martucciani and private colln], but words in Perrino (1996), pp.221–33
[68]	La canzone dei ricordi (R. Pagliara), song cycle, Mez/Bar, pf, 1887 (1888); arr. Mez/Bar, orch, 1898 (1899)
[68]	Sogni (C. Ricci), 1v, pf, 1888 (1888)
68	Pagine sparse (Ricci), 1v, pf, 1888 (Leipzig, 1888)
—	Ballando! (Ricci), 1v, pf, 1889, unpubd (MS in *I-Nc*; pf arr. in op.74)
[68]	Due canti (Pagliara), boys' vv, org, 1889 (Naples, 1889)
84	Tre pezzi (G. Carducci), 1v, pf, 1906 (1907)

(Although only the *Pagine sparse* were published as op.68, Martucci's own list makes it clear that he wanted that number also to cover three other vocal compositions, as indicated above.)

CHAMBER

—	Divertimento [after Verdi: La forza del destino], fl, pf, 1869, unpubd [MS in Centro Studi Martucciani]
—	Trio [after Offenbach: La belle Hélène], vn, vc, pf, 1869, unpubd [MS in Centro Studi Martucciani]
22	Sonata, vn, pf, 1874 (1876)
45	Piano Quintet, 1877, rev. 1892 (Leipzig, 1893) [orig. planned as op.36]
52	Sonata, vc, pf, 1880 (Leipzig, 1888)
55/1	Minuetto, str qt, 1893 (1893) [arr. of pf piece of same name, 1880]
59	First Piano Trio, C, 1882 (1883)
62	Second Piano Trio, E♭, 1883 (Leipzig, 1888)
64/1	Momento musicale, str qt, 1893 (1893) [arr. of pf piece of same name, 1884]
67	Tre pezzi, vn, pf, 1887 (Leipzig, 1888)
69	Tre pezzi, vc, pf, 1888 (Leipzig, 1889) [no.2 also arr. vc, orch]
—	Melodia, vn, pf, 1890 (Naples, 1890)
72	Deux romances, vc, pf, 1891 (Leipzig, 1891)

KEYBOARD

for pf solo unless otherwise stated

—	Various juvenilia, before 1871, mostly unpubd [MSS in Centro Studi Martucciani and private colln] but incl. 3 polkas and a mazurka (Naples, 1867)
1	Fantasia sull'opera La forza del destino, 1871 (Naples, 1872)
—	Polka improvvisata, 1872, unpubd [MS in Centro Studi Martucciani]
2	Primo capriccio, 1872 (Naples, 1872)
3	Secondo capriccio, 1872 (Naples, 1872)
4	Mazurka di concerto, 1872 (1875)
5	Andante e polka, 1873 (1875)
6	Tarantella, 1873 (1875)
7	Agitato, 1873 (1875)
8	Pensieri sull'opera Un ballo in maschera, pf duet, 1873 (1876)
9	Studio di concerto, 1873 (1875)
10	Pensiero musicale, 1873 (1875)
11	Tempo di mazurka, 1873 or 1874 (1875)
12	Terzo capriccio, 1874 (1876)
13	Allegro appassionato, 1874 (1875)
14	Fuga, 1874 (1876)
15	Quarto capriccio, 1874 (1876)
16	Prima melodia, 1874 (1875)
17	Improvviso, 1874 (1875)
18	Fuga a due parti, 1874 (1876)
19	Polacca, 1874 (1875)
20	Prima barcarola, 1874 [unpubd cadenza added 1876] (1875)
21	Seconda melodia, 1874 (1875)
23	Scherzo, 1875 (1875)
24	Capriccio di concerto, 1875 (1875)
25	Nocturne: Souvenir de Milan, 1875 (1875)
26	Caprice en forme d'étude, 1875 (1875)
27	Tre romanze: Tristezza; Ritorno; Passione, 1875 (1875–6)
28	(1) Fughetta a due parti (2) Fuga a tre parti, both 1875 (1878)
29	La caccia [repubd as Scherzino], 1876 (1877)
30	Seconda barcarola, 1876 (1877)
31	(1) Notturno [Secondo notturno] (2) Terza barcarola (3) Quarta romanza, (4) Dolce ricordo [Terzo notturno], 1876 (1877)
32	Fantasia, d, 2 pf, 1876 (1877)
33	(1) Voce del cuore (2) Al cader delle foglie (3) Canto religioso, 1876 (1877)
34	Sonata, E, 1876 (1877)
35	Mazurka, 1876 (1877)
36	Sonata, d, org, 1879 (Ancona, 1973) [op.45 in autograph]
37	Racconto, 1877 (1884) [in memory of Bellini]
38	(1) Flatterie (2) Souvenir d'un bois (3) Chant d'amour (4) La chasse (5) Sérénade (6) Moment de joie, all 1878 (1878)
39	Souvenir de Paris, 1878 (1878)
41	Sonata facile, 1878 (1878)
42	(1) Notturnino (2) Secondo notturnino (3) Terzo notturnino, all 1880 (1880–81)
[43]	12 preludi facili, 1877, unpubd [MS in *I-Nc*] though numbered as op.43 in autograph
43	(1) Pensiero musicale (2) Dolore (3) L'arcolaio, all 1878; (4) Pensiero fantastico (5) Fiorellino (6) Verso sera, all 1879; (7) Presso il ruscello, 1882 (1878–84)
44	(1) Momento d'ozio (2) Pezzo fantastico (3) Colore orientale (4) Barcarola (5) Notturno (6) Tarantella, 1879–80 (1880–81) [Colore orientale and Tarantella also orchd (the latter with title Danza)]
46	(1) Valzer, a (2) Valzer, g (3) Valzer, B, all 1879 (1880)
47	Studio, 1879 (Stuttgart, 1879)
48	Seconda polacca, 1879 (1880)
49	3 romanze: Desio, Quante memorie, both 1880, Ansia, 1882 (1880–84)
50	Novella, 1880 (1881)
51	Fantasia, g, 1880 (1881)

53 (1) Scherzo, A (2) Scherzo, E, both 1880, (3) Scherzo, D♭, 1882 (1881–2)
54 Studio caratteristico, 1880 (1881)
55 (1) Minuetto, 1880, (2) Tempo di gavotta, 1888 (1881–8) [Minuetto also arr. str qt; Tempo di gavotta also orchd with title Gavotta]
56 Improvviso-fantasia, 1880 (1881)
57 (1) Capriccio (2) Serenata, both 1886 (1886) [Serenata also arr. str orch]
58 Tema con variazioni, 1882 (1882) [with two alternative finales]; new version as Variazioni, 2 pf [using only second finale], 1900 (1901); 2nd version, 1 pf [incl. new material from version for 2 pf] (1905) [also arr. pf, orch, unpubd, inc.]
60 Foglie sparse: album di sei pezzi, 1883 (1884)
61 (1) Preludio (2) Toccata (3) Giga, all 1883 (1884) [Giga also orchd]
63 Moto perpetuo, 1884 (1884)
64 (1) Momento musicale (2) Scherzo (3) Barcarola, all 1884 (1884) [Momento musicale also arr. str qt]
65 (1) Preludio (2) Canzonetta (3) Serenata, all 1884 (1885) [Canzonetta also orchd]
— Romanza, E (1889)
70 (1) Notturno, G♭ (2) Notturno, f♯, both 1891 (1891) [no.1 also orchd]
73 Deux pièces: Serenata, Gavotta, both 1893 (Leipzig, 1894)
74 Trèfles à 4 feuilles, 1895 (Leipzig, 1895)
76 Trois morceaux: Novelette, Nocturne, Scherzo, 1896 (Leipzig, 1897)
77 (1) Capriccio (2) Toccata, 1896 (1896)
78 Tre piccoli pezzi: Serenata, Minuetto, Capriccio, 1900 (1900)
79 Tre piccoli pezzi: Preludio, Canzonetta, Saltarello, all 1901 (1901)
80 2 caprices: b♭, g♯, both 1902 (Boston, 1903)
— Terza melodia, 1902 (1902)
82 (1) Intermezzo (2) Novelletta (3) Scherzo, all 1905 (1906) [Novelletta also orchd]
83 (1) Improvviso (2) Capriccio (3) Tempo di valzer, all 1905 (1908)

TRANSCRIPTIONS
(detailed list in Fano (1950), pp.161–3)

Orchd: G. Sammartini: Pastorale, g, 1884, unpubd, ?lost; Pastorale, G [orig. 2 vn, bc], 1906 (1907)

JOHN C.G. WATERHOUSE (work-list, bibliography with FOLCO PERRINO)

Marturet, Eduardo (*b* Caracas, 19 Sept 1953). Venezuelan conductor and composer. He began private studies in percussion, conducting and composition in 1971 in Cambridge. He took a postgraduate music degree at the Anglia Polytechnic College of Cambridge (1977–8). He also studied conducting with John Carewe (1978–9) and Franco Ferrara (1981, 1983). Since his return to Venezuela he has held several artistic and administrative posts, including those of associate conductor of the Caracas PO (1979–83), music director of the Teatro Teresa Carreño (1984–7) and conductor of the Venezuela SO (1987–95). In 1986 he founded the Caracas Sinfonietta, for which he commissioned works by Ricardo Lorenz, Izarra and others. His impact on the Venezuelan musical establishment was allied to his charismatic ability to secure reliable private support for the organizations under his leadership. This endeavour changed irreversibly the dynamics of artistic patronage in Venezuela, which previously had lain exclusively with the state institutions, and guaranteed the survival of musical programmes during the government financial crisis of the late 1980s and the 90s. His compositions explore a variety of conceptual and experimental schemes, employing aleatory, minimalist and environmental elements in a language that is sparse but suggestive.

WORKS
(*selective list*)

Dramatic: Oriana (film score), 1984; Secretos (ballet), 1986

CARMEN HELENA TÉLLEZ

Martyn (*fl* 15th century). ?English composer. The name appears by Kyrie square 14 (*see* SQUARE) in *GB-Lbl* Lansdowne 462. G. Martini, possibly the same man, is named as a composer in the motet *Sub Arturo plebs* (*see* ALANUS, JOHANNES).

MARGARET BENT

Martyn, Bendall (*b* London, 8 Jan 1700; *d* Highgate, 19 Dec 1761). English composer and violinist or cellist. His father was Henry Martyn, essayist and inspector general of exports and imports. Martyn entered King's College, Cambridge, in 1719, graduating as BA in 1722 and MA in 1726. In December 1732 he obtained a place in the customs-house, and in 1738 was appointed, under the patronage of the Walpole family, secretary to the Commissioners of Excise, a post he retained until his retirement on 8 October 1761, due to 'great Infirmity'. Hawkins called him a 'gentleman musician' and described him as a violinist, but Eitner stated that he was an outstanding cellist, a suggestion that may be borne out by the role he gives to that instrument in his only known work, the posthumously published *Fourteen Sonatas* (2 vn, vc, hpd; London, 1763). Each sonata includes a fugue and one has a ground-bass movement. The general style seems conservative for 1763; we have no idea of when the pieces were actually composed. They show an adventurous treatment of texture, with the cello part unusually independent of the continuo. There are several cello solos, and passages where the cello alone accompanies the violins.

RICHARD PLATT

Martyn, Edward (*b c*1472; *d* 1545). English composer. His five-part setting of the lengthy text *Totius mundi domina*, honouring the Blessed Virgin Mary, survives incomplete in *GB-Cu* Peterhouse 471–4. A plausible candidate for identification with the composer is the Edward Martyn who was successively chorister (until 1486), demy, and finally Fellow (1496–1504) of Magdalen College, Oxford, and who presented the college with 'cantica' (i.e. vocal compositions of some kind) in 1506–7.

ROGER BOWERS

Martyn, John [Geachy, Iain] (*b* Glasgow, 11 Sept 1948). Scottish folksinger and guitarist. He moved to London from Glasgow and was signed by Island Records while still a teenager. His first album *London Conversation* (Isl., 1967) showed jazz and blues influences, and was followed a year later by *The Tumbler*, in which he mixed his guitar playing with the flute and saxophone. During 1970 he released two albums with his wife Beverley – *Stormbringer* (recorded in the USA with a group that included Levon Helm of THE BAND) and *The Road to Ruin* (both Isl). His best-received albums *Bless the Weather* (1971) and *Solid Air* (which included the song 'May You Never', later recorded by ERIC CLAPTON) followed (both Isl.). In 1975, Martyn released the self-produced *Live at Leeds*, after which he went to Jamaica to work with reggae artists. This led to the album *One World* (Isl., 1977), in which he was once again joined by STEVE WINWOOD who had previously played on the 1973 album *Inside Out*. Three years later after his marriage had collapsed, he was joined on the highly personal and pained *Grace and Danger* (Isl., 1980) by PHIL COLLINS. By the mid-1980s Martyn had begun wearing smart suits on stage and playing electric guitar, more like a rock star

than a folk-jazz artist, but his work was still experimental – as shown by his hit version of 'Somewhere Over the Rainbow', from *The Wizard of Oz*. He continues to be a highly-respected, original musician despite having never enjoyed huge commercial success.

ROBIN DENSELOW

Martyria. A Byzantine modal signature identifying the mode and the melodic formulae required to perform a hymn (*see* BYZANTINE CHANT, §3(ii)). If a new mode is required during the course of the melody, a medial *martyria* is inserted. (J. Raasted: *Intonation Formulas and Modal Signatures in Byzantine Musical Manuscripts*, MMB, *Subsidia*, vii, 1966)

FRANZ WIERING

Martyrology (Lat. martyrologium, legendarius, passionarius etc; Gk. synaxarion, menologion). A Christian liturgical book in the Latin, Greek and other Eastern rites, containing the lives of the saints (not only martyrs) set out for public reading according to the order of their commemoration days in the church year; essentially, thus, it is an enlarged liturgical calendar of the Proper of the Saints. In the primitive church, such readings occurred at the annual commemorations of the deaths of the martyrs, Proper Offices developing from the 4th and 5th centuries, possibly first in the East (e.g. Jerusalem). Martyrologies varied according to locality; in the Latin West, however, the most popular medieval martyrology was that of Usuardus (*PL*, cxxiii, 503), of *c*875; the Roman martyrology compiled by Cardinal Baronius and others, issued under Gregory XIII in 1583 (with an immediate successor in 1584), became official in the Roman Catholic Church, and formed the basis of all subsequent revisions.

The readings from the martyrology were part of the Divine Office from the Middle Ages. In the Byzantine rite they occur during Orthros after the 6th ode of the KANŌN; in the medieval Latin rite, they were read in choir at Prime. The martyrology varies considerably in size: medieval Latin chant books sometimes contain it as a supplementary fascicle, sometimes including chants from the Proper of the Saints, but it sometimes assumes considerable proportions (*see* LITURGY AND LITURGICAL BOOKS, §§II, 4, III, 3; SOURCES, MS, §II).

□

Martzy, Johanna (Emilia Maria) (*b* Temesvár [now Timişoara, Romania], 26 Oct 1924; *d* Zürich, 13 Aug 1979). Swiss violinist of Hungarian birth. She began playing the violin at six under the tutelage of Josef Brandeisz, a pupil of Flesch, and at seven went to Jenö Hubay in Budapest for lessons, although she was more often taught by Nándor Zsolt. In 1932 she entered the Liszt Academy, where Hubay was principal, and until his death in 1937 she was his nominal pupil. Again she was supervised by Zsolt; and after he died in 1936 her tutor was Ferenc Gabriel. At 13 she toured the Hungarian provinces and Romania, at 16 she won the Reményi Prize and at 17 the Hubay Prize. In 1943 she appeared with the Budapest PO under Mengelberg. After the German invasion in 1944, she and her first husband joined the French forces as resident musicians; and in 1946 they moved to Switzerland, where in 1947 Martzy won the violin prize at the Concours International d'Exécution Musicale in Geneva. A year later she made her Amsterdam début and established a duo with the pianist Jean Antonietti. During the 1950s she appeared regularly throughout Western Europe, making her Berlin début in 1952 and her British début the following year. A Swiss publisher who became her second husband gave her the 1733 'Tarisio' Carlo Bergonzi violin – her favourite instrument – and a 1733 Stradivarius. In 1957–8 and 1958–9 she played in the USA; in 1959 she was the subject of controversy when the Czech PO refused to appear with her at the Edinburgh Festival; and in 1960 she toured South America. During the 1960s her career waned, although she still performed to a high standard, and she was dogged by ill-health in the 1970s. She taught and went on playing in public until 1976, forming another duo with István Hajdu – they were joined in trios by Paul Szabo of the Végh Quartet. After her death Martzy became a cult figure among record collectors; and as her relatively few recordings were reissued during the 1990s, her posthumous reputation grew. Many of her concert and radio performances have also been published, to acclaim, and she is now acknowledged as one of the finest violinists of her time. Her repertory was not large and focussed on Bach and the Viennese classics, as well as Mendelssohn, Brahms, Tchaikovsky, Franck, Dvořák and such 20th-century composers as Ravel and Bartók. Her interpretations, always in impeccable taste, were unobtrusively virtuosic and stylistically aware.

TULLY POTTER

Marusin, Yury (*b* Perm', 8 Dec 1947). Russian tenor. He studied in Leningrad, where he made his début at the Maliy Theatre in 1972. After further study in Milan (1977–8) he joined the Kirov Opera, making his British début in 1987 with that company at Covent Garden as Lensky, also singing Hermann and Grigory. He has sung the Tsarevich (*The Tale of Tsar Saltan*) at La Scala and Reggio nell'Emilia (1988), Golitsïn (*Khovanshchina*) at the Vienna Staatsoper (1989), Anatol' Kuragin (*War and Peace*) at the Kirov and in San Francisco, and Prince Andrey Khovansky at Edinburgh (1991). His roles also include Faust, Rodolfo, Pinkerton, the Duke, Alfredo, Don Carlos, Don Alvaro, Vaudémont (*Iolanta*) and Bayan (*Ruslan and Lyudmila*), which he has sung in San Francisco and in Palermo (1995). Although the strong beat in his voice is not to all tastes he is a powerful singing actor, specially effective as Hermann, a role he has sung in St Petersburg, Paris, Toronto, Madrid and at Glyndebourne (1992 and 1995).

ELIZABETH FORBES

Marx, (Friedrich Heinrich) Adolf Bernhard [Samuel Moses] (*b* Halle, 15 May 1795; *d* Berlin, 17 May 1866). German music theorist, critic and pedagogue. One of the most influential theorists of the 19th century, Marx named and codified sonata form. As a critic he awakened and cultivated early appreciation for the symphonies of Beethoven; as a pedagogue he worked to make music an integral part of the education of the individual and of the development of the German nation.

Marx was the son of a Jewish doctor in Halle. He entered the university there in 1812, studying law, and together with Carl Loewe also studied composition with Türk. He practised law in Naumberg from 1815 to 1821, and in 1819 converted to Protestantism, changing his forenames from Samuel Moses to Friedrich Heinrich

Adolf Bernhard. In 1821 he moved to Berlin, where he increasingly gave himself over to music and studied for a short period with C.F. Zelter. The music publisher A.M. Schlesinger made him editor of the *Berliner allgemeine musikalische Zeitung* in 1824, a position Marx maintained for seven years. During this time he promoted orchestral concerts as opportunities to learn and appreciate the spiritual qualities of the symphonies of Haydn, Mozart and, above all, Beethoven. Marx had become friends with the Mendelssohn family in 1826, and in 1829 he assisted Felix Mendelssohn with the important performance of Bach's *St Matthew Passion.* During this period he also published a book on vocal technique, a treatise on tone-painting and his first musical compositions. In 1830 he was appointed to the university in Berlin. (There is no evidence that Mendelssohn recommended his friend after being offered the position first himself.) This made him the first supernumerary professor of musicology at a German university. Marx had applied for the doctorate (necessary for his appointment) from the University of Marburg in 1828, and it was 'conferred in philosophy and particularly music' in 1831. In 1832, after the deaths of Zelter and Bernard Klein, he was additionally named director of music at Berlin University. In his first year he lectured on the theory of musical composition and the 'purpose and method of musical education for the people and for artists'.

In 1837–8 Marx published the first two volumes of his most famous and influential text, *Die Lehre von der musikalischen Komposition* (the remaining two volumes appeared in 1845 and 1847). He became recognized as the leading authority in music theory and was much sought after as a private teacher of composition. He married in 1838 Marie Therese Cohn, the daughter of a Jewish merchant from Dessau; their marriage produced a son and three daughters. Two important events took place in 1841: first, Marx's oratorio *Moses*, an ambitious work for which he had great hopes, was performed in Breslau. He had counted on Mendelssohn's giving the work its first performance in Leipzig, and his refusal made Marx bitter and malicious towards his past friend to the end of his life. The performance received a great deal of attention, but the critical response was mixed. Meanwhile, Marx started a controversy over the purpose and method of teaching composition by publishing *Die alte Musiklehre im Streit mit unserer Zeit*, a critique of the theorist S.W. Dehn's thoroughbass method. He rejected the idea of music theory as specialized knowledge for professional musicians, arguing instead that it was an opportunity for any human being to grow and develop as a whole person as he or she progressed through an organically constructed course of music instruction. Marx always tried to put his pedagogical theories into practice, and submitted several proposals to the Prussian government for a comprehensive national system of music education, getting so far as to meet King Friedrich Wilhelm IV in 1845. When revolution broke out in 1848 Marx plunged wholeheartedly into discussions of reform, writing as a liberal and a nationalist about elections, parliament and the reorganization of musical life. He proclaimed that, with the revolution, music had come into its own as a means for building and strengthening the nation. His plans failed, however, with the failure of the revolution. In 1850 he founded with Stern and Kullak the Berliner Musikschule, later called the Sternsches or Städtisches Konservatorium, but withdrew from that institution in 1856. In his book *Die Musik des neunzehnten Jahrhunderts* (1855), he tried to demonstrate his comprehensive approach to music by addressing everything from the smallest pedagogical detail to the broadest philosophical speculation. His study of the life and works of Beethoven (1859) and a book on Gluck and opera (1863) expanded on previously published material. His memoirs were published 1865, one year before he died. *Das Ideal und die Gegenwart* was published posthumously, but the work that was intended to situate his theory of composition within an overall theory of music, his *System der Musikwissenschaft,* never appeared.

Marx expounded over the course of his whole life ideas formulated in his writings in the 1820s. His approach remained thoroughly Hegelian in that he always began with the notion of the rational, progressive self-realization of the spirit through history as the basis for understanding all aspects of music. Marx traced a genetic development of form from the four-bar phrase to the *ABA Liedform*, through five rondo forms to its culmination in Beethovenian sonata form. He identified the basic dynamic impulse underlying all forms as the three-part movement from rest to motion to rest. Like Hegel, he proposed a speculative, three-stage history of music, with ideal forms for each stage. Music began as a play of the senses, progressed to the inchoate feelings of the soul, and finally achieved the definition and specificity of thoughts. For Marx, the third and final phase of music was embodied by the music of Beethoven, above all by his symphonies, and by the 'Eroica' in particular. Marx believed that the most fully developed music was not merely a play of forms or expression of a general mood (since this was music at an earlier stage), but rather that composers tried 'to reveal, not only the internal emotions and mental conditions of their characters but also the accompanying external circumstances, actions, and events' (*Die Musik des neunzehnten Jahrhunderts*). There is strong evidence that the young Felix Mendelssohn was influenced by Marx's viewpoint regarding what music could and should represent, and that he accepted Marx's help in 1826 in representing external actions and circumstances in his Overture to *A Midsummer Night's Dream.* Marx's analyses of Beethoven's symphonies and piano sonatas were much admired by adherents of both absolute and programme music in the 19th century. In his later years, Marx's insistence on the importance of extra-musical representation and of drama for opera made him appear sympathetic to the New German School. In fact, Liszt had *Moses* performed at Weimar in 1853 and published an enthusiastic review of *Die Musik des neunzehnten Jahrhunderts* in the *Neue Zeitschrift für Musik*. However, Marx found himself, like Hegel, unable to envision any 'Music of the Future'. Although he never stopped preaching the importance of teaching music and music composition for the future, he reserved all his energy and enthusiasm for composers of the past.

WORKS

for an extensive list, including projected, incomplete and lost works, see Hirschberg

SACRED CHORAL

Orch acc.: Der 137. Psalm, 1827; 2 lateinische Kirchenlieder, 1840; Mose, orat, op.10, 1841 (Leipzig, 1844); Zur Zeit der Auferstehung, 1842–3; Festkantate zur Jubelfeier der Universität, 1860

Pf/org acc.: Evangelisches Choral- und Orgelbuch, op.3 (Berlin, 1832); Am Tage Johannes des Täufers, orat, 1834; Psalm 1, op.5 (Berlin, 1837); Meine Seele ist stille zu Gott (from Ps lxii), op.17 (Minden, 1846); In banger Zeit, op.19 (Minden, 1846); Gebet um Kirchenfrieden (Marx), op.21 (Berlin, 1847)

A cappella: De profundis, 1823; 2 Motetten, op.4 (Berlin, 1834); Gebet für die Verstorbenen (Requiem int), op.7 (Leipzig, 1841); [3] Festgesänge, op.27 (Leipzig, 1858)

SECULAR CHORAL

Das Siegesmahl (H. Stieglitz), male chorus, orch, 1826; 3 Chorgesänge, chorus, pf, op.1 (Leipzig, 1830); 3 Gesänge gedichtet von Goethe (J.W. von Goethe), 4 male vv, pf, op.6 (Leipzig, 1841); Morgenruf (G. Herwegh), 8 male vv, op.23 (Minden, 1848); [62] Gesänge aus der Chorschule (Leipzig, 1860) [incl. 51 orig. works; others arr. Marx]

Partsongs: Ruhe, süss Liebchen (L. Tieck), 4vv, op.15 (Leipzig, 1846); Wanderlied (W. Müller), 4vv, op.18 (Leipzig, 1846); In der Frühe (Goethe), 6vv, op.20 (Leipzig, 1846); 6 Gesänge, 4 male vv, op.25 (Minden, 1848); 6 Gesänge, 4vv, op.26 (Minden, 1848)

SONGS

all with piano accompaniment

12 Gesänge, op.2 (Leipzig, 1830); Nahid und Omar, cycle of 9 songs, op.9 (Berlin, 1844); Die Zigeunerinnen (Mühlbach), S, A, op.13 (Leipzig, 1845); Ein Frühlingsspiel (H. Heine), op.14 (Leipzig, 1845); [12] Spanische Lieder (trans. Giebel), op.22 (Berlin, 1847); Hinaus mein Lied (W. Witte), Bar, op.24 (Minden, 1848); Meiden und Finden (K. Martell), with vc, 1860

PIANO

Am Nordgestade, fantasia, pf 4 hands, op.11 (Leipzig, 1845); Um Mitternacht, fantasia, pf 4 hands, op.12 (Leipzig, 1845); Grosse Sonate, A, pf solo, op.16 (Leipzig, 1846)

SANNA PEDERSON

Marx, Hans Joachim (*b* Leipzig, 16 Dec 1935). German musicologist. He studied at the Musikhochschule in Leipzig and with Edith Picht-Axenfeld in Freiburg (1954–9); from 1956 he also studied musicology at Freiburg University with Hammerstein and continued his studies with Schrade at Basle University (1960–64). He took the doctorate in Basle in 1966 with a dissertation on the organ tablature of Clemens Hör. From 1967 to 1968 he taught at the University of Zürich and, after holding a two-year scholarship from the Deutsche Forschungsgemeinschaft, became assistant lecturer in 1969 at the University of Bonn, where he completed his *Habilitation* in musicology in 1972 with a study of Corelli sources. In 1973 he was appointed research fellow and professor at the University of Hamburg. His main areas of research are Baroque choral music, instrumental music from the 16th to the 18th centuries and the works of Handel and Corelli (particularly Corelli's compositions for Cardinal Ottoboni). Marx's writings include articles for numerous music dictionaries (*MGG1*, *MGG2*, *NOHM*, *OG*, *Grove6*) and he is editor of the *Hamburger Jahrbuch für Musikwissenschaft* and the series Beiträge zur Geschichte der Kirchenmusik and Veröffentlichungen der Internationalen Händel-Akademie Karlsruhe; he is also general editor of the new collected edition of Corelli's works.

His wife, Magda Marx-Weber (née Weber, *b* Graz, 17 Nov 1941), is also a German musicologist. She took doctorate at Bonn University with a dissertation on Alexander Stadtfeld (1969) and worked there as an assistant lecturer (1968–72). Her work focusses on Italian and German church music of the 18th and 19th century.

HANS HEINRICH EGGEBRECHT/KONRAD KÜSTER

Marx, Joseph (i) (*b* Graz, 11 May 1882; *d* Graz, 3 Sept 1964). Austrian composer, teacher and critic. He first studied music with members of his family. After attending courses at Graz University in philosophy, art history and German studies, he took the doctorate in 1909. For a time there was a complete break between the young Marx and his family, who wanted him to read law. He began composing in earnest at the age of 26 and within four years (1908–12) wrote around 120 songs. His name became known in Vienna, where in 1914 he was offered the post of professor of theory at the music academy. In 1922 he succeeded Löwe as director of the academy, and he was rector (1924–7) when the institution was reorganized as a Hochschule für Musik. He then acted as adviser to the Turkish government in laying the foundations of a conservatory in Ankara (1932–3). From 1931 to 1938 he was music critic for the *Neues Wiener Journal* and after World War II worked in the same capacity for the *Wiener Zeitung*. A collection of his criticisms and essays was published as *Betrachtungen eines romantischen Realisten* (Vienna, 1947), and later he brought out the valuable *Weltsprache Musik* (Vienna, 1964), which deals with acoustics, tonality, aesthetics and musical philosophy. It was typical of his extreme conservatism that the index contained no mention of Schoenberg, Berg or Hindemith. His many pupils included Johann Nepomuk David.

Like his south Styrian compatriot Wolf, Marx was a born song composer, and it is on his songs that his international fame rests. Giving the text its true value, he embedded the vocal line in an impressionist kind of lyricism supported by a symphonic accompaniment (several of his songs are orchestral). He possessed the spontaneity and brevity of the vocal miniaturist, but lacked Wolf's wit, panache and élan. His style is characterized by Slavonic and Italian elements; his mother was of Italian origin, and he set those of Heyse's *Italienisches Liederbuch* which Wolf had omitted. He also set verses used by his coeval Berg (Rilke, Storm, Mombert) and produced songs from Giraud's *Pierrot lunaire*, which strongly contrast with Schoenberg's settings. The 1920s and early 30s saw him as an orchestral composer, and this period was followed by an almost exclusive concentration on chamber music. But the perfect style synthesis Marx achieved in his songs is missing from his late instrumental works, where the influences of Bruckner, Brahms and Reger are patent. He started his career in a promising and rewarding way but ended as a composer of purely local importance.

MOSCO CARNER/SIGRID WIESMANN

Marx, Joseph (ii) (*b* 9 Sept 1913; *d* New York, 21 Dec 1978). American oboist, researcher and publisher. As well as being active as a performer of contemporary music for oboe, Marx's reputation is based on his pioneering contributions to the revival of the Baroque oboe. After studying with the principal oboist of the Cincinnati SO, he established a lasting friendship with the composer Stefan Wolpe, with whom he studied composition. He played in the Jerusalem SO under Toscanini (1936–7), and during leave travelled to England for lessons with Leon Goossens. Illness prevented him from being drafted in World War II, enabling him to develop a career as an oboist in the USA, where he played with the Ballet Theatre of New York (1940–42), the Pittsburgh SO (1942–3), the Metropolitan Opera (1943–50), and as an adjunct member of the New York PO (1948–78). In 1946, in partnership with his wife, Marx founded the music publishing company McGinnis and Marx to provide editions of new and obscure works for wind instruments. For many years he played with the Columbia University Group for Contemporary Music and was closely associated with the creation of a number of new works involving oboe, including *Octandre* by Varèse, Elliott Carter's Sonata, Gunther Schuller's Oboe Sonata and a trio by Charles Wuorinen. In addition, he ran the Joseph Marx Baroque Ensemble with Bernard Krainis, while his seminal article 'The Tone of the Baroque Oboe', which arose from experiments with historical instruments, has been a touchstone for the revival of the 18th-century oboe.

GEOFFREY BURGESS

Marx, Karl (*b* Munich, 12 Nov 1897; *d* Stuttgart, 8 May 1985). German composer. He began serious music studies only after military service and imprisonment (1917–19), when he had some lessons with Orff. From 1920 to 1924 he studied with Beer-Wallbrunn, Hausegger and Schwickerath at the Munich Academy of Music, where he was appointed to teach vocal rehearsing (1924) and theory (1929); he also took over the direction of the Munich Bachverein chorus in 1928. During World War II he taught composition at the Staatliche Hochschule für Musikerziehung in Graz, where he was made professor in 1944. In 1946 he moved to the Staatliche Hochschule für Musik in Stuttgart to teach composition and theory; in 1955 he was made head of the school music department there. Awards made to him include the Munich Music Prize (1932).

Marx was above all a composer for the voice, particularly choral voices. His works display a strong feeling for poetic sense, formal solidity and linear polyphony, a polyphony having its origins in pre-Classical music. He did not stretch the technical capacities of the chorus, and he made some notable contributions to the youth music movement in Germany.

Marxism. An extensive body of thought in economics, political theory, sociology, philosophy, aesthetics and other disciplines deriving from the work of Karl Marx (1818–83). What chiefly distinguishes the Marxist approach is its concern with the material factors – the

economic 'forces and relations of production' – that have given rise to different forms of social existence in the passage from antiquity to feudalism and thence to the various stages of bourgeois-capitalist development. Such analysis usually goes along with a critique of the existing socio-economic order and a strong commitment to alternative (i.e. socialist or revolutionary) programmes of political change.

To the extent that they have differed, often very sharply, on these and related issues commentators have also given different accounts of the implications of Marxist thought for cultural criticism and theory. Neither Marx nor his collaborator Friedrich Engels left anything like a full-scale, detailed or systematic treatment of the topic. Still, there are sufficient indications in their work as to what such a treatment might have looked like and what would most likely have been its central areas of concern. In the case of musical aesthetics this problem is yet more acute since there are even fewer passages from which to start out in the process of critical reconstruction. Marx and Engels, in fact, show little interest in music, despite their impressive range of reference to sources in the literary and visual arts.

Nevertheless, there are several good reasons why music critics and theorists – not to mention composers and performers – have attempted to build on these somewhat shaky foundations. First, there is the fact that Marxist aesthetics grew out of a rich and complex tradition of German post-Kantian philosophical thought, in which music played an important and at times a central role. Of course, it was Marx's claim to have stood such thinking back on its materialist feet by insisting that developments in the cultural, intellectual or ideological sphere could be explained only through prior reference to economic forces and relations of production. Even so, he clearly allowed that the relationship between material 'base' and cultural 'superstructure' might take a more complex or 'mediated' form, as for instance when artists, philosophers or critical intellectuals opened the way for an advance in social consciousness which in turn brought about some decisive transformation in the economic sphere. Second, there is the rich legacy of Marxist-inspired theoretical work in literary and cultural criticism, work that very often has a pointed (albeit a fiercely contested) relevance to debates about the socio-historical dimension of musical forms, genres, meanings and values. Moreover (third) those debates have at times affected the course of musical history, as they did during the period of Soviet hegemony in central Eastern Europe when composers were subject to intense pressures of ideological recruitment, and as they have for Western composers (among them Bush, Henze, Nono, Stevens and Stevenson) with a strong allegiance to communist ideals of social and political justice.

Marx and Engels address these questions most explicitly in the preface to their 1857 *Contribution to a Critique of Political Economy*. Their chief aim here is to criticize those forms of classical economics that took for granted the existence of capitalist social relations and of bourgeois 'human nature' (acquisitive, self-seeking, private-individualist). Such ideas merely serve to conceal the underlying reality of a class-divided society, where the capitalists own the means of production and are thereby enabled to extract surplus value from those who have only their labour to sell. Thus the function of ideology, as Marx and Engels conceive it, has been to legitimize this grossly unjust state of affairs by representing it as a timeless truth of the human condition. Works of art may be seen as complicit in this process of ideological mystification to the extent that they offer a false – a partial or distorted – view of reality. That is to say, they obscure the various class-related conflicts of interest or 'objective' contradictions that characterize a given stage of economic development, as for instance by projecting an idealized (escapist) world view or by tacitly endorsing the current self-images of the age. However, there is also the possibility that works of art may both express those tensions and point towards a realm of human fulfilment beyond present conditions of social and political injustice. Such works would be progressive, not utopian, in the sense of preserving a critical awareness of the various factors that conspire to prevent social change. Nor would they always, or necessarily, represent the conscious intentions of the artist concerned. In some cases (Balzac is a favourite example) his overt professions of class-allegiance might well be thrown into doubt by various sorts of contrary or complicating evidence drawn from the work itself.

These debates have found numerous echoes in the history of Marxist musicology and music criticism. A central question is whether music offers any grounds for comparison with those aspects of the visual and literary arts that arguably offer a hold for the distinction between 'form' and 'content'. This issue became especially urgent during the period of imposed party-line orthodoxy in Soviet aesthetics, when the term 'formalist' was routinely applied to any work that exhibited an over-concern with matters of style or technique, and that was therefore open to the charge of Western bourgeois-decadent influence. Such was the doctrine of 'socialist realism' propagated – largely at Stalin's behest – through a series of now infamous decrees, notably those of 1936 and 1947, issued by the cultural commissar Zhdanov. This hardening of attitude went along with the entrenchment of Stalinist dictatorial rule and the adoption of a programme ('socialism in one country') which sought to exclude all elements of cosmopolitan thought and culture. It thus marked the end of that earlier period when Lenin had promoted his New Economic Policy, adopted chiefly with a view to normalizing trade and diplomatic relations with the West, and hence characterized by a much greater openness in the cultural, intellectual and artistic spheres. Among the chief victims of this policy-shift was Shostakovich, whose music – especially his Fourth Symphony and the opera *Lady Macbeth of the Mtsensk District* – had up to then shown distinct modernist leanings.

Shostakovich thus found himself caught between the two main currents of Marxist aesthetic theory whose conflicts of aim and priority were especially marked at this time. One was the Hegelian-Marxist conception, which was developed most fully by Lukács, that great works of art were those encompassing the widest range of human experience during periods of world-historical change, along with the clash between opposing ideologies or forms of residual and emergent class-consciousness. Thus the classic texts of bourgeois literary realism (e.g. the novels of Balzac or Sir Walter Scott) could be read as manifesting the socio-economic and political truths of their time despite and against their authors' overt allegiance to a 'reactionary' (backward-looking)

ideological perspective. What made this possible was the range and multiplicity of internal perspectives, along with the presence of a focal consciousness – that of the fictive protagonist – wherein they achieved both adequate expression and universal significance.

Against that view, some critics have rejected those elements of Hegelian thinking that are still to be found in the early Marx, and which are taken as evidence that he had not yet thought these issues through to a properly Marxist (dialectical-materialist) conclusion. On their account art is the more truthful, and politically progressive, for its refusal to offer the kind of comprehensive (or 'totalizing') world view that Lukács so valued in the tradition of high bourgeois realism. Thus the role of art is to sharpen our perception of the various conflicts that result from some particular stage in the process of socio-economic development. This can best be achieved through genres and art forms that incorporate certain refractory elements, as for instance by drawing attention to their own compositional or formal devices, or again, by holding out against the false ideal of a seamlessly unified ('organic') mode of artistic representation. Most influential here was Brecht, whose plays and theoretical writings argued the case for a deliberate 'alienation-effect', a dramatic device that would break the theatrical illusion and so require the audience to think critically about what was happening on stage, rather than taking refuge in that realm of vicarious cathartic experience which Aristotle viewed as the chief purpose of tragedy, but which Brecht denounced as a form of mass-induced ideological complicity.

It is not hard to see how these debates can be translated into musical (or music-historical) terms. Thus there exists a close analogy between Lukács's Hegelian conception of literary realism and the idea of certain musical genres, the symphony especially, as containing or projecting whole worlds of representative human experience. On the other hand, the Brechtian approach finds a parallel in varieties of (mostly Western) Marxist musicological thought that challenge both the continuing validity of those once hegemonic genres and the very idea that music should aspire to such universal or world-historical significance. To this way of thinking, what is truly dialectical is music's resistance to forms of premature ideological closure by its emphasis on conflicts or discrepancies of style that reflect the real conditions of life in an unjust, exploitative or class-divided society.

Such techniques might be adopted with conscious intent, as for instance by composers of a Marxist persuasion such as Weill and Eisler, both of whom worked closely with Brecht and carried his precepts into musical practice. In Eisler's case this activist commitment went along with a strongly marked modernist impulse that derived in part from his early apprenticeship to Schoenberg. That his music has suffered such undeserved neglect during the postwar period is no doubt a consequence of its forthright political stance, coupled with its use of deliberately incongruous expressive and formal resources. Similar techniques were deployed by some composers of the 1920s Soviet avant garde, Shostakovich among them, whose music very often implies an equation between formal or stylistic heterogeneity and the desire to subvert conventional, i.e. 'bourgeois', canons of disinterested judgment and musical taste. They assume a more overt (at times didactic) form in the music of such otherwise very different composers as Nono, Cardew and Rzewski, those who have sought to revolutionize social awareness by incorporating elements of agit-prop or direct social protest. However, the Brechtian-Marxist approach can also be applied to genres that would otherwise be thought of as belonging very squarely within the mainstream musical tradition. Thus a critic might point to certain moments of unresolved tension in a work, moments that witness the pressure of conflicting ideologies or a failure to achieve the kind of long-range structural integrity – the ultimate reconciliation of diverse elements – held out as an ideal by classical conceptions of form.

Again there is a parallel to be drawn between 'symptomatic' readings of this sort as applied to literary texts and developments within Marxist (or Marxist-influenced) musical criticism. Most influential here has been the work of Adorno. To call that work 'Marxist' is to beg some large and much debated questions. Certainly Adorno rejected any version of the argument that treated works of art as mere components of the ideological 'superstructure', along with philosophy, religion, ethics and everything bar the economic forces and relations of production. (But then it is doubtful that any Marxist thinker of consequence, least of all Marx himself, has ever espoused so crudely reductive a doctrine.) It was also Adorno's contention, as against Hegel, that dialectical thinking should not aspire to some ultimate truth or moment of transcendence beyond all the vexing antinomies of content and form, intuition and idea, particular and universal. Rather it should practise a vigilant critique of all such totalizing claims, a 'negative dialectic' constantly alert to the non-coincidence between thought and its object, or the impossibility of transcending that state under late-capitalist conditions of social existence.

These arguments were laid out programmatically in *Dialectic of Enlightenment* by Adorno and his Frankfurt School colleague Max Horkheimer. Here they offered a powerful, deeply pessimistic account of how 'enlightened' reason had betrayed its original *promesse de bonheur*, its self-proclaimed role as an emancipatory project that would bring about the transformation of society in accordance with ideals of truth, justice, autonomy and freedom. So far had this project miscarried, in their diagnosis, that it now stood exposed as a form of oppressive instrumental reason that had subjugated nature and culture alike to an order of exploitative technological mastery and ubiquitous mass-media control. Hence Adorno's constant injunction: that critical reason must always be deployed against itself in a negative dialectic that steadfastly refused to identify truth, in Hegelian fashion, with some existing (or soon to be achieved) standpoint of Absolute Knowledge.

Thus Adorno denounces any premature appeal to ideas of fulfilment, reconciliation or imaginative transcendence through art. Those ideas had once found authentic expression in works (e.g. the 'Eroica' Symphony and other compositions of Beethoven's middle period) conceived at a time of revolutionary hope when it was still possible to write such affirmative music without falling into bad faith, naivety or emotional self-indulgence. But already in Beethoven's late style – the subject of a classic essay by Adorno – this prospect had receded to the point where truth could only take the form of a negative, intensely critical relation to those same expressive resources. It is on this account also that he finds much to admire in the music and literature of European modernism, unlike

Lukács who notoriously viewed it as a terminal phase in the bourgeois-decadent flight from reality and reason. For Adorno, on the contrary, modernism is the last refuge of that critical spirit which refuses to make terms with a bad (inhuman and distorted) reality. Thus he mounts a strong case in defence of those works, especially the music of Schoenberg and Berg and the plays of Samuel Beckett, that hold out against the lure of a false utopia by expressing without compromise the harshness and alienation of contemporary life. Only in this way, Adorno maintains, can art and philosophy live up to their jointly inherited role as purveyors of a truth that has been distorted almost beyond recognition by the blandishments of mass-culture. It is an outlook epitomized in his withering attack upon Hegel's (positive-dialectical) claim that ultimately 'the rational is the real', as also by Adorno's famous question as to how lyric poetry could continue to be written after Auschwitz. Hence his practice of a rigorously self-critical style which pits its resources against all forms of delusory substitute gratification.

Other members or associates of the Frankfurt School – Ernst Bloch, Walter Benjamin and Herbert Marcuse among them – can perhaps best be seen, in contrast to Adorno, as espousing a somewhat more affirmative view of the prospects for social change. With Bloch this took the form of a sustained meditation on hope as the ultimate horizon of human existence, a transcendent – and potentially transformative – dimension that is implicit (though often concealed or obscured) in our every act and thought. Bloch's writings range widely over music, literature, philosophy, political theory and history. His aim is always to draw out those intimations of a future utopian state whose advent is prefigured – so he seeks to show – in even the most apparently debased or commodified forms of cultural production. These ideas placed considerable strain on his relationship with Adorno, though the two came to achieve some degree of reconciliation as each acknowledged the other's work as in some sense a necessary counterpart to his own. In the case of Walter Benjamin, a Brecht-inspired Marxist commitment to dialectics and historical materialism went along with a marked (and some have felt a strongly countervailing) strain of Jewish mystical or messianic thought. This produced a tensile configuration of images, metaphors and analogies in texts which often contain passages of extraordinary cryptic power.

Marcuse was, by comparison, an exoteric thinker whose ideas had great influence on the New Left movement and student revolts of the late 1960s. The sources of his thinking were mainly in psychoanalysis (as interpreted by his Frankfurt colleague, Erich Fromm) and in those writings of the early, Hegelian Marx that envisaged an end to the alienating forces of capitalist social order and a consequent liberation of our human powers of expressive and productive self-fulfilment. Unlike Adorno, he also took heart from that line of affirmative aesthetic speculation – descending chiefly from Kant by way of Schiller – which treated art as the promise of a harmony between reason and imagination beyond their present (fractured or discordant) condition. Various factors have conspired against serious assessment of Marcuse's work, but his thinking has exerted considerable influence, not least because it pointed an alternative way forward for composers and cultural theorists averse to what they saw as the self-denying rigours of Adorno's negative-dialectical approach. Hence the emergent polarization of attitudes between those in the broadly Darmstadt camp who equated progress with formal complexity (e.g. through the extension of serial techniques to every compositional parameter) and those who reacted against that idea in the name of a 'new tonality' or a return to more intuitive (less stringent) criteria of musical worth. It is not hard to guess what Adorno might have said about recent minimalist or neo-Romantic trends given his analysis of 'regressive listening', the culture-industry and the fetishized character of musical perception in an age of commodity capitalism.

Musicology was not immune to the kinds of 'free-world' or 'liberal' triumphalist rhetoric that greeted the end of communist rule in central Eastern Europe. Very often such claims went along with the idea that nothing distinguishes the heritage of Marxist political, social and philosophic thought from communism as it existed and developed in the Soviet Union and satellite states. In which case, so it is argued, Marxism now stands exposed as an utterly bankrupt and discredited doctrine whose various more specialized manifestations – in economics, sociology, historiography, ethics or literary and music criticism – must likewise be viewed as mere relics of a false and pernicious political creed. Against that reductive simplification one may point to the depth, range and diversity of Marxist criticism and the continuing relevance of such classic debates as those between Lukács and Brecht or Adorno and Bloch. Fortunately this lesson has not been lost upon a younger generation of musicologists and theorists. Nor has it failed to leave a significant mark upon disciplines such as musical anthropology and the study of popular musics in their broader socio-political context. For here also the insights of Marxist criticism are such as to provide a strong counter-argument to other, less historically (and ethically) informed varieties of cultural theory.

CHRISTOPHER NORRIS

Marxsen, Eduard (*b* Nienstädten, nr Altona, 23 July 1806; *d* Altona, 18 Nov 1887). German pianist, teacher and composer. He studied music with his father, organist in Altona, and with Johann Heinrich Clasing in Hamburg. After returning home to assist his father (until his death in 1830), he went to Vienna to study counterpoint with Ignaz Seyfried and the piano with Carl Maria von Bocklet. He lived in Hamburg as a much sought-after teacher and was awarded the title of royal music director in 1875. His compositions include the operetta *Das Forsthaus*, symphonies and overtures, male choruses on patriotic texts, lieder and chamber music with piano. Among his numerous piano compositions is a *Fantasie 'alla moda' über den Kaffee*, its theme based on the notes C–A–F–F–E–E, which appeared in the same year as Schumann's 'Abegg' Variations op.1 (1831).

It is as Brahms's teacher that Marxsen is now remembered. His pupil Otto Cossel, who had given Brahms his first musical instruction, declared in 1844 that he 'could take his pupil no further'. At first Marxsen agreed to teach the boy only the piano, but in the course of the lessons he discovered Brahms's talent for composition and instructed him in strict counterpoint and the works of Bach and Beethoven. Brahms acknowledged his master's instruction with the dedication of the B♭ Piano Concerto, but found in him an uninspiring teacher and claimed privately to have learnt nothing from him; still, he must have profited greatly from knowing Marxsen, who placed his library of scores and theoretical works at his disposal and who was indirectly responsible for his pupil's acquaintance with the Schumanns.

Mascagni, Pietro (*b* Livorno, 7 Dec 1863; *d* Rome, 2 Aug 1945). Italian composer and conductor.

1. LIFE. His precocious musical talent was identified by Alfredo Soffredini, his first teacher, who encouraged him in a musical career against the wishes of Mascagni's father. His first compositions, a four-part mass and the cantata *In filanda* (1881), from which he extracted the dramatic idyll *Pinotta* in 1883, won him financial support from Count Florestano de Larderel and enabled him to go to the Milan Conservatory, where he studied with Ponchielli and Saladino, and shared a room with Puccini. However, he left in April 1885, finding work at once with the company of Dario Acconci, who had already staged his operetta *Il re a Napoli* that year. He toured Italy as a conductor with various companies until he arrived at Cerignola, in Apulia, for Carnival 1886, where he settled as teacher to the local philharmonic society, partly because his wife, Lina, was expecting their first child. In 1888 he abandoned the first version of *Guglielmo Ratcliff*, on which he had been working since 1882, in order to enter the Sonzogno competition. *Cavalleria rusticana* greatly impressed the jury, which included Giovanni Sgambati and Amintore Galli, and he was awarded the prize over 72 rivals, among them Bossi and Giordano. The opera was enormously successful from its first performance at the Costanzi in Rome in 1890. From then on Mascagni spent the rest of his long career treating a wide variety of subjects. His next opera, *L'amico Fritz* (1891), consolidated his success with Roman audiences, and revealed his lyrical vein. This fluent rustic comedy was successful particularly because melodic vitality – the outstanding merit of *Cavalleria* – was combined with a more elegant harmonic idiom.

Concerned to make his music widely known, Mascagni soon acquired a reputation as a conductor outside Italy. In 1892 he had a great personal success in Vienna and

Paris and in the following year in London, where he conducted his operas in Covent Garden's Italian season. These included *I Rantzau*, a bitter story of love between cousins but with a happy ending, which had been well received in Florence in 1892. The critics hailed it as 'a real music drama', and the Germans particularly praised its orchestration. Meanwhile Mascagni had succeeded in finishing *Ratcliff*, and it was performed at La Scala in 1895 with moderate success. To satisfy Sonzogno Mascagni also had to write *Silvano* in a great hurry for the same season, and this was savaged by audience and critics alike.

In 1895 Mascagni was appointed director of the Liceo Musicale of Pesaro, where his one-act opera *Zanetto* (1896) was performed, but his commitments to the operatic seasons prevented him from fulfilling his academic duties adequately, and he had to resign after he went on a long tour of the USA and Canada in 1902–3. *Iris*, which had its première in Rome (1898) with considerable success, inaugurated the vogue for *fin-de-siècle* exotic opera. At the height of his popularity, Mascagni produced a resounding failure in *Le maschere* (1901), which opened simultaneously at seven Italian theatres and was a fiasco at all of them except in Rome, where it was saved by the composer's presence as conductor. Its failure was due largely to the impossibility of reconciling Illica's wish to revive the *commedia dell'arte* with Mascagni's reluctance – and unsuitability – to do so.

He was more successful at Monte Carlo in 1905 with *Amica*, to a French libretto by the publisher Paul de Choudens, which signalled a return to *verismo* and a renewed attention to orchestral models. Real success returned with *Isabeau* (1911), to a libretto by Illica, written as a South American answer to Puccini's recent début at the New York Metropolitan with *La fanciulla del West*. Enthusiastically welcomed by the Italian community in Buenos Aires, its triumph was repeated in Milan and Venice, where it received its European première. But this voluntary return to a romantic atmosphere made it evident that Mascagni's inventiveness was exhausted and that he was acquiring a mannered style which could be reinvigorated only by his constantly seeking new subjects for treatment. His momentous collaboration with D'Annunzio resulted in *Parisina* (1913), a 'cultured' opera which the critics unhesitatingly condemned. The following year Mascagni continued to experiment by writing for the cinema – a *Rapsodia satanica* for the film of the same name by Nino Oxilia (1915).

With *Lodoletta*, by Ouida (1917), he returned to the sentimental lyrical genre in close rivalry with Puccini's *La rondine*, and with *Sì* he made another foray into the world of operetta. These operas confirmed Mascagni's propensity for a balance of lyricism and drama, but feeling he had won his way back into public favour he returned to *verismo* with *Il piccolo Marat* (1921). Probably realizing at this juncture that his career was leading him inexorably to regress, he shut himself away, in spite of the work's success, in almost total seclusion; he was interrupted only by a revival of his youthful *Pinotta* in 1932, the 'symphonic vision' *Guardando la Santa Teresa del Bernini* and finally *Nerone* (1935), no more than a rhetorical political allegory, though musically subdued and backward-looking. Mascagni hoped that this last work, refused by every publisher, represented a new direction in which

Pietro Mascagni conducting Verdi's Requiem in Prague: portrait by 'Dr Desiderius', charcoal and watercolour, 1927

he created a new relationship with reality through the metaphor of history. His fame was briefly revived, largely through the Fascist regime which was responsible for the work's elaborate première at La Scala in which Aureliano Pertile shone in the leading role. It was Mascagni's last battle against the modernism of his times, and the regime was probably grateful to him for it. Celebrating the 50th anniversary of *Cavalleria*, the priest and musician Licinio Refice defined him as 'the musical lymph of pure Italianity; flame of the intact Italian tradition of melodrama; a vigilant sword to protect the artistic strength of the Italian race'. He died in 1945, in a Rome now free from totalitarianism and full of the ghosts of his triumphs.

2. WORKS. Mascagni's one-act masterpiece, *Cavalleria rusticana*, was a resounding success at the première in Rome (1890) and within a few months had been rapturously received in all the principal cities of Europe and America. For over a century it has enjoyed a place in the repertory of leading singers and conductors, and today it is usually paired with Leoncavallo's *Pagliacci*, a work of similar concision from which it has become virtually inseparable. It has often been said that Giovanni Verga's *Cavalleria*, the play on which the opera is based, inaugurated the *verismo* period in Italian theatre. Mascagni stressed his adherence to the play as his source and rejected the idea of a close affinity between his opera and Bizet's *Carmen*, but *Carmen* was in reality a decisive model for the dramatic composition of *Cavalleria*. All the tragic elements of the story are concentrated in a musical framework calculated to convey maximum immediacy. In this Mascagni adhered to the traditional plan of 19th-century opera, returning to the closed numbers already

abandoned by Verdi. But he treated his material with an originality evident from the opening prelude: although this appears at first to be typical in its exposition of the principal melodies of the work, the way in which they are later recalled re-evokes its entire structure in the listener's memory. Mascagni created an opera realistically dominated by sentiment by using formal means more effective in their subtlety than openly veristic. *Cavalleria* achieved a perfect balance between all its components; even such possible defects as the conventional orchestration and academic harmony have their place in the dramatic characterization, combined with felicitous melodic invention and an original handling of standard situations which pleased both traditional Italian and nostalgic foreign audiences. Mascagni's masterpiece hastened the end of an epoch by exhausting its possibilities; it was soon evident that this national path led nowhere, and the spirit of his unrepeatable masterpiece haunted Mascagni for the rest of his life.

In his second opera, *L'amico Fritz*, Mascagni seemed to reject the urgent *verismo* manner. This was due partly to the subject, a sentimental comedy, and partly to his wish to counter accusations that his technique was that of an 'amateur'. The slight plot, based on the novel by Erckmann and Chatrian, did not inspire him dramatically or (apart from the 'Cherry Duet') melodically. There are notable passages for soprano and tenor, and some interesting orchestration, but the opera as a whole lacks dramatic continuity.

Although Mascagni had composed *Guglielmo Ratcliff* before *Cavalleria* it was not performed until 1895. The libretto was adapted from a translation of Heinrich Heine's novel *William Ratcliff*; this is accordingly one of the earliest Italian examples of the *Literaturoper* genre. The opera offers several inspired and original melodies, but in a musical context that is often exaggerated and supported by an over-complicated dramatic structure. It was rather dated, using mannerisms from Verdi and melodies reminiscent of Ponchielli which jarred after the novelties of *Manon Lescaut* and *Falstaff*.

The Japanese setting of *Iris*, first performed more than five years before *Madama Butterfly*, indicates another shift in Mascagni's varied stylistic career as an opera composer. Mascagni said of *Iris* that he did not want the music to be only 'arid comment' on the drama but that it should 'develop it with its own inexorable force'. This declaration fails to conceal the true problem with the subject, the thinness of the action. The consequence is the introduction of an excessive number of character-pieces, among which is the grandiloquent 'Hymn to the Sun', a sort of orchestral-choral prologue with dances, arias and serenades. In the search for realistic orchestral sounds Mascagni made use of the *shamisen*, a long-necked Japanese lute with a piercing tone, and enriched the percussion with several Japanese instruments. The dominant features of the writing are the dynamic nuances, lyrical vocal texture and harmonic blends of unusual delicacy and originality, although Mascagni could not match what Puccini's greater skill and shrewdness were later to accomplish.

Despite Mascagni's reported return to the romanticism of earlier Italian opera, in the crucial moments of *Isabeau*, his version of the medieval English legend of Lady Godiva, he was not deterred from using a strenuous vocal line and heightened dynamics. Mascagni tried to concentrate interest on the orchestra, but *Isabeau's* survival for 15 years was thanks to tenors such as Hipolito Lazaro and Bernardo De Muro. Despite the effectiveness of such passages as the flowing Intermezzo which accompanies Isabeau's ride, characterized by an incessant use of bells, the opera depends too much on 19th-century devices whose forced rhetoric is often evident; similarly, the attempts at musical sophistication in the work fail to conceal its essential conservatism.

Offered first to Puccini and then to Franchetti, D'Annunzio's *Parisina* was intended as the successor to *Francesca da Rimini* in a trilogy on the Malatesta family, and it became Mascagni's second *Literaturoper*. Mascagni's music follows closely the precise 'musical' directions given by D'Annunzio, creating more than usually complex structures without entirely mastering them. The effort of making himself equal to D'Annunzio's decadent aestheticism results in an impressive work, especially the second act; but his use of musical declamation, though marking his point of closest contact with European theatre, often becomes monotonous, while in the most highly charged moments his *verismo* and generally agitated tone still predominate.

With *Il piccolo Marat* Mascagni turned his attention to the French Revolution, perhaps in the hope of rediscovering the roots of his own poetics, with the example of Giordano's *Andrea Chénier* (written 25 years earlier) before him. The librettist Giovacchino Forzano was one of the foremost literary figures in Mussolini's circle, and he skilfully devised a functional plot with guaranteed dramatic appeal. The chief weakness of *Marat* is the superficiality of the sharp tension between orchestra and voice that characterizes the music. The happy ending has a fairy tale air, whereas the premises of the drama call for a very different conclusion. The condemnation of the French Revolution as a metaphor for the violent and blind rebellion of the masses, as in *Andrea Chénier*, is in line with the ideology of the time and, together with the numerous opportunities the work offers for well-equipped singers to shine, explains the opera's ephemeral success.

MICHELE GIRARDI

Mascardi. Italian family of music printers. They were active at Rome from about 1620 to at least 1719. The biography of the family is difficult to unravel, partly because many editions carry the impress 'Il Mascardi' or merely 'Mascardi'. At least three members were involved: Giacomo Mascardi, who ceased printing in 1640; Vitale Mascardi (*b c*1594; *d* 10 April 1666), who succeeded him and printed until 1666; and Giovanni Mascardi, who appears to have printed between 1667 and 1675, after which most editions carry the inscription 'successor to the Mascardi', or 'Il Mascardi'. Vitale Mascardi seems to have been the first to print music, beginning in 1650 with editions by leading Roman composers, Foggia, Graziani and Sabbatini among them. He printed much music between 1650 and 1654, including a number of volumes of villanellas and several of music by Valentini. A number of his books were edited by Floridus de Silvestris. Giovanni printed little music (although he produced several volumes devoted to Graziani), and his successors averaged no more than one or two books of music a year. At this time the firm had a successful collaboration with the promoter G.B. Caifabri: he had employed a number of printers, but from 1673 published all his musical ventures (including some anthologies edited by himself) from the Mascardi printing shop. This represented one of the more flourishing periods of the firm. There were several other periods when little appears to have been published. As would be expected of a Roman printer, the bulk of the repertory is sacred music, supported by volumes of instrumental music. A volume of Palestrina and G.F. Anerio was published in 1689; several volumes of Corelli, the *Sacri concerti musicali* of Carissimi (1675) and sonatas by Benedetto Leoni (1652) are among the most distinguished titles.

STANLEY BOORMAN

Maschek. *See* MAŠEK family.

Maschera, Florentio [Florenzo] (*b* ?Brescia, *c*1540; *d* Brescia, *c*1584). Italian composer, organist and string player. He first studied with his father, Bartolomeo, who was teacher of Latin grammar to the choirboys at Brescia Cathedral, and then became an organ pupil of Claudio Merulo. After serving as organist at Santo Spirito, Venice, he succeeded Merulo as organist of Brescia Cathedral on 22 August 1557. In 1562 he received a salary of between 180 and 210 lire, which was increased in 1567 to 240

lire. He was succeeded at Brescia in 1584 by Costanzo Antegnati, according to whom he inherited from Merulo 'la dolcezza del suonare'. He was also noted by Cozzando (in Valentini) and by Walther as an excellent performer on the viola da braccio and violin and is known to have played frequently in many cities of northern Italy.

His 23 surviving compositions are all four-part instrumental canzonas. His *Libro primo de canzoni da sonare a quattro voci* (Brescia, ?2/1584/*R*; ed. in *IIM*, ix, 1995, and in McKee) containing 21 of these pieces appeared in at least six editions between about 1582 and 1621; the earliest extant print, dated 1584, is a reprint; its dedication and a manuscript keyboard transcription (in *B-Bc*) are dated 1582 which may be the date of the first edition. Two further canzonas were published in a collection of 1608 (RISM 1608[24]); arrangements of some of the pieces appeared in collections of organ pieces (1607[29], 1617[24] and *D-Bsb* 40115 f.24*v*) and as intabulations for the lute (1593[11]). Maschera's canzonas are sectional and fairly repetitive. All the pieces use lively rhythms and are highly contrapuntal; dialogues between two pairs of voices are a common feature of the works, and there is very little homophonic writing. After Vicentino's ensemble canzonas of 1572 Maschera's pieces appear to be the first original instrumental canzonas as distinct from pieces designated as suitable for either vocal or instrumental performance. One manuscript copy of the 1590 edition of the *Libro primo* (in *US-Wc*) specifies performance on the organ, but the pieces are equally suitable for viol ensembles and for the lute. Their popularity, as indicated by their commercial success, was undoubtedly due to their charm, ease of execution and suitability for many varied ensembles.

W.E. McKEE

Mascherata [mascarata, mascherada] (It.: 'masked', 'masquerade'). (1) A type of Renaissance entertainment, particularly popular in Florence, involving pantomimed action based on allegory or myth and musical performance (instrumental and vocal) often given from parade and carnival floats. Although the term was sometimes used for a work properly called INTERMEDIO, mascheratas generally had little dramatic content, thus resembling the masque.

(2) A type of VILLANELLA probably intended to be sung and played during Carnival (e.g. Giovanni Croce's *Mascarate piacevoli et ridicolose per il carnevale*, 1590), or by street players. Michael Praetorius (*Syntagma musicum*, iii, 1618, p.26) said that they were 'performed in mummer's clothes and in masks'. They often have some element of caricature of a person or type, such as a foreigner. The greatest master of the genre was Lassus.

DENIS ARNOLD

Mascheroni, Angelo. Italian conductor and composer, brother of EDOARDO MASCHERONI.

Mascheroni, Edoardo (*b* Milan, 4 Sept 1859; *d* Ghirla, 4 March 1941). Italian conductor and composer. As a young man he helped to found the periodical *La vita nuova* which brought him into contact with musical figures like Boito and Faccio, and he studied privately with Boucheron. In 1880 he made his début at Brescia with *Macbeth* and *Un ballo in maschera*, and after further conducting in the Italian provinces he worked in Rome from 1884, mainly at the Teatro Apollo, becoming president of the Società Musicale Romana. He gave the Italian première of *Fidelio* at the Apollo in 1886, and the first performances in Rome of *Tannhäuser* and *Der fliegende Holländer* in successive seasons (1886–7) and of *Manon Lescaut* (1893), and *La bohème* (1896). In 1891 and 1893 he also introduced the two Wagner operas at La Scala, where, with the support of Verdi and Boito, he was engaged as chief conductor (1891–4). There he conducted the premières of Catalani's *La Wally* (1892) and, at Verdi's request, *Falstaff* (1893). Verdi called him the 'third author' of *Falstaff* and entrusted him with productions elsewhere in Italy and in Austria and Germany. Mascheroni also toured abroad to Spain and South America, and in 1898 inaugurated the Teatro Adriano, Rome. Between 1887 and 1922 he conducted several other premières of operas by Catalani (the revised *Loreley*, 1890), Bustini, Donaudy, Falchi, Alberto Franchetti and Vallini. Although he was generally held in high esteem, and participated in the 1913 Verdi centenary celebrations at Busseto, he did not receive the support of younger composers such as Puccini and Mascagni. Mascheroni retired about 1925, having composed two requiems, chamber music and two operas, both with librettos by Luigi Illica: *Lorenza*, staged at the Teatro Costanzi, Rome, on 13 April 1901, and revised for a performance in Brescia on 3 September 1901, and *La Perugina*, favourably received at the S Carlo, Naples, on 24 April 1909.

Mascheroni's brother Angelo Mascheroni (1855–1905) was a conductor, active in Paris and London, who worked with Patti and who composed a number of songs, including a popular salon piece *For all Eternity*.

CLAUDIO CASINI

Mascitti, Michele [Michel, Miquel] (*b* Chieti, nr Naples, 1663 or 1664; *d* Paris, 24 April 1760). Italian composer and violinist. He was taught by his uncle, Pietro Marchitelli, who was attached to the royal chapel of Naples and to the church of S Bartolomeo as a violinist. Marchitelli procured for his young nephew the post of a 'supernumerary violinist' in the royal chapel with the prospect of a permanency later, but Mascitti preferred to seek his

fortune abroad. Having travelled through Italy, Germany and the Netherlands, he settled in Paris in 1704. He soon attracted the attention of the Duke of Orléans and through him gained the opportunity to play before the king, the dauphin and the whole court. Mascitti became a figurehead of Italian instrumental music in France and was regarded as the peer of Corelli and Albinoni. Possessing the advantage over his fellow-nationals of residence in Paris, where all nine of his published collections were first issued between 1704 and 1738, Mascitti enjoyed enormous popularity with the French public, to whom he was affectionately known by his first name Michele in various gallicized forms. In the Low Countries and England, where his music was extensively reprinted, his reputation was less exceptional, though still considerable. He entered the service of the Duke of Orléans and in later years enjoyed the patronage of the influential Crozat family, lodging at the house of Pierre Crozat. In 1739 Mascitti became a French citizen by naturalization. He married in the following year. His last 20 years seem to have been spent in retirement.

All of Mascitti's 116 printed works are for strings; 100 are solo sonatas (overwhelmingly of the *da camera* variety, and showing a judicious admixture of French elements); 12 are trio sonatas; and four (op.7 nos.9–12) are concertos of rather Corellian design, which on their appearance in 1727 became the first string concertos by a composer resident in France to be published there. Mascitti's published works offer a competent reproduction of Corelli's style lightly retouched to conform to French taste; however, it is likely that the music he wrote in Paris for special occasions (e.g. the chaconne in the third act of the intermezzo *Baïocco*) would, if recovered, show that he could use a more truly French style when required.

MICHAEL TALBOT

Mašek [Maschek, Machek]. Czech family of musicians.

(1) (Václav) Vincenc Mašek (*b* Zvíkovec, nr Rokycany, 5 April 1755; *d* Prague, 15 Nov 1831). Composer and conductor, the most celebrated member of the family. He came from a family of village cantors and received his early musical training from his father, Tomáš Mašek. He then went to Prague, where he studied the piano with F.X. Dušek and composition with Josef Seger. He entered the service of Count Vrtba and travelled widely, giving concerts in Berlin, Hamburg, Leipzig and Dresden. He settled in Prague in 1791 and became a well-known piano teacher. He was also chorus master of the German Opera and from 1794 music director at the church of St Mikuláš in the Old Town of Prague, and in the latter capacity he organized memorial celebrations for Mozart, Dušek, Paul Wranitzky and other notable musicians. In 1802 he opened a music store where he sold copies and prints of his and other composers' music.

A prolific composer in the Classical style, Mašek wrote a great number of dances and variation sets for the piano, the most famous being the variations on a pas de deux from *Alceste* (1802). Some of his compositions are unusual in their instrumentation, for instance the Concertino for Piano and Wind (1803), a work that shows Mašek's affinity with the Czech village music tradition which he brought to the attention of Prague's fashionable society. His best-known works, the partitas, serenades and nocturnes for wind ensemble, also belong to this tradition; they often contrast two choirs of wind instruments and generally have a structure of four movements, at least one of which is in sonata form. He wrote extensively for the glass harmonica, and it seems he contributed to the popularity and development of this instrument. Mašek also excelled in the Christmas pastorella, a typically Czech genre of sacred music.

WORKS

Stage: Der Ostindienfahrer, op; Der Spiegelritter, op, Prague, Nostitzsches Nationaltheater, 9 March 1784; ballet music

Vocal: 30 masses, *c*40 grads, *c*70 offs, motets, litanies, cants., pastorellas; children's songs; solo songs, some ed. M. Poštolka and O. Pulkert (Prague, 1962)

Orch and chbr: Concertino, pf 4 hands, 2 fl, 2 ob, 2 hn, 2 bn (Leipzig, 1803); pf concs.; syms.; over 15 str qts; pf trios; duos and sonatas, vn, pf; numerous partitas, nocturnes and serenades, wind ens, 1 ed. in MAB, xxxv (1952)

Pf: sonatas; numerous dances; variation sets, incl. 10 Variationen über ein Pas de deux aus Alceste (Prague, 1802); other works

Works for 1 or 2 glass harmonicas

(2) Pavel Lambert Mašek (*b* Zvíkovec, 14 Sept 1761; *d* Vienna, 22 Nov 1826). Composer and teacher, brother of (1) Vincenc Mašek. He learnt music from his father and began composing at an early age. He taught music from the age of 15 and moved to Vienna in 1792 as a piano and composition teacher. His works, published extensively in Vienna and Bonn, include two operas, *Waldegraf der Wanderer* and *Der Riesenkampf*, six symphonies, six string quartets, cantatas, songs and much piano music.

(3) Kašpar Mašek (*b* Prague, 6 Jan 1794; *d* Ljubljana, 13 May 1873). Composer, son of (1) Vincenc Mašek. After studying in Prague he made a career abroad as a theatre composer in Graz and later in Slovenia. Several of his compositions, including the Slovenian Overture (*c*1870), echo Slovenian patriotism. His son Kamilio (*b* Ljubljana, 10 July 1831; *d* Steinz [now Stainz], nr Graz, 29 June 1859), a composer, is best remembered for his song collection *Venec slovenskih pesem Dr. Fr. Preširn-a* (Ljubljana, 1859).

(4) Albín Mašek (*b* Prague, 10 Oct 1804; *d* Prague, 24 March 1878). Choirmaster, organist and composer, son of (1) Vincenc Mašek. He studied music with his father and later at the Prague Conservatory, where he specialized in the cello. He taught the piano, the organ and singing but made his career chiefly as organist and choirmaster of a number of leading churches in Prague. His output consists almost entirely of sacred choral music,

ranging in scale from about ten masses and over 45 offertories to a number of simple hymns.

ADRIENNE SIMPSON/JITRENKA PEŠKOVÁ

Masekela, Hugh (Ramopolo) (*b* Witbank, South Africa, 4 April 1939). Jazz trumpeter, flugelhorn player, singer, composer and spokesperson for the anti-apartheid movement. His style is characterized by an extensive use of melodies exploiting the upper registers of his instruments, 'half-valve' effects and repeated figures; his music brings together elements of jazz, rhythm and blues, South African jive, Afropop and the township styles of the late 20th century.

At the age of 14 he played in the Father Huddleston Jazz Band, and in 1959 he co-founded the Jazz Epistles with the trombonist Jonas Gwangwa, the clarinettist and saxophonist Kippie Moeketsi and the pianist Dollar Brand. Masekela first travelled overseas in a touring production of the musical *King Kong*; he emigrated to the USA in 1961, where he remained in exile for three decades. During the 1960s he played a form of African cool jazz and his career flourished; *Grazing in the Grass* topped the charts in 1968. In the 1970s Masekela developed a more African-centred sound, recording with Fela Anikulapo-Kuti, Dudu Pukwana, Makaya Ntshoko, Hedzollah Zoundz and Herb Alpert. He recorded with South African musicians in Botswana in 1982 and performed in Zimbabwe during Paul Simon's *Graceland* tour in 1987. His second major hit *Bring Him Back Home* (1987) became the anthem of Nelson Mandela's international tour in 1992. In 1992 Masekela returned to Johannesburg, where he continued his musical career; he has acted as a mentor to young musicians, opened a jazz club and supported the development of music education in South Africa.

LOUISE MEINTJES

Masenelli, Paolo. *See* MASNELLI, PAOLO.

Masetti, Enzo (*b* Bologna, 19 Aug 1893; *d* Rome, 11 Feb 1961). Italian composer. He studied under Franco Alfano and graduated in 1920. He was a remarkable and untypical figure among those composers who specialized in film music, for the critical and analytical attention he paid to the work of others, as well as for his predisposition to theoretical and teaching work; this led him to lecture in film music at the Conservatorio di Musica S Cecilia and at the Centro Sperimentale di Cinematografia in Rome from 1942 to 1960. On the creative side, after a prolific early period devoted to opera and concert pieces, Masetti dedicated himself to film with a below-average output for the period (around 60 films in 25 years, including some documentaries), but achieving, in general, superior results. His first film score was for Goffredo Alessandrini's *Cavalleria*in 1936, followed by some of the most representative films of the period: *La fossa degli angeli* (1937), *Addio giovinezza!* (1940), *Piccolo mondo antico* (1941) and *Fari nella nebbia* (1941). His dramatic vein, almost always subject to taut control of expressive means, also appeared in the postwar years in his work with Duilio Coletti, Mario Camerini, Luigi Zampa and Alessandro Blasetti, but it is likely that cinema did not exploit his talent to the full. He won the first Nastro d'argento in 1946.

SERGIO MICELI

Ma Shizeng (*b* Shunde, Guangdong province, 1900; *d* Beijing, 21 April 1964). Chinese actor, a specialist in *chou* (clown roles). Ma came from an educated family and spent much of his early career abroad, including periods in Singapore, Malaya, Vietnam, California and the Philippines, acting and making films. Apart from the last four years of World War II, he lived from 1933 until 1955 in Hong Kong, his main troupe being the Taiping. In 1955 he returned to Guangdong, where he headed the Guangdong Cantonese Opera Troupe and joined the Guangdong Provincial People's Congress. The last of his three marriages was to the famous Cantonese opera actress Hongxiannü, his partner for ten years in leading the Taiping troupe.

Ma was versatile and innovative as an actor and musician and was the foremost exponent of *yueju* (Cantonese opera). After returning from America he introduced many Western instruments into the Taiping troupe including the saxophone, which remained part of the orchestra.

COLIN MACKERRAS

Mashroqita (Heb.). Instrument mentioned in *Daniel*. *See* BIBLICAL INSTRUMENTS, §3(xiii).

Ma Shuilong [Ma Shui-Long] (*b* Jilong, 17 July 1939). Taiwanese composer and music educator. He studied

composition with Xiao Erhua at the National Institute of the Arts (1959–64). As a member of the Sunflower Group (1967–71) he was active in the early promotion of contemporary music in Taiwan. He took up graduate studies in composition with Oskar Sigmund at the Regensburg Kirchenmusikschule (1972–5). In 1981 Ma became head of the music department at the newly founded National Academy of the Arts in Taibei, creating there a much-emulated programme which offers students a grounding both in Western and East Asian music.

The combination of traditional Asian idioms and materials with Western techniques is the most distinctive trademark of his creative output, which has developed from a more conservative idiom to a distinctly experimental and contemporary one. In *Yugang sumiao* (1969) he translates the techniques of several Chinese instruments for the piano. The striking use of pizzicato, especially in the first movement of his String Quartet no.2 (1982–3), echoes the plucked instruments in China's traditional ensembles. *Pan* (1976) for Chinese ensemble powerfully synthesizes traditional sonorities and modern musical techniques. In *Dou E Yuan* (1980) and *Wo shi* (1985) he incorporates Chinese vocal techniques into atonal sound environments.

BARBARA MITTLER

Ma Sicong [Ma Szu-Ts'ung, Ma Sitson] (*b* Haifeng, Guangdong province, 7 May 1912; *d* Philadelphia, 20 May 1987). Chinese composer. He studied the violin at conservatories in Nancy and possibly Paris before returning to China in 1929, briefly travelling back to France in 1930 for composition lessons. After a series of teaching and administrative appointments at Chinese conservatories, he was appointed head of the Central Conservatory (1950). Persecuted at the outbreak of the Cultural Revolution (1966), he fled to the USA, where he remained until his death. Though initially better known as a violinist than a composer, Ma wrote patriotic songs for use during the 1930s and 40s. Most of his large-scale pieces date from the central phase of his career in China. He was particularly active as an organizer in later years, working to develop the infrastructure for the development of Western-style composition and performance in China. In exile in America, he resumed his earlier concentration on composition.

Ma's larger-scale music reflects his cosmopolitan training and interests. The opening of his Symphony no.2, for instance, combines modal melodic work with a rhythmic texture reminiscent of that employed by Saint-Saëns in the opening movement of his Symphony no.3. Ma's harmonic language varies from moments of polytonality, superimposed 4th chords and pentatonic note sets to conventional tonal writing. Shorter works, for instance many of his songs and recital pieces for the violin, are simpler in design.

JONATHAN P.J. STOCK

Masii, Laurentius. *See* LORENZO DA FIRENZE.

Masini, Angelo (*b* Terra del Sole, Forlì, 28 Nov 1844; *d* Forlì, 26 Sept 1926). Italian tenor. He studied with Gilda Minguzzi and made his début in 1867 at Finale Emilia as Pollione (*Norma*), a role he repeated at Mantua in 1869. The following year he appeared at La Fenice, Venice, in Donizetti's *Lucrezia Borgia* and Pacini's *Saffo*. In 1871 he sang *Faust* in Rome and Donizetti's *Dom Sebastien* at Bologna. He was heard as Radamès (*Aida*) at Florence (1874) and Don Alvaro (*La forza del destino*) at the Teatro Apollo, Rome (1875). In 1875 he sang the tenor part in Verdi's Requiem on a tour of Paris (Opéra-Comique), London (Albert Hall) and Vienna (Hofoper), conducted by the composer. He spent the winter of 1875–6 in Cairo, singing in Donizetti's *Maria di Rohan* and *La favorite*, *I puritani* and *Aida*. On 22 April 1876 he sang in the first Paris performance of *Aida* at the Théâtre Italien. He also appeared in Moscow, St Petersburg, Madrid, Lisbon and Buenos Aires. His repertory ranged from Mozart (Don Ottavio) to Wagner (Lohengrin), from Rossini (Almaviva) to Meyerbeer (Raoul in *Les Huguenots* and Vasco da Gama in *L'Africaine*), and his vocal technique was considered outstanding. His last appearance was in 1905 in a performance of *Il barbiere de Siviglia* at the Théâtre Sarah Bernhardt, Paris. Details of his life can be found in C. Rivalta's *Il tenore Angelo Masini e Faenza* (Faenza, 1927).

ELIZABETH FORBES

Masini, Antonio (*b* ?Rome, 1639; *d* Rome, 20 Sept 1678). Italian composer and musician. He worked in Rome and was employed there as a chamber musician in the service of Queen Christina of Sweden. On 1 May 1674 he was named *maestro di cappella* of S Pietro, a position he held until his death. In Holy Year 1675 a series of eight oratorios by him was performed at the Oratorio della Pietà in S Giovanni dei Fiorentini: *La morte di Saul*, *Sommersione di Faraone*, *Ieft*, *S Eustachio*, *S Dorotea*, *Sposalizio di Salomone*, *Sacrifizio d'Abram* and *Tobia*; only the first survives (in *I-Nf*). Along with Stradella he was among the first composers to apply the technique of the concerto grosso to his oratorio accompaniments. His other works included the lost opera *L'Eumene* (Ferrara, 1666), and some dozen cantatas and a few sacred pieces survive (in *I-Bc*, *MOe*, *Nc* and elsewhere; one cantata in F. Vatielli, ed.: *Antiche cantate d'amore*, ii, Bologna, 1912).

JULIA ANN GRIFFIN

Masini, Laurentius. *See* LORENZO DA FIRENZE.

Maskanda. Urban performance style from South Africa. The term derives from the Afrikaans word *musikant*, meaning musician. *Maskanda* describes a musical genre typically performed by young Zulu men, many of whom have been involved in the migrant labour system, mixing indigenous, rural musical practices with urban styles. The practice clearly dates back to the early 20th century, but it possibly has earlier roots in the introduction of the guitar by Portuguese sailors in the 1880s. The acoustic guitar remains the central instrument in *maskanda*, but the concertina, violin, mouth organ and piano accordion are also commonly used, that is, instruments that can be played unaccompanied or to accompany singing while walking. Under direct and indirect pressure from radio and record producers, musicians have been encouraged to form bands with electric guitar, bass guitar and drums.

Maskanda songs, called *izingoma* (sing. *ingoma*), a generic term for Zulu dance-songs, can be either adaptations of existing songs or new compositions. A common theme is nostalgic longing for rural homelands and loved ones, or commentary on the urban situation. Songs generally open with a fast guitar flourish establishing the key, allowing the musician to check his tuning and to identify himself musically. The song proper begins with an instrumental section that presents a multi-part structure with at least two overlapping parts (fundamental to virtually all Nguni musical performance). Once this is established, the voice enters and may sing through several verses interspersed with instrumental interludes. Roughly two-thirds through the song the singer frequently bursts forth with a string of self praises in speech-mode, serving to identify the musician further.

JANET TOPP FARGION

Maslanka, David (Henry) (*b* New Bedford, MA, 30 Aug 1943). American composer. After attending the New England Conservatory (1959–61), he studied composition with Joseph Wood at Oberlin College Conservatory (BM 1965) and conducting with Gerhard Wimberger at the Salzburg Mozarteum (1963–4); at Michigan State University (1965–70, MM, PhD), he studied composition with H. Owen Reed and theory with Paul Harder. He has taught at Geneseo College, SUNY (1970–74), Sarah Lawrence College (1974–80), New York University (1980–81) and Kingsborough College, CUNY (1981–90). His awards for composition include four MacDowell Colony fellowships and grants from the Martha Baird Rockefeller Fund for Music (1978), ASCAP and the National SO (1997). Among his many commissions are those from the Northwestern University Wind Ensemble for *A Child's Garden of Dreams* (1981), the University of Arizona Wind Ensemble and Symphonic Choir for the Mass, and Robert and Mary Sue Lawman for *In Lonely Fields* (1997). His music is characterized by Romantic gestures, tonal language and clearly articulated large-scale structures.

PAUL C. PHILLIPS

Masnelli [Masenelli], **Paolo** (*b* Verona; *fl* 1578–1609; *d* Verona, 10 Feb 1613). Italian composer. His earliest

known pieces were published in the *Primo libro de madrigali a cinque voci* (RISM 1578[21]) of his fellow Veronese Paolo Bellasio. According to the title-page of his book of four-voice madrigals (1582), Masnelli was then organist of the famous *ridotto* in Verona, which met under the patronage of Count Mario Bevilacqua. He is recorded as an organist at Mantua between 6 February 1585 and 24 March 1592, and his first book of five-voice madrigals is dedicated to Duke Guglielmo Gonzaga; but he was evidently unhappy there, since on 16 December he applied, unsuccessfully, for the post of organist at Padua Cathedral. In 1593 he returned to Verona as organist of the cathedral, and in the same year he became the organist of the Accademia Filarmonica. These circumstances are reflected in the dedication of his second book of five-voice madrigals, to Count Alessandro Bevilacqua, Mario's nephew, who contributed two pieces to Masnelli's book of four-voice madrigals and composed the opening item of the second book for five voices. Masnelli was still organist of the Accademia in 1604.

Masnelli's craftsmanlike but generally conservative music was apparently suitable material for anthologies, for during the 1580s and 90s a number of important Italian and German secular collections included works by him; all these were specially composed and only later were three of them reprinted in his own publication of 1596. He is represented in all three volumes of the popular anthology *De' floridi virtuosi d'Italia* (RISM 1583[11], 1585[16] and 1586[9]), for the first volume of which he wrote the light pastoral *Clori vezzosi*, the most often reprinted of all his works.

IAIN FENLON

Mason (i) [first name unknown] (*d* June–Sept 1614). English composer. On 20 May 1612 the senior fellows of Trinity College, Cambridge, ordered 'that the place of Organist for the Chapple is conferred uppon [blank] Mason, servant lately of the L[ord] Compton [Earl of Northampton]'. By December 1613 Mason was receiving money 'for his keeping in his sicknesse' and by Michaelmas the following year he was dead: the College accounts record a payment of 28s. 4d. for 'Mr Mason's buriall and other charges about the same'. Although nothing further is known of his life, it is certain that he is not the George Mason, musician to the Earl of Cumberland, who was still active in 1617.

Mason's short career at Trinity College occurred at a time of great musical activity there, particularly as regards instrumental music. Together with his predecessor, [Thomas] Wilkinson, he composed some music for viols which is preserved in manuscript (*GB-Lbl* Add.20826–8; ed. I. Payne: *Cambridge Consorts: Pavans and Galliards ... in five parts from London, British Library Add MSS 30826–8*, St Albans, 1991). These eight fragmentary five-part pavans, his only extant works, are less conservative than Wilkinson's, featuring some chromaticism and unusual keys.

IAN PAYNE

Mason (ii). American family of composers, musicians, music publishers and instrument builders. Members of the family were important in American musical life throughout most of the 19th century and the early 20th; no other family contributed so much to American music during this period.

(1) Lowell Mason (i) (*b* Medfield, MA, 8 Jan 1792; *d* Orange, NJ, 11 Aug 1872). Music educator, church musician, composer and anthologist. An advocate of congregational participation in church music, he is best known for establishing curricular music in American public schools. In addition to compiling tune books with instructional materials for schools and churches, he composed and arranged hundreds of hymn tunes, some of which are still used. Through the success of his books, Mason's preference for European styles spread across the USA.

His parents, Johnson and Caty Mason, sang in their church choir, and his father played the bass viol. He attended a singing school taught by Amos Albee, compiler of *The Norfolk Collection of Sacred Harmony* (1805), and studied music with Oliver Shaw, a blind composer of hymn tunes and ballads. He also learnt to play several instruments. At the age of 16 he became choir director of his church and two years later led the Medfield band.

In 1812 Mason moved to Savannah, Georgia, where he worked in a dry-goods store, eventually becoming a partner in the firm. After his partner's death in 1817 Mason worked at the Planters' Bank, becoming a leader in the community. From 1815 to 1827 he was superintendent of the Sunday school of the Independent Presbyterian Church. Through his initiative the church in 1826 opened the first Sunday school for black children in North America. Mason was a founder and active member of the Savannah Missionary Society, established in 1818.

Mason led singing schools and concerts in Savannah from 1813 to 1824. In 1815 he became choir director and five years later organist of the Independent Presbyterian Church. He studied harmony and composition with the German-born musician Frederick L. Abel, who emigrated to Savannah in 1817, and it was under Abel's direction that he began composing hymn tunes and anthems. During this time Mason compiled a collection based on the Englishman William Gardiner's *Sacred Melodies*, consisting of hymns set to tunes arranged from Mozart, Haydn and other European composers. In 1822 this collection, *The Boston Handel and Haydn Society Collection of Church Music*, was published by the society in Boston. The book appeared without Mason's name because he did not wish to be known as a professional musician, but he was identified as editor in later editions.

His successful tune book and growing reputation as a choirmaster and church music reformer brought Mason to the attention of church leaders in Boston. After negotiating a contract to supervise music in three Congregational churches there, he moved to Boston in 1827. He served as choirmaster of Lyman Beecher's Bowdoin Street Church (1831–45) and, from 1844 until his retirement in 1851, as organist and choirmaster of Central Church. Both choirs built national reputations. He revitalized the Boston Handel and Haydn Society as its president and music director from 1827 to 1832, when he resigned in order to devote himself to teaching.

In 1829 Mason compiled what he believed to be the first Sunday school collection with music, *The Juvenile Psalmist*, followed in 1831 by *The Juvenile Lyre*, a school music collection. In 1832–3 he led a children's vocal music class at Bowdoin Street Church and gave children's concerts. He also began teaching music in private schools. In 1833 Mason and George James Webb established the Boston Academy of Music to promote music education among the masses and raise standards of church music. Immediately successful, the academy enrolled 3000 students by the second year. It offered vocal and instrumental instruction, developed choirs and instrumental groups, and presented public concerts, among them the first American performances of Beethoven symphonies, in 1841–2. In 1834 Mason published *The Manual of the Boston Academy of Music*, an edited translation of G.F. Kuebler's *Anleitung zum Gesang-Unterrichte in Schulen* (Stuttgart, 1826). This book, which Mason claimed was based on Pestalozzian principles, was used extensively by music teachers.

Beginning in 1834, Mason and his associates pioneered teacher training by holding annual conventions lasting a week to ten days. They continued after the academy closed in 1847, later developing into institutes and choral festivals involving thousands of participants from many states. In the 1830s the academy initiated the experimental teaching of music in the Boston public schools. Mason taught at one grammar school as a volunteer and was instrumental in securing acceptance of music into the curriculum. From 1837 to 1845 he served as superintendent of music in the Boston schools, where he continued to teach until 1851. For a decade beginning in 1845, Mason was a staff member of the teachers' institutes of the Massachusetts State Board of Education. Through those sessions, the musical conventions of the Boston Academy of Music, and other music institutes, he trained or influenced a large proportion of the music teachers of his day. In this way, his ideas were assured an enduring place in the music education movement.

In 1837 Mason travelled to England, Germany, Switzerland and France, where he met many European musicians and educators, purchased music and observed music teaching in schools. On a second visit, which lasted from December 1851 until April 1853, he lectured in the British Isles on congregational singing and the Pestalozzian method of teaching. He reported on this trip in *Musical Letters from Abroad* (1854). After returning from Europe, Mason made New York his business headquarters and a 28-hectare estate nearby in Orange, New Jersey, his home. His later years were occupied with occasional teaching and continued publishing of articles and books. In 1855 he was awarded an honorary doctorate in music by New York University, the second such degree given by an American institution. Mason's personal library grew to 10,300 items, which the family later donated to Yale University.

Mason's influence on American music is generally regarded as a mixed blessing. Although he established music as an integral part of public school education, he replaced the indigenous fuging tunes and anthems of 18th-century America with hymn tunes and anthems arranged from European music or imitations based on 'scientific' principles producing 'correct' harmonies. Among his lasting hymn tunes, composed or arranged, are 'Antioch' (*Joy to the World*), 'Bethany' (*Nearer my God to thee*), 'Hamburg' (*When I survey the wondrous cross*), and 'Olivet' (*My faith looks up to thee*). Mason and Thomas Hastings, both of whom opposed the more folklike musical idioms of revivalism, jointly compiled *Spiritual Songs for Social Worship* (1832) to counteract the influence of the revivalist Joshua Leavitt's popular *Christian Lyre* (1830). Through the publication of his books, most of them for schools or churches, Mason attained an extraordinary influence over American tastes.

WORKS

(selective list)

Works published individually or without attribution, occasional works and are not included; for a fuller list see Rich (1946) and Pemberton (1985). Unless otherwise stated, items before 1850 were published in Boston, those from 1850 in New York

CHURCH MUSIC COLLECTIONS

The Boston Handel and Haydn Society Collection of Church Music (1822/*R*); Select Chants, Doxologies &c. Adapted to the Use of the Protestant Episcopal Church in the United States of America (1824); Choral Harmony (1828); Church Psalmody (with D. Greene) (1831); Spiritual Songs for Social Worship (with T. Hastings) (Utica, NY, 1832); The Choir, or Union Collection of Church Music (1832); Lyra sacra (1832); Manual of Christian Psalmody (with Greene) (1832); Sacred Melodies (with G.J. Webb) (1833)

(2) Daniel Gregory Mason (i) (*b* Savannah, GA, 24 June 1820; *d* Schwalbach, Germany, 8 May 1869). Music publisher, son of (1) Lowell Mason (i). He was educated in Boston and attended Yale College for one year. In 1851 he and his brother (3) Lowell Mason (ii) joined Henry W. Law of Brooklyn, New York, as partners in the new publishing firm of Mason and Law. Two years later Daniel Gregory and Lowell established their own firm. Mason Brothers became well known as publishers of secular and religious music, school textbooks, histories, English and French dictionaries, and music periodicals, including *The New York Musical Gazette*. In 1868 the partners were joined by another brother, (5) Henry Mason. The business continued until a few months after the unexpected death of Daniel Gregory Mason. Lowell and Henry Mason, deeply involved with the instrument-manufacturing company Mason & Hamlin, sold the holdings of the publishing house to the Oliver Ditson Company.

(3) Lowell Mason (ii) (*b* Westborough, MA, 17 June 1823; *d* 1885). Music publisher, son of (1) Lowell Mason (i). See (2) Daniel Gregory Mason (i).

(4) William Mason (*b* Boston, MA, 24 Jan 1829; *d* New York, 14 July 1908). Pianist, teacher and composer, son of (1) Lowell Mason (i). He studied with his father and with Henry Schmidt before making his début at the Boston Academy of Music on 7 March 1846. In 1849 he was sent to Europe, where he studied in Leipzig with Moscheles, Hauptmann and Richter, in Prague with Dreyschock and in Weimar with Liszt (1853 and 1854). His *Memories of a Musical Life* are valuable for an anecdotal account of Liszt's Weimar circle. While in Europe he travelled and performed in many countries, playing in London in 1853 with the Harmonic Union and enjoying the prestige accorded a virtuoso protégé of Liszt. He returned to the USA in July 1854.

Mason was possibly the first pianist to give concerts in the USA without assisting artists, but he found touring distasteful and settled in New York to teach. He wrote several important teaching manuals for the piano and propounded a pulling-finger motion known in the USA as 'the Mason touch'. In 1855, with Theodore Thomas and others, he established the Mason and Thomas Chamber Music Soirées, which for 13 years introduced Romantic works to American audiences. His compositions include more than 50 virtuoso piano pieces in an accepted, genteel and often over-refined style. In 1872 he received the DMus from Yale College. He wrote over 50 piano works, and numerous choruses are found in his collections.

(5) **Henry Mason** (*b* Boston, 10 Oct 1831; *d* 1890). Instrument builder, son of (1) Lowell Mason (i). *See* MASON & HAMLIN.

(6) **Daniel Gregory Mason (ii)** (*b* Brookline, MA, 20 Nov 1873; *d* Greenwich, CT, 4 Dec 1953). Composer, writer on music and teacher, son of (5) Henry Mason. He studied with Paine at Harvard (1891–5) and continued his composition training under Chadwick and Goetschius. In 1894 he composed his op.1, but he soon turned temporarily to the career of a writer on music, and in 1902 published his first book, *From Grieg to Brahms*. His long association with Columbia University began in 1905 with his appointment as lecturer in music; he later became assistant professor (1910) and MacDowell Professor (1929), serving as head of the music department until 1940 and retiring in 1942. From 1907 he concentrated increasingly on composition, and in 1913 he went to Paris for further studies with d'Indy, who influenced him strongly without erasing his affinity with Brahms. He received honorary doctorates from Tufts College (1929), Oberlin College (1931) and the Eastman School (1932); he was a member of the National Institute of Arts and Letters (elected 1938); and he gained publication prizes from the Society for the Publication of American Music and the Juilliard Foundation.

In style and outlook Mason was conservative. His models were the great Austro-German masters and, though he admired Franck and d'Indy, he had little sympathy with the French Impressionists and totally opposed 20th-century modernism. He is often regarded as one of the 'Boston classicists' and he considered himself a 'musical humanist'. He fought for the recognition of American music and tried occasionally to colour his scores with indigenous material; later he became convinced that 'for better or for worse American music is necessarily eclectic and cosmopolitan, and that the kind of distinctiveness to be looked for in it is individual rather than national' (letter to J.T. Howard, 1930).

Mason believed in creative self-discipline and expression that avoided excessive emotionality. He was a meticulous technician and a perpetual reviser. His untypical *Russians* (1915–17), a cycle of five songs to texts by W. Bynner, is one of his finest and most unusual works. Realistic scenes are portrayed through bold, uninhibited musical passages containing strong feeling. Also unusual for Mason is the fine String Quartet on Negro Themes (1918–19), which employs spirituals and, at times, a Debussian impressionistic style. His writing for instruments is idiomatic and his textures are opulent, at times Brahmsian, though his orchestration reveals occasional touches of French colouring. Randall Thompson remarked that 'A certain sinister and foreboding pessimism, a dour and bitter irony in Mason's music has not been fully appreciated. His exuberant *Chanticleer*, so widely played, refutes the characterization but the paradox is all to his credit'. This beautifully realized concert overture is based on a text by Thoreau, a writer Mason greatly admired. Of his symphonies, the last, subtitled 'A Lincoln Symphony', tries to capture the personality of the great emancipator. The movements have the titles 'The Candidate from Springfield', 'Massa Linkum', 'Old Abe's Yarns' and '1865 – marcia funebre', and the music is evocative of time and place although only one popular tune of the 1860s, *Quaboug Quickstep*, is used. Mason, however, preferred his 'music without program'. For all his musical intelligence and sensitive idealism he was unable to develop a strong creative profile, and his conservatism proved alien to the post-triadic tendencies that dominated American music during much of the 20th century.

Mason's books, particularly his analyses of chamber music by Beethoven and Brahms, are written with elegance and insight. He was a pioneer in the sphere of music appreciation and could 'explain' music to the layman without condescension. *Artistic Ideals*, which he considered his best book, contains his credo as a creative artist. Other essays are polemical and controversial: in *The Dilemma of American Music* he referred to American composers as 'polyglot parrots' and urged them to find their own voice through elastic eclecticism; and in *Tune in, America*, subtitled 'a study of our coming musical independence', he criticized Toscanini and other 'imported' conductors for neglecting American music. Yet he himself received the strongest encouragement from such 'imported' musicians as Gabrilowitsch and Bruno Walter. His autobiographical *Music in my Time* paints a vivid picture of musical and intellectual life in New York and New England.

WORKS
(*selective list*)

Orch: Sym. no.1, c, op.11, 1913–14; Prelude and Fugue, op.12, pf, orch, 1914; Chanticleer, festival ov., 1926; Sym. no.2, A, op.30, 1928–9; Suite after English Folksongs, op.32, 1933–4; Sym. no.3 'A Lincoln Symphony', op.35, 1935–6; Prelude and Fugue, c, op.37, str, 1939; incid music, transcrs.

HARRY ESKEW/CAROL A. PEMBERTON (1), CAROL A. PEMBERTON (2), WILLIAM E. BOSWELL (4), BORIS SCHWARZ/N.E. TAWA (6)

Mason, Benedict (*b* London, 21 June 1955). English composer. He studied at Kings College, Cambridge (1971–5) and took a degree in film making at the Royal College of Art (1975–8). He turned to composition relatively late, after the age of 30, but immediately attracted attention with his first acknowledged work, *Hinterstoisser Traverse* (1986). He subsequently won the Guido d'Arezzo International Composers' Competition with *Oil and Petrol Marks on a Wet Road are Sometimes Held to be Spots Where a Rainbow Stood* (1988) while his first orchestral piece, *Lighthouses of England and Wales*, was awarded first prize in the Benjamin Britten Composers' Competition in 1988.

Mason's early works display a characteristically post-modern stylistic diversity, which arises in part from their 'investigative' intentions: the String Quartet no.1 examines various modes of travelling, *Lighthouses of England and Wales* analyses the phenomenon of 'sea music', while *Oil and Petrol Marks* collates and classifies children's games. Works around 1990 show an increasing interest in polyrhythm which culminated in two highly virtuosic ensemble pieces: the glittering Double Concerto (a virtual 'homage to Ligeti') and, above all, the typically whimsically entitled *Animals and the Origins of Dance*, a set of '12 90-second polymetric dances' which at some points calls for as many as eleven separate click-tracks.

A particular feature of Mason's later music is its spatial dimension, which goes far beyond the 'multi-ensemble' approach pioneered by Henry Brant and Stockhausen. In 1993, Mason began to write works intended for particular halls, which then act as highly diverse resonators for the sounds produced by the musicians (who in turn also articulate the acoustic and architectural properties of the halls). The main outcome of this preoccupation has been a series of 11 pieces – most of which are much more austere than Mason's preceding works – generically entitled 'Music for Concert Halls'. In many cases, the musicians participating in the 'Concert Hall' pieces are located outside the main auditorium – in the Trumpet Concerto, for example, only the solo trumpeter is inside the auditorium – and perform at the verge of audience audibility. Thus the pieces not only break with the ceremonial aspects of the traditional concert – they could be regarded as 'concert installations' (many of them including video and slide projections) – but also become an invitation to acute listening. Such pieces are, by their nature, virtually unrecordable, reflecting the composer's complementary insistence on music as something to be produced by live musicians in authentic acoustic environments, as opposed to the artificiality of music conveyed via domestic loudspeakers.

RICHARD TOOP

Mason, Edith (Barnes) (*b* St Louis, 22 March 1893; *d* San Diego, 26 Nov 1973). American soprano. She studied in Cincinnati, and in Paris with Enrico Bertran and Edmond Clément, making her début in Marseilles in 1911. She sang with the Boston Opera Company, with which she first appeared as Nedda (*Pagliacci*) in 1912, in Montreal (1912) and Nice (1914), and with the Century Company, New York (1914–15), before making her Metropolitan Opera début in 1915 as Strauss's Sophie; she performed at the Metropolitan until 1917, and again in the 1935–6 season. She was heard in Paris at the Théâtre du Vaudeville (1919–20) and later at the Opéra and Opéra-Comique, and also at La Scala as Mimì under Toscanini (1923) and

at Salzburg in 1935 as Nannetta (*Falstaff*). A long, important career at Chicago, where she was first engaged by Mary Garden, began in 1921; she was the first Chicago Sophie (1925) and Snow Maiden in Rimsky-Korsakov's opera, and also the principal interpreter there of Gilda, Gounod's Marguerite and Boito's Margherita. She also played Massenet's Thaïs, Elsa (*Lohengrin*), Fiora (in Italo Montemezzi's *L'amore dei tre re*), and, notably, Butterfly. Her stage appearances were marked by the natural beauty and easy production of her voice (amply confirmed in her recordings), her meticulous attention to the musical text, and the graceful restraint of her acting. She retired in 1939, after playing Desdemona to Martinelli and Tibbett, but in 1941 made a single reappearance in Chicago as Mimì. She was twice married to the conductor Giorgio Polacco.

RICHARD D. FLETCHER/R

Mason, George (*fl* 1610–17). English composer. He was in the service of the Earl of Cumberland for some years. The household accounts for Londsborough show that he was paid £3 6s. 8d. on 23 June 1611 for the first half-year, and it is likely that he remained in the earl's employment at least until 1617 when, on 6 August, a masque was given at Brougham Castle, Westmorland, for the entertainment of James I; for this he collaborated with John Earsden. A letter from the earl to his son suggests that Thomas Campion was in some way involved in devising the masque, and it is generally assumed that he wrote the words of the ayres. It is possible that Mason was dominant in the musical partnership with Earsden for, when the ayres came to be printed, his name was given pride of place and was set in larger type on the title-page; since one song was placed out of sequence at the end of the book, it may well be that this song alone was Earsden's contribution. It is not known whether the George Mason who was appointed master of the choristers at York Minster in August 1613 is identical with him, but it is not impossible. The former served at York for only one year, and the household musician disappears from the Earl of Cumberland's accounts between December 1611 and August 1614.

The ayres, written towards the end of the period in which the form enjoyed great popularity in England, show a complete change from the earlier style. The vocal line is declamatory, and the contrapuntal character of the lute accompaniment has given place to a supporting chordal structure. Perhaps because of the nature of the entertainment for which they were written, groupings of different voices are used.

DIANA POULTON/IAN PAYNE

Mason, John (*b* *c*1480; *d* ?Hereford, by 2 Feb 1548). English church musician and composer. He may have been a lay clerk of the choir of Eton College from June 1501 to Christmas 1506 and in February 1509 was awarded the BMus at Oxford, having resided in the University for one year. At about the same time he took orders as a priest. From March 1509 until June 1510 he was a chaplain and Instructor of the Choristers of the chapel of Magdalen College, Oxford. Mason enjoyed influential friends and patrons; from 1517 onwards he was gaining rectories in the dioceses of Salisbury and Worcester. He may also be identifiable with the John Mason who in 1521 was a chaplain of the household chapel of Cardinal Thomas Wolsey. In February 1523 he was collated to a canonry and prebend of Salisbury Cathedral.

The 'dom. John Mason B.Mus.' who occupied one of the two Mortimer chantries in Chichester Cathedral from October 1523 until some time before June 1527 appears certain, by virtue of the particular nature of his degree, to be identifiable with the composer. While Mason could enjoy his rectories and canonry *in absentia*, the Mortimer chantry required residence; by 1523, therefore, he had left Wolsey's service. It seems unlikely that a man with elevated musical qualifications was employed at Chichester as a mere chantry priest; in the 1520s the Bishop of Chichester, Robert Sherburn, was making strenuous efforts to enlarge and improve the cathedral choir, and it may be conjectured that the chantry (an unusually valuable benefice, presentation to which lay with the sovereign) was a convenient sinecure for Mason while his principal duties were as a musician with the choir. In the manuscript *GB-Cu* Peterhouse 471–4, which preserves all four of Mason's surviving works, the composer is described as 'of Chichester' presumably to distinguish him from some other prominent church musician of the same name. In July 1525 Mason was collated to a canonry and prebend of Hereford Cathedral and it is likely that the close at Hereford soon became his principal home since he was admitted to residence in August 1526 and was appointed Treasurer in 1545. He had died by 2 February 1548.

The John Mason who was still a chorister-boy of the household chapel of Margaret, Countess of Richmond and Derby, in August 1503 and who spent the years from 1504 to 1507 at Tattershall College under her patronage appears too young to be identifiable with the composer, who possessed his degree in music by 1510. This John Mason is known to have entered Orders and may be the musician whose adult career needed to be distinguished from that of the composer. Either man may be identifiable with the 'dom. Mason' who, in the emergency caused by the fall of Wolsey and the departure of John Taverner, served briefly as chaplain of the choir and Master of the Choristers at Cardinal College, Oxford in 1530. However, given his likely earlier career with Wolsey, it is probable that the known composer (taking leave from Hereford) offers the better identification.

Of Mason's surviving compositions, *O rex gloriose* (ed. N. Sandon, Moretonhampstead, 1994) is a setting of the ritual antiphon sung during part of Holy Week to Nunc dimittis, the canticle at Compline. *Vae nobis miseris* is a Jesus antiphon, while *Quales sumus* (ed. N. Sandon, Moretonhampstead, 1994) and *Ave Maria* are Marian antiphons. Each of the latter three works is of considerable length, sustaining its duration in the standard manner by the alternation of sections for chorus with sections for reduced solo ensemble. Mason's style is typical for the period, except perhaps for the sombreness of texture arising from the dense scoring for five men's voices which is common to all four pieces.

ROGER BOWERS

Mason, Luther Whiting (*b* Turner, nr Lewiston, ME, 2 or 3 April 1818; *d* Buckfield, nr Auburn, ME, 14 July 1896). American music educator and editor of school songbooks. He was a pupil of Lowell Mason at the Boston Academy of Music (he is purported to have been a distant relative of Mason). His early career was as a leader of singing classes and church choirs. In 1853 he went to Louisville as a music teacher in the public schools, where he gained recognition for his pioneering efforts at instructing the primary grades. He moved to Cincinnati in 1856 and in 1864 went to Boston, where he set up a plan for primary schools whereby general classroom teachers taught their pupils singing under his supervision. This plan was widely emulated.

In 1880 Mason was invited to go to Japan, where he spent two years setting up a national training programme for school music teachers. He imported Western instruments, taught Western notation and harmony to the imperial court musicians, and retuned their ancient instruments to the Western scale. School music in Japan became known as 'Mason song' because of the widespread use of his songbooks, which contained Western songs in translation and other East/West hybrids. He also travelled extensively in Europe.

Mason was best known in the USA for the immensely successful National Music Course, which originally comprised three student books (the *First, Second, and Third Music Readers*, 1870, rev. 2/1885), a teacher's guide (*The National Music Teacher*, 1870), and three sets of charts. Based on the work of the German pedagogue Christian Heinrich Hohmann, Mason's method was to teach young children to sing by rote, and then introduce musical elements in song, principally translations of German folksongs. *Mason's Hymn and Tune Book* and *The Mason School Music Course* were published in 1882 and 1898 respectively.

BONLYN HALL/R

Mason, Marilyn (May) (*b* Alva, OK, 29 June 1925). American organist. She studied at Oklahoma State University, and the University of Michigan, where her teacher was Palmer Christian. She also worked with Nadia Boulanger and Maurice Duruflé, and studied Schoenberg's Variations on a Recitative op.40 with the composer in 1950. In 1954 she received the DSM degree from Union Theological Seminary in New York. She joined the staff of the University of Michigan in Ann Arbor in 1946, becoming chairman of the organ department in 1962 and professor in 1965. She has also taught for brief periods at Columbia University, at Union Seminary and in Parana, Brazil. Mason has appeared all over the USA and Canada, in Europe, Africa, Australia and South America, and has played with the Philadelphia and Detroit orchestras. She has recorded music by Satie, Sessions, Virgil Thomson, and Schoenberg's Variations, has edited organ pieces, published articles, and commissioned works by William Albright, Henry Cowell, Ross Lee Finney, Ulysses Kay, Ernst Krenek, Leo Sowerby and Alec Wyton, among others.

VERNON GOTWALS

Mason, Mark. Pseudonym of SEPTIMUS WINNER.

Mason, Mathias [Mathathias] (*d* after 25 Dec 1609). English lutenist and composer. He was appointed 'one of her majesty's musicians upon the 3 luts' backdated to September 1579; his initial salary of £20 was doubled in September 1589. The 'Mathias Mason, gent.' paid riding charges before October 1578 was almost certainly the lutenist, who signed his name 'Mathathias Mason' in an acquittance book of 1581–2 (*GB-Lbl*, Harley 1644, f.21*v*). At the funeral of Queen Elizabeth in 1603, he was given pre-eminence over all other royal musicians, as 'lute of the Privy Chamber', a distinction he retained in the reign of King James. He was paid his salary until 25 December 1609. On 6 April 1610 he was described as 'deceased' and was replaced as lutenist by Simon Merson who received back pay from 25 December 1609.

In Robert Dowland's *Varietie of Lute-lessons* (RISM 1610^{23}) John Dowland referred to Mason's addition of wooden frets above the eight tied round the neck of the lute. These high notes on the first string of the lute had been written for and played since at least the beginning of the 16th century (see J.A. Dalza, *Intabulatura de Lauto*, Venice, 1508/*R*, f.40) but without frets, as Ganassi confirmed by his *Regola Rubertina Liber II* (1542–3; ed. and trans. D. Silvester and S. Silvester, Berlin, 1977). Mason's three surviving works, a pavan and two corantos, were written for a lute with between seven and nine courses in 'old' tuning. The galliard attributed to 'Master Mathias' in the Ballet Lutebook (*IRL-Dtc*) is found in four other sources with attributions to Holborne.

DIANA POULTON/ROBERT SPENCER

Mason, William (*b* Hull, 12 Feb 1725; *d* Aston, Yorks., 5 April 1797). English poet and amateur musician. He studied at Cambridge (BA 1746, MA 1749), was ordained in 1754 and became chaplain to Lord Holdernesse and Rector of Aston (1754), prebendary at York Minster from

1757, canon and precentor from 1762 and a royal chaplain from 1757 to 1772. He was a friend of Thomas Gray, Horace Walpole and William Wilberforce, and also of Arne, Avison and Burney; a minor poet, dramatist and polemicist; an inventor and amateur scientist, a painter and a landscape gardener, as well as an accomplished musician.

As precentor Mason had charge of music at the minster, and he took this duty more seriously than the average cathedral precentor of his day: indeed, he was almost the only precentor with any musical qualifications. He published a book of words of anthems sung in the services. At Aston he became well known not only as a preacher but for his musical innovations. He 'taught the village blacksmith to sing Marcello's Psalms like an angel'; he installed a barrel organ – one of the first in an English church – in 1782; visitors discovered 'the almost adored parish priest in the organ loft teaching the children some music for next Sunday'. His views on both cathedral and parochial church music are eloquently expressed in four essays, published in 1795. He also wrote several hymn tunes, an anthem and a set of responses. With Matthew Camidge, organist at York, he prepared a curious edition of Henry Lawes's setting of Sandys's metrical psalms, entitled *Psalmody for a Single Voice* (1789).

Mason was one of the first Englishmen to appreciate the value of the piano. He brought one from the Continent in 1755 or earlier, and has been credited with inventing the action adopted by Zumpe in his square pianos. He was himself no mean performer on harpsichord, piano and organ. He invented his own keyboard instrument, the 'celestinette'. He also enters musical history as the author of two dramatic poems which were popular with the composers of the period: *Elfrida* was set by Arne (performed 1772) and Giardini (1779), *Caractacus* by Arne (1776), Shaw (1777), Mornington and Charles Wesley.

Another William Mason 'of Cambridge' compiled *Congregational Singing*, a book of church music for dissenters (London, 1789).

NICHOLAS TEMPERLEY

Mason & Hamlin. American firm of piano and reed organ makers. It was founded in Boston in 1854 by Henry Mason (1831–90), son of the composer Lowell Mason, and Emmons Hamlin (1821–85). Hamlin had previously been employed by the George A. Prince melodeon factory as superintendent of tuning, in which capacity he had developed the art of voicing free reeds to produce imitative effects; this system ultimately led to the development of the modern theatre organ. The firm's first instruments were of the traditional melodeon type; it soon began making larger models with a greater variety of stops, and in 1861 changed the name of these products to 'cabinet organ' (sometimes referred to as the 'flat top' melodeon). By 1867, when it was awarded a first prize at the Paris Exposition, the firm was manufacturing about a quarter of the reed organs produced in the USA. In the 1890s its models ranged from the tiny 'Baby' organ (introduced 1881), popular for Sunday schools and summer cottages, to the two-manual-and-pedal 'Church' organ, complete with a superstructure of dummy organ pipes. Around 1900 the firm produced a few pipe organs.

Henry Mason retired as president of the firm in 1869; he was succeeded by Lowell Mason jr (1823–85), who remained until his death. Subsequent presidents included Henry Mason's sons Edward Palmer Mason and Henry Lowell Mason (1864–1957). The latter entered the firm in 1888 and became its president in 1906; he also wrote several books on music, including a history of the cabinet organ, published in 1901.

In 1883 Mason & Hamlin began making pianos. Like Brinsmead they developed a machine-screw threaded into a flange on the frame instead of using the usual wrest plank and tuning-pins, in order to eradicate loose pins. This costly process was discontinued in 1905. Richard Gertz, who joined the firm in 1895, developed the 'tension resonator' and the 'duplex scale'. The tension resonator, patented in 1900, consists of radial arms of rigid steel joined under the white spruce soundboard and fixed to the inner, thicker, solid maple rim of grands and the frame of uprights. It safeguards the vital ⅛″ per foot crown that the soundboard needs for full resonance, and can, if necessary, be adjusted to restore this curvature. The duplex scale is a system of ALIQUOT scaling designed to provide sympathetic resonance to enrich the treble of the piano. From about the turn of the century to the 1920s Mason & Hamlin was one of the important American piano makers, producing a relatively small number of high quality grands and uprights. An unusual feature of the firm's grand pianos is that their spines are angled slightly to the left to permit a larger soundboard. In 1911 the reed organ business was sold to the Aeolian Co, but no futher reed organs were built. The piano business passed to other companies and in 1932 the Boston plant was moved to East Rochester, New York. The firm subsequently became part of the Aeolian American Corporation in East Rochester, but their factory closed on 22 July 1982.

In 1989 the firm was taken over by the Falcone Piano Co. of Haverhill, Massachusetts, and the company was renamed Mason & Hamlin Piano Companies. In 1994 the production of pianos was suspended and the company declared bankrupt. The owners of Premier Pianos, Peter Murphy and John Flippen jr, then took control of the company; they completed unfinished instruments and also built some new pianos. At the same time, they were fighting creditors' attempts to enforce liquidation or sale of the company. On 5 April 1996 the firm was sold to the brothers Kirk and Gary Burgett, owners of Music Systems Research and manufacturers of the PianoDisc player piano system. Production was resumed at the Haverhill factory and at the end of the 20th century Mason & Hamlin continued to produce a limited number of hand-built premium pianos. There are two models of grand piano (1·74 m and 2·13 in length) and an upright (1·27 m high), built to what are essentially the original company specifications, with the tension resonator and duplex scale included on all models. A new concert grand (2·84 m) was designed to be introduced in 1999.

Masonic music. Music used in connection with the ritual and social functions of freemasonry. A number of well-known composers ranging from William Boyce to late 20th-century figures have been freemasons, most notably Mozart, who made significant contributions to the repertory.

1. Introduction. 2. Ritual music. 3. Mozart's masonic music. 4. Masonic influence on other composers.

1. INTRODUCTION. Freemasonry is an allegory of morality in which men are taught the virtues of an upright life through the symbolism of stonemasonry. It seems to have derived from the late medieval practice of admitting 'speculative masons' to the lodges of working masons, a practice that became widespread in the late 17th century and gained great popularity in the 18th that has continued ever since. Adherents of freemasonry are said to 'work' at the construction of a 'temple of humanity', an intellectual analogue to Solomon's temple supported by the three pillars of Nature, Reason and Wisdom. Although the ritual and the symbolic vocabulary of freemasonry derive ultimately from the myths surrounding the figure of Hiram, Solomon's chief mason (*1 Kings* vii.35–45, *2 Kings* xiii.4–6), the cult as it developed in the 18th century was characterized by a remarkably rich syncretism, accepting the equivalent validity of all religious and mystic revelation and building an elaborate imagery drawn from sources as disparate as the Egyptian Tarot, traditional astrology, numerology, the Koran, Talmudic writings and the Bible. 18th-century freemasonry proved an ideal form of expression for the political and social liberalism of the middle classes, guided by its most eminent members, who included Goethe, Lessing, Herder, Klopstock, Pope, Swift, Voltaire, Stendhal, Frederick the Great, Don Pedro I (Emperor of Brazil), George Washington and Benjamin Franklin, as well as a great number of musicians and composers.

Because of the secrecy that has surrounded freemasonry since the 18th century, specific evidence as to whether a piece of music is 'masonic' is often lacking. Purely instrumental music cannot be said to have 'masonic' content unless it embodies masonic symbolism, even though the music may have masonic intent in having been written for use in a masonic ceremony. Music with a literary text is even more problematic, as supposed masonic content must be combined with masonic intent for a work to merit the description 'masonic' by a freemason. Thus, for example, while Mozart's opera *Die Zauberflöte* unquestionably embodies much masonic symbolism, the work's masonic intent is unproven, so that it might not be considered 'masonic music' by certain members of the Craft. To the uninitiated, however, music having masonic symbolism or implications, as well as music actually used in rituals, may be considered 'masonic'.

2. RITUAL MUSIC. Music has always been used to ornament or enhance masonic rituals, both in lodge 'workings' and in the so-called 'white table' or 'harmony' that occurs after lodge work has been concluded. Hymns are somtimes sung and are considered (in deistic lodges) to be an extension of prayer, as are 'masonic canticles', such as those composed by the clergymen Anderson and Desagulier for publication in their Constitution of the Craft, known as the *Book of Constitutions* (1723). Neither, however, forms an integral part of masonic rituals. A rite of initiation into the higher degrees of the Craft (N.C. des Etangs, *Oeuvres maçonniques*, Paris, 1848, p.155, initiation into the degree of Grand Elect Knight K-H, 30th degree) specifies 15 musical interludes in the course of the ceremony, most notably extracts from the *Mystères d'Isis*, translated and musically arranged from *Die Zauberflöte*. A description of the consecration of the Royal Arch Chapter in St Andrews (1821) included a typical reference to the use of music in the lodge: 'During these ceremonies several hymns and an anthem was sung'. Occasional references in lodge minutes and account books to the hiring of instrumentalists suggest that the music of such lodges was usually restricted to unaccompanied singing. In the 19th century, however, several organs are known to have been installed in lodges in England (though not in France), and a particularly fine instrument built in 1818 has survived among the furniture of the Bath lodge. According to Northcott, many English lodges included an organist among their officers; the post seems to have been the only one with no stated duties, probably because of the relative scarcity of organs.

Much of the music actually used in masonic lodges seems to have taken the form of strophic songs in the style of the French 'Caveau' (such as street songs, songs from popular or comic opera, dances and hymns; *see* VAUDEVILLE, §3) as well as hymns specially composed for masonic use. Many anthologies were published in various countries in the 18th and early 19th centuries. It seems from the evidence of published masonic hymnals that many of the texts were designed to be adapted to specific popular hymns. In England and Scotland, for example, a common metre for masonic texts was 6:6:4:6:6:6:4, and the tunes most often indicated in published hymnals were 'God Save Great George our King' and Felice Giardini's 'Moscow', both in that metre; in France the popular song *La béquille du père Barnabas* and *airs* from Rameau's operas were widely used. Such adaptations were fairly common on the Continent, especially during the 18th century. The earliest known masonic song appeared in Sperontes's *Singende Muse an der Pleisse* (1736), a collection of street songs including a text about 'our Order' later printed in explicitly masonic collections. Such anthologies as *Freimaurerlieder im Musik* (Leipzig, 1785) and *Freymaurerlieder mit Melodien* (Berlin, 1793) largely comprised such adaptations of pre-existing music by Georg Benda, J.A. André, Antonio Cartelliari, Philipp Enslin, J.G. Naumann and Ignace Pleyel, as did the popular Franco-Dutch *La lire maçonne* (The Hague, 1766; reprinted four times in 30 years) by Vignoles and Dubois, which contained many contrafacta of *airs* from operas by Campra and Rousseau, as well as the first version of *God Save the King* to be printed on the Continent. Other important collections of masonic hymns include J.-C. Naudot's *Chansons notées de la très vénérable confrérie des maçons libre* (1737), J.A. Scheibe's *Neue Freymäurer-Lieder mit bequemen Melodien* (1749), Thomas Hale's *Social Harmony* (1763), C.G. Neefe's *Freimaurerlieder zum Gebrauche der gerechten und vollkommenen Loge* (1774), Naumann's *40 Freymäurerlieder* (1782, containing some purely instrumental processional music) and Richard Gaudry's *A Collection of Masonic Songs* (1795). Such works and anthologies

continued to be produced into the 20th century, for use in lodge rituals or as demonstrations of masonic propaganda, and include Lortzing's celebratory cantata (1841) for the centenary of the Leipzig lodge 'Minerva zu den drei Palmen' and Sibelius's *Rituaalimusiikki* op.113 (1927), as well as several of Mozart's shorter works.

3. MOZART'S MASONIC MUSIC. Like many of his contemporaries in the Austria of the Enlightenment, Mozart found the ideals of freemasonry enormously attractive. Though a Catholic, he was initiated into the first degree of the Craft, that of Apprentice (*Lehrling*), on 11 December 1784 in the lodge 'Zur Wohltätigkeit' in Vienna. His contact with freemasonry antedated his initiation, however: as early as 1773 he had written incidental music (K345/336*a*) for T.P. Gebler's masonic play *Thamos, König in Ägypten*, and in 1778 he at least considered writing a melodrama on Otto von Gemmingen's 'masonic' libretto *Semiramis* (von Gemmingen was later to be the Venerable of Mozart's first lodge). Mozart's progress through the early stages of freemasonry was fairly rapid: he reached the third degree, that of Master, by April 1785, and it seems that part of his contribution to his lodge included musical performance. For example, Mozart and his friend and lodge brother Anton Stadler, the clarinettist, organized a concert at their lodge for 20 October 1787 (see Nettl, 1932) with a programme including specifically masonic works (hymns, Mozart's cantata *Die Maurerfreude* K471, and two symphonies by the freemason Paul Wranitzky) as well as apparently non-masonic ones, notably a concerto for basset-horn and another for clarinet – both instruments, however, being held in high regard in masonic circles. Besides such performing activities Mozart composed a number of works for special occasions at Viennese lodges, especially during his first two years of membership. The cantata *Dir, Seele des Weltalls* K429/468*a* is thought to have been composed for a masonic celebration to which non-members were invited, and the song *Gesellenreise* K468, on a text by Joseph von Ratschky, was composed as a welcome to new Journeymen (*Gesellen*) entering the second degree of the Craft. *Die Maurerfreude* was composed in 1785 to honour Ignaz von Born, secretary of the Austrian Grand Lodge and a leading moral and intellectual figure in Vienna. The brief *Maurerische Trauermusik* K477/479*a* is now thought to have been written for the installation of a Master, as that ritual includes funerary imagery, not, as has been suggested, for the memorial service of two of Mozart's lodge brothers (it was performed on the latter occasion, but was composed in July 1785, several months before the brothers' death). These works, along with the much later cantatas *Die ihr des unermesslichen Weltalls Schöpfer ehrt* K619 and *Laut verkünde unsre Freude* K623, are properly considered masonic music, because they were explicitly intended for use in various aspects of the ritual, and they incorporate typically masonic musical symbols. Such is not the case, curiously, with a number of Mozart's works that have been adopted by the Craft for ceremonial use, including the *Lobegesang auf die feierliche Johannisloge* K148/125*h*, the Marian gradual *Sancta Maria* K273, the Adagio and Fugue in C minor K546, the Adagio and Rondo in C K617 and the motet *Ave verum corpus* K618.

Musical reflections of masonic imagery in Mozart's works are seen most clearly in his best-known masonic work, *Die Zauberflöte* (1791). The symbolism of the libretto (written by a freemason, Emanuel Schikaneder) merits close attention. The trials to which the two couples are subjected are thought to replicate those of the different stages of masonic initiation, and the relative success of worldly and spiritual attitudes in entering the mysteries of the Craft is reflected in the denial of initiation to Papageno and Papagena. Tamino and Pamina, by virtue of their strength of character and willingness to seek higher wisdom, are welcomed into the brotherhood, which is represented by a chorus of priests led by Sarastro, a character said to have been modelled on Ignaz von Born. The Queen of Night and her Ladies represent the unenlightened state, as does, ultimately, the dark Monostatos (for a detailed literary and musical analysis of the opera as a masonic parable see Chailley, 1968).

Musical symbolism directly related to masonic rites and images has been found in Mozart's score. Chailley argued that the tonal scheme of the opera reflected the changing attitudes of the characters and emphasized their worldly or spiritual ambitions. Thus the key of E♭ serves as the perfect masonic tonality, the three flats of its signature reflecting both the threefold initiation rite and the three pillars of the 'temple of humanity'; the relative minor (C) symbolizes an incomplete grasp of masonic ideals, while sharp keys are thought to represent worldly interests, and the neutral key of C major, according to Chailley, serves as the context for oracular statements. This thesis remains speculative, but may be supported by the fact that most of Mozart's explicitly masonic music, such as the cantatas K429/468*a* and 471, is in the 'masonic' tonality of E♭. Another aspect of masonic symbolism, reflected in rhythmic motifs, may be found in *Die Zauberflöte*. The number three has various ritual meanings in the Craft, the most common ones being an association with the third degree or Masters of the lodge and the representation of the three pillars of the temple. This is represented by various rhythmic ideas, of which the threefold repetition of chords is the most obvious (Chailley has further pointed out that the number five, associated with women's lodges, is also used).

4. MASONIC INFLUENCE ON OTHER COMPOSERS. The use of the three-chord motif to represent the Masters of a lodge appeared in a number of other works intended to symbolize masonic rituals, such as Naumann's processional 'L'entrée dans la loge' (*40 Freymäurerlieder*, 1782) and Philidor's cantata *Carmen saeculare* (1779). The latter piece, a cantata based on texts from Horace deliberately chosen for their masonic implications and first performed at the Grand Lodge of London, was one of many 18th-century compositions inspired by masonic ideals. Such large-scale works were rare, however. An early masonic opera, W.R. Chetwood's *The Generous Freemason*, was first performed in 1730 during the Bartholomew Fair and published the next year as a 'tragi-comi-farcical ballad opera'; the music consisted of songs by Henry Carey, Richard Charke and John Sheeles. Chetwood subsequently arranged the comic scenes, which dealt with the 'humours of Squire Noodle and his man Doodle', into an operetta entitled *The Mock Mason*, first performed in 1733 at the Goodman's Fields Theatre. On the Continent at least two other masonic operas are known: Naumann's *Osiride*, first performed at Dresden in 1781 and based on a libretto adapted from the masonic novel *Sethos* by Caterino Mazzolà (who later adapted *La clemenza di Tito* for Mozart), and *L'initiation d'Arlequin*

(composer unknown), performed by the Opéra-Comique at the Théâtre de Nicolet.

In France, works with masonic connections included, besides Philidor's *Carmen saeculare*, learned cantatas by Clérambault and Louis Lemaire, as well as such operas as *Zoroastre* (1749) by Rameau, who clearly explained the initiatory purposes of the overture. Mention should be made too of the 'little masonic operas' for the use of lodges in Versailles, Paris and the provinces to texts by Félix Nogaret set by various composers including François Giroust, who also wrote a masonic funeral cantata entitled *Le déluge* (1784), and of the collection of masonic works by Henri-Joseph Taskin (1779–1852) now in the music department of the Bibliothèque Nationale. There were also a number of works written in the Revolutionary period (*see* REVOLUTIONARY HYMN) and then under the Empire of Napoleon.

Haydn became a freemason in February 1785, receiving his initiation in the lodge 'Zur wahren Eintracht' (whose Venerable was Ignaz von Born). It has been suggested that he joined at Mozart's instigation, but it seems more likely that his interest had received greater stimulus from his close friend Paul Wranitzky, musical director to the court of Count Johann Esterházy. (Wranitzky wrote two symphonies for a concert at the amalgamated Viennese lodge 'Zur gekrönten Hoffnung', formed by a merging of three lodges as ordered by Joseph II in December 1785.) Haydn's membership lapsed in 1787 and he seems not to have taken part in any masonic activities after his initiation; nor does he appear to have composed any music for the Craft, although Chailley (1970) claimed to have found evidence of masonic symbolism in *The Creation*.

Beethoven's knowledge of masonic ritual was much deeper than that of the layman acquainted with currently fashionable ideas. There seems little doubt that he was initiated; in October 1852 Karl Holz, the second violinist in Schuppanzigh's quartet and a close friend of Beethoven, told the musicologist Otto Jahn that the composer 'had been a freemason, but was no longer active in the Craft during his latter years'. He left several works certainly inspired by freemasonry, notably the Adagio of the String Quartet op.59 no.1, which has a clear indication on the manuscript; certain passages in *Fidelio*; melodies for which F.G. Wegeler substituted masonic texts; and finally the Choral Fantasia op.80 and the Ninth Symphony with its choral movement, both settings of masonic texts. Certain phrases in Beethoven's correspondence suggest masonic membership, and it is known that his teacher C.G. Neefe was an enthusiastic freemason.

Other 19th-century composers who were masons include Franz Abt, Leopold Damrosch, Carl Loewe, Ferdinand Ries, Wilhelm Speyer, Spohr, Puccini, Boito, Ole Bull, Józef Elsner and Sousa. Don Pedro I, Emperor of Brazil (1798–1834), was a keen bassoonist and clarinettist who also composed many patriotic choruses and a fine *Hino maçonico* that is still in the repertory of the Brazilian lodges.

Liszt had been introduced into the lodge 'Zur Einigkeit' in Frankfurt in 1841, and was promoted to Journeyman in 1842 at the lodge 'Royal York' in Berlin, then to Master in 1870 at the lodge 'Zur Einigkeit' in Budapest. It has been suggested that his interest in freemasonry may have been influenced by some aspects of Wagner's *Parsifal*, which Wagner is thought to have composed deliberately from an initiatory and alchemical angle. On his arrival in Berlin around 1872 he asked to be initiated into one of the city's lodges, but discreet pressure caused him to abandon the idea. Gounod, although a practising Catholic, was sufficiently interested in masonic sumbolism to compose a 'quasi-masonic' opera, *La reine de Saba*, to a libretto inspired by a story from *Le voyage en Orient* by Gérard de Nerval (an aleatory mason). The score of this work contains rhythmic elements and features of orchestration very close to those of *Die Zauberflöte*. The musicologist Hugo Riemann was a prominent mason; it was for his own 'Phoenix' lodge in Leipzig that he first wrote his 'work' subsequently published in *Latomia* ('Les tailleurs de pierre', 1897).

In the 20th century the Dutch composer Willem Pijper produced a fine work entitled *Zes adagios* for an initiation in 1940. Several of P.M. Dubois' works were inspired by freemasonry: *Le concert des éléments*, *Musique maçonnique contemporaine* (for an initiation) and the opera *Le serpent vert*, on a subject taken from Goethe, himself a mason. Julien Falk left some noteworthy scores for use in masonic ceremonies including a cantata on a text from St John's Gospel, *Les trois voyages* (initiation), *La lumière* and a number of marches. The Belgian composer Vic Legley wrote some highly regarded masonic pieces: *La cathédrale d'acier*, *Dyptique* (for initiation into the 18th degree), and Music for Brass and Percussion (initiation into the 30th degree). Another Belgian, Arsène Souffriau, composed a great deal of ritual music including some for the 33 degrees of the Scottish rite. Finally, the Swiss Jacques Cerf, a member of the Swiss grand lodge 'Alpina', wrote not only a considerable body of highly acclaimed secular work but also much masonic music, including most notably *Petit livre pour un rituel* (initiation into the 18th degree) and *La légende d'Hiram* for soloists, male-voice choir and large orchestra.

CECIL HILL/ROGER J.V. COTTE

Masotti, Giulio (*b* Castrocaro, nr Forlì; *fl* 1583). Italian composer. It is clear from the dedication to Ippolito dalla Rovere da Monte Feltre of his only known work, *Il primo libro de* [22] *madrigali a cinque voci* (Venice, 1583), that he was then associated with Ippolito's court where 'so many musicians of supreme perfection' received patronage. The book includes texts by Sannazzaro, Ariosto and Petrarch. The style is contrapuntally developed and restrained in expressive language.

PIER PAOLO SCATTOLIN

Masque. A genre of entertainment that developed in England during the 16th and 17th centuries around a masked dance. Based on allegorical or mythological themes and involving poetry, music and elaborate sets, its finest achievement was in the court masques of the poet laureate Ben Jonson and stage architect Inigo Jones from 1605 to 1631. A lesser-noted but nonetheless important type was the theatre masque of the same period, which survived the demise of the court masque and reached its highest development in the dramas and semi-operas of the Restoration (1660–*c*1700), especially in the works of Dryden and Purcell.

1. Origins to *c*1600. 2. Jacobean (1603–25). 3. Caroline (1625–49). 4. Commonwealth (1649–60). 5. Restoration (1660–*c*1700). 6. 18th century. 7. 19th and 20th centuries.

1. ORIGINS TO *c*1600. The origins of the masque are to be found in the festivals, pageants and revels of the Renaissance, particularly the English disguising and its Italian counterparts, the *veglia* and *masquerie*. From the Italian *trionfo* came the processions and elaborate pageant carts which presented symbolic figures and allegorical themes from classical mythology. The French *ballet de cour* and *masquerade* strongly influenced the dances and choreography of the masque and contributed to the growth of some loose dramatic continuity. The former, like the Italian *intermedio*, added significant advances in stage and scenic design. From the older tradition of mummings derived the element of dance pantomime, and additional prototypes for the comic dances of the antimasques existed in the *ballet à entrées* (*see* BALLET DE COUR), morescos, farces, jigs and various country dances of the period. The instrumental music of the masque was derived from popular and court dances of the 15th and 16th centuries (basses danses, measures, pavans, galliards, branles, voltas and others), and the vocal music was strongly influenced by popular as well as more sophisticated genres (choirboy songs, ayres, ballads, canzonets, madrigals, and the dramatic monodies, *récits* and continuo songs of the Italian, French and English courts).

The immediate prototype of the masque, the disguising, was known as such in England from the early 15th century. It developed from the native pastime of mumming, which had itself descended from the art of the troubadours. Based on allegorical or mythological themes and using elaborate stage machinery, the disguising was performed at night on special or festive seasonal occasions by both speaking and singing actors, with dance as the culminating event. Disguisings were popular at the court of Henry VII, especially during the Christmas season, when a Lord of Misrule was chosen to preside over the festivities (for a contemporary account of a lavish disguising performed for the wedding in 1501 of Prince Arthur and Catherine of Aragon see Wickham, 1959–81, i, pp.208–9).

According to an account in Hall's *Chronicle*, Henry VIII introduced the Italian *masquerie* to the English court in 1512:

> On the daie of the Epiphanie at night, the kyng with xi other wer disguised, after the manner of Italie, called a maske, a thyng not seen afore in Englande, thei were appareled in garmentes long and brode, wrought all with gold, with visers and cappes of gold, and after the banket doen, these Maskers came in, with sixe gentlemen disguised in silke bearynge staffe torches, and desired the ladies to daunce, some were content, and some that knewe the fashion of it refused, because it was not a thyng commonly seen. And after thei daunced and commoned together, as the fashion of the Maskes is, thei toke their leave and departed, and so did the Quene, and all the ladies.

Most likely the basic difference between the disguising and this form of 'maske' was that in the latter the masquers revelled with ladies of the audience in dancing, gallantry and intrigue. These revels became an essential feature of the English court masque.

In the course of the 16th century the masque merged with the disguising, assuming its scenic décor and other theatrical elements. Scenes like those of a castle, a ship, a mountain or a bower were either fixed or mounted on floats that carried the masquers in and out of the hall. From these stationary or movable tableaux the dancers made their entry and descent to the floor, often preceded by the presenter's prologue, an encomium to the king and queen, which was followed by a song or a chorus, or both. After the formal dance and the revels the masquers were called back to the set by another speech or song (sometimes both) and then made their exit. Allegory and symbolism were an important part of the poetry, the scenery, the costumes, the dances and the music. A masque of this kind was given by Henry VIII in 1527 for the French ambassador on the signing of an alliance between Henry and François I.

The increasing popularity of masques and other entertainments at court is reflected in the creation of the post of Master of the Revels in 1545, and in the selection of the poet George Ferrars as Lord of Misrule. Ferrars was responsible for works with such bizarre titles as *The Masque of Covetous Men with Long Noses*, *The Masque of Cats* and *The Drunken Masque*, written to amuse the boy King Edward VI. Activity decreased during the reign of Mary Tudor, but Elizabeth I, although frugal in her habits, was a devotee of music and dancing and participated in and supported a number of masque productions. Several of these depicted tradesmen: fishermen, swartrutters, foresters, mariners etc. For Elizabeth's projected meeting with Mary Stuart at Nottingham in 1562 a *Masque of Peace* was prepared, and, although the meeting never took place, a description has survived indicating that there were actually three masques to be presented on successive nights, each with its own theme. The last of

these was to end with a chorus 'as full of armony as may be devised'. A later production, *The Masque of Gods* (1578), was a processional masque to welcome Elizabeth to Norwich, and more closely resembled the 'entertainment' that had as its principal feature the offering of gifts.

During Elizabeth's reign masques were also presented by the four legal societies of the Inns of Court, each of which chose a Lord of Misrule to preside over its seasonal festivities. At Shrovetide 1595 the barristers of Gray's Inn performed a masque for the queen entitled *The Masque of Proteus and the Adamantine Rock* which, with the exception of the antimasque, contained all the elements of the Jacobean masques, and became the prototype for those of Ben Jonson.

The music for Tudor masques was composed by the leading musical figures at court: the Master of the Chapel Royal, members of the King's Musick or the organist of St Paul's. Under Henry VII Gilbert Banester and later William Newmark were in charge of such festivities; under Henry VIII, John Redford and William Cornyshe; during Elizabeth's reign, Richard Farrant and Richard Edwards. The musical performers were the instrumental consorts, choirboys and 'singing-men' of the King's Musick and the Chapel Royal, and on occasion the musicians and boys of St Paul's and Westminster Abbey. The vocal music consisted of consort songs to viols, lutesongs, partsongs for two to six voices and other more popular forms. The dances included a variety of measures, pavans, galliards, corantos, voltas, branles and country dances. Undoubtedly some of this music survives in manuscript and printed collections of the period, but specific identifications are very difficult, perhaps even impossible.

1. An Elizabethan masque in performance: detail from the 'Memorial Portrait of Sir Henry Unton' by an unknown artist, c1596 (National Portrait Gallery, London); Mercury and Diana lead the entry of masquers and torchbearers who process round a broken consort (a consort of viols can be seen in the upper left-hand room)

2. Jacobean (1603–25). The early Stuarts were sophisticated patrons of the arts, and the royal household included large numbers of artists, poets, musicians and savants who collaborated in producing some of the most lavish court diversions ever seen in England. Masques were increasingly exploited for political purposes, and foreign ambassadors intrigued for prominent places at performances. In addition to the traditional representations at Twelfth Night and Shrovetide, masques were staged for marriages, births, progresses, treaties, alliances and other occasions at court. Aping these elaborate productions, the prominent nobility, as well as the gentlemen of the Inns of Court, mounted their own less pretentious private masques for special occasions. Poets took advantage of public admiration of such spectacles by including masque-like episodes in their plays at the Bankside and in the new theatres in London.

The high literary quality of the Jacobean masque is largely due to Ben Jonson, who combined a sensitive feeling for lyric and dramatic poetry with depth and accuracy of classical scholarship. Familiarity with classical mythology is necessary for an understanding of the allegorical and symbolistic associations that are the essence of masque themes (also referred to as the 'meaning', 'conceit', 'emblem' or 'soul' of the masque). It was the task of the various poets, artists, musicians, actors and artisans of the court to personify the classical gods of antiquity and their godly virtues in the bodies of the English royal family. The courtiers were usually sufficiently educated to recognize these allusions; for his more obscure references Jonson engaged in more subtle didactic rhetoric.

Other fine poets, including George Chapman, Francis Beaumont, Thomas Middleton, John Marston, Thomas Campion and Samuel Daniel, also wrote masque texts. At the same time, under the gifted Inigo Jones, who borrowed heavily from foreign spectacles, the visual aspects of the masque – scenery, costumes, stage machinery including the *deus ex machina*, and even the hall itself – became increasingly elaborate, impressive and costly. More than 400 of Jones's sketches of the costumes and scenery for Jacobean and Caroline masques are in the Duke of Devonshire's Chatsworth collection (see figs.2–4, 6 and 7; a good selection is included in Simpson and Bell, 1924).

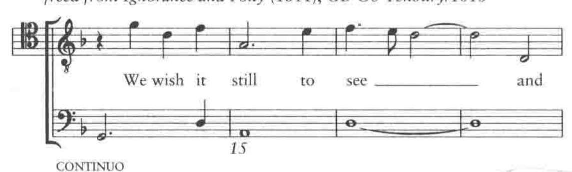
The court masques had no rigid structural formula but certain elements are common to most of them, and their general organization is as follows: (1) procession, (2) allegorical speech or dialogue, (3) antimasque songs and dances, (4) discovery of the scene of the masque, (5) song I, (6) entry dance of the masquers and descent to the floor, (7) song II, (8) main dance of the masquers, (9) song III, (10) revels with the audience, (11) song IV, (12) return to the stage and final dance of the masquers or a grand chorus. Variants of this plan sometimes omit the main dance, include an additional one, or place the revels at the end, as in the *ballet de cour*. A special dance for the torchbearers could also precede the entry dance, and often the masque was followed by a sumptuous banquet. An entire production lasted as long as four or five hours.

Jacobean masques were presented either in the Great Hall at Whitehall or in the Banqueting House, which was rebuilt by James I in 1606 and again in 1622 after the disastrous fire of 1619 (Inigo Jones was the architect). Scaffolding was erected for the spectators on three sides,

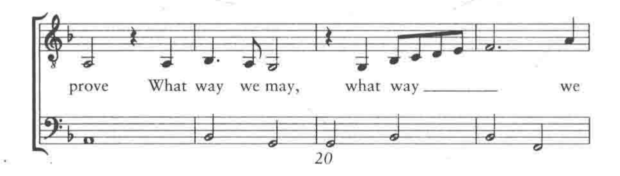
and a raised dais of state was placed on the floor about two thirds of the way back from the stage. The central clearing was left open for the dancing and singing.

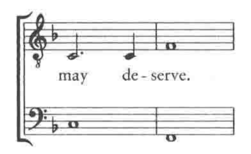
No complete score for a court masque has survived, for several reasons. The loose arrangement and collective nature of the composition of the music involved composers from various consorts of the King's Musick (e.g. the consort of violins for the dances, the lutenist-singers for the songs, the 'loud' music or wind band for processions and scene changes); indeed a division of labour even existed between the composer of the dances and the composer who orchestrated the dances for the king's violin band (Holman, 1993). Each leader composed the music and provided the parts for his own consort. Antimasques frequently used anonymous popular ballads, catches and dance-tunes as well as newly composed and choreographed dances, and were performed (danced) by professional actors from dramatic companies such as the King's Men. The songs in the published texts of the masques were usually printed in italics, and these show that the vocal music consisted mainly of individual numbers. The masquing and antimasque dances are indicated in the printed stage directions, but with a few exceptions none of the music was printed with the librettos, and scores and parts were rarely kept after a performance.

The earliest masque for which specific music survives is Jonson's *Masque of Blackness* (1605); only one song is extant, 'Come away' by Alfonso Ferrabosco (ii) (*Ayres*, 1609). This was the first masque to do away with dispersed scenery in favour of a stage and curtain, and was the first product of the collaboration between Ben Jonson and Inigo Jones, who, until their quarrel in 1631, produced about 30 works together. Ferrabosco seems to have been a third member of this partnership, especially for the earlier masques, of which he supplied seven with music. Later he contributed to Jonson's *Masque of Augurs* (1622); Jonson lauded him in his librettos, his *Epigrams* (cxxx and cxxxi) and elsewhere. Five of Ferrabosco's songs are extant from the *Masque of Beauty* (1608), more than have survived from any other Jacobean masque. One of them, 'So Beauty on the waters stood', is among his finest songs and illustrates his ability to create a flexible, expressive melody out of the simplest devices, in this case a long anacrusis held over the bar-line, followed by a leap of a 7th (ex.1). Three of the songs from the *Masque of Beauty* are linked as a continuous musical scene between the main dance and the revels, and are tonally organized in G minor. With its long sequential descent moving out of phase over ponderous harmonies, the final return from G major by way of F major is a forward-looking piece of dramatic-harmonic writing (ex.2). This continuous musical organization is seen again in Ferrabosco's music for Jonson's *Love freed from Ignorance and Folly* (1611), where it is almost the same; these may be the earliest instances of such dramatic writing in the masque tradition. Ferrabosco's music is strongly individual, and his masque songs are in a rudimentary declamatory style, easily recognized by the broad sweep of angular, triadic melody – almost instrumental in character; the setting of text is sometimes crude. 6ths and even 7ths are frequent in the vocal lines, some of which have a range of up to two octaves (ex.3). The opening held gesture is a hallmark of his songs.



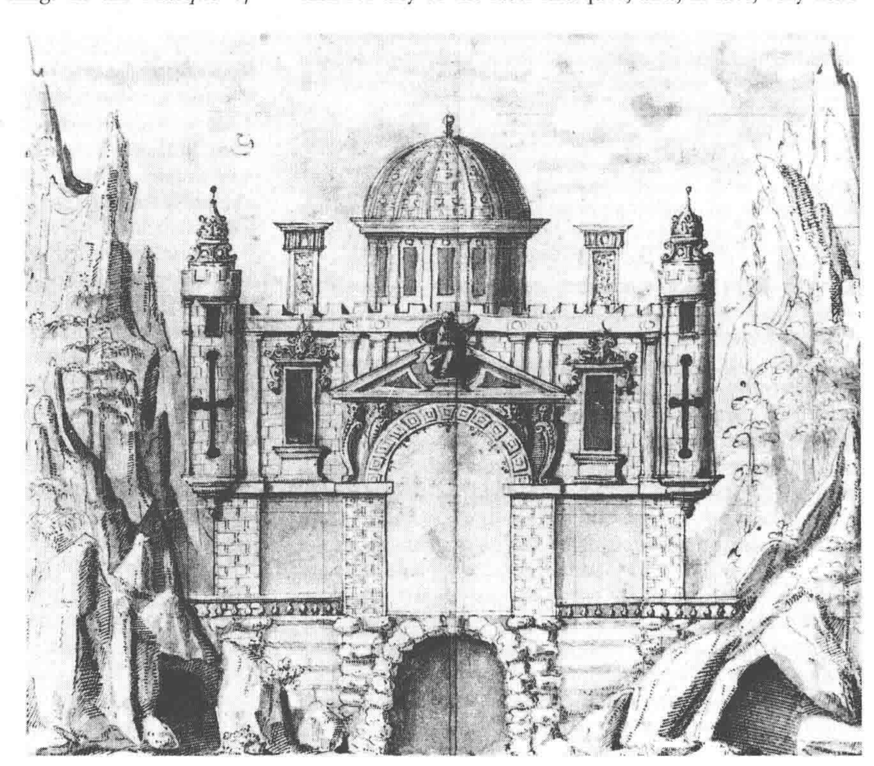
Ex.1 Opening of Alfonso Ferrabosco (ii): 'So Beauty on the waters stood'. Ben Jonson's *Masque of Beauty* (1608). Song printed in Ferrabosco's *Ayres* (1609)





Ex.2 from Alfonso Ferrabosco (ii): 'Yes, were the loves', Ben Jonson's *Masque of Beauty* (1608). Song printed in Ferrabosco's *Ayres* (1609)

Ex.3 from Alfonso Ferrabosco (ii): 'How near to good', Ben Jonson's *Love freed from Ignorance and Folly* (1611), *GB-Ob Tenbury*/1018



Ferrabosco also wrote the music for Jonson's *Masque of Hymenai* (1606), a 'double masque' (one of men, another of women) for the marriage of the Earl of Essex and the Lady Frances Howard. Here the episode of the presenter's speech is a rudimentary dramatic situation in which extra characters are added and remain as participants in the ensuing action. The 'device' (theme) thus became a more dramatic and unifying factor in Jonson's masques. Allegorical and symbolic meanings were also deepened, and applied not only in the spoken lines but also in the décor and the choreography, the point of it all being the glorification of the king. In the *Masque of Hymenai* Jonson drew attention to the dancing-master and violinist Thomas Giles, who introduced the main (third) grand masquing dance; an 'Essex Antick Masque' and the three masquing dances are extant (*GB-Lbl* Add.10444, nos.92–5). Giles's choreography also included a processional paired entry, a circle, a chain of linked hands and the initials of the bridegroom.

In two of Jonson's masques of 1611, the *Masque of Oberon* and *Love Freed*, Ferrabosco was assisted by Robert Johnson, who composed music for the dances only. In *Oberon*, a masque for Prince Henry, Jonson confronted the problem of corruption posed by the antimasque to the theme of the masque proper, an overriding consideration in all his masques. He attempted to create a measure of unity and balance among the main masque, the antimasques and the revels, not only in the dramatic symbolism of the text but also in the dramatic function of the music which was dispersed throughout the masque and which now furthered the development of the theme. To achieve this goal he and Jones also introduced movable sliding flats to allow quick changes of scene. Ferrabosco's music for two of the songs for the main masque are extant: 'Nay, nay, you must not stay' and 'Gentle knights' (*GB-Ob* Tenbury 1018); the latter is one of his finest songs. Some music for the antimasque dances of satyrs and fairies has survived (Sabol, 1978; Chan, 1980), and a substantial number of documents are also available for this masque (Walls, 1996).

Two songs by Ferrabosco also exist for *Love freed*: 'O what a fault' and 'How near to good' (*GB-Ob* Tenbury 1018; ex.3). Here Jonson continued to develop the masque into a cohesive structure in which the audience itself became an integral part. Ferrabosco's music, even more than in *Oberon*, perfected his new declamatory style intermixed with tuneful melody. No music survives by him for any of the later masques, and, in fact, very little

2. King Oberon's Palace from Ben Jonson's 'Masque of Oberon, the Fairy Prince', scene ii: design by Inigo Jones, pen and ink with wash, 1611 (Devonshire Collection, Chatsworth House; Simpson and Bell, no.42)

identifiable vocal music exists for any of the later Jacobean masques. Even among the considerable number of extant masque and antimasque dances few can definitely be associated with their masques, although attempts to do so have not been wanting (e.g. Cutts, 1954; Sabol, 1978; Walls, 1996).

When after 1612 Ferrabosco (for some unexplained reason) ceased writing music for Jonson's masques, Robert Johnson was one of the composers, with Coprario, Campion and Nicholas Lanier, who wrote both songs and dances. Johnson was also active as a composer and musician for the King's Men and seems to have transferred some of his dance-tunes from the masquing hall to the theatre stage. He wrote music for Shakespeare's *Tempest* (1611) – the most important play of the period to incorporate masque – and for several other dramatic works. He also provided music for two of the three masques presented in 1613 for the marriage of Princess Elizabeth and the Count Palatine of the Rhine: Campion's *The Lord's Masque* and Chapman's *The Middle Temple and Lincoln's Inn Masque*. For the latter he composed both the songs and the dances and supervised the musicians, for which he received £45. He also wrote music for Jonson's *The Gypsies Metamorphosed* (1621).

One of the most significant masque poets, Thomas Campion, was also a musician. In 1607 he wrote both the text and the music for the *Masque in Honour of the Marriage of Lord Hayes*. Thomas Giles set the dances with the assistance of Thomas Lupo the younger, the king's composer for the violins. The libretto describes the disposition of the vocal and instrumental groups:

> on the right hand ... were consorted ten Musitions, with Basse and Meane lutes, a Bandora, double Sackbott, and an Harpsichord, with two treble Violins; on the other side somewhat neerer the skreene were plac't 9 Violins and three Lutes; and to answere both the Consorts (as it were in a triangle) sixe Cornets, and sixe Chappell voyces.

Campion's description of the musical part of the performance for the chorus of the transformation scene for the appearance of the grand masquers adds valuable details of performing practice:

> This Chorus was in manner of an Eccho seconded by the Cornets, then by the consort of ten, then by the consort of twelve, and by a double Chorus of voices standing on either side, the one against the other, bearing five voices a peece, and sometime every Chorus was heard severally, sometime mixt, but in the end altogether . . . (their number in all amounting to fortie two voyces and instruments).

Of the seven vocal numbers in the masque, Campion printed only two: 'Now hath Flora rob'd her bowers' and 'Move now with measured sound'. Three dances by Lupo and Giles, presumably the grand masquing dances, were also included, but with words added later. Campion's music is somewhat conservative, quite unlike Ferrabosco's modern dramatic writing.

Coprario's masque songs are also conservative; in 1613 he wrote music for Beaumont's *Masque of the Inner Temple and Gray's Inn* and for Campion's *The Masque of Squires*. Coprario may also have contributed to the *Masque of Flowers* (1614), which was completely financed by Sir Francis Bacon. He reputedly participated in some of the earliest Italian operas during a sojourn in Italy, but Italian influence is not evident in his three extant songs from the *Masque of Squires*. However, he was the teacher of William Lawes, whose music does show Italian influences and who dominated the masque music during the Caroline period. Foreign influence on the masque increased during the second decade of the 17th century. The French and Italian borrowings of Inigo Jones, who had learnt his craft in those countries, are well known and documented.

By 1617 Ben Jonson also capitulated to continental literary ideas: his Twelfth Night masque of that year, *The Vision of Delight*, incorporated an antimasque of Burratines and Pantalones in direct imitation of the French *Ballet de la Foire St Germain* (1606), which employed the stock figures of the *commedia dell'arte*. He also borrowed extensively for the same masque from the spectacular *intermedi* and *veglia* presented at the Palazzo Vecchio in Florence in 1608, the *Notte d'amore*. The *Masque of Queens* (1609) had already shown the influence of the pastoral comedy *Giudizio di Paridi* (1608) by the Italian poet Michelangelo Buonarotti the younger and the stage architect Giulio Parigi. The first *intermedio* (the 'Palace of Fame') was the prototype not only for a similar scene in the *Masque of Queens*, but also for another 30 years later in *Britannia triumphans* by Jones and Davenant.

The music was similarly subject to foreign influence, particularly that of the Italian *stile recitativo*. Monodies by Caccini, Notari and others were printed in England at this time and Ferrabosco himself wrote recitatives in Italian (ESLS, 2nd ser., xix), although there is a marked difference between these and his declamatory writing for masques. In the preface to his famous *Lovers Made Men* (1617), Jonson wrote that 'the whole masque was sung after the Italian manner, *stilo recitativo*, by Master Nicholas Lanier, who ordered and made both the Scene and the music', and the text shows that it was completely set to music. Jonson used the phrase 'stylo recitativo' again in *The Vision of Delight*, but the music to both masques is lost.

The extent of Italian recitative influence on English declamatory song has been questioned in favour of an indigenous development resulting from the need for a more dramatic style (see Spink, 1959–60), and it has also been pointed out that Jonson's reference to *stilo recitativo* did not appear in the 1617 librettos of his masques, but only in the 1640 editions (Emslie, 1960). There are in fact basic differences of style between the declamatory song and Italian monody, differences inherent in the languages themselves: the former, in observing English rules of declamation in speech rhythm, accent and inflection, is more melodic with frequent end-stopped lines. For these and other reasons it has been suggested that *Lovers Made Men* was probably set not as a continuous recitative but as a series of declamatory songs, dialogues and choruses, but without the music this cannot be proved. However, Lanier's early declamatory style may be examined in his one surviving song from the *Masque of Squires* (1613), 'Bring away this sacred tree', which contains both recitative and declamatory elements. Lanier visited Italy in 1625 to buy paintings for the king, and on his return in 1628 he wrote his famous dialogue *Hero's Complaint to Leander* in the recitative style; thus in either 1617 or 1628 he played a leading role in introducing continuous recitative – or declamation – into England (Walls, 1996). But the masque was certainly the principal vehicle for the development of the heightened speech of the English declamatory style. This development can be traced clearly from the masquing songs of Ferrabosco to those of William Lawes, Locke and Purcell, the four most prominent composers of music for the masque.

The songs in the masques have musical and dramatic significance to the spectacle as a whole, but they, like the text and the décor, play a secondary role to the dances. Indeed, one function of the songs was to allow the dancers to rest between numbers. The dances – both the formal dances of the three grand masquing dances and the social dances of the revels – were the raison d'être of the genre; in fact many of the songs are dancing-songs, not only in the antimasques, but during and in between the grand masquing dances and the revels. The main masquing dances were performed by cultivated aristocratic amateurs coached and accompanied by professional musicians and dancing-masters. The grand masquers themselves were lords or ladies currently in high favour at court; their number varied from six to 16 and they assumed some symbolic disguise, such as knights, heroes or other virtuous champions of the crown. At times the king or queen themselves took part. The masquers were taught their steps and rehearsed by dancing-masters like Giles, Jeremy Herne and the Frenchmen Bochan and Confesse, who also devised the ballets. The value attached to these dancing-masters can be seen in the fact that their pay often exceeded that of the poet or the composers. Especially important to these activities was the courts's band of violins, which accompanied the dancers in their rehearsals and in the performances (Holman, 1993).

The three grand masquing dances – entry, main dance and going-off – were always newly composed and newly choreographed. These set dances were often referred to as 'measures' (i.e. each dance was a newly choreographed unit), as were choreographed antimasque dances. The term was also used to refer to the more stately choreographed pavans that often led off the dance entries (Cunningham, 1965; Ward, 1988). The climax of the grand masquing dances was the main dance, a ballet involving symbolic figures, letters and geometrical patterns related to the theme of the masque. The dance types employed were measures, almans, ayres, pavans and corantos. Often a special dance of torchbearers preceded the entry of the masquers to illuminate the way for their descent to the floor: the torchbearers were chosen from among the young gentlemen of the nobility, and their dances were of the same type as those of the masquers but more simply patterned, befitting their youth and inexperience. They also took part in the figures of the grand masquers, their torches articulating the designs. Often, when the choreography required it, a third strain in triple time was added to the grand masquing dances; they were usually in duple time and numbered '1st', '2nd' or '3rd'. They reflect the majesty of the occasion, as can briefly be seen in the opening tune from the main dance, 'The 2nd of the Temple', which may be from Chapman's *Masque of the Middle Temple and Lincoln's Inn* (1613; ex.4).

Ex.4 'The 2nd of the Temple', *GB-Lbl* Add.10444, no.40

The social dances of the revels, in which the masquers took partners of the opposite sex from the audience, included measures, almans, corantos, galliards, branles, voltas and various country dances, but these were not specially composed or choreographed for the occasion:

3. Design by Inigo Jones for a masquer, pen and ink with wash, c1610–13 (Devonshire Collection, Chatsworth House; Simpson and Bell, no.430)

they were mostly bipartite in form, and it is possible that in the improvised, paired and varied repeats of the strains, the music and the dance steps themselves were varied according to the prowess of the participants.

Burlesque dances – 'anticks' or 'antemasques' – were not innovations of the Jacobean masque. The commonly held belief that comic relief was introduced by Ben Jonson at the request of Queen Anne in the *Masque of Queens* results froma misinterpretation of Jonson's statement that the queen 'commanded me to think on some dance or shew, that might precede hers, and have the place of a foil, or false masque'. Jonson introduced the term 'antimasque' in the next sentence in referring to the 'antimasque of boys' that he had included in his masque of the previous year, *The Haddington Masque*. In the *Masque of Queens* Jonson fulfilled Anne's request (she was one of the masquers) by contrasting the 12 noble queens with an antimasque of 12 disreputable hags. He used the term 'antimasque' to emphasize this dramatic contrast and to prevent the element of the bizarre from degenerating into low comedy. According to Welsford (1927) 'the *Masque of Queens* fixed the norm of the masque for some years. From 1609 to 1617 Ben Jonson wrote masque after masque, all showing the same careful structure and unity of design, the antimasque being kept

strictly in its place and serving as a foil to the main action'. As the antimasque became established as a permanent feature it borrowed heavily from the French *ballet masquerade* and the *ballet à entrées*.

For the antimasques composers used anonymous popular ballads, catches and dance-tunes, and also wrote new dances in fast duple or triple metre: jigs, country dances, morescos, voltas, galliards, corantos, almans etc. The choreographed measures of these often differ from the terminal dances in that they consist of a greater number of strains which are contrasted in tempo, mood and length; sections in fast jig time indicated by ₵ are common. Sometimes pauses over notes indicate certain held gestures. Frequently the titles of these dances refer to the characters of the antimasque, e.g. 'The Satyrs Masque', 'The Ape's Dance at the Temple', 'The Cuckolds Masque'. A good example is 'The Second Witches Dance' from the *Masque of Queens*: a prankish tune (ex.5*a*) is succeeded by two sudden gestures, which are in turn followed by a series of short, metrically contrasted sections (ex.5*b*).

The reconstruction of the dances for the court masques can be only partly successful, not for want of the music, much of which is retrievable, but for want of the choreography for the antimasques and masquing dances. Many of the masque librettos do include descriptions of the patterns formed by the dancers, but specific details of the dances or 'measures' themselves are lacking. The major source for the music of Jacobean masque dances (*GB-Lbl* Add.10444) has been the subject of much research and controversy (cf Lawrence, 1922; Cutts, 1954; Willetts, 1965; Knowlton, 1966, 1967–8; Sabol, 1978). The manuscript includes 138 dances under such vague and fanciful titles as 'The Old Anticke Masque', 'Gray's Inn Masque', 'The humming batchelor', and 'My Lord Essex', but the association of these tunes with their proper masques is problematic, since the titles are ambiguous in many cases and can be ascribed to two or more works. Many of the dances are to be found with additional parts in William Brade's *Newe ausserlesene liebliche Branden ... a 5* (Hamburg, 1617), Thomas Simpson's *Taffel-Consort* (Hamburg, 1621) and, most extensively, in John Adson's *Courtly Masquing Ayres* (London, 1621); many are edited in Sabol (1978).

3. Caroline (1625–49). During the reign of Charles I and his consort Queen Henrietta Maria it became customary for the king and his lords to present a masque to the queen at Twelfth Night, and for the queen and her ladies to reciprocate at Shrovetide. The productions of this period became increasingly costly and more directly intended as political propaganda. The queen had brought her own musicians with her from France, and the several minor productions recorded between 1625 and 1631 are thought to have been heavily influenced by the *ballet à entrées*, but neither the text nor the music to any of them is extant.

In 1631 Ben Jonson produced his last two masques, *Love's Triumph through Callipolis* and *Chloridia* (no music has survived). In the latter the long and fruitful association between Jonson and Inigo Jones ended; deeply rooted jealousies and a basic conflict of artistic ideals made the break inevitable, though the immediate cause was the quarrel over who was to be in charge of their productions. Jonson's ideal was a scholarly, dramatic form that would have enduring value as literature, but Jones saw each masque as an occasional visual and aural entertainment, lingering only in the memories of those who were present. When Jonson printed his own name ahead of Jones's in the libretto of *Chloridia* and viciously attacked the architect in writing, he placed Jones in a position of defensive advantage and found himself ostracized from all future masque productions. Jonson's jibes in his famous *Expostulation with Inigo Jones* were cruel, but not without some foundation, since without significant literary content the masque did subsequently degenerate into mere spectacle. Jonson's irony was prophetic in the *Expostulation* when he cried:

> O shows, shows, mighty showsThe eloquence of
> masques! what need of prose,
> Or verse or prose, t'express immortal you?
> You are the spectacles of state, 'tis true . . .
> Or to make boards to speak! there is a task!
> Painting and carpentry are the soul of the masque.

Inigo Jones, now in complete charge, turned to lesser and manageable poets like Aurelian Townshend, who wrote the verses for both *Albion's Triumph* and *Tempe Restored* (1632).

Almost all the surviving vocal music for the Caroline court masque is in the autograph manuscript of William Lawes (*GB-Ob* Mus.Sch.B.2), which contains part of the music for James Shirley's *Triumph of Peace* (1634) and Sir William Davenant's *The Triumphs of the Prince d'Amour* (1636) and *Britannia triumphans* (1638) (ed. in Lefkowitz, 1970). Many of the dance-tunes for the Caroline masques are in John Playford's *Court-ayres* (1655) and *Courtly Masquing Ayres* (1662) (ed. in Sabol,

4. Designs by Inigo Jones for masque characters, pen and ink with wash: (a) Fear from the second antimasque, and (b) Queen Henrietta Maria as Chloris (annotated presentation design: an inscription below appeals to the queen not to alter the costume), both from Ben Jonson's 'Chloridia', 1631; (c) a Turk from the antimasque in William Davenant's 'Britannia triumphans', 1638; (d) a youthful torchbearer from Thomas Carew's 'Coelum britannicum', 1634 (Devonshire Collection, Chatsworth House; Simpson and Bell, nos.92, 98, 296, 206)

1978). As dramatic and lyric poetry the masques of this period are inferior to Jonson's, but as musically organized dramatic presentations they are far more developed and prepared the way for the later masques, semi-operas and operas of Locke, Blow and Purcell. They show William Lawes, best known for his string music, as the most important English dramatic composer of the first half of the 17th century.

The *Triumph of Peace* was probably the most elaborate of all court masques. It was presented to the king by the four Inns of Court at a cost of more than £21,000, and had distinct political overtones. In his *Histriomastix*, William Prynne, a Puritan barrister of Lincoln's Inn, had attacked participation by the aristocracy in stage plays and masques as licentious and ungodly. Taking this as an affront, the king requested a masque from the Inns of Court as a public testament to their love and affection for the crown. The masque was preceded by a magnificent pageant that paraded through the streets of London for hours before the performance. The original plans for this masque, made by the parliamentarian Bulstrode Whitelocke, who was in charge of organizing the music, contain much information about this masque and its musicians (over 100) and about performing practice in general (see Lefkowitz, 1965, and Sabol, 1966). Diagrams show the exact position of the singers and instruments for specific musical numbers, which indicate that the larger musical scenes were performed on the floor in geometric figures with the voices and instruments integrated (fig.5). There is also a list of the instrumentation of the 'symphony', a consort of six lutes, a bass lute, a harp, a violin and three viols, which performed the 'symphonies' and accompanied the singers in the ceremonial part of the masque.

Most of the symphonies, songs and choruses for the *Triumph of Peace* have survived in Lawes's autograph. The missing music was probably composed by Simon Ives, who like Lawes received £100 for his efforts. The symphonies are two-part (treble and bass) bipartite instrumental dance forms of the alman variety, and serve the dual purpose of introducing the songs and covering the movement of the musicians from the stage to the dance floor. The songs are declamatory continuo songs in the tradition of those of Ferrabosco and Lanier: the third song is a declamatory dialogue between Eunomia (Law) and Irene (Peace). The choruses are homophonic or in madrigal style. The formal structure, symphony–song–chorus, is repeated as a series of musical scenes, and is a marked advance from the loose arrangement of individual songs in the Jacobean masque and Ferrabosco's earlier attempts at musical unity.

In *The Triumphs of the Prince d'Amour* William Lawes collaborated with his brother Henry, from whom we have only one surviving song, 'Whither so gladly and so fast'. The masque was produced by the Middle Temple of the Inns of Court to honour the arrival in England of the king's nephews, the Palatine Princes Charles and Rupert. The title was taken from the name of the Christmas Lord of Misrule at Middle Temple. From the text of the first printed edition it is clear that the entire work (except the prologue) was set to continuous music, but it is not completely in recitative (declamatory) style. The careful structural plan of Jonson's masques has been abandoned for a freer mixture of antimasques, songs, formal dances and a banquet; it was prepared in haste and is short, has no spoken dialogue, only two antimasques, no revels and no exit dance. It shows strong French influence and closes with a grand chorus. William Lawes's music for the concluding two scenes is more unified than any previous English dramatic music: not only does the musical design symphony–song–chorus govern them individually, but in the last Song of Valediction they are linked together by a ritornello based on the second strain of the opening symphony (a device later used by Locke). The musical organization is conceived operatically; a continuous and varied musical and dramatic structure builds up to the final grand chorus. Symmetry of design, a unified sense of tonality (C minor with its related keys was Lawes's favourite), varieties of rhythms and textures, some expressive pictorialisms and a frequent use of the chorus are synchronized with the movements of the priests of Mars, Venus and Apollo from the stage to the dance floor and up to the dais to pay homage to the princes.

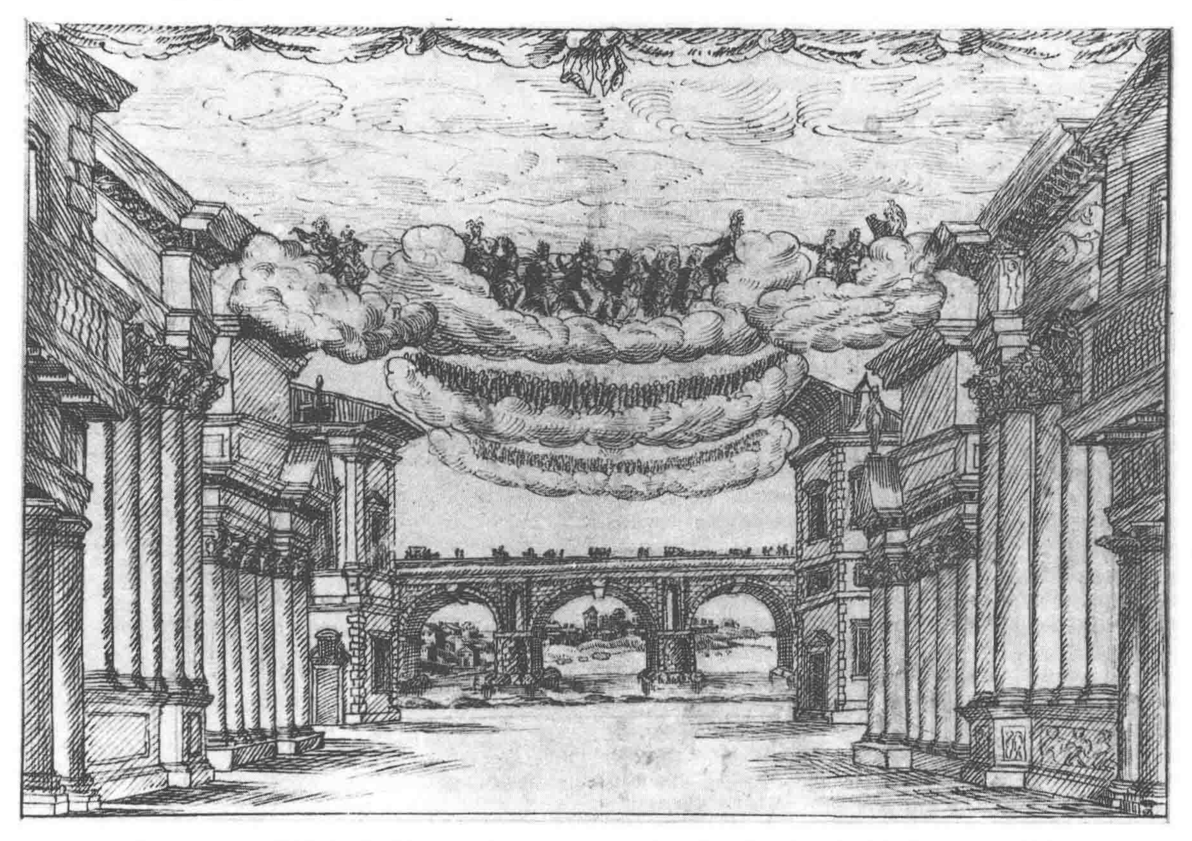
5. Transcription of a diagram showing the positions of soloists, chorus and instrumentalists in Shirley's 'Triumph of Peace', 1634 (after the Longleat Papers of Bulstrode Whitelocke, f.28v, Longleat House, Warminster)

The music for *Britannia triumphans* is the most extensive surviving partial score for any of the court masques. It is also the last court masque for which music is known to be extant and has by far the best surviving iconography. Davenant's preface speaks of 'Masques with shewes and intermedii', and indeed there is much borrowing from the French and the Italian in the entries and in the scenic designs. The theme is both political and religious, seeking to justify the king's use of ship money tax and to ridicule the Puritans. It was acted on a Sunday, which infuriated Puritan leaders for more than half a century afterwards. It was for this masque that Charles I built a special masquing hall so as not to ruin the newly painted Rubens ceiling of the old Banqueting Hall with the smoke of many torches.

Dramatically and musically *Britannia triumphans* is the most advanced of all surviving court masques. E.J. Dent (1928) called attention to William Lawes's advanced tonal organization in his other masques, but here it is even more striking. The 'royal' key of C is the tonal centre for a variety of related keys, including A minor, D major, C minor and E♭ major. Of particular interest is the composer's handling of major–minor tonal relationships and their close association with textual expression. The clear distinction between declamatory airs and tuneful ballads approaches a recitative-aria design, and three-part instrumental symphonies and five-part choruses replace the two-part and four-part ones respectively. This masque also contains one of the earliest instances of the use of the dramatic ostinato in England, in the song and chorus of Fame, which Lawes entitled 'Ciacona'. Some of the symphonies and dances for this masque appear in Playford's *Court-ayres*, but none of the music for the antimasques has been identified with certainty.

Davenant's last two court masques, *Luminalia* (1638) and *Salmacida spolia* (1640; fig.7), are completely dominated by foreign influence. The former is an adaptation of Francesco Cini's *Notte d'amore* and Parigi's *Triumph of Peace*. The latter is a *ballet à entrées*, with no fewer than 20 comic entries. The decline of the Jonsonian masque was complete, and the ensuing civil war provided the *coup de grâce*.

The court masques of this period are augmented by a number of works prepared for the lesser nobility, for the theatre and for the private schools. The most famous in the first category is Milton's *Comus*, performed at Ludlow Castle in 1634 for the investiture of the Earl of Bridgwater. It is far shorter than the conventional masque, having only one antimasque, one formal dance and no revels; five songs for it by Henry Lawes are extant (*GB-Lbl* Add.53723). Many short masque insertions are extant from contemporary plays, but one of the earliest full theatre masques was *The World Tost at Tennis* by Thomas Middleton and William Rowley (1638), which omits the terminal dances and the revels as well. These are also absent from most of the masques inserted into plays performed at the public schools.



4. COMMONWEALTH (1649–60). The influence of the court masque during the interregnum continued in the school masques and in new stage performances called 'moral representations' or 'private entertainments', which incorporated music and the dance, and 'scenes and machines', which Davenant and others used to circumvent the Puritan ban on stage plays. The popularity of school masques is affirmed by Pepys's diary entry for 26 April

6. Design by Inigo Jones for a dwarf rider from Hell in Ben Jonson's 'Chloridia', pen and ink with wash, 1631 (Devonshire Collection, Chatsworth House; Simpson and Bell, no.87)

1663, when during a family walk into the country his wife's maid entertained them with stories of a masque at her school in Chelsea some six or seven years earlier. Some poets became schoolmasters and turned their dramatic talents to school productions, like James Shirley whose *The Triumph of Beauty* was presented before about 1645 'by some young Gentlemen, for whom it was intended, at a private Recreation'. Its subject was the judgment of Paris, but it includes comic scenes (antimasques) for Shepherds, songs for Hymen and Delight, a chorus of Graces and Hours, and a final allusion to the legal nymphs, Irene, Eunomia and Diche, who were the central figures in Shirley's *Triumph of Peace*. One song, the three-part 'Cease warring thoughts' by William Lawes, is extant (excerpt in Lefkowitz, 1960). Another setting of this, and two songs by the theatre musician John Gamble, were printed in his *Ayres and Dialogues* (1659).

The interdiction of stage plays by the Puritans during the Commonwealth did not include a prohibition on concerts or on private musical dramatic productions, presented under such titles as masques, operas and 'moral representations', even though they were really plays with musical interludes. Instead of 'acts' the masque term 'entries' was used. Davenant's *Siege of Rhodes* (1656), for example, which was set to continuous music (now lost) and is often referred to as the first English opera, contained five entries in lieu of acts. As in the masques the composition of the music was a collective affair, including in this instance works by Henry Lawes, Captain Henry Cook, Locke, Charles Coleman and George Hudson. A similar but less pretentious work, Davenant's *First Day's Entertainment at Rutland House by Declamations and Musick* (a kind of lecture concert), was produced earlier in the same year. Davenant continued

7. Scene iv (with masquers revealed in the clouds) from William Davenant's 'Salmacida spolia': design by Inigo Jones, pen and ink with wash, 1640 (Devonshire Collection, Chatsworth House; Simpson and Bell, no.355)

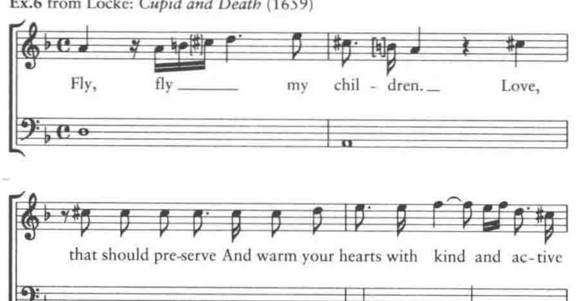
his musical dramatic productions with *The Cruelty of the Spaniards in Peru* (1658) and *The History of Sir Francis Drake* (1659). Both are described in their titles as operas (music for both was written by Locke), yet neither work is actually an opera. They too are divided into entries and they contain important elements of the masque, including both comic and serious dance scenes and instrumental and vocal music recitatives, songs, dialogues, choruses and a variety of dances. In 1663 Davenant revived the two works as Acts 3 and 4 of *The Playhouse to be Let*.

The true masque tradition survived during the Commonwealth only in Shirley's *Cupid and Death*, performed in honour of the Portuguese ambassador on 26 March 1653, but possibly written for an earlier school performance. It was revised by Locke in 1659 for a presentation at the military grounds in Leicester Fields, with music by Locke and Christopher Gibbons (the music for the 1659 version is in Locke's autograph in *GB-Lbl* Add.17799, published in MB, ii, 1951, 2/1965). Locke himself described it in his autograph as a 'Morall Representation', although the printed 1653 text refers to it as a 'Masque' (the printed 1659 text calls it a 'Private Entertainment'). Some of Gibbons's music is known to have been included in the 1653 version. Locke probably added substantial sections of recitative in the last two entries in the revision. The dances were arranged by the English 'hop-merchant' (dancing-master) Luke Channel, who was master of a boarding-school in Broad Street (Pepys, 24 September 1660). It is not known for what occasion or by whom the 1659 version was performed, though it was presumably for the Military Company in the Meeting House of the Military Grounds (Harris, *MB*, ii).

Cupid and Death is in fact the only complete extant score of a 17th-century English masque. It is not a court masque, but musically it is close to the form as it is known from William Lawes's partial scores. It is thus reasonable to assume that we have here almost the full musical schema of the earlier genre – without, of course, the participation of royalty in the grand masquing dances or the social dances of the revels. Unlike the court masques, *Cupid and Death* has a substantial plot which is based on Aesop's fable of the unknowing exchange of arrows between Cupid and Death. Shirley's source for this was undoubtedly John Ogilby's paraphrases of 1651. The masque is divided into five entries, each consisting of a suite of dances – alman, courant, saraband or jig or galliard – and a sequence of solo song, dialogue, recitative or duet (or a combination of these), followed by or interspersed with (or both) one or several short choruses. Substantial dialogue occurs in each of the first three entries but thereafter music or dance (or both) are almost continuous to the end of the final chorus. As in the court masque the action builds up to the Grand Dance of the principal characters, but by contrast with the court masque there is no clear delineation between the comical first half and the ceremonial second half of the masque. The antimasques occupy a prominent position in each of the entries and are directly related to the plot itself; they are the central focus of the entertainment.

Dent (1928) pointed out that the key scheme of Locke and Gibbons's score is not entirely congruous, and

suggested that Locke alone was probably in charge of the 1659 production and that he was probably obliged to include some of Gibbons's music from the 1653 version, even though it did not fit into his own scheme of tonalities. The masque begins in G and ends in A, which is regressive by comparison with Lawes's well-balanced key schemes, or even with Locke's own later dramatic productions. In other ways, too, Locke did not make advances beyond Lawes; he used a five-part chorus only once and then only in the eight-bar finale. The use of four-part writing, however, can be viewed as a progressive feature of Locke's style. Like Lawes he wrote some scene changes for two trebles and a bass and did not specify the instruments; but he did supply an independent violin part for the final grand chorus. A comparison with *The Triumph of Peace* shows strong parallels with Lawes's score and suggests that Locke was well acquainted with Lawes's music.



Locke's most original contribution lay in his recitatives for the fourth and fifth entries, which are the earliest extended English dramatic recitatives extant. They not only further the action of the plot, they also contain dramatic movement. While the first three entries include songs as well as spoken dialogue, the longer and more dramatic recitatives are reserved for the fourth and fifth entries, which for the most part are performed by the allegorical and mythical beings; the mortals speak mainly in dialogue. Significantly, both the dialogues and the recitatives are in free, unrhymed blank verse. Locke's declamation combines a strict attention to the natural rhythm of the spoken word with the normal inflections of speech, as well as a subtle use of agogic accent and more obvious pictorialisms. He also managed to combine the angular English declamatory style with the more emotional Italian idiom. The intensified parlando contrasts sharply with widely ranging, disjunct, almost erratic lines, which sometimes traverse an 11th in little more than a bar: the effect is intensely dramatic, as at the beginning of the fourth entry, when Nature attempts to warn some of the lovers of the approach of Cupid bearing his deadly darts (ex.6).

It was in these extended recitatives that Locke confronted and managed to solve the problem of successfully setting the English language to music in a dramatic context. Indeed, this was a salient feature of his legacy to Purcell.

One important reason for the success of *Cupid and Death* is the fact that the major dramatic roles in the fourth and fifth entries were specified and had to be performed by musicians, whereas the spoken dialogues of the first three entries were probably performed by actors who could not manage the difficult recitatives. Indeed, the songs in the first part of the masque are blank songs sung by unspecified soloists and chorus, whereas the dramatic action of the finale is carried forward in music performed by the main characters of the masque rather than by faceless commentators on the periphery of the action, as was the case in earlier masques and plays presented by actor's companies (and in many later ones as well). Locke's recitatives especially benefited from this, and enabled him to produce what is probably his finest dramatic writing for the stage and certainly the most successful dramatic score leading from the earlier court masques to the semi-operas of the Restoration.

5. Restoration (1660–c1700). During the Restoration influences from the earlier masques were manifested in

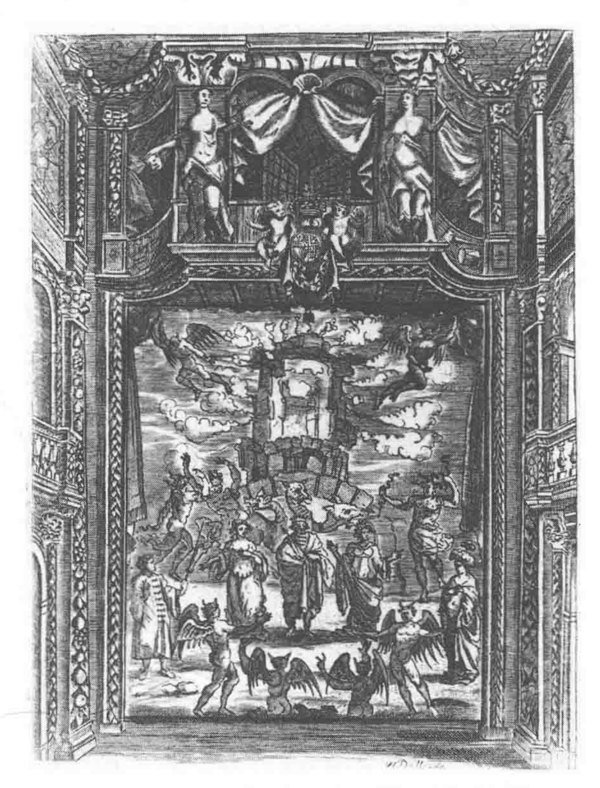
Ex.6 from Locke: *Cupid and Death* (1659)

two distinct groups of entertainment: plays with musical interludes (which proliferated after the reopening of the theatres), and the more substantial theatre and court masques. Of the two groups the first were the more numerous.

Davenant's 'operas' of the 1650s were the immediate models for the musical plays of the 1660s, a number of which therefore included theatre masque entries. The tradition of musical interludes had been popular with the English theatre public since the 16th century (Reyher, 1909, pp.497–8 lists some 80 plays written between 1588 and 1700 that contain masque scenes). Shakespeare's *A Midsummer Night's Dream* and *The Tempest* contain two of the most extensive examples from the earlier period. Sometimes their use in plays was functional, as in the case of *Henry VIII* (Act 1 scene iv), where the king meets Anne Boleyn when he selects her as his dancing-partner in the revels of a masque. In the Restoration theatre, however, these short insertions were generally placed at the end of acts and were not usually related to the plot. Each resembles a single entry of the court masque type, including a dance or a suite of dances, a song or a recitative (or both), a dialogue or chorus (or both) and a closing dance or suite. Differences do however exist between entries used in tragedies and those found in comedies (Price, 1979). Thus entries might be comic in the nature of the antimasque, ceremonial in the nature of the main masque, or, as in some of the tragedies, dramatically integrated into the plot. Often allegory and the *deus ex machina* were retained.

The increasing popularity of the theatres was encouraged by both Charles II and James II. The former granted licences to two major theatre companies: the Duke of York's Company, led by the dramatist William Davenant and the great Shakespearean actor Thomas Betterton, which performed first at Lincoln's Inn Fields and later at the new Duke's Theatre in Dorset Gardens; and the King's Men Players, led by Thomas Killigrew at the Theatre

Royal, Drury Lane. Composers such as Locke and Banister wrote almost exclusively for the Duke of York's Company, while Nicholas Staggins was the chief composer for the King's Men Players. These composers like the other court musicians, came from a musical tradition in which plays and masques were the main entertainments at court, and it is not surprising that they carried over the musical practices of their earlier plays and courtly masques into their music for the new theatres.



But the musicians, poets and artists of the English court were forever ruled by the tastes of their royal patrons. Charles II, his brother James, Duke of York (later James II), and Charles's illigitimate son James Scott, Duke of Monmouth, were all in France at various times during the Interregnum. They greatly admired the French musical establishment of Louis XIV and in particular the poetry, music and dancing of the *ballet de cour*, and the *comédie-ballets* and *tragédie-ballets* of Lully. Monmouth himself was an accomplished dancer, and a patron and possibly a former student of the famous French ballet-master St Andrée. During the 1670s Charles II sent Betterton to France to recruit musicians and dancers and to find dramatic material for his own court entertainments. Thus Restoration English plays and masques took on French characteristics, notably in the choreography, poetry and scenic design. The attempt by a French faction at court, supported by Charles II, to replace the masque tradition with French opera was abandoned after the unsuccessful production, in French, of Pierre Perrin's *Arianne* (1674) with music (now lost) by Louis Grabu and Robert Cambert. Neither the English court nor English theatre audiences could accept a play set continuously to music, let alone one in French; besides, the English theatre companies were too firmly entrenched to allow foreign opera a foothold in England.

Nevertheless, Restoration theatre audiences did demand musical interludes in their fare; well over 40 of the plays written and produced between 1663 and 1703 contain masques (see Price, 1979). Sir Robert Stapylton's *The Slighted Maid* (1663) with music by Banister had no fewer than three masques, and his *The Step-mother* (also 1663) with music by Locke had two. The pastoral drama offered other notable examples, such as Richard Fleckno's *Love's Kingdom* (1664) and Thomas Shadwell's *The Royal Shepherdess* (1669), which has, in addition to much other music, a 'masque of Shepherds and Shepherdesses' that includes a song in *stilo recitavito*.

Restoration musical theatre productions were variously called masques (Crowne), plays with musical interludes and elaborate scenery (Davenant), operas (Locke), semi-operas (Roger North), or dramatic operas (Dryden). (To Pepys 'the opera' was a nickname for the Duke's Theatre at Dorset Gardens.) The terms semi-opera and dramatic opera are now used interchangeably for a small number of 17th-century heroic dramas which include spoken dialogue as well as substantial masques or masque-like scenes, which may or may not relate to the drama, and which normally occur at the end of the acts.

The more substantial of these Restoration theatre or court masque productions are few indeed. Each is a work *sui generis*; together they do not represent a significant repertory or a distinguishable genre of entertainment; rather, they are the result of a mixture of traditional English masque elements and incidental theatre music with French ballet and dramatc poetry. A 'grand ballet' was performed at court in 1671 which, from several contemporary accounts, was in fact a court masque of considerable importance; some of the songs and dances have survived (see Holman, 1993), but unfortunately many details about this work are unknown. Equally obscure is information regarding four masque-like entertainments given at court between 1664 and 1668 and mentioned by John Evelyn in his *Diary*.

In 1673 Elkanah Settle's *The Empress of Morocco* included in Act 4 scene 3 a substantial masque of the story of Orpheus and Eurydice (fig.8). The music by Locke (in *GB-Occc* 692; ed. in MB, li, 1986) contains an extensive recitative that, more than in any other Restoration play, ingeniously furthers the action of the plot. In the play a young queen is tricked into murdering her own husband by her mother-in-law (the empress) during the presentation of a masque. Since this 'plot within a plot' is itself a tragedy continuously set to music, it is in fact a true opera in miniature and may well have served as the model for Blow's *Venus and Adonis* and Purcell's *Dido and Aeneas* (Lewis, 1947–8); it is a significant departure from both the thematic symbolism of the court masque and the dramatically unrelated entries of the theatre masque. Locke's musical characterization and his flexible recitative-arioso enhance Settle's text considerably. The music vacillates between melodious recitative in duple metre and lighter triple-metre airs. Locke's declamation is sometimes quite effective, as in Orpheus's opening recitative 'The groanes of Ghosts'. Notable also is Orpheus's last song, 'For this signal Grace', in 4/4, which is repeated in triple time in the final four-part chorus. The

8. Scene for the 'Masque of Orpheus' from Elkanah Settle's 'The Empress of Morocco', Dorset Garden Theatre, London, 1673, with music by Matthew Locke: engraving by William Dolle (GB-Ob Douce SS.385, opposite p.48)

play initiated a pamphlet war between Settle and Dryden and was later burlesqued by Thomas Duffet.

The many Restoration revivals and adaptations of Shakespeare also borrowed the trappings of the masque. Davenant and Dryden's version of *The Tempest* (1667) included masque music; in 1674 it was again adapted, with enormous success, by Shadwell, and it included spectacular scenic effects and additional music by Pelham Humfrey for a new concluding masque of Neptune and Amphitrite. The music for both versions was a collaborative undertaking that included vocal music by Humfrey, Banister, Pietro Reggio and James Hart, instrumental music by Locke and dances by G.B. Draghi. The exact association of composers and music for the two productions poses a problem that continues to vex musical scholars (a score for the 1674 version was reconstructed by Tilmouth in MB, li, 1986). This 'operatic' revival of *The Tempest* proved an outstanding financial and popular success. The Duke's Company, and Betterton in particular, were convinced that the future lay in the inclusion of more music, more dancing and more 'scenes and machines'; indeed, the more spectacle, the more the audience liked it. In 1673 there seems to have been an elaborate revival of *Macbeth* set as an 'opera' with music by Locke that contained a very popular antimasque for the witches. Masque music from this production was included in all the many popular revivals throughout the 17th and 18th centuries (although the famous score by William Boyce is probably not by Locke but very possibly by Richard Leveridge). In 1678 Shadwell also adapted *Timon of Athens* with music by Grabu, a theatre masque that was to be reset, more successfully, by Purcell in 1694. Both the 1673 *Macbeth* and the 1674 *Tempest* pointed the way towards the later semi-operas.

French influence was specially strong in Shadwell's *Psyche*, which was published in 1675 but probably staged in 1674 (see Arundell, 1957; Lefkowitz, 1979-80; Holman, 1993) and was the first dramatic musical score to be printed in English. This work was modelled on the *tragédie-ballet Psyché* (1671) by Molière, Corneille, Quinault and Lully, and set to music by Locke (entries and vocal music) and Draghi (dances). The French dancing-master St Andrée choreographed and danced in both the English and the French versions (see Lefkowitz, 1979-80), but although the dancing, poetry and choreography were heavily influenced by French practices, the music itself remained thoroughly English and closely related to masque traditions, and not all the text was set to music. Locke entitled his score 'The English Opera' and justified it as follows:

> ... it may justly wear the title (i.e. opera) though all the Tragedy be not in musik: for the Author prudently considere'd that though Italy was, and is the great Academy of the World for that Science and way of entertainment, England is not: and therefore mixt it with interlocutions, as more proper to our Genius.

Psyche became a subject of controversy between the English and French factions at court over the failed attempt by Grabu to establish a French-style academy for opera. Locke and Shadwell had the support of Batterton and of the Duke of Monmouth. The latter was the dedicatee and it was he who brought St. Andrée over from Paris: he also rehearsed the dancers and danced in the performances.

Psyche is the most extensive English dramatic score written before Purcell. It was produced at enormous expense and involved the complete artistic resources of the royal court and the Duke of York's Company. When Locke's vocal score is collated with Shadwell's text, which includes many additional indications for the music, instrumentation and dancing, a more complete view emerges: the production involved more than 100 actors, singers, instrumentalists and dancers; 15 musical scenes (symphony-recitative-air-chorus type), seven dance entries, nine complete scene changes, six antimasques, extensive use of *deus ex machina* and a large variety of musical instruments and consorts (see MB, li, 1986). Locke's original and forward-looking score may indeed be called a short score: its mainly four-part texture includes directions for various instruments and a rudimentary orchestration previously unknown in England. The music itself is thoroughly integrated into the plot, and the musical scenes expand the symphony-recitative-song-chorus formal design developed by Lawes. Importantly, these scenes are unified by a variety of ritornellos, used with impressive originality.

When compared to *Cupid and Death* or *The Masque of Orpheus*, Locke's music for *Psyche* is, however, disappointing. The recitatives are stiff and for the most part dramatically uninteresting, partly because Shadwell's detailed directions to Locke for composing the music were restrictive (Shadwell stated, in his preface, that he did not like to write tragedy, and he did not like recitative or writing in rhymed couplets), and partly because most of the major roles except Venus were not sung but spoken, having been written for actors of the Duke's Company, most of whom did not sing. There are some fine pieces in *Psyche*, however: the chant-recitative of the Chief Priest, 'By sacred hyacinth', in the Song of the Priests of Apollo in Act 2 is excellent dramatic writing, and as Westrup pointed out (*NOHM*, v), the scene of the Despairing Lovers is one that Purcell himself would have been proud to have written. The grand finale, a particularly forward-looking and extended musical scene knit together by a series of ritornellos and symphonies, is certainly the highest point yet reached in the development of musical drama in England. Together with his scores for *Cupid and Death* and the 'Masque of Orpheus' in *The Empress of Morocco*, Locke's *Psyche* represents the most important link between the earlier court masques of Lawes and the later semi-operas of Purcell. Locke must indeed be given credit both for transforming the court masque into theatre masque and semi-opera and for charting the course towards English opera.

The influence of the French ballets is again evident in John Crowne's *Calisto* (1675), produced at the Hall Theatre at enormous expense. Much of the music for this major court production is extant, all of it by Staggins (*GB-Lbl* Add.19759; *IRL-Dtc* 413; and possibly *US-NYp* Drexel 3849; see Holman, 1993). Though entitled a masque, *Calisto* bears little resemblance to pre-Restoration court masques except in so far as the royal princesses, the Duke of Monmouth and several other members of the court – all costumed as symbolic figures – took part in the dancing. The prologue is actually an allegorical masque, and the rest of the singing and dancing consists of masque entries between the acts and at the end. A large number of documents for *Calisto* have survived (see Boswell, 1932, Holman, 1993 and Walkling, 1996), revealing much about the musicians and the expenditure on personnel, costumes, scenery and the like, including the

fact that a sizeable instrumental group occupied the enclosed pit in front of the stage, with another placed behind the scenes; at least 21 of the musicians were French. The influence of French court ballets is seen in the use of a French overture, an allegorical prologue, the formal design of the acts, the musical *intermedi* and the style of the costumes and scenery. Most of the music, however, holds firmly to the musical traditions of the English masque and is easily recognizable as such.

Elements of the masquing tradition can also be found in the three short through-composed real operas of this period. Blow's *Venus and Adonis* (*c*1683), entitled a 'masque for the entertainment of the King', is a miniature opera despite its lack of dramatic conflict; and it includes short masque-like dance movements (e.g. the spelling lesson of Venus and the cupids). In 1685 Dryden wrote the opera *Albion and Albanius*, which he originally conceived as the prologue to his epic dramatic opera *King Arthur*; Grabu's uninspired score caused Dryden to select Purcell as the composer for *King Arthur*. *Albion and Albanius* is a political allegory, with dance, *deus ex machina* and other features of the masque. The third opera, Tate and Purcell's *Dido and Aeneas* (1689), unifies the recitatives, choruses and dances of the masque tradition with the choral ballet plan of Lullian opera and with the clearly differentiated styles of aria and recitative of contemporary Venetian opera (see Moore, 1961, pp.43f). *Dido and Aeneas* itself was subsequently introduced as a masque interpolation in Gildon's arrangement of *Measure for Measure* (1700) and in other early 18th-century plays.

The most successful dramatic form of the Restoration was the heroic drama, which contained both spoken and musical scenes. It was also the most significant in perpetuating the masque interludes demanded by the growing audiences that frequented the new theatres (Lincoln's Inn Fields, Dorset Garden, Drury Lane and the Duke's Theatre). The interpolation of these masque episodes into the heroic plays greatly influenced English dramatic opera, especially the outstanding works of Dryden and Purcell. Masque and antimasque scenes are indispensable ingredients of Purcell's semi-operas, where they are exploited not only for their popular appeal but also as structural links between the acts of the play. Purcell's most extensive masque is that celebrating the triumph of love in the last act of *Dioclesian* (1690). In *King Arthur* (1691) he incorporated three masque episodes, including the comic Frost Scene and the more ceremonial tableau in which Merlin (as in *Britannia triumphans*) waves his magic wand and brings forth the Fairest Isle. *The Fairy-Queen* (1692), an adaptation of *A Midsummer Night's Dream*, is in fact more masque than opera or drama. Its construction resembles that of the French *comédie-ballet* with detachable masques added at the end of each of the five acts, including the humorous scene of the Drunken Poet, a direct descendant of the antimasque. Purcell's other masques include those for the 1695 revival of *The Tempest*, which remained popular throughout the 18th century, and for *The Indian Queen* (by Dryden and his brother-in-law Sir Robert Howard). The final masque in this production, *The Masque of Hymen*, was set by Purcell's brother Daniel, which suggests that Henry may have died before finishing the score.

6. 18TH CENTURY. Newspaper advertisements of the early 1700s testify to the continued popularity of English dramatic opera and the use of music in the theatre, and include special notices of the masques and musical interludes to be performed (M. Tilmouth: 'A Calendar of References to Music in Newspapers', *RMARC*, no.1, 1961); but the theatre masque tradition was threatened by the imported Italian opera. A group of artists, including the musicians J.C. Pepusch, John Eccles and J.E. Galliard, and poets led by John Hughes, Colley Cibber and William Congreve, refused to accept the immigrant genre and continued to write short semi-operas which they called masques. The affinity of these pieces with earlier masques lies in the classical or pastoral context of their plots, their comic sub-plots (antimasques), the use of recitative, songs and choral finales, and the careful attention paid to scenery and dancing.

These early 18th-century masques were ordinarily divided into two 'interludes' or 'entertainments' and were sometimes performed between the acts of larger dramatic works; they were as popular as the numerous Shakespeare revivals and Purcell's dramatic operas. One of the most notable during the first decade was Eccles's *Acis and Galatea* (1701) to a libretto by P.A. Motteux. In the same year a contest was held for the best musical score for Congreve's masque *The Judgment of Paris*, and prizes were awarded to Eccles, Daniel Purcell, John Weldon and Gottfried Finger. During the second decade Pepusch was specially productive in this field; he furnished the music for Cibber's *Venus and Adonis* (1715), Barton Booth's *The Death of Dido* and Hughes's *Apollo and Daphne* (1716). Even closer to the earlier masque was Lewis Theobald's *Decius and Paulina* (1718), with music by Galliard.

Handel, no less than his English contemporaries, was influenced by the masque tradition: he studied Purcell's semi-operas and was well acquainted with Thomas Britton's library of earlier English music. *Acis and Galatea* (1718) was called a masque in more than one edition, and it was Handel's early version of *The Masque of Esther* that was later to become his first English oratorio. In his setting of Congreve's *Semele* (1743) Handel showed a new mastery of styles, synthesizing the best musical features of English masque and semi-opera with those of Italian opera. Further influences from the masque are evident in his music drama *Hercules*, the oratorio *Solomon*, the opera *Alcina* and elsewhere.

The newer 18th-century genres, such as John Rich's pantomime operas and the immensely popular ballad operas, were partly indebted to the masque tradition, and the tenacity of the tradition is clearly observable in the stage works of Thomas Arne, who had a particular interest in early masque librettos and wrote new music for revivals of *Dido and Aeneas* (1733), *Comus* (1738; ed. in MB, iii, 1951), *The Tempest* (1746), *Dioclesian* (1758), *The Judgment of Paris* (1740) and *Alfred* (1740, with the final chorus 'Rule, Britannia'). Masques are also included in Sheridan's burlesque *The Critic* (1779), and in William Pearce's *Windsor Castle or The Fair Maid of Kent* and *Peleus and Thetis* (1795). The last, with music by J.P. Salomon, was performed for the marriage of the Prince of Wales.

7. 19TH AND 20TH CENTURIES. Occasional masques were written during the 19th and 20th centuries for specific celebrations such as the marriage of the Prince of

Wales in 1863, for which John Oxenford wrote *Freya's Gift*, with music by G.A. Macfarren. There have also been some 19th-century revivals, notably of the *Masque of Flowers* for the jubilee at Gray's Inn (1887) and again for the diamond jubilee of Queen Victoria (1897). 20th-century revivals include several in both England and the USA of Campion's *Masque in Honour of the Marriage of Lord Hayes*, Shirley's *Cupid and Death* and a reconstruction of Davenant's *Britannia triumphans* produced by the Juilliard School of Music in 1953 in honour of the coronation of Queen Elizabeth II. The influence of the masque tradition in the 20th century is strongest in the works of Vaughan Williams, especially in his *Job, a Masque for Dancing*, *The Bridal Day: Masque for Dancing* and *On Christmas Night*. Other masque-like works are Constant Lambert's *Summer's Last Will and Testament*, a masque for orchestra, chorus and baritone solo (1937), 'words taken from the pleasant comedy in that name' by Thomas Nashe (1593); Menotti's *The Unicorn, the Gorgon and the Manticore*, a madrigal for chorus, ten dancers and nine instruments (1956); and Malcolm Arnold's *Song of Simeon*, a nativity masque for mimers, soloists, mixed chorus and orchestra, to words by Christopher Hassall (1960). These few sophisticated 20th-century analogues and historical revivals do not, however, constitute the continuation of a viable tradition.

MURRAY LEFKOWITZ

Mass (Lat. *missa*; Fr. *messe*; Ger. *Messe*; It. *messa*; Sp. *misa*). The term most commonly used to describe the early Christian and medieval Latin eucharistic service. It has been retained within Catholicism during modern times. The plainchant of the medieval Mass, and the polyphonic music of the Mass between the 12th and 16th centuries, are central to the history of Western music. The

polyphonic Mass Ordinary of the Renaissance is one of the more important genres of European art music.

This article focusses on the musical development of the Mass, dealing with liturgical history to the extent necessary to create a context for this emphasis. It thus concentrates on the 'High' or 'Solemn' Mass, in which virtually all the texts are sung, as opposed to the 'Low Mass', in which they are simply read. Subspecies of the Mass include the CHORALE MASS, which uses German hymns as cantus firmi; MISSA BREVIS, a type of 'short Mass'; MISSA DOMINICALIS, in which polyphonic settings are based on chants 'in dominicis infra annum'; ORGAN MASS, in which settings for organ replace portions of the text; PLENARY MASS, which contains polyphonic settings of both Proper and Ordinary chants; and REQUIEM MASS, or Mass for the Dead. (*See also* ROMAN CATHOLIC CHURCH MUSIC.)

1. Early history. 2. The early medieval Roman-Frankish Mass: (i) The Mass of *Ordo romanus I* (ii) The Mass Ordinary (iii) The Mass Proper. 3. Later medieval developments. 4. Reform.

1. EARLY HISTORY. It can be said that there was singing at the very first Mass. Matthew and Mark conclude their descriptions of the Last Supper with the same words: 'While singing a hymn they went out to the Mount of Olives'. If, as the three Synoptic Gospels indicate, the Last Supper took place on the eve of Passover, this 'hymn' might have been the Hallel (Psalms cxiii–cxviii). It is significant that the Mass had its origins in a Jewish ceremonial meal; such meals were frequently accompanied by religious song, a characteristic that was maintained in early Christian communal suppers, whether eucharistic or not.

The earliest full description of a Christian Eucharist is that of Justin Martyr (*d* c165; *First Apology*, 67). It comes from a time when the Eucharist was no longer celebrated at an evening meal, possibly because of abuses such as those cited by Paul (*1 Corinthians* xi.17–34), but early on Sunday morning. The language of the document creates the impression of great precision:

> And on the day named for the sun there is an assembly in one place for all who live in the towns and in the country; and the memoirs of the Apostles and the writings of the Prophets are read as long as time permits. Then, when the reader has finished, he who presides speaks, giving admonishment and exhortation to imitate those noble deeds. Then we all stand together and offer prayers. And when, as we said above, we are finished with the prayers, bread is brought and wine and water, and he who presides likewise offers prayers and thanksgiving according to his ability, and the people give their assent by exclaiming Amen. And there takes place the distribution to each and the partaking of that over which thanksgiving has been said.

The overall shape of the 4th-century Eucharist, and indeed of all later Christian eucharistic services, is already present here: an initial period of scripture reading, instruction and prayer – the so-called Service of the Word or Fore-Mass – followed by the eucharistic service proper, consisting of bringing in the sacred elements, saying the eucharistic prayer over them and distributing them to the people. The only essential event not mentioned, because it had yet to be introduced, is the dismissal of the non-baptized after the conclusion of the Fore-Mass, an action that would bring about the division into a 'Mass of the Catechumens' and 'Mass of the Faithful'.

Justin's description of the Fore-Mass has caused some disquiet among music historians because of its failure to mention psalmody. Liturgical scholars and musicologists once broadly assumed that the Fore-Mass was an adoption *en bloc* of the Synagogue liturgy, a standardized service consisting of the four essential elements of reading, discourse, prayer and psalmody. It now appears, however, that the truth is not so simple: the Synagogue services were not nearly so formalized at the time of the first Christians, nor indeed were the services of the Christians themselves (see Bradshaw, 1992). The characteristic custom of the Synagogue was the reading of Scripture with attendant commentary, and it was this in particular that early Christians continued to include in many of their gatherings and that became an integral part of the pre-eucharistic service. The singing of psalms and hymns, as a discrete ritual act, is more obviously appropriate to communal evening meals than to early morning instructional services, and the practice of obligatory psalmody established itself in both the Synagogue service and the Christian Fore-Mass only in subsequent centuries as the two developed independently of each other (Smith, 1984; McKinnon, 1986).

This is not to say that psalms were never chanted in the Fore-Mass of Justin's time, but only that psalmody had not yet been recognized as a discrete and independent element of that service as it would be by the later 4th century. It must be assumed that psalms would occasionally have figured among the biblical readings of the Fore-Mass, where their lyric character might very well have called for a more melodious cantillation than that accorded to the other readings. This assumption is supported by the patristic evidence of the later 4th century, relatively abundant at that time as opposed to the meagre and scattered references of previous centuries. A psalm in the Fore-Mass was still spoken of as a reading; Augustine, for example, commented in Sermon 165: 'We heard the Apostle, we heard the Psalm, we heard the Gospel; all the divine readings sound together'. But while still referred to as a reading, the psalm had come to be recognized at the same time as a discrete liturgical act, one appreciated, moreover, for its essentially musical character. As Augustine remarked of the congregational response 'Ecce quam bonum': 'So sweet is that sound, that even they who know not the Psalter sing the verse' (*Ennarratio in psalmum cxxxii*). Why the psalmody of the Fore-Mass came to achieve its later 4th-century status is a matter for speculation. No doubt one of the factors involved is the increasingly public and ceremonial character of the liturgy during the period after the emancipation of Christianity under Constantine in 313; it was a liturgy, moreover, conducted within the acoustical ambience of great stone basilicas as opposed to the house churches of earlier centuries. The Eucharist, too, must have felt the influence of that general, later 4th-century enthusiasm for psalmody that was more obviously

manifested in the development of the sung Office and the rise of the popular psalmodic vigil (McKinnon, 1993).

In any event the 4th-century literature shows psalmody firmly established at two points in the Eucharist: in the Fore-Mass, and also during the distribution of Communion. The latter development occasions no surprise: the distribution of Communion is a joyous event, one not occupied by the reading of any texts or prayers and one that might well retain associations of the evening eucharistic meal. The psalm sung during Communion was usually Psalm xxxiii (Revised Standard Version: xxxiv) with its highly appropriate verse 8, 'Taste and see that the Lord is good'.

The psalmody of the Fore-Mass is more problematic, largely because of a set of commonly held assumptions about its relationship to the readings. It was once widely believed that in all Christian liturgies there were two readings before the Gospel, one each from the Old and New Testaments. This in turn required the singing of two psalms, because a psalm in the Fore-Mass necessarily functioned as a response to a reading. The 4th- and 5th-century patristic evidence, however, demonstrates that each of these assumptions lacks a basis in fact: one reading only before the Gospel was at least as common at the time as more than one reading; a single psalm was considerably more common than more than one, particularly in the West; and the psalm was never described as a response to a reading but rather, as seen above in the quotation from Augustine, as an independent liturgical act on a par with the readings (Martimort, 1970, 1984, 1992; McKinnon, 1996).

This single psalm of the Fore-Mass was typically described in the patristic literature as a responsorial psalm and can therefore be viewed as the ancestor of the gradual. But it was not always so described; it is possible that it might have been sung on occasion – during penitential seasons perhaps – without response, and that such a psalm could be thought of as the ancestor of the tract. On other occasions, especially during Paschal Time, the response of the psalm was the acclamation 'Alleluia', so it might be said that the ancient gradual psalm sometimes took on the form of an alleluia. A genuine proto-alleluia, however, would seem to require the regular singing of two psalms in the Fore-Mass. Such a situation is in fact documented for the first time in early 5th-century Jerusalem. The Armenian Lectionary (see Renoux, 1969–71), which appears to reflect the liturgy of Jerusalem at that time, gives the incipits of two psalms in its pre-eucharistic synaxis, the second of which is regularly provided with an alleluia response. It is probable that this Hagiopolite alleluia exercised its influence on the liturgical centres of the East at a far earlier date than on those of the West, which were already becoming isolated in the 5th century by the barbarian incursions attendant upon the collapse of the Roman Empire.

Broadly speaking, by the turn of the 5th century, as Christian antiquity was drawing to a close, the Western Mass (or at least its African-Italian manifestation) had the following general aspect. The service opened abruptly with a greeting from the celebrant and the readings followed on immediately (the introductory items of introit psalm, Kyrie, Gloria and collect were not yet present). There was generally only one reading before the Gospel, the so-called Apostle (our Epistle), taken frequently from the epistles of Paul and less often from the *Acts of the Apostles* or the Old Testament. A psalm was chanted either before or after the Epistle by a lector; this psalm was frequently responded to by the congregation with melodious refrains, including alleluia refrains during Paschaltide, and it may also have been declaimed without refrains, particularly on penitential occasions.

The Gospel, the recitation of which would eventually come to be surrounded with great ceremony, was already preceded by a procession with lighted tapers. After the Gospel the celebrant preached a homily based on one of the readings (including sometimes the psalm), and there followed then the prayers of the catechumens and the catechumens' dismissal. The prayers of the faithful ensued and the bringing in of the eucharistic elements, not yet accompanied, apparently, by an offertory psalm. The celebrant began the Eucharistic Prayer over the elements by exchanging a series of greetings with the congregation. This prayer, which was chanted aloud, and the exchange of greetings was already very close to its early medieval form. The prefatory portion of the prayer concluded with the singing by all of the Sanctus, and the entire prayer ended with a solemn congregational 'Amen'. Levy (1958–62) has argued persuasively that the melody of the Sanctus, and indeed of the entire eucharistic dialogue between clergy and faithful, is closely related to that of the early medieval Western sources (the Sanctus is the familiar one of the Requiem Mass). After the Eucharistic Prayer there followed the 'Pax', the Fraction of the consecrated bread, the *Pater noster*, and finally the distribution of the sacred elements to all in attendance, during which a psalm – usually Psalm xxxiii (Revised Standard Version: xxxiv) – was sung responsorially with 'Taste and see' as refrain.

See also CHRISTIAN CHURCH, MUSIC OF THE EARLY.

2. The early medieval Roman-Frankish Mass.

(i) The Mass of 'Ordo romanus I'. Augustine died in 430 as the Vandals held the city of Hippo under siege. His passing is emblematic of the closing of the era of abundant patristic literature and the beginning of a centuries-long period of comparative silence during the barbarian ascendency. There is very little information about the development of the Roman Mass until the appearance of the celebrated *Ordo romanus I*, which describes in detail the Pontifical Mass of about 700. This service is of great importance because it became the model for the manner in which Mass was celebrated over much of Latin Christendom; moreover, virtually all the principal prayers, readings and chants of the mature medieval Mass (Table 1) are already present in it.

The pope celebrated Mass each day at a different one of the so-called stational churches, of which there were about 30 at the turn of the 8th century. He arrived at the church with his retinue and vested in the secretarium, a sort of sacristy near the entrance. During his procession through the nave of the church to the altar, the introit psalm was chanted by the Schola Cantorum, preceded by the singing of the Proper introit antiphon. On arrival at the altar the pope bowed before it in prayer, extended a greeting of peace to the clergy and then nodded to the Schola to curtail the chanting of the psalm and to go to the concluding *Gloria Patri* and repetition of the antiphon. There followed the singing of the Kyrie eleison by the Schola, and the Gloria in excelsis, intoned by the pope, and finally the declamation by the pope of the collect, a

Proper oration that brought the introductory rites of the Mass to a close.

After the pope and clergy seated themselves in the apse behind the altar, a subdeacon mounted the steps of the ambo to recite the Epistle. Next a cantor, with 'cantorium' in hand, mounted the ambo and chanted the 'responsum' or gradual, no longer the complete responsorial psalm of patristic times, but rather an elaborate response followed by an equally elaborate verse and a repetition of the response. A second cantor followed with either the alleluia or tract, depending on the liturgical occasion. The alleluia, sung on most feast days of the Church year, consisted of a rhapsodic rendering of the response 'Alleluia', followed by a moderately florid verse and repetition of 'Alleluia'. The tract, performed on a limited number of penitential occasions, lacked a response and was rather a psalm, or several verses thereof, sung to a limited number of elaborate formulaic tones. This portion of the service came to a climax with the chanting of the Gospel by the deacon; the deacon, holding the Gospel book, was led to the ambo by two acolytes with candles and two subdeacons with censers.

There is no mention of a homily in *Ordo romanus I*, nor indeed in the other *ordines romani*, an omission that occasions some surprise. A number of other omissions at this point in the Pontifical Mass are, by contrast, altogether expected. There was no Credo, because this chant of the Ordinary made its way into the Roman Mass only in the 11th century. Neither were there prayers of the catechumens, dismissal of the catechumens nor prayers of the faithful. These rites were no longer observed in the Roman Mass; the non-baptized were now admitted to the eucharistic portion of the Mass, while the prayers of the Fore-Mass had been moved to the introductory portion of the service, where they took the form of the Kyrie eleison, still a litany at the end of the 7th century. The absence of prayers from their traditional place in the Mass was marked by the vestigial 'Oremus', uttered by the celebrant at the beginning of the offertory.

The Proper chant called the offertory, which consisted of an initial chant of moderate melodic elaboration (referred to neither as a response nor as an antiphon in the sources) followed by two or three verses, was sung while a complex series of ritual acts were performed; among these were the reception by the pope of the gifts (including wine and leavened bread), the washing of the pope's hands, the preparation of the gifts by the clergy, and prayers said by the pope over the gifts. At the conclusion of these ceremonies the pope nodded to the Schola to complete the singing of the offertory, and he began his own chanting of the Preface with a series of greetings beginning 'Dominus vobiscum'. The Preface concluded with the clergy singing the Sanctus, presumably in the simple ancient tone mentioned above. After the Sanctus, which now included its second portion, 'Benedictus qui venit' (*Matthew* xxi.9), the pope began the Canon with the words 'Te igitur'. The Canon, which by the end of the 8th century would be read in silence, was at the time of *Ordo romanus I* recited in a subdued tone rather than being chanted aloud as it had been in the early Church. And it was not interrupted by the elevation of the host or chalice, acts of eucharistic adoration that would not be introduced until the 13th century. The Canon concluded with the words 'per omnia saecula saeculorum' and the response 'Amen'.

The introductory communion rites of the early 8th century followed a different order from those of the early Church; the *Pater noster* came first, followed by the 'Pax' and finally the Fraction. During the Fraction the Agnus Dei was sung; it had been introduced under Pope Sergius I (687–701). Communion was distributed to the clergy in hierarchical order and then to the laity, first to the men and then the women, who occupied different sides of the church (in the following centuries there would be a sharp decline in the frequency of lay Communion). During the distribution the Schola sang the communion chant, which was much like the introit in external aspect, consisting of a psalm with Proper antiphon. And as with the introit the pope nodded to the Schola to cease the singing of the psalm and to conclude with the Gloria Patri and antiphon when the distribution was completed. After the communion the celebrant recited the oration called the post-communion, then announced 'Ite missa est' (to which the response was 'Deo gratias') and returned in procession with attendant clergy to the secretarium.

(ii) The Mass Ordinary. The term 'Ordinary', as opposed to 'Proper', refers to any part of the Mass, sung or spoken, that has the same text at every enactment of the service. The sung Ordinary is usually said to consist of five items: Kyrie, Gloria, Credo, Sanctus and Agnus Dei. All but the Credo were in place in the Roman Mass of the early 8th century. The celebrant's announcement at the end of Mass, 'Ite missa est' ('Benedicamus Domino' when the Gloria is not sung), and its response 'Deo gratias', achieved something of the status of a sung Ordinary item in later centuries when it came to be chanted to the same melodies as the Kyrie. In the later Middle Ages and Renaissance the centrally important musical form of the polyphonic Mass Ordinary was created. Some liturgical historians consider this development to be unfortunate because they believe that the unified musical character of the five items belies their widely differing liturgical

functions, and that the prominence afforded to the Ordinary serves to denigrate the importance of other parts of the Mass such as the Proper chants.

The early history of the KYRIE ELEISON remains controversial. It was once thought to have originated when the *Deprecatio Gelasii*, a litany purportedly adopted from the East by Pope Gelasius (492–6), was moved from its place at the end of the Fore-Mass to the present position of the Kyrie. This view is doubted now, however, not least because the response to the *Deprecatio Gelasii* was 'Domine exaudi et misere' rather than 'Kyrie eleison'. The only certainty is that the Kyrie was originally a litany of some sort. It is frequently said to have lost its supplications under Gregory I (590–604), who wrote in his letter to John of Syracuse: 'In daily masses we omit the rest that is usually said, and say only "Kyrie eleison" and "Christe eleison"'. But *Ordo romanus I* still refers to the Kyrie as a litany that was concluded only when the pope signalled to the Schola to do so. In any event the late 8th-century Frankish-Roman Ordo of St Amand (*Ordo romanus IV*) described the Kyrie in its classic medieval form, that is, a threefold Kyrie, threefold Christe and threefold Kyrie.

The GLORIA IN EXCELSIS DEO had its remote origins in the Christmas story of Luke's gospel (chap.ii), where the angels sing 'Glory to God in the highest, and on earth peace to men'. It was expanded during the first centuries of Christianity into a prose-like hymn that had a prominent place in the morning Office of the principal Eastern ecclesiastical centres. It made its way into the Roman Mass only gradually, being restricted at first to Christmas Day and later to episcopal services. By the 11th century it was sung at most masses other than those of penitential occasions.

The CREDO is a Latin translation of a creed or 'symbolum', which was recorded first in Greek at the Council of Chalcedon in 451. The Chalcedon text was an attempt to summarize the doctrine of the councils of Nicea (325) and Constantinople (381), hence its title the 'Nicene' or 'Niceno-Constantinopolitan' Creed. Like the earlier Apostles' Creed, its original liturgical function was to serve as a profession of faith for the newly baptized. It found a place in the eucharistic services of several Eastern rites of the earlier 6th century, and made its first appearance in a Latin liturgy later that century in Spain, where it was recited before the *Pater noster*. Charlemagne (*d* 814) introduced it into the Frankish-Roman Mass, but it was not included in the Roman Mass itself until the period of German liturgical influence during the 11th century.

The SANCTUS, which occupies a prominent place in the Eucharistic Prayer as a sort of concluding doxology to the Preface, has a complex and controversial early history. Its original portion, the 'tersanctus', derived from *Isaiah* vi.3 (and *Revelation* iv.8), would appear to have been adopted from Jewish liturgical practice, but it does not figure in every preserved version of the early Christian Eucharistic Prayer. It had become almost universal, however, by the later 4th century. Its second portion, 'Benedictus qui venit' (*Matthew* xxi.9), from the narration of Jesus's triumphal entry into Jerusalem, is first attested by Caesarius of Arles (*d* 542). The Benedictus closes with the exclamation 'Hosanna in excelsis'; eventually this was added to the Sanctus portion of the chant as well. In performances of the polyphonic Sanctus, the two portions were separated, with the Benedictus being sung after the Elevation.

The introduction of the AGNUS DEI ('Lamb of God') into the Roman Mass by Pope Sergius (687–701) appears to have been an act of theological defiance against Byzantium. The chant was sung in Syria (Sergius himself was Syrian) but was not allowed in Constantinople because of a ban on depicting Christ in animal form. The Agnus may originally have been a litany; it was in any event at first repeated as often as necessary to cover the actions of the Fraction, always with the response 'Miserere nobis'. By the 11th century the chant was limited to three repetitions of the Agnus, and the final response was changed to 'Dona nobis pacem' ('Dona eis requiem' in the Mass for the Dead), a reference to the just completed Pax.

Ordinary chants were probably originally sung to fairly simple tones: the Sanctus, for example, to the tone known from the Requiem Mass, and the Agnus, perhaps, to the similar tone given in the Vatican Edition under 'Mass XVIII'. In the 9th century among the Franks, however, the process of providing a variety of new and more elaborate melodies had already begun; such melodies would eventually be organized into musically compatible chant 'ordinaries' after the manner of the polyphonic mass. The beginnings of this development were closely tied to the creation of tropes. Kyrie tropes for a particular feast, for example, might inspire the composition of a new Kyrie melody, which would in turn be associated with the festival in question. These melodies, with or without their tropes, came to be organized in portions of manuscripts referred to later as 'kyriales'. The Kyrie melodies would be grouped together, followed by those of the Gloria, Sanctus, Agnus and sometimes *Ite missa est*; Credo melodies, of lesser number, would appear last. There was a departure from this practice in the reform liturgy of the 13th-century Papal Curia; here the kyriale consisted of about ten chant 'ordinaries' without tropes, arranged in Kyrie to Agnus order, with each set of chants assigned to a different class of festival. The chant Ordinary was much cultivated in the 15th and 16th centuries – after the model, apparently, of its polyphonic counterpart.

(iii) The Mass Proper. The Proper consists of the introit (*see* INTROIT (i)); the gradual (*see* GRADUAL (i)); the alleluia (*see* ALLELUIA, §I), sung on festive days and replaced by the TRACT on certain penitential occasions; the OFFERTORY; and the COMMUNION; the sequence (*see* SEQUENCE (i)) was added by the 9th-century Franks as a poetic extension of the alleluia.

The gradual and communion were already in place in the Western Mass as the patristic period drew to a close towards the mid-5th century; but the first unequivocal testimony to the existence of the other items is to be found in *Ordo romanus I*, dating from approximately two and a half centuries later. As a general observation, it may be said that variable psalmody appears to characterize the Roman Proper more radically than the Propers of most other Christian liturgies, and this trait may shed light on the origins of certain chants. (For further discussion of origins see the individual articles mentioned above.) The entrance and offertory chants to the Byzantine Eucharist, for example, are Ordinary chants rather than psalmic Propers: the TRISAGION was the original entrance chant and the Cheroubikon the offertory chant. These hymns were introduced in turn into Latin eucharistic liturgies

such as the Mozarabic and Gallican, but not the Roman, which consistently manifested a preference for variable psalmody.

This preference may be explained by the influence on the Roman Mass of the Office psalmody of the Roman basilicas, the responsibility since the 5th century of monastic communities attached to them. Thus the introit psalm, for example, whatever the time of its introduction, would take on the general aspect of Office antiphonal psalmody, with a different psalm and antiphon sung at each service. The communion, perhaps, was transformed under the influence of Office psalmody into something different from its original state; it very likely began as virtually an Ordinary item, consisting of the singing of the same Psalm xxxiii on most days, but by the mid-8th century had achieved a repertory of nearly 150 Proper antiphons, far more than any other Christian communion chant, Eastern or Western. Its weekday Lenten series of numerically ordered psalmic texts, moreover, may betray the influence of the numerically ordered psalms of the Office.

In any event the core repertory of the Roman Mass Proper was in place by the time of its transmission to the Carolingian realm in the second half of the 8th century. That is to say there existed chants with the same texts as those of the so-called Old Roman (11th-century Roman) and Gregorian (9th-century Frankish-Roman) repertories; the precise nature of the 8th-century Roman melodies is not known, but it must be assumed that they share a basic relationship with the derivative Old Roman and Gregorian melodies, which are themselves obviously related. The number of introits and communions transmitted from Rome to the Frankish territories was slightly less than 150 for each genre, more than 100 for graduals, less than 100 for offertories, about 50 for alleluias and just 16 for tracts. The 9th-century Franks contributed relatively small numbers of chants to each genre, except for some 12 offertories and more than 40 alleluias.

While the repertory of the Mass Proper was substantially complete by the mid-8th century, very little is known about how it developed. At one time it was thought that Gregory I (590–604) supervised its completion; indeed according to medieval legend he personally composed the chants under the inspiration of the Holy Spirit. Many chant scholars now incline towards the view that much of the final composition, revision and organization of the Proper took place somewhat later than Gregory's time, perhaps during the second half of the 7th century and the early 8th. Aiding speculation on this point is the fact that considerably more is known about the development of the annual cycles of Proper prayers and readings than of the chants, and both prayers and readings, which may be at least as ancient as chants, became fixed at Rome only towards the mid-7th century. On the other hand, much of the chant repertory was certainly completed by the time of Gregory II (715–31), who added the Thursdays of Lent to the liturgical year. An analysis of the texts of the weekday Lenten chants shows them to have been organized before the addition of the Thursday chants.

The most fundamental consideration to be kept in mind when speculating on the development of any Proper is that all Christian liturgies observe a broad movement from the ad hoc selection of prayers, readings and chants each day by the celebrant to the permanent assignment of these items, and the recording of them in writing, for the entire year. An analysis of the patristic evidence makes it clear that the psalms sung in the Eucharist, except for rare exceptions such as the Easter gradual response 'Haec dies' (Vulgate Psalm cxvii.24), were not yet fixed in the 4th and 5th centuries. The same consideration also has chronological implications for the later stages of a Proper's development. There is reason to suspect that chants lacking stable assignments in the sources, that is, chants that vary from manuscript to manuscript (as does a large portion of the alleluia repertory), are later creations than chants with uniformly stable assignments.

Another factor to be taken into account when speculating on the time of a chant Proper's creation is the existence of a group of ecclesiastical singers capable of creating and maintaining it. The Roman Mass Proper comprises some 550 chants of considerable elaboration; the texts were recorded in writing but the melodies were not. The body responsible for their performance from year to year was the Schola Cantorum (*see* SCHOLA CANTORUM (i)), a clerical group that resided at the pope's Lateran palace. It was formerly thought that Gregory I (590–604) founded the Schola, but the evidence suggests a later date, perhaps the mid-7th century.

The examination of the Proper as a whole in the hope of discovering layers of compositional planning has proved to be a fruitful area of study. Peter Wagner was engaged in this kind of research in the early 1900s, revealing, among other things, patterns in the way that psalmic and non-psalmic texts were assigned over stretches of the liturgical year. One interesting result of his analysis is the conclusion that the final revision of the Mass Proper was carried out more genre by genre than festival by festival. This particular insight has received a measure of corroboration in later liturgical investigation, which shows that the Roman Gospel and Epistle cycles were developed independently of each other. A far more thorough employment of Wagner's method is needed, one that begins with an examination of the texts, where compositional planning is more easily discerned, and then moves on to an extensive analysis of the music.

3. LATER MEDIEVAL DEVELOPMENTS. The Mass had achieved its classic medieval shape by the time of its transmission from Rome to Francia in the mid-8th century. Its subsequent history might be described as an initial phase of accumulation in which the basic structure was heavily elaborated, and a subsequent phase of reform in which there was an attempt to undo the elaboration and return to earlier forms of the service.

Liturgical additions to the Mass in the 9th century and thereafter were particularly prominent at the beginning and end of the service; musical additions were more pervasive, consisting especially of the accretion of tropes to most chants of the Ordinary and Proper (*see* TROPE (i)). All the items of the Ordinary, except for the Credo, were subject to regular troping, while among the items of the Proper the introit was most often troped and the gradual least often. The alleluia came in for special treatment, tending to accumulate various additions after the verse; these include tropes, *sequentiae* (long melismatic extensions of the original jubilus) and, of course, the poetic genre known as the sequence. Independent chants were also added to the Mass: antiphons, for example, before the Gospel and after the Agnus Dei, and the chant that accompanied the sprinkling of the congregation before Sunday Mass with an aspergillum – the antiphon

Asperges me with Psalm l throughout most of the year, and *Vidi aquam* with Psalm cxvii during Paschal Time.

These additions reached their climax during the 11th and 12th centuries. The Mass of the time, and the Office for that matter, must have been splendid spectacles. Conducted in great Romanesque monastic churches and cathedrals, the liturgy benefited from the literary contributions of the most talented citizens of Europe and was performed by these same individuals, monks and canons who had sung chant daily from early childhood. It could be said, however, that this form of liturgy was doomed to collapse under its own weight, sapping the energy of its executants and leaving them little time to keep abreast of other developments in the rapidly changing society of the High Middle Ages.

4. Reform. Among the first to react against this liturgical grandeur, particularly in its Benedictine manifestations, were the 12th-century Cistercians; purporting to return to the pristine monasticism of St Benedict's time, they took aim at what they saw as liturgical excess, excising many of the Benedictine additions and even applying surgery to the melismas of the core chant repertory (Maître, 1995). But a reform of greater long-term significance was that undertaken in the Papal Curia of the 13th century. Motivated less, perhaps, by the sort of spiritual concerns that impelled the Cistercians than by the practical need to save time for harried bureaucrats, the Curial reform sought to pare down the liturgy to a form not far removed from that of the earlier 9th century. The Curial liturgy was embraced in turn by the Franciscan friars who – themselves active and itinerant in their efforts to bring religion to the laity – helped to propagate it throughout Europe (Van Dijk and Walker, 1960). The later medieval Mass, then, was less burdened in many localities by an excess of subsidiary chants than it had been in earlier centuries, but it came to labour under the abuses of a different nature. It differed so widely from diocese to diocese, not least from the proliferation of local saints' days, that it lost a good measure of its universality. And still worse, it degenerated in the minds of some into a sort of spiritual coinage: paying a stipend to have a Mass said or sung could save a soul or secure some temporal favour, and such masses were thought to be all the more efficacious if they took the form of a votive Mass or that of some favoured saint, rather than that called for by the liturgical calendar.

The Council of Trent (1545–63) addressed the problem of the late medieval Mass in general terms in its *Decretum de observandis et evitandis in celebratione missarum* of 1562, leaving matters of detail to be covered by the preparation of a reform missal, which appeared in 1570. The missal called for a lean Roman Order of the Mass to be observed precisely throughout the entire Church. A scaled-down version of the introductory prayers was retained, including the 'Introibo' (Vulgate Psalm xlii) and 'Confiteor', as was the 'In principio erat verbum' (*John* i) at the end of Mass. All tropes were eliminated, however, and also all sequences except for the highly favoured *Victimae paschali laudes* of Easter, *Veni Sancte Spiritus* of Pentecost, *Lauda Sion* of Corpus Christi and *Dies irae* of the Requiem Mass. As for the calendar, the celebration of sanctoral feasts and the use of votive masses was sharply curtailed. The general spirit of the reforms was to secure central Roman control and to prevent change. A point of considerable musical significance was the decision to retain the polyphonic Ordinary. The chant Propers did not fare so well: under the direction of Pope Paul V (1605–21), the composers Felice Anerio and Francesco Soriano prepared a reform gradual in which the medieval melodies were revised according to humanistic standards, a process that required, among other things, the excision of many melismas or their transferal from unaccented to accented syllables.

The mid-19th century saw the birth of the modern Liturgical Movement. Prominent among its early proponents were the French Benedictines of Solesmes, who made it one of their principal aims to restore the medieval chant. They achieved an undeniable success with the chant melodies, and while the rhythmic system they devised for the performance of the chant was historically questionable, it resulted nonetheless in the development of a practical church music of great beauty and refinement. At the same time groups such as the German Caecilians attacked the orchestral Mass Ordinary of the Baroque and Classical periods and called for a return to the *a cappella* Mass of the late 16th-century Roman school. By the early 20th century the ultimate liturgical ideal of Mass celebration was the scrupulous observance of the Tridentine rubrics by the presiding priest and the dignified chanting of his prayers in Latin, while an expert choir, preferably with boy trebles, sang a chant Proper and an Ordinary by Palestrina or some contemporary.

This was to change drastically as the Liturgical Movement entered into a new, more populist phase, which culminated in the reforms of the Second Vatican Council (1962–5). While it is not always easy to distinguish between the intentions of the Council and their realization at the local level, the central aim of the reforms may be characterized as an attempt to involve the lay congregation more actively in the Mass; in spirit and style there is a movement away from ritual to informality, and, historically, an abandonment of the medieval ideal in favour of the early Christian. The introit is generally replaced by a hymn of the chorale type (in the vernacular, of course, as is the entire ceremony); the introductory prayers such as the 'Introibo' and 'Confiteor' are omitted. The reading cycle on Sundays and festivals includes an Old Testament pericope, a psalm sung responsorially to a simple contemporary setting, a New Testament reading, a tuneful Alleluia with a few psalm verses and finally the Gospel. A homily is preached with due attention to the readings, followed by a period of variable prayer in the form of a litany. Members of the congregation bring in the gifts of bread and wine to the accompaniment of a hymn. The Eucharistic Prayer, now variable, is recited aloud; a simple congregational 'Holy, holy, holy' occupies its accustomed place, while the Elevation passes almost unnoticed without its medieval bells and genuflections. The congregational 'Amen' at the end of the prayer is given considerable emphasis, as is the Pax, an occasion for much informal greeting by those in attendance. A simple setting of 'Lamb of God' accompanies the Fraction, and a hymn the distribution of communion. After the final blessing (the 'In principio' is no longer read) the celebrant processes out to the accompaniment of a hymn.

A few Benedictine communities, not always with the blessing of the local bishop, have sought to work out compromises between the reforms and their medieval musical heritage. They might combine, for example, vernacular readings, prayers and Ordinary chants with a

Gregorian Mass Proper sung in Latin. In 1974 the monks of Solesmes published a new *Graduale romanum* that retained the Latin Proper chants while integrating them with the changes wrought to the liturgical year. Chief among these changes is the abandonment of the named Sundays of the year, that is, the Sundays after the Epiphany, the pre-Lenten Sundays beginning with Septuagesima and the Sundays after Pentecost; in their place is a series of 34 'Ordinary Sundays'. The majority of the Proper chants occupy their medieval positions in the new gradual, but there are a substantial number of changes; alternative chants are frequently given to provide choice, and a number of chants have been reassigned to accommodate changes in the lectionary – the celebrated five Lenten Gospel communions, for example, have been transferred from Lenten weekdays to Sundays along with their corresponding Gospels.

Most find little to defend in the latest reforms from a strictly musical standpoint. It is true that the changes are well intentioned from a pastoral point of view and that the ideal of chant Propers combined with 'Palestrina' Ordinaries was not so frequently realized. But even less often realized are the opportunities for significant new musical composition that have been opened up within the reform Mass. Perhaps the single unqualified gain is the introduction of many fine Protestant hymns, while the most absolute failure is the so-called Folk Mass. (*See also* ROMAN CATHOLIC CHURCH MUSIC.)

Studies of Greek, Latin, and Slavonic Liturgical Music for Kenneth Levy, ed. P. Jeffery (forthcoming)

II. The polyphonic mass to 1600

1. Early organum to the school of Notre Dame. 2. Organa for the Mass in England, Spain, Germany and Italy. 3. The rise of the polyphonic Mass Ordinary in the 14th century. 4. 14th-century mass cycles. 5. The first half of the 15th century. 6. The cyclic mass in the later 15th century. 7. The mass in the earlier 16th century. 8. The Counter-Reformation; Palestrina. 9. The late 16th century.

1. EARLY ORGANUM TO THE SCHOOL OF NOTRE DAME. The beginnings of polyphony are closely associated with the chants of the Mass, particularly those of the Proper, which served as melodic material for early organum. Music examples and instructions in the *Musica enchiriadis* (*c*900) indicate that the sequence was performed polyphonically at a very early date; its syllabic pattern and clearcut melodic phrasing doubtless facilitated the improvisation of parallel or oblique organum in note-against-note style (*see* ORGANUM, ex.1). Polyphony may thus have entered the Mass at a point traditionally reserved for the most elaborate musical performance, the sequence with organum forming a final link in the succession of soloistic chants (gradual and alleluia) that served as musical interludes between the scripture readings.

The earliest fragments of mass polyphony outside the treatises date from the 11th century and include two-voice settings of alleluias (12), responsories (three) and graduals (three) in manuscripts from Chartres (*F-CHRm* 4, 109 and 130; facs. in PalMus, i, pl.xxiii), which were destroyed by fire in 1944, and Fleury (now *I-Rvat* Reg.lat.586; facs. in H.M. Bannister, *Monumenti Vaticani*, ii, pl.43*a*). From these beginnings polyphony appears to have spread to other parts of the Mass, particularly to those chants or sections of chants that were originally performed by a soloist. The earliest extensive repertory of polyphonic (two-voice) Mass chants is that of the 11th-century Winchester Troper, which shows a strong preference for the alleluia (53 examples in its main corpus). Second in number among the Proper chants in this source are the liturgically closely related tracts (19), representing the only known instance of polyphony for this chant in medieval sources. Apart from a large number of Office responsories (54), seven sequences and some introit tropes (four) that were added later, the Winchester Troper also contains the first polyphonic examples from the Ordinary with seven troped Glorias, four troped and eight untroped Kyries. Significantly, the emphasis is on the troped sections, which were performed by soloists, and it is through these that polyphony became part of the otherwise chorally performed Ordinary. The cheironomic notation of the two-voice organa in the Winchester Troper and the 11th-century fragments from Chartres and Fleury cannot be transcribed precisely, but the neumes indicate a polyphonic practice with simultaneous voice movement (note against note), frequent voice-crossing because of the equal range of both parts, and the melodically dominating role of the plainchant.

This first stage of polyphony connected with chants from the Mass is still partly represented in 12th-century sources from St Martial in Limoges and from the famous pilgrimage centre of Santiago de Compostela (Codex Calixtinus). Liturgically the ST MARTIAL pieces are almost exclusively associated with new textual additions, the tropes and sequence. Only the latter count as Mass items, however, since the large number of *Benedicamus* tropes belong to the Office. Mass chants in two-voice organum settings are found again in the Codex Calixtinus with the troped Kyries *Rex immense* and *Cunctipotens genitor*, the *prosa Portum in ultimo* and the *Alleluia, Vocavit Jesus Jacobum*. Unlike the *prosa* and the Kyrie *Rex immense*, which continue an earlier practice of simultaneous voice movement with frequent crossing of the voices, the *Alleluia, Vocavit* and the Kyrie *Cunctipotens* represent a new stage of polyphony in which the added voice stays principally above the plainchant and introduces melismatic formulae. The borrowed Mass chant thus loses its melodic profile and becomes a structural basis of single sustained notes supporting a dominating ornamental voice; the once-lively liturgical melody stagnates and assumes the role of a given dogma. The basic techniques involved in this new polyphonic art are outlined in contemporary treatises, especially the Milan treatise *Ad organum faciendum* and, more exhaustively, the Vatican organum treatise (*I-Rvat* Ottob.3025), both from the late 12th century. The music examples in the Milan treatise are Mass chants (Kyrie, alleluia) which give the structural consonance only, leaving the possible inclusion of melismas up to the performer. Closer to the performance level are the richly melismatic organa at the end of the Vatican organum treatise (ed. Zaminer), the *Alleluia, Hic Martinus* from the Mass for St Martin's Day and two similarly structured responsories, which foreshadow the elaborate *organa dupla* of the school of Notre Dame in Paris.

In the newly built Notre Dame Cathedral polyphonic music for the Mass was associated primarily with responsorial psalmody, specifically the solo sections of the gradual and alleluia. Leoninus provided a cycle of two-voice organa for these chants in his *Magnus liber organi*, and three- and four-voice settings were also composed by Perotinus, Leoninus's successor at Notre Dame. In these compositions polyphony assumed such proportions that not only its artistic quality but also its length made it the main feature of the liturgical ceremony, particularly for the high feasts of the church year. Significantly, this achievement coincided with concentration on only a few specific liturgical items, whereas the earlier and less elaborate polyphonic settings were distributed among a wider variety of Mass chants, including items of both the Proper and Ordinary.

The development at Notre Dame of a notational system capable of fixing durational values made possible a fairly rapid evolution and diversification of polyphonic styles and forms in the mass (i.e. organum versus discant; *see* DISCANT, §I, 2–3). By Perotinus's time (late 12th century) a rhythmically more sophisticated form of CLAUSULA was being composed as a substitute for sections in the older discant or original organum style; by the beginning of the 13th century the addition of text to the upper voices of these newer discant sections resulted in the MOTET. Like the clausula, the early motet had its place within the polyphonic gradual and alleluia, for which it furnished a kind of contemporary textual commentary to be performed simultaneously with the corresponding section of the cantus firmus in the tenor (for example, clausulas and motets with an 'In seculum' tenor were originally a part of the Easter gradual *Haec dies*). Once established as an individual form, however, the motet quickly developed into a separate composition and was no longer placed within a given gradual or alleluia. Some documentary

evidence calls for the performance of motets later in the Mass, after the Benedictus.

The polyphonic CONDUCTUS was also somewhat loosely connected to the Mass ceremony. In its original function as a processional piece, accompanying the movements of the clergy, the conductus was generally sung immediately before and sometimes also after the readings of Epistle and Gospel while the reader or celebrant proceeded to or from the lectern. Examples of this kind occur in the 13th-century mass repertory for the feast of Circumcision in manuscripts from Sens and Beauvais, as well as in the 14th-century Magi play from Besançon.

2. ORGANA FOR THE MASS IN ENGLAND, SPAIN, GERMANY AND ITALY. Outside Paris, in provincial France as well as in other parts of Europe, two-voice organa of a less elaborate kind covered a wider range of Mass chants. This is apparent in a special collection of two-voice settings originating in England and attached to the Notre Dame manuscript W[1]. The 11th fascicle of this source contains, in addition to various chants from the Proper (alleluia, tract, sequence, offertory), several troped chants of the Ordinary (Kyrie, Gloria, Sanctus, Agnus Dei), all belonging to Marian feasts. The distribution of polyphony among various parts of the Proper and Ordinary is not only reminiscent of the earlier Winchester Troper but is also typical of such later English sources as the Worcester Fragments from the 13th and 14th centuries, which contain polyphonic settings of the Kyrie, Gloria, Sanctus and Agnus Dei, as well as of introit, gradual, alleluia and offertory (*see* WORCESTER POLYPHONY). A similar distribution of polyphony among Mass chants is found in Spanish sources of the same period (*E-TO* C.135; *BUlh*, without signum; *Mn* 20324; *Boc* 1), especially in the famous 'Codex Las Huelgas' with its numerous organa for mostly troped Kyries (five), Gloria (one), Sanctus (eight) and Agnus Dei (nine). An even greater variety of organa for the Mass occurs in a large number of sources from Germanic countries and northern Italy, originating mostly in the 14th and 15th centuries but preserving the musical characteristics of an earlier period (i.e. voice-crossing as practised in the 12th century with simultaneous motion in the voice-parts based on the consonances of 5th, octave and unison). The Mass chants treated in this way include all parts of the Ordinary except the Gloria; the Proper is represented by tropes to the introit, verses of the gradual and alleluia, sequences, and tropes to the offertory. A unique feature in this group of sources is the inclusion of scripture readings (Epistle and Gospel) among the polyphonic items of the Mass.

3. THE RISE OF THE POLYPHONIC MASS ORDINARY IN THE 14TH CENTURY. In 1309 the French pope Clement V moved the papacy from Rome to Avignon, which became the home of his successors until 1376. After a move back to Rome under Gregory XI, the papacy of the Neapolitan Urban VI (1378–89) led to the schism, as a result of which there were popes in Avignon until the Council of Konstanz in 1417 secured the succession of Martin V alone, who finally returned the papacy to Rome.

Most mass polyphony in the 14th century is generally related to the papal residence in Avignon, which turned the city into one of the main musical centres of the time. The earliest known settings coincide with the move. These were officially denounced by Pope John XXII in the decree 'Docta sanctorum patrum'of 1324–5, which censured those who composed polyphonic chants for divine services using *minime*, hockets, texts in the vernacular, upper voices (*triplis et motetis*) and other features. Such music was forbidden; in its place the decree recommended polyphony that doubled the plainchant with simple consonances.

The decree's immediate effect, if any, is not known. But by the middle of the century there existed a remarkable repertory of polyphony in Ars Nova notation for the Ordinary; and the repertory grew in succeeding years. Although it never matched the rhythmic and harmonic complexity of the secular Ars Subtilior works, it did include short note values and hockets (especially in the Amen sections of Gloria and Credo movements) in music mainly in three or four voices. Stäblein-Harder (1962) has classified the surviving movements in various groups: some reflect motet style, with two upper texted voices that have the mass text unless they are troped; others are in the discant style of secular song, with only the upper voice texted; and some reflect the earlier conductus in having homophonic polyphony with all voices texted. These groups are not exclusive: some pieces have other defining features; and some survive in different versions that would put them into different categories – as in the case of the 'Sortes' Credo, which appears both in three-voice discant style and in four-voice homophonic style.

There are three main sources for the French repertory (ed. in PMFC, xxiii). The Apt choirbook (*F-APT 16bis*) of around 1400 contains ten Kyries, nine Glorias, ten Credos, four Sanctus and one Agnus, of which 21 have text only in the upper voices. The slightly earlier manuscript *I-IV* 115 has four Kyries, nine Glorias, ten Credos, two Sanctus and two motets on *Ite missa est*; 15 of these are in motet style. The manuscript *E-Bc 853c-d*, containing five Kyries, one Gloria, three Credos and one Sanctus, is one of 12 Ars Nova manuscript fragments known from the old Kingdom of Aragon, which bordered on Avignon: between them they contain some 40 Mass Ordinary movements, of which 23 are in discant style. Small though the French Mass repertory may be, it is very widely disseminated, with several works appearing in ten or more sources, often in substantially different versions. Composers can be named for less than a third of the repertory, but at least five of them can be associated with the Avignon curia: Perrinet, Tailhandier, Tapissier, Sortes and Peliso.

Of the mass music by Italian composers (mainly Glorias, Credos and Sanctus settings, ed. in PMFC, xii) only about a quarter shows pure Italian style: the rest is heavily influenced by the French tradition. The main named composers are Philippus de Caserta, who worked in Avignon, and Antonio Zacara da Teramo and Matteo da Perugia, both connected with the papal curia in Bologna. In the entirely anonymous English repertory from the early 14th century (ed. in PMFC, xvi) Credo settings are particularly rare. Most of the music is in simple homophonic style and perhaps derives from the growing custom of singing Marian votive masses. Special to the English repertory is the survival of Mass Proper settings.

4. 14TH-CENTURY MASS CYCLES. While the manuscripts normally grouped settings of a particular text together, there are some examples of apparent cyclic grouping, though never more than one such group in any single manuscript. The TOURNAI MASS (*B-Tc* 476, ed. in PMFC,

i; also ed. J. Dumoulin and others, Tournai 1988), considered the earliest, has six Ordinary movements, of which the last is a motet in Ars Nova style, *Se grasse/Ite, missa est/Cum venerint* (known also from *I-IV* 115 and from the index of *F-Pn* n.a.fr.23190; the Credo has three further sources, two of them in earlier notation and of Spanish origin, and the Gloria has a further source in *F-CA* 1328 (n), no.2). Only the Kyrie, Sanctus and Agnus are unique, all in Franconian notation. There is no apparent musical connection between the six movements apart from their being all in three voices and all in simultaneous style apart from the concluding motet (which shares its tenor with a motet by Marchetto da Padova).

The four-voice *Messe de Nostre Dame* of Guillaume de Machaut, composed perhaps in the early 1360s for Reims Cathedral, is more unified and is important as the earliest such cycle conceived as a unit by a single composer. Machaut may have known some of the Tournai cycle, since his Gloria and Credo have similar textless musical interludes and share other features; they are in simultaneous style and end with a long melismatic Amen. The other four movements of Machaut's mass are in the manner of motets, but all voices carry the same mass text. The tenor of the Kyrie is based on Vatican Kyrie IV; the Sanctus and Agnus correspond to Vatican Mass XVII; and the *Ite* is on Sanctus VIII. The Gloria and Credo have no apparent chant basis, though they are stylistically related to one another.

The masses of Barcelona and Toulouse (*E-Bc* 971 and *F-TLm* 94; ed. in PMFC, i) share the same Credo, ascribed in Apt and Barcelona to SORTES. The TOULOUSE MASS, copied on the blank pages of a monophonic missal, is in three voices and lacks a Gloria; Kyrie and Sanctus are in motet style and seem motivically related. The Credo likewise seems related to the *Ite*, which opens with a phrase similar to one in the Credo. These two and the Agnus are in discant style. The BARCELONA MASS has no *Ite* and is in three voices, except for a four-voice Agnus. Only the (unique) Kyrie and the Agnus are in any way related musically. The remaining movements are strongly contrasted and seem arbitrarily selected.

Other four-movement cycles are just as disparate in style. That in the second fascicle of *F-APT* 16 *bis* (ed. in PMFC, xxiii, nos.7–10) unites a Kyrie by De Fronciaco, a Gloria by Depansis (ascribed to Sortes in Solsona, Archivio diocesano, MS 109), a Sanctus by Fleurie and an anonymous Agnus, all quite unrelated. A group in *E-Boc* 2 comprises a Kyrie by Johannes Graneti, the Gloria that also appears in the Barcelona Mass, a Credo ascribed elsewhere to Tailhandier, and a unique anonymous Agnus; these are unified only by a broad stylistic uniformity between Kyrie, Gloria and Credo. The only known Italian cycle (in the Florentine manuscript *F-Pn* it.568; ed. in PMFC, xii, nos.3, 12, 15, 20 and 27) has a Gloria and Agnus by Gherardello (loosely related in style and conceivably intended as part of a cycle), a Credo by Bartholus, a Sanctus by Lorenzo and a *Benedicamus* by Don Paolo. Apart from the three-voice *Benedicamus*, it is entirely in two voices but give no further hint of cyclic unification.

Only the Mass of Besançon (or of the Sorbonne: *F-Pim*; reconstructed in PMFC, xxiii, nos.1–6), ascribed to Johannes Lambuleti, has unifying elements. Its one surviving bifolium lacks the intervening leaves: there is a single-section Kyrie followed by the opening of the Gloria, then fragments of the Sanctus, Agnus and *Benedicamus*. Kyrie and Agnus are musically related; the missing Credo may well be that in *I-IV* 115, no.48, which shares its opening with the Besançon Gloria. In that context it may be relevant to note that certain other scattered movements among the surviving sources have musical relationships that could suggest their origin in matched pairs or even fuller cycles.

5. THE FIRST HALF OF THE 15TH CENTURY. Johannes Ciconia may be an important link between these dispersed movements of the 14th century and the mass cycle of the Renaissance. While no full cycle by him is known, there are several apparently unified Gloria-Credo pairs in a style that sometimes reflects the Avignon music (ed. in PMFC, xxiv); pairs also appear in the music of Antonio Zacara da Teramo (ed. in CMM, xi/6). Ciconia's works include movements in a responsorial style that alternates the full choir with a duo of two equal high voices, a technique adopted by other composers and perhaps reflecting the divisions of some choirs, including the chapel of Pope Martin V. (Another example is the Gloria *Iubilacio* of Hymbert de Salinis, celebrating the election of Pope Alexander V in 1409).

Seven Gloria-Credo pairs appear in the early 15th-century manuscript *I-Tn* 9, from the Lusignan court in Cyprus (ed. in CMM, xxi); they are paired not on the basis of shared material but only in their scoring. Whereas this repertory is entirely anonymous, composers are named for some two-thirds of the music in the contemporary English OLD HALL MANUSCRIPT, probably written for the chapel of Henry V's brother, the Duke of Clarence (ed. in CMM, xlvii). 121 of its 147 pieces are Mass Ordinary movements, grouped by type: 40 Glorias, 35 Credos, 27 Sanctus and 19 Agnus settings. (An opening section containing Kyries may have been lost.) Among its wide variety of musical types, some written in pseudo-score, some in separate parts, both Gloria-Credo and Sanctus-Agnus pairs have been identified on the basis of layout, structure and musical material. The influence of continental music can be identified in many of these works; but, apart from Pycard and Antonio Zacara da Teramo, the composers all appear to be English, including Roy Henry (perhaps Henry V) and the major composer in the collection, Leonel Power.

Power and Dunstaple are the first known composers to have unified a mass by using a single cantus firmus tenor in all movements. This can be seen in Power's Mass *Alma Redemptoris mater*, in Dunstaple's Mass *Da gaudiorum premia* and Gloria-Credo pair *Jesu Christe Fili Dei*, and in other works of conflicting authorship: the masses *Rex seculorum* and *Sine nomine* (the latter probably in fact by John Benet). None of these cantus firmus melodies comes from the Mass Ordinary; and in that respect these works may point to the widespread use of non-liturgical melodies in the cantus firmus masses of the Renaissance. But the technique of unification by a single cantus firmus does not appear in non-English music before the late 1440s.

In the continental sources, particularly the Trent Codices, there are several examples of apparently paired mass movements – by Dunstaple, Binchois and others – that would hardly be considered pairs if they had not appeared together in a manuscript; many such pairs continue to be disputed, with the relatively large mass output of Binchois posing some of the severest problems.

At about the same time as the earliest English cantus firmus cycles, there seem to have been two other kinds of solution to the same problem. One kind survives only in the mass cycle (without Agnus) that is a later addition to the previously mentioned manuscript from Cyprus (*I-Tn* 9): it has consistent style but with each movement based on a different tenor, presented in the manner of a cantus firmus. The other kind is known mainly from works in northern Italian sources of the years 1420–35, including cycles by Arnold de Lantins, Johannes Reson, Guillaume Du Fay (two), Estienne Grossin, Johannes de Lymburgia and Reginaldus Libert. While all are loosely organized, they show enough unity to confirm that they were planned as cycles. But the idea seems not to have taken hold: among the 190 works in the Aosta Codex (1430s), no fewer than 129 are Mass Ordinary movements, though without showing any sense of cyclic organization. And it looks as though the composers of Du Fay's circle devoted their efforts in the early 1440s to cycles of the Mass Proper, with the chants paraphrased in the top line – perhaps those in *I-TRmp* 88 (ed. in Monumenta Polyphoniae Liturgicae Sanctae Ecclesiae Romanae, 2nd ser., i, Rome, 1947). Quite suddenly, however, various English masses became available in northern Italy, prime among them the anonymous Mass *Caput*; their impact was perhaps decisive in launching the fully unified mass cycle of the next 150 years.

6. The cyclic mass in the later 15th century. By 1450 the polyphonic Mass Ordinary had become the largest and most serious of contemporary musical forms. Owing to the length and central liturgical function of its texts it was suited to musical setting on the broadest scale, while the fixed yet contrasting content of these texts rendered it equally open to the most flexible methods of composition. Tinctoris, the great representative theorist of the later 15th century, distinguished the mass as *cantus magnus* from the smaller forms of motet and chanson, and from the period of the maturity of Du Fay to the maturity of Josquin (roughly from 1450 to 1500) settings of the Mass covered a wide range of compositional techniques while nevertheless maintaining a similar approach to structure and dimensions.

The earliest masses involving repetition of musical material from section to section have been divided by historians into two broad classes: the so-called 'motto' mass, in which the movements have closely similar or identical opening motifs but no further recurring features apart from their common mode and number of voices; and the 'cantus firmus' or 'tenor' mass, in which all movements are based on the same borrowed melody (taken from outside the mass itself), which is used as the structural basis for the entire work (*see also* Borrowing, §5). Of these the second category far outdistanced the first in importance and degree of cultivation. It became the basic mass type of the late 15th century, drawing on an increasingly broad range of sources for its antecedent melodies and subjecting these melodies to diverse types of elaboration. Within the repertory of the tenor mass of the late 15th century, two broad types can be distinguished whose origins can be traced back to the inception of the genre. In the first of these, descended from such early cycles as Power's Mass *Alma Redemptoris mater* (*c*1440 or earlier), the borrowed melody, normally in the tenor in a three- or four-voice texture, is stated in every movement of the mass in the same rhythmic and intervallic form or in schematically altered forms. In the second type, whose lineage extends back to such works as the Mass *Rex seculorum* attributed variously to Dunstaple and Power, the complete melody is elaborated in a different form in each major movement. But while pre-1450 models are almost invariably drawn from plainchant, the years after mid-century saw the rise and wide proliferation of cycles based on polyphonic antecedents, usually secular songs. While these masses are based on the tenors of their models, deployed, as in masses based on plainchant, in the tenors of the new works, many also make some reference to one or both of the other voices of their antecedents. Frequently cursory and seldom systematic at first, such borrowing would in time have a transformative effect on mass construction.

The development of the mass after 1450 took place primarily on the Continent in the work of Du Fay and his major successors, but it may have been given its first impetus by English musicians. Among English masses, surely the most influential was the widely distributed 'Caput' Mass formerly thought to be by Du Fay. Besides its direct emulations in 'Caput' masses by Ockeghem and Obrecht, its style, structure and texture – in four voices with low contratenor – is mirrored in a large number of continental masses of the 1450s and 60s, for example Domarto's Mass *Spiritus almus* and the anonymous German Mass *Gross Sehnen* (Wegman, 1991).

Of the seven complete extant masses by Du Fay, two (the *Missa 'Resvelliés vous'*, formerly known as the *Missa sine nomine*, and *Missa Sancti Jacobi*, the latter a so-called 'plenary' mass including settings of mass Propers alongside the usual Ordinary settings) are certainly early works, written not later than 1430. Du Fay's other extant plenary cycle, his stylistically diverse mass for St Anthony of Padua, was probably composed some 20 years later. The *Missa 'Se la face ay pale'*, which may date from the early 1450s, is among the earliest surviving masses based on a secular model (in this case a ballade by Du Fay himself probably dating from the 1430s). His *Missa 'L'homme armé'* is surely among the first of more than two dozen masses based on this famous melody and written over more than 150 years. Du Fay's later works include two tenor masses based on Marian antiphons – the *Missa 'Ave regina celorum'* and the *Missa 'Ecce ancilla Domini'*, which is actually based on two antiphons. Even the few masses securely attributed to Du Fay show a wide variety of cantus firmus techniques, and in this respect are representative of the range of styles deployed in mass composition in the late 15th century. The cantus firmus is almost always in the next-to-lowest voice, whatever the clef and range of this voice; it is often divided according to a systematic proportional scheme and is frequently differentiated from the prevailing rhythmic motion of the other voices, typically through the use of longer note values. At times this systematic differentiation is achieved through complex mensural schemes that change in the course of the setting. The tenor may be written out once complete, and a verbal canon, at times obscure, may be used to indicate its successive temporal and intervallic modifications (for a description of the treatment of the tenor in Du Fay's *Missa 'Se la face ay pale'* see *ReeseMR*, 70–71, or Brown, 1976, pp.45ff). Important in Du Fay's masses, as in those of other composers of his and the next generation, is the use of contrasting mensurations for the subdivisions of the five primary movements of the

Ordinary; each movement normally begins in perfect time and shifts to imperfect at a natural textual division; thus a familiar Kyrie plan is: Kyrie I O, Christe ¢C, Kyrie II Φ. Contrast through use of reduced number of voices and change in vocal register is normally achieved in subordinate divisions of the major movements, which often omit segments of the tenor; typical for these interludes are the Christe, Benedictus, Pleni and Agnus Dei II. This use of contrasting interludes lasted until the late 16th century.

In the main period of Ockeghem and his contemporaries (roughly 1460–90) the chanson came to the fore as a source of melodies for the tenor of the mass. Of 14 masses attributed to Ockeghem five are based on voices derived from contemporary three-part chansons, and at times the superius rather than the tenor of the model is used as tenor in the mass; sometimes parts of both voices are used, but not simultaneously. Ockeghem's sources include a number of his own chansons (e.g. the *Missa 'Fors seulement'*) and one by Binchois (*Missa 'De plus en plus'*). A broadening of style in his masses goes together with his remarkable control of flowing, largely non-imitative counterpoint in many works. Particularly noteworthy is the *Missa prolationum*, perhaps the first of all masses based completely on the principle of progressive canon through all movements (later used by Palestrina in his *Missa ad fugam* and in the canonic movements of Bach's Goldberg Variations). Another famous experiment that lacked imitators was Ockeghem's *Missa cuiusvis toni*, which can apparently be sung in any one of the four authentic-plagal pairs of modes in use at that time.

Of great significance for the development of the mass in this period was the rise of competitive settings of the same melody. Of these the most famous group is the series of masses based on the tune *L'homme armé*. Whatever the veracity of a later claim that the melody was actually written by Antoine Busnoys there can be no doubt of the importance of Busnoys' *Missa 'L'homme armé'*, which, in addition to its clear influence on a number of other masses, has been shown to be the particular model for the *L'homme armé* Mass by Obrecht and of an anonymous *Missa de Sancto Johanne Baptista* (for the latter see Wegman, 1989). Other composers of Ockeghem's generation who wrote masses on *L'homme armé* include (besides Du Fay, Ockeghem himself and Busnoys) Firminus Caron, Guillaume Faugues, Johannes Regis, Philippe Basiron, Tinctoris, Bertrandus Vaqueras and thec anonymous composer (although both Busnoys and Caron have been put forward as candidates) of six consecutive mass settings on the tune in a Naples manuscript of this time (*I-Nn* VI.E.40). Slightly later is the group of *L'homme armé* settings by Josquin (two), Compère, Brumel, Pierre de La Rue, Matthaeus Pipelare, Marbrianus de Orto, Mouton and Vitalis Venedier. In the 16th century the tradition was maintained by Mouton, Senfl, Festa, Robert Carvor, De Silva, Morales (two) and Palestrina (two). A lesser parallel to the great *L'homme armé* tradition is the large group of elaborations of Ockeghem's rondeau *Fors seulement*, which was used in numerous chanson settings but also for masses by Ockeghem, Obrecht, La Rue and others. In the 16th century similar groups of settings of familiar models are found, among them the series of masses on Richafort's motet *Quem dicunt homines* (*c*1515), on which masses were composed by Mouton, Antonius Divitis, Lupus Hellinck, de Raedt, Charles d'Argentilly, Morales, Ruffo and Palestrina.

The greatest flowering of the late 15th-century mass is in the works of Obrecht and Josquin. Obrecht's surviving mass oeuvre (see R. Wegman: *Born for the Muses: The Life and Masses of Jacob Obrecht*, Oxford, 1994) encompasses 27 securely attributed works, while at least four more have been reasonably ascribed to him on the basis of style. Covering a period of some 30 years beginning in the late 1470s, they span the gulf between the 15th-century mass styles of Busnoys and Ockeghem and that of the mature Josquin. The earliest masses, apparently dating from the decade beginning in the mid-1470s, are each based on a plainchant cantus firmus, presented in elaborated forms. *Missa 'Petrus apostolus'*, which may be Obrecht's earliest mass, is stylistically related to the masses of Busnoys, while *'Sicut spina rosam'* betrays the influence of Ockeghem, even quoting the head-motif of his *Missa -Mi mi'*. This was not Obrecht's only musical tribute to Ockeghem: his *Missa de Sancto Donatiano*, which shares with *'Sicut spina rosam'* something of the unpredictable contrapuntal diversity of the older composer, also quotes from his *Missa 'Ecce ancilla Domini'*.

The considerable demand for new masses at St Donatian, Bruges, where Obrecht worked as succentor from late 1488 and early 1491, seems to have engendered a spate of remarkable productivity. Wegman (1994) has plausibly suggested that this period was his most prolific as a mass composer, accounting for 15 or more of his surviving cycles. Copying records and paper dating for specific pieces also led him to surmise that these years, and those immediately adjacent to them, also constitute the period of Obrecht's greatest stylistic development. Techniques characteristic of the Busnoys generation – for example the strict cantus firmus procedures of the *Missa de Sancto Martino* of 1486–7 – seem to have given way in a very short space of time to the types of idioms which now appear quintessentially Obrechtian. In masses such as *'Fortuna desperata'* and *'Rose playsante'*, rigid, formulaic cantus firmus layouts become the frames for endlessly inventive and aurally compelling musical canvases which entirely belie their rigidity of background structure. Tenor layouts include the use of such procedures as retrograde motion (for example *'Fortuna desperata'*) and the composer's well-known 'segmentation' technique. In the latter the cantus firmus is divided into a number of segments, each of which, repeated according to various mensural and proportional formulae, is used as the basis for one mass section before the complete melody is laid out in the Agnus Dei (for example *'Rose playsante'*). While such segments, sometimes spun out in the tenor by means of very long notes, from time to time lend the music an ostensibly archaic appearance, they give rise to an infinite and highly distinctive range of textures in sound.

While many of Obrecht's masses embody structural complexity, only one, the *Missa 'Sub tuum presidium'*, seems to have given that complexity the status of raison d'être. The main cantus firmus, stated in the superius, takes the same form in each section. In the last three movements it is accompanied by other Marian chants, increasing in number by one chant each movement and culminating in the simultaneous quotation in the Agnus Dei of four chants. The number of voices similarly increases movement by movement, from three in the Kyrie to seven in the Agnus Dei. The mass also embodies a

complex numerical scheme, and it has been claimed that the *Missa 'Sub tuum presidium'* is a large-scale example of numerical symbolism traceable to late medieval speculative thinking.

In Josquin's masses traditional melodic sources are found side by side with new and highly original ones. Although the chronology of his masses is still largely in doubt, his first two volumes of published masses, issued at Venice by Petrucci in 1502 and 1505, are not only the first by any single composer but probably represent a generally earlier phase of his work, written between about 1470 and about 1500. His third book (1514) may well intermingle older works with one or two that could have been written after the second (e.g. the *Missa de Beata Virgine*, which Glarean especially praised). Josquin's masses represent a summa of contemporary approaches to mass composition. Of his two *L'homme armé* settings the one entitled *super voces musicales* is a strict tenor mass which successively presents the melody on ascending steps of the hexachord while maintaining the modal integrity of the whole texture; the *Missa 'L'homme armé' sexti toni*, in utter contrast, is a free elaboration of the given melody, presenting it in every voice of the complex, at times in embellished form. Several of his masses brilliantly exploit cantus firmi from polyphonic chansons, and it may be biographically significant that two of these are taken from chansons used also by Obrecht (*Fortuna desperata* and *Malheur me bat*); in method these works continue the tradition established by Ockeghem, to whom Josquin seems to have been indebted. Others break new ground in their choice of material. For example, the *Missa 'La sol fa re mi'* is based on a short and freely invented subject, identified only by its solmization syllables, on which Josquin erected a brilliant series of contrapuntal elaborations.

Even more original is the subject of the *Missa Hercules dux Ferrariae*, the first known mass based on what Zarlino later called a *soggetto cavato delle parole* (a 'subject carved out of the words'); the tenor of the mass is drawn from the name 'Hercules dux Ferrariae' (referring to Duke Ercole I d'Este of Ferrara) by substituting the proper solmization syllable for each vowel of his official name and title (*re ut re ut re fa mi re*). Unlike the *Missa 'La sol fa re mi'* the *Missa Hercules dux Ferrariae* has a rigid tenor construction in which the subject is normally presented in a threefold form, rising through the final and confinal of the mode onD (1st mode) and always in equal note values. The tradition of the canonic mass was cultivated by Josquin in his *Missa ad fugam* and *Missa sine nomine* of the third book, while the masses on *Ave maris stella* and *Pange lingua* (the latter probably a very late work) exemplify the imitative paraphrase mass developed from a single well-known plainchant; this was an important mass type about 1500 and a new departure from the older tenor mass on a plainchant. Similar to these is Josquin's widely copied *Missa de Beata Virgine*, which elaborates the complete plainchant Ordinary for festivals of the Virgin and begins a great tradition of works of this type.

Although older structural principles are still plainly visible in Josquin's masses they are perfectly blended with a freer, more expressive, declamatory approach to text that is conveyed in beautifully articulated polyphonic structures. A major development in the mass literature of Josquin's later years, visible in incipient form in such works as Obrecht's *Missa 'Rose playsante'* and Josquin's *Missa 'Mater Patris'* (whose authorship has been questioned by a number of scholars at the end of the 20th century), was the tendency to base a mass on the entire polyphonic substance of its antecedent.

This procedure was not in itself new: as noted above, it was as old as the practice of basing masses on polyphonic models. Even some of the earliest such masses include lengthy simultaneous paraphrases of two, sometimes even all three, voices of their models. These include Bedyngham's Mass *Dueil angoisseux*, Le Rouge's Mass *Soys emprentid* and Barbingant's *Missa 'Terriblement'*, all composed by the early 1450s (Kirkman, 1996). Block quotation of polyphonic models can be found in cycles dating back at least to the early 1460s (e.g. the anonymous *Missa 'Quand ce viendra'* in *I-TRmp* 89). Four (apparently related) anonymous, probably Austrian, cycles composed most likely in the late 1460s even include lengthy contrafacta of their antecedent German Tenorlieder (Peck Leverett, 1995). However, it was not until the early 16th century that such borrowing became systematic, developing in time into the standard practice for setting the mass in western Europe.

This wholesale borrowing from a pre-existing polyphonic piece has gained the widely used but misleading terms 'parody technique' and 'parody mass' in modern musicological terminology, owing in part to a misunderstanding of 16th-century usage. The term 'missa parodia' was used in one mass of 1587, by the little-known German composer Jakob Paix, published at Lauingen on the Danube. The actual title of the work is *Missa: parodia mottetae Domine da nobis auxilium Th. Crequilonis*, that is, a mass based on the motet *Domine da nobis auxilium* by Crecquillon. The word 'missa' is buried in the upper decorative border of the title-page and the word 'parodia' is clearly an elegant Greek substitute for the Latin *ad imitationem*. So the one known instance of the term is actually an obscure variant of a different terminological tradition. Historically the more correct term for the practice of large-scale borrowing is therefore 'imitation' and 'imitation mass', reflecting the 16th-century use of the term 'missa ad imitationem' in numerous titles of mass publications, especially in France. Whatever terminology is applied to it, this approach became the primary means of mass composition in the 16th century, and the gradual shift from the typical 15th-century practice of using a single pre-existing voice as cantus firmus to the typical 16th-century derivation of material from all voices of the complex is one of the decisive developments of the period.

Essential to this development was not only a change in the nature of the mass but a change in its models. In the works that best exemplify the change a shift can be seen from three-voice chanson models to four-voice motet models, with emphasis on motets by Josquin or his immediate successors. In these models the pervasive use of contrapuntal imitation, the uniform motivic content of all voices, and the consequent open texture make it virtually impossible to detach a single voice as cantus firmus of a new work, for in these models no single voice is any longer a self-contained linear unit. It follows that the use of contrapuntal imitation makes the rise of total borrowing in the mass not only possible but inevitable. The first realization of this principle in major works is seen in masses by French court composers of the period

1500–25, especially Mouton, Antoince de Févin, Divitis, Richafort, Claudin de Sermisy and the young Willaert. Pioneering works in this genre are Josquin's *Missa 'Mater Patris'* (based on a three-voice song motet by Brumel), Mouton's masses on *Sancta Trinitas* and *Quem dicunt homines*, and Févin's on *Mente tota* and *Ave Maria*, both of which are based on four-voice motets by Josquin. It may have been these that Glarean had in mind when he referred to Févin as 'felix Jodoci aemulator' ('the felicitous imitator of Josquin').

7. THE MASS IN THE EARLIER 16TH CENTURY. By Josquin's death in 1521 certain primary trends had been established that dominated the genre to the period of Palestrina and Lassus. During the era from 1520 to about 1560 the two basic mass types built on single melodies (both the older tenor mass and the newer polyphonic paraphrase) receded into the background while the contrapuntal imitation mass (the type frequently called the 'parody mass', as noted above) came strongly to the fore. The imitation mass indeed became the fundamental prototype for the rest of the century, reaching down to Monteverdi's *Missa da cappella* of 1610 (based on Gombert's motet *In illo tempore*). The vitality of the tradition depended on that of the polyphonic style of the 16th century, and with the rise of monody and polychoral writing in the early 17th century it lost its basis for further development and became an outmoded genre.

Alongside the imitation mass, in which the source composition was the essential basis for inner continuity and structure, certain secondary types continued to be cultivated and attained a definable role in 16th-century mass literature. One is the mass set in canon throughout; inherited from the late 15th century, and exemplified in Josquin's works of this type (see above) along with those of La Rue, the canonic mass is repreented in the earlier 16th century by the *Missa 'L'homme armé'* by Mouton or Forestier, and later by Palestrina's *Missa ad fugam*. A subclass of the canonic mass is formed by those works that are based on canonic motets or chansons and thus combine canon with polyphonic imitation: for example La Rue's *Missa 'Ave sanctissima Maria'* and Palestrina's *Missa 'Repleatur os meum'*. Another distinctive type is the mass based not on a pre-existing subject but on a freely invented one. At times this is designated *Missa sine nomine*, a term that existed long before the Council of Trent and thus, contrary to myths long perpetuated, had nothing to do with the alleged disguising of secular models during the Counter-Reformation. An example is Vincenzo Ruffo's *Missa sine nomine* of 1557, mentioned by the theorist Pietro Pontio (in 1588; see below) as an example of a mass based on a freely invented subject. The Palestrina *Missa Papae Marcelli* is by far the most famous example of this type (see Jeppesen, 1945).

Another type of mass that survived in this period was the *missa brevis*. In the 16th century this did not mean (as it came to mean in the 18th), a setting of only the Kyrie and Gloria; rather it denoted the shortest possible setting of the full Ordinary consistent with conveying the entire text. It was normally set for four voices even after this had become a less common practice, and usually entailed considerable overlapping of textual phrases in Gloria and Credo, with very short Kyrie, Sanctus and Agnus sections. A defining feature of the genre would also appear to be absence of borrowed material, though a number of masses on borrowed melodies, significantly Josquin's *Missa 'D'ung aultre amer'* and Martini's *Missa 'In Feuers Hitz'*, reveal similar dimensions and construction. The term itself dates back in surviving usage to around 1490, and the compilation, under the aegis of Franchinus Gaffurius, of four large volumes of polyphony for Milan Cathedral. One of these volumes (*I-Mcap* 2268) contains four very short masses, all probably by Gaffurius himself, which are so designated in the contemporary list of contents. These masses involve little or no mensural contrast and, in the Gloria and Credo, considerable omission of text and syllabic setting with many repeated notes. The genre, however, can be traced back at least another 15 years: the same characteristics appear in portions of an apparently composite mass in *I-TRmp* 91 (Peck Leverett, 1994), perhaps itself composed for Milan in imitation of a style already current in that city or a survival of similar practices elsewhere. The period from about 1560 to 1600 saw much cultivation of a similar idiom: exponents included Vincenzo Ruffo and Andrea Gabrieli in northern Italy, while Palestrina's *Missa brevis* is a masterpiece of the genre as practised further south. The latter was published in his third book (1570) and characteristically has no traceable pre-existing material. Interest in the *missa brevis* in the late 16th century arose amid a general tendency to shorten mass settings of all kinds and to lessen their contrapuntal complexity as a result.

For the major composers of the period between Josquin and Palestrina the mass was a basic form and the imitation mass the paramount category. Of some 17 masses reasonably attributed to Jean Mouton, 13 of them securely, only two are imitation masses while the majority are based on cantus firmi (see P. Kast: *Studien zu den Messen von Jean Mouton*, Frankfurt, 1955). But of Willaert's eight or nine masses only one is not an imitation mass and four of his masses are based on motets by Mouton, his teacher. Of the ten masses by Nicolas Gombert none is based on a cantus firmus in the true sense, and only two are paraphrase compositions (the masses on *Da pacem* and *Tempore paschali*) while eight are imitation masses. With Clemens non Papa all 14 masses are based on polyphonic models – four on motets or chansons of his own composition and ten on works by others. Perhaps the most prolific mass composer of this period was Cristóbal de Morales, of whose 20 masses at least eight are imitation masses based on models by Josquin, Mouton, Richafort, Verdelot, Gombert and possibly Févin. From about 1520 to the end of the century the choice of models for imitation masses is often a revealing clue to the background and stylistic leanings of the mass composer, at times forming part of the cult of competitive composition that flourished in the mass as well as in other genres, in part showing individual predilections for models of a certain type, length and complexity of elaboration.

The rise of the principle of polyphonic derivation conferred on the mass a high degree of stability in the means of integrating the five movements of the Ordinary through borrowed material. 'Rules' for the broad distribution of the material were later drawn up by Pietro Pontio (1588) and by Pietro Cerone (1613); those of Cerone are in part dependent on Pontio. These include the observation that the principal mass movements should begin with varied treatments of the opening subject of the model and close with its final cadence; if there is a second section in the model this should be used for subordinate

mass sections (e.g. 'Qui tollis', 'Et in spiritum' etc.). These points accurately describe the main outlines of the imitation mass from about 1520 to the end of the century, but they leave unaddressed the intricate and complex problem of the internal distribution of the borrowed material. Although a great deal of research is still to be done, it is clear that in many masses based on motets, chansons or madrigals the choice of distribution of motifs is in part cyclic and follows the order of motifs in the model; at the same time the contrapuntal fabric in the model is drastically altered, but still to some degree recognizable. Whether or not the sequence of motifs roughly follows the order of the model, the location of certain motifs is often changed in order to use elements of the model that best fit the declamation and meaning of particular phrases of the Mass text. In works of certain composers, notably Palestrina, one finds some tendency to choose motifs that have special meaning in the model, such as those mentioning the name of Jesus; frequently the text of the motif in the model may have a bearing, symbolic or structural, on its use in the mass. Thus, in Palestrina's *Missa 'Aspice Domine'* (published 1567) based on the motet *Aspice Domine quia facta est* by Jacquet of Mantua (published 1532), Jacquet's original motif on the text 'sedet in tristitia' is used by Palestrina for the phrase 'sedet ad dexteram Patris' in the Credo. The careful alteration and refashioning of borrowed polyphonic material in the mass became one of the most refined of 16th-century composition procedures, and it must have been motivated both by a sense of competitive skill among composers and by a desire to challenge the musical imaginations of auditors and fellow musicians. A sense of what this art could mean to a contemporary listener is given in a letter written from Vienna in 1559 to the Bavarian Archduke Albrecht V in Munich; the letter was written by the Bavarian vice-chancellor, Dr Seld, who reported having heard a mass sung that pleased him very much and added: 'the subject on which it was based rang in my ears but I could not immediately identify it. Afterwards, as I was singing it over, I found that the master of the imperial chapel [Jacobus Vaet] had based it on the motet *Tityre tu patulae* composed by Orlando [Lassus]'.

In the first half of the 16th century several fairly consistent regional schools of mass composition can be distinguished that adhere in some measure to stylistic tendencies associated with national traditions, particularly English, German and French. The most important source for English masses from the later 15th century is the Burgundian court manuscript *B-Br 5557*, and the best-represented composer is Walter Frye. The Brussels manuscript contains three masses by Frye and another that may be his (Kirkman, 1992), while the fragmentary Lucca Codex (*I-La* 238) contains the upper voice of a Kyrie by Frye apparently from another cycle which, as Brian Trowell has shown, reworks his own song *So ys emprentid*. All three of the complete ascribed cycles are based on plainchant cantus firmi, either strictly repeated or rhythmically varied on each statement. The Mass *Nobilis et pulcra*, which belongs to a sound world similar to that of the two cycles by Bedyngham, probably dates from the early 1450s, and suggests the work of a composer not yet entirely at ease with composing a large-scale work. On the other hand, the elegance, consistency and carefully judged pacing of the masses *Flos regalis* and *Summe Trinitati*, which reveal the hand of a master in full control of his craft, support dating in the mid- to late 1460s. The mass by John Plummer in the Brussels manuscript displays something of that peculiarly insular floridity which was to reach its apogee at the end of the 15th century in the repertory of the Eton Choirbook.

Something of the grandeur of Eton is perceptible in the sumptuous and contrapuntally dense festal masses in five and six parts composed in the early 16th century by Ludford and Fayrfax. By this stage insular developments were progressing on lines distinct from those on the Continent. The masses *Gloria tibi Trinitas* and *Western Wynde* by their near contemporary John Taverner are among the most memorable of the period, the latter for its extraordinary variation treatment of a popular melody, the former for its musical splendour and by reason of historical accident. In the Benedictus of the Mass *Gloria tibi Trinitas* Taverner set the words 'in nomine Domini' to the plainchant on which the whole mass is based, and when this section of the Benedictus was later used independently as an instrumental piece its plainchant basis became the antecedent for the whole tradition of English instrumental compositions called 'In Nomine' which persisted into the 17th century. On the whole the English mass tradition of the earlier 16th century, which was of course exposed to changing liturgical conditions with the establishment of the Church of England, maintained an emphasis on the cantus firmus and on florid counterpoint in a five- and six-voice texture that strongly reflects its detachment from contemporary trends on the Continent in the age of Josquin and his followers.

The German traditions of the mass are naturally divided, even more sharply than the English, between orthodox settings and the liturgical forms that arose from the upheavals of the Reformation. German and Austrian mass style of the later 15th century has been notoriously difficult to define, largely because most of its examples are apparently hidden anonymously in the large codices (chiefly in Trent) on which much knowledge of the repertory of this period is based. In such circumstances German repertory has to be identified on the basis of derivation from German antecedents and considerations of style. The latter presents major problems, chiefly on account of the widespread stylistic overlap between German works and more familiar cycles from the Low Countries and England. This is apparent in the cases of a number of masses based on German models, and thus clearly of German origin, for example the masses *Gross Sehnen* and *Christus surrexit*, both closely related to the English mass style represented by the anonymous 'Caput' Mass. Others, such as the four brief cycles embodying song contrafacta mentioned above, testify to the existence also of distinct local trends, probably fostered to at least some degree by local composers.

Perhaps the most influential figure for the German mass is the great international master Henricus Isaac, who was born in the Low Countries, lived for years in Italy, and in later life was court composer to the Emperor Maximilian. Isaac's *Missa carminum* illustrates a quodlibet-like procedure long cultivated by German composers, and is based on popular German songs. His numerous other masses include a set published in 1506 that contains four masses based on chansons; but the greater number of his masses have liturgical melodies as their sources. By far his most important single contribution to the whole field of

the mass was not to the Ordinary but to the Proper; his *Choralis constantinus*, a gigantic series of polyphonic settings of Proper texts for the liturgical year, was the first such collection of its kind by a single composer, and in the entire period is rivalled only by Byrd's *Gradualia*. Other German mass composers of this time reveal a preference for simple cantus firmus settings, along with an emphasis on *alternatim* settings using plainchant and polyphony in alternate segments throughout the mass, perhaps implying the use of the organ for many sections (*see* ORGAN MASS). On the Lutheran side the official liturgical transformation came in 1526 with the issuing of Luther's *Deutsche Messe*. The complex musical and liturgical developments of the mass in Lutheran centres require a separate discussion (*see* LUTHER, MARTIN) but they did not preclude the continued printing and use of masses by such Catholic composers as Josquin and Isaac, as is clear from the publication of their masses in the great collections produced in 1539 by Petreius and in 1541 by Georg Rhau, the official publisher of Lutheran music at Wittenberg.

In brief perspective, the French traditions of the period can be said to entail a reduction in complexity from the style of the French court circle that had surrounded Mouton and Févin in the first 20 years of the century. The later phase is best exemplified in the masses of Sermisy, Certon and, to a lesser extent, Janequin. In these works the predilection of the chanson composers for lightness of texture, brevity and homophonic writing leavened by simple polyphony is taken over as nearly as possible into the four-voice mass. This is seen most directly when the masses are based on chansons that can readily be adapted to the Mass text (e.g. Certon's *Missa 'Sus le pont d'Avignon'*) but often too when a motet or other basis is used.

8. THE COUNTER-REFORMATION; PALESTRINA. Although Italy had been the seat of the origins of music printing and of the first published mass collections, the printed repertory was wholly dominated by non-Italians from its beginnings in 1502 (Josquin's first book) to 1542, when a mass by Vincenzo Ruffo broke the northern monopoly. In1549 the first published book of masses appeared by an individual Italian composer, Gasparo Alberti of Bergamo; in 1554 Palestrina's first book of masses opened a new era, and after 1560 a vast outpouring of mass settings by Italians turned the tide towards Italian leadership. During the first half of the century the dominating figures for the mass in northern Italy had been the leading musicians at the major princely and cathedral chapels, chiefly Willaert at Venice and Jacquet at Mantua. In Rome the major figures in the papal choir after the international period of Leo X (1513–21) were the main contributors to the mass, especially Costanzo Festa and Morales. The latter, although Spanish by birth, is really the most important Roman composer of masses before Palestrina (he spent the decade 1535–45 in Rome) and probably exerted a substantial influence on Palestrina's development.

The two decisive factors for the mass in the Palestrina period, especially after 1560, were the gradual absorption by Italian musicians of the complex polyphonic art of the northern composers (which in itself was a major historical development from about 1470 to about 1560) and the Counter-Reformation. The rise of powerful Catholic militance in the papal dominated areas of Europe was in direct proportion to the huge losses of political and spiritual control suffered by the Church in Germany, England and elsewhere in Europe. In sacred music this militance was particularly evident in the mass; in 1562 the Council of Trent issued a canon prohibiting all 'seductive and impure' melodies from church use, and the primary goal of the reformers was to see that the Mass text was made as intelligible as possible to congregations. With this in view the most powerful papal leader of the 1560s, Cardinal Carlo Borromeo, called for the writing of 'la musica intelligibile', and actually tested certain commissioned masses at Rome to see if they were satisfactory. Such high-minded sentiments notwithstanding, however, the extent of their effect in practice, and particularly beyond Rome, is highly debatable. Yet such remarks as the following in a letter accompanying a mass by Palestrina sent by the composer to the Duke of Mantua would seem to reveal something of this spirit: in this letter, dated 1568, the composer requested that the duke let him know, should the mass prove unsatisfactory, if and in what ways he would like it reworked, 'whether short, or long, or composed so that the words may be understood'.

Certain works reveal the influence of the Counter-Reformation directly. These include the later masses by Ruffo (published from 1570 to 1592), some by Giovanni Animuccia (1567), Costanzo Porta (1578) and certain works by Palestrina, particularly his famous *Missa Papae Marcelli*, published in his second book of 1567. But the 'intelligible style' is only one facet of Palestrina's immense breadth of style and knowledge as a mass composer. His 104 masses make him the most prolific as well as the most consistently resourceful mass composer of the century. Fewer than half his masses were published within his lifetime (he died in 1594), and a large number were published after his death by his sons. This circumstance, with other evidence of the early composition but delayed publication of many masses, makes their true chronology an unsolved problem.

The scope of his achievement as a mass composer is clear from the stylistic variety of the works alone. Six are based on freely invented subjects (including the *Missa Papae Marcelli*); five are canonic throughout; seven are old-fashioned tenor masses, while 35 are paraphrase masses of different kinds. The largest group (53 masses) comprises polyphonic imitation masses, of which 31 are based on works by others, 22 on works by Palestrina himself. Those on models by his predecessors are strongly indicative of Palestrina's stylistic orientation and of other influences in his career. In his imitation masses, Palestrina's main leaning was towards the French, Flemish and Spanish composers who had been assimilated into Roman and especially papal musical circles during the first half of the century, among them De Silva, Lhéritier, Penet and Morales. He avoided models by Willaert or any members of the Venetian circle except Rore (whose connections with the Este of Ferrara may be the source of Palestrina's interest in him) as well as models by Gombert, Clemens or others associated with the imperial chapel of Charles V. A distinctive group of his masses is based on motets published in the *Motteti del fiore* collections issued by Jacques Moderne. Perhaps somewhat later than the masses on works by others is the large series based on his own models, especially motets. Palestrina's imitation masses constitute the largest group of such works by any

composer of the period, combining remarkable formal and technical perfection with the stylistic discipline for which Palestrina's works are justly famous. His subtle art of transformation of models by others has yet to be fully explored, although a beginning has been made by such authors as Klassen and Quereau.

Among other important compositional methods within Palestrina's mass output is the paraphrasing of a short plainchant melody (as especially in the masses based on hymns; see Marshall, 1963). This genre was revived in the Counter-Reformation as part of a reawakened interest in the polyphonic adaptation of plainchant and a tendency to transform plainchant traditions into polyphonic repertories wherever possible. This tendency is also reflected in the setting of Proper texts by Palestrina (*Offertoria totius anni*, 1593) and numerous other composers. Another important group comprises the special masses written for the ducal chapel at Mantua; these have *alternatim* Gloria and Credo settings and use plainchants supplied by Palestrina's distant patron Duke Guglielmo Gonzaga; after being lost for many years these masses were rediscovered by Jeppesen. Important too is the group of four polychoral masses published posthumously in 1600 but probably composed in the 1570s or1580s. Among these, the *Missa 'Confitebor tibi'*, copied into a Cappella Sistina manuscript in about 1577, is the first polychoral work copied for use by the papal chapel. These masses were widely imitated, inspiring similar works by Marenzio, the Anerios and others, and, not least, the *Missa 'Cantantibus organis Cecilia'* for double and triple choir composed collaboratively by members of the Compagnia dei Musici di Roma.

9. THE LATE 16TH CENTURY. While Palestrina's settings established an ideal fusion of structure and expression for the late 16th-century mass, they were only a part of its historical development and essentially a conservative part. A glimpse at the masses of three great rival composers of the late 16th century – Victoria, Lassus, and Byrd – may provide a wider view. Victoria was both the greatest Spanish composer of the period and, like Morales, one whose career unfolded essentially at Rome. Affinities with Palestrina are therefore to be expected in his masses, of which there are 20. 11 are based on his own motets while others have plainchant models or are derived from other composers' motets, significantly including the Spanish masters Morales and Guerrero and also Palestrina. The style is one of richly developed polyphony of great seriousness, lacking almost every trace of secular influence. The only exception is his double-chorus *Missa pro victoria*, based on Janequin's programme chanson *La guerre* – but it is likely to be a celebration piece for a special occasion. The Victoria masses show on the whole that Palestrina's highly disciplined polyphonic style was an individual idiom within the range of contrapuntal styles encompassed by Roman composers of the late 16th century, and it was these composers, notably Francesco Soriano, Ruggiero Giovanelli and others, who kept the mass a living form in Rome after its traditions elsewhere had succumbed to the drastic stylistic changes of the time.

A much broader outlook is of course to be expected in Lassus's 60 or so masses, which use a wide array of antecedent models ranging from German lieder to motets by Lassus himself and others, to madrigals by Arcadelt, Palestrina, Rore and others, and to chansons by French and Netherlandish masters such as Sandrin, Gombert and Clemens. His masses reflect Lassus's wide-ranging acquaintance with current styles and genres but above all reveal an extraordinary fecundity and variety of approach to the reworking of antecedent works of the greatest diversity. While stylistically removed from the masses of Palestrina, a number of his shorter masses display a frequent combination of clear text declamation with terse and uncomplicated counterpoint, perhaps in some – albeit rather different – way reflecting Counter-Reformation concerns. A further significant difference between the mass outputs of the two composers may be seen in their choice of models: Lassus's masses show a much greater emphasis on secular models, sometimes of a highly *risqué* nature: see for example his masses based on chansons such as *La, la, maistre Pierre* and *Je ne mange poinct de porcq*.

Byrd's three masses, probably dating from the 1590s, rank with the greatest of the period. There is no evidence in them of contact with the continental technique of the imitation mass or even the paraphrase mass; there are similarities between the openings of some movements but little more by way of musical consistency within individual cycles. The three works are written for three, four and five voices respectively, and thus seem to form almost didactic examples of mass settings for various combinations of voices, increasing in complexity with greater fullness of sonority. Clear influences are difficult to substantiate, and it seems that the style of the masses was to a very large extent of Byrd's own devising; however, if antecedents were to be sought, reasonable candidates would probably include such brief settings as were popular in England in the second quarter of the century. Masses in question include Taverner's Mean mass, the clear inspiration for Byrd's four-voice mass, and whose Sanctus formed the direct model for the same movement of Byrd's cycle. Structural modelling notwithstanding, the musical language of the two masses, separated by half a century or more, is radically different. Such grandiose festal works as Tallis's seven-voice Mass *Puer natus est nobis*, possibly written for the combined English and Spanish royal chapels during the reign of Mary I (1553–8), belong to a quite distinct tradition.

Returning to a more central terrain for the development of the mass, it can be said that in northern Italy a division is fairly clear between Venice and the territories dominated by Milan and the northern courts. In the latter the influence of the Counter-Reformation is perhaps at its clearest, and it coincides with a musical trend towards relative brevity, clarity of text-declamation in varying degrees, and a continued emphasis on the imitation mass, in which composers of good but not first-rank quality contributed to the literature as part of a sense of musical tradition and no doubt as part of their obligations as local *maestri di cappella*. At Venice the mass was less important than the motet and symphonia sacra as a vehicle for the increasing emphasis on dramatic contrast and antiphonal choirs. Less suited to dramatization than works on freely chosen texts, the mass at the turn of the century took only a small part in the trend towards the concertato style. With the drastic change in style that attended the rise of the basso continuo and the recession of interest in balanced contrapuntal writing as a form of expression, the polyphonic mass receded into the background. While some composers developed it towards larger choral forces and the stark contrasts of polychoral writing, the basic

reliance of the 16th-century mass traditions on derivation from polyphonic antecedents was now at a virtual end, and with it the traditional basis for mass composition had ended too.

III. 1600–2000

The form and texts of the Latin Mass were largely stable between the publication of the revised Missal (1570) and the revisions initiated by the Second Vatican Council in the documents of 1693–4. However, there were minor regional variations: even in early 17th-century Rome Frescobaldi omitted the Benedictus from his two masses. The primary concerns until the 1960s are compositional rather than liturgical, but there is a persistent duality of approach. On the one hand composers have adopted contemporary musical styles and formal principles in setting the disparate texts of the Mass and in addressing problems of large-scale musical structure; on the other hand they have sustained the polyphonic idiom of the 16th century, especially in the four-part *missa brevis* in *stile antico*. The tension between liturgical propriety and musical imagination, evident since the 16th century, has been superseded worldwide since the 1960s by the requirements of a pastorally orientated liturgy, perhaps marking the end, for the time being, of significant mass composition.

1. Italy 1600–*c*1680. 2. 17th century outside Italy. 3. 18th century: (i) Neapolitan (ii) Viennese. 4. 19th century. 5. 20th century.

1. Italy 1600–*c*1680. The duality of style is made explicit in the distinction of *prima pratica* and *seconda pratica* in early 17th-century Italy, but the contrast is less extreme in mass composition than in secular vocal music, motets or psalm settings. In part this is due to the restrained and familiar nature of the unchanging Mass texts, and in part because fewer works were written for fewer than four voices. In some instances the use of *prima pratica* principles was a selfconscious imitation of an older style, the *stile antico*. This is the case in Monteverdi's six-voice *Missa da cappella* (1610), based on Gombert's motet *In illo tempore*, and reported to have been an undertaking of 'great study and fatigue'. Deliberate archaism is also evident in Carissimi's *L'homme armé* Mass, both in the choice of a melody popular in the 15th and 16th centuries, and in the use of cantus firmus.

The *prima pratica* or *stile antico* masses were particularly prevalent in Rome, where the influence of Palestrina was strongest on his colleagues and pupils, and include works by the Anerios, G.M. Nanino and Soriano. These works continue Palestrina's restrained and careful treatment of melodic contours, rhythm and dissonance which is confined to suspensions, and they often use the longer note values typical of the 16th century. The texture is polyphonic and generally imitative, and some masses include deliberate learnedness in their use of devices such as canon. Nevertheless the harmonic language is increasingly tonal, shaped by regular harmonic rhythm and cadence. Although they are frequently designated 'da cappella' this does not imply unaccompanied performance: the organ frequently supported the voices, further emphasizing the harmonic elements of the composition. One surprising trait is the consistent use of all the voices and the avoidance of contrasting textures. Continuous, even relentless use of all six voices is a feature of Monteverdi's *In illo tempore* Mass. More commonly it is found in the use of the four-part SATB texture, which removes much potential for the contrast of varied groups. It is symptomatic that Palestrina's originally six-voice *Missa Papae Marcelli* was arranged for four voices by G.F. Anerio in 1619.

The advantages to the composer of the *stile antico* mass lay in its natural unity, preserved by such 16th-century techniques as parody or the use of head-motifs for different sections. The advantages to the performer were its natural simplicity, which made it suitable for small churches or for ferial days in larger ones. Its disadvantages lay in its inexpressiveness and divorce from contemporary idioms, and it is noticeable that these were alleviated in some works by the use of madrigalian turns of phrase, as in Monteverdi's four-part mass (published in 1650), a usage which was to lead to two distinct styles within the *stile antico*.

The survival of the polyphonic style in this simple form probably accounts partly for the paucity of few-voice concertante masses. Viadana was the first to essay the style in his *Missa dominicalis* (1607) for solo voice, a functional work that added a continuo accompaniment to the plainchant. This concept was not followed up, both chant and the single voice being too restrictive for an extended form, but masses for three to five voices proved more suitable. Those for three voices, such as that by Alessandro Grandi (i) (1630), naturally used a trio texture (two equal upper voices and bass), with little polyphonic development of themes. Later examples, notably Carissimi's *Missa a tre* (1665–6), often have more melodious solo phrases. Those for more voices use a quasi-contrapuntal manner, in which themes are passed from voice to voice, but as there is no necessity to continue with individual lines because of the harmonic function of the continuo, the effect is often diffuse with little working towards a climax as in true polyphony. The melody of few-voice concertante masses is governed by the highly syllabic setting of the words, although the influence of the triple-time aria of the 1630s and 40s is felt in works of the mid-Baroque period. The methods of organization are usually projections of those of the 16th century: Grandi used head-motifs; others, such as Banchieri in his mass (1628) on Monteverdi's continuo madrigal *T'amo mia vita*, used parody. The ostinato bass technique, during its vogue around 1630, was also applied to the mass, the severest example being Merula's mass on the Ruggiero (1639) in which the bass figure is used throughout the mass.

The practice of writing masses for two or more choirs, begun in the later 16th century, continued and developed

in two ways: the use of several choirs with identical scoring separated spatially, and the combination of voices and instruments. The first of these methods was highly favoured in Rome, where polychoral music continued to follow the procedure and style established in the time of Palestrina and Victoria, with two or more choirs of similar scoring, most often C(antus)ATB. The choirs were often separated spatially in galleries or on specially built platforms, each with their own organ. Although the majority of these polychoral masses are set for two CATB choirs, there was a predilection in 17th-century Rome for the 'colossal' in the use of four or more choirs. According to the diarist Gigli, G.F. Anerio's first mass in the Gesù in 1616 was sung by eight choirs located in eight of the 14 galleries, and from the list of payments to organists it appears that in S Pietro the patronal feast was celebrated with 12 choirs in 1629. None of the surviving mass music is for more than four choirs. (Hintermaier established that Benevoli did not write the legendary 53-part *Missa salisburgensis* in 1628.) There are extant Roman masses for three choirs by Ugolini (1622), and parts of a mass for four choirs by Abbatini (1627). G.F. Anerio wrote the *Missa Costantini* for three choirs while serving the Polish court in Warsaw in the later 1620s. In Ugolini's *Missa 'Quae est ista'* most of the writing is for all 12 voices, but some sections are scored for three cantus and three altos or three tenors and three basses; the 'Osanna' of the Sanctus is a canon for 12 voices. The use of head-motifs and the stylistic idiom belong to the 16th century, but their deployment in the spatial context of three choirs places such a *prima pratica* work firmly within a 17th-century aesthetic. From mid-century and later come the better-known Roman polychoral masses for up to four choirs by Orazio Benevoli, Francesco Beretta and Carissimi. These massive works are far more extended (the concluding 'Amen' of the Credo may be as long as the complete Sanctus). They remain stylistically conservative with their reliance on the idioms of *stile antico*.

Archival evidence establishes that instruments were used with voices on occasion in Roman churches from at least the early 17th century, but their independent role in masses for two or more choirs was exploited more systematically and idiomatically in northern Italy. The mass in the second volume of Giovanni Gabrieli's *Symphoniae sacrae* (1615) requires trombones and solo voices in addition to a ripieno chorus. Although the motets of this collection make more imaginative use of such disparate forces, the mass is significant as one of the first to show idiomatic writing for instruments, virtuoso soloists and a less skilled choir. The tendency in all 17th-century music to reduce instrumental colours to comparatively few, based on string tone, is found almost at the outset in G.F. Capello's *Missa ad votum* (1615), parodying an instrumental canzona by Antonio Mortaro, which adds a quintet of strings to three voices and continuo. Although the nature of the thematic material is similar for both voices and instruments, the function of the instruments to provide interludes between vocal sections is clearly defined. Ercole Porta's Mass in G (1620) for two violins, three trombones, continuo and five-voice choir (or solo group), goes further in giving the voices expressively ornamented lines while the instruments double them at climactic, less flamboyant moments (the first violin often plays the second soprano part at the octave, a practice that became tradition in choral works of the later Baroque period). Porta's mass also shows the tendency towards division of movements into shorter sections, which is even more marked in Grandi's mass (1630) for soloists with ripieno chorus and orchestra, where the 'Crucifixus' is written as a miniature aria for solo tenor. In Monteverdi's mass written for the cessation of the Venetian plague of 1630, the Gloria is similarly divided into a series of duets, grouped together with strophic variation techniques, and massive contrapuntal choruses.

In the Venetian tradition it became common to omit one or more sections of the Ordinary as the scale of individual movements increased (missing sections might be replaced by instrumental music; *see* ORGAN MASS and SONATA, §I). That there were problems of form in the grander settings of the mid-Baroque period is clear from the surviving examples. Cavalli's *Messa concertata* (1656) is typical of works by Orazio Tarditi (1648), Cazzati (1668) and others in that the extended triple-time arioso of the period often seems overlong when developed in concertante open work as in earlier few-voice concertante settings. Equally, the muted sonorities of the reduced *cori spezzati* forces allow insufficient variety, and the lack of tonal direction and coherence is restrictive. Cavalli's choral passages often employ counterpoint, just as the Bologna composers of the 1660s to 80s used the *stile antico*, a sign of the integration of the two styles of church music within the mass.

2. 17TH CENTURY OUTSIDE ITALY. Developments in Italy were generally followed elsewhere with varying degrees of promptness. In France during the first half of the century a generally conservative attitude prevailed. There was little novelty in church music during the wars between Catholics and Protestants which ended in 1628: Lassus rather than Palestrina was the principal influence, and the main composers of masses were provincial choirmasters, who wrote in the *stile antico*. The most interesting of these was Guillaume Bouzignac, whose works include one mass in traditional polyphony, another larger-scale piece for seven voices and a remarkable concertante work for two sopranos and organ.

Towards the middle of the century, Parisian composers turned more to setting the Mass but remained old-fashioned, although works attributed to Boësset (probably Jean-Baptiste) in a manuscript copied in the 1650s show more progressive attitudes. The advent of Louis XIV, which had a great effect on the motet, resulted in little progress in the royal chapel, since he preferred to hear Low Mass, as did his successors. The only French composer to make a considerable contribution was Charpentier, who remained outside the royal establishment and whose studies with Carissimi had a marked effect. One of his probably early works is a mass for four choirs after the manner of the Roman school, while a mass for four voices with instruments is written in a kind of modernized *stile antico*, with richly dissonant, and at times chromatic, harmony derived from the late madrigal rather than from Palestrina. His best-known work, the *Messe de minuit pour Noël*, breaks away from Italian models and is purely French in its adaptation of popular noëls, with square rhythms and alternations of orchestral, choral and solo sonorities after the manner of operatic and ballet music.

North of the Alps, Italian methods spread faster, owing both to German musicians studying in Venice and to the

employment of Italian musicians in such important posts as that of Kapellmeister at Salzburg Cathedral. These links continued and strengthened through the century as students attended the Collegio Germanico in Rome, where a healthy musical tradition was fostered by such masters as Cifra, Agazzari and Carissimi. Thus the *stile antico* was much practised in both southern Germany and Austria, and to an extent in the Protestant states where the Lutheran liturgy retained the Kyrie and Gloria. Although some composers followed Italian fashion in making the style selfconsciously learned, most, including Buxtehude and Rosenmüller, used chromaticism and dissonance expressively, and were not afraid to use contrasts of texture, thus being more faithful to Palestrina. As in Italy, tonality as expressed by the tendency of figures to outline chords, and regularity of accent and harmonic rhythm, helped to modernize the style. The few-voice concertante style, though known in Germany as early as Johann Stadlmayr's mass collection (1610), was found more useful for motets and resulted in no considerable mass repertory.

However, the most distinctive contribution to the mass was in the development of *cori spezzati* ideas; unlike the Roman school, German composers found the mixture of instruments and voices of the late Venetians capable of further exploitation. Retaining many of the families of instruments (particularly wind and brass) of the late Renaissance orchestra, they eschewed the Italian tendency towards the monochrome, and thus preserved and at times increased the resources of the Venetians, especially in their use of clarino trumpets and the obsolescent cornetts. They were also conscious of the division between the 'coro favorito' (solo voices) and ripieno. The resulting music often has very simple harmonies, to accommodate the clarinos, and melodies that are less attractively fluent than those of contemporary Italians. Nonetheless, its brilliant sonorities and exploitation of choral dialogue made it the most exciting festive music of the 17th century. The works of Schmelzer, Kerll and Biber bring the style to its highpoint in the later part of the century and it is most probably to a composer of their epoch that the famous *Missa salisburgensis* in 53 parts belongs (not to Benevoli, as in DTÖ).

Elsewhere in Europe Italian domination was almost complete. The Polish court had Italian *maestri di cappella* until 1648, and such native composers as Marcin Mielczewski wrote in the *stile antico*. Succeeding generations were more enterprising: Bartłomiej Pękiel also wrote in the old style, but his *Missa 'La Lombardesca'* is a large-scale mass in a style similar to that of the mid-century Italians. Where Polish influences are to be found, as in his *Missa paschalis* (1662), which uses a Polish Easter hymn, the working out is in the motet manner developed by Germans such as Michael Praetorius for hymn settings. Bohemia shows a similar situation. At the beginning of the century Kryštof Harant z Polžic a Bezdružic significantly used Marenzio's madrigal *Dolorosi martir* for a parody mass (1602); and Adam Václav Michnaz Otradovic used the concertato style, writing a mass (in *Sacra et litaniae*, 1654) on an ostinato bass. The strict Roman Catholicism of Spain, Portugal and their uncultivated colonies may account in part for the musical conservatism of the church music, where the *stile antico* persisted well into the 18th century. Composers such as Bernardo Clavijo del Castillo, Mateo Romero, Joan Pau Pujol and Sebastián López de Velasco wrote masses in the *stile antico*, using *cori spezzati* in larger-scale works in a manner employed by their predecessors, Victoria and Alonso Lobo, close to that of Rome, but demonstrating an aesthetic and contrapuntal fluency far closer to the late 16th century than to their Italian contemporaries.

3. 18th century.

(i) Neapolitan. The main influence on church music throughout much of the 18th century was the so-called Neapolitan school of composition. Its exponents were largely trained in the conservatories (originally foundling homes), where they learnt the art of church music first, only later turning to the more profitable opera; and they then often travelled abroad, spreading their style throughout Europe. Although the source of the style was thus homogenous, the resulting music is extremely varied, the more so since Neapolitan-trained composers flourished throughout the century and followed the period's main developments. There is, therefore, no 'Neapolitan' mass or even 'cantata mass' style, but rather a general attitude that infected the whole century. Virtually all composers studied the *stile antico*, though not all wrote complete masses in it. Alessandro Scarlatti, eight of whose ten masses are in the *stile antico*, took a strict approach that allowed little expressiveness; others, notably Francesco Durante, used chromaticism and irregular harmonies even in works marked 'in Palestrina' (e.g. the four-voice mass in *I-Nc* 470).

But the *stile antico* also pervades many masses in the more common 'stilus mixtus'. The mixture is drawn from three main elements: choruses in *stile antico* with orchestral doubling of the voices; choruses where the orchestra plays a prominent part in the formal organization; and music for solo voices. To accommodate these, the text of the Mass was sectionalized, as in certain 17th-century settings, except that for the Neapolitans the individual items were more or less independent of each other and much important mass music consists of settings of only the Kyrie and Gloria. Some items served a structural purpose, such as the fugues that became customary for the 'Amen' settings that end the Gloria and Credo, while others used the expressive manner for solemn moments such as the 'Crucifixus' (e.g. Leo's mass for ten voices, *I-Nc* 1039). The choruses with independent accompaniment reflect the rise of orchestral forms. In these the chorus is mostly homophonic, with a syllabic declamation of the words, often in stereotyped regular rhythms, fulfilling the functions of recitative and of strengthening the continuo harmonies; the orchestra is given the main thematic material. In the early part of the century, themes were generally worked out as though in a concerto, as in Alessandro Scarlatti's 'St Cecilia' Mass (where, however, the treatment of the voices is more thematic than usual). There are sometimes echoes of the French overture (e.g. Durante's Mass in B♭, *I-Nc* 469; Sabatino's mass, *I-Nc* 3044). Later, incipient symphonic forms appeared, as in Jommelli's fine *Missa nsolemnis* (1766), whose Credo opens in the manner of an operatic overture and develops material in a manner similar to a concerto, even though it involves bringing back the word 'Credo' in an unliturgical way. Sections for solo voice do not always occur, and they are usually most extended in works by opera composers. Porpora's Mass in D (*I-Nc* 1630) has a Gloria with a florid aria for 'Laudamus te', and a scarcely less

elaborate duet for 'Domine Deus' dominates the whole movement.

The Neapolitan formula is found with different regional and personal emphases in virtually all Europe. A few examples, such as the rather eccentric masses of the antiquarian Padre Martini in Bologna, resulted in large-scale contrapuntal essays using canon and other learned devices. In Venice, the most important church music also came out of the conservatories, and in general style followed that of Naples; the divergences were caused by the nearly exclusive use of girls in the choirs, which caused difficulties in writing in the *stile antico*. There was therefore an even stronger preference for the orchestrally orientated mass, and for the use of the solo voice. Vivaldi's well-known Gloria in D is a typical example, for even though men's voices are brought in for the choruses, the opening section is virtually a concerto allegro with 'vocal continuo' and the solo sections are for women. Remarkable and by no means typical is his Kyrie in which there is a florid concertante part for soprano, setting words outside the Mass text almost in the manner of a trope. Galuppi's church music similarly recalls his symphonic works, while Jommelli's Mass in F for the Incurabili (*I-Nc* 977) offsets the limitations of using SSAA chorus and strings by including elaborate parts for no fewer than five soloists.

Outside Italy the Neapolitan style was especially influential in Germany and Austria, having little effect in France, where there was still little demand for sung Ordinaries. Surprisingly, the greatest work in the style was by a northern Protestant, J.S. Bach, whose Mass in B minor shows the mixture of styles at its most diverse. As with many Italian as well as Lutheran works, it was designed as a setting of the Kyrie and Gloria alone, the other sections being conceived as separate entities and in some cases drawn from existing works. This helps to explain the disparities of style and resources. Local traditions determined that the choruses played a larger role than in many Neapolitan works. In these choruses the *stile antico* is used extensively but in an idiom adapted to an 18th-century style, using freer harmonies and a more natural command of device. The choruses with orchestral continuity improved equally on the Neapolitan principles, especially those in ritornello form, which are much tighter than most of their Italian equivalents. The solo music is less operatic than that of the Italians, its elaborate ornamentations unlike the relative musical simplicity of their traditional treatment of da capos; the use of obbligato instruments shows that Bach preferred trio texture to pure aria. The orchestration is equally German, in both the wide range of wind instruments and their groupings, as for example in the 'Quoniam', scored for horn, bassoons, continuo and solo voice. His other masses are all of the Lutheran Kyrie–Gloria form.

The Roman Catholic composers of southern Germany and Austria were more thoroughly indoctrinated in the Italian style, especially since the principal composers at the leading court of Dresden, Lotti and Hasse, were distinguished in opera. Lotti wrote a great deal in the *stile antico*, both in a severe style and in the richer vein displayed by the well-known 'Crucifixus' from his Credo for eight voices (*F-Pc*), which shows how much dissonance and chromaticism can be encompassed within the rules of suspension and resolution. Fux, at Vienna, preferred the strict manner, although his music is completely tonal and rhythmically quite rigid compared with the 16th-century models he undoubtedly knew. In addition to strict *a cappella* masses, he wrote settings in a grander vein that are both backward-looking and Baroque. His instrumental resources include trumpets, trombones and occasionally a cornett, together with strings. The trumpets sometimes play fanfare-like material (as in the symphonies in the *Missa corporis Christi*), the trombones usually doubling the voices in the traditional manner. There is solo music for the voices, although the development of a section for single voice is rarely on a large scale. The chorus sings either in homophony, often in an expressive harmonic idiom far from that of the Neapolitans, or in the *stile antico*, although this is not so severely old-fashioned as in the *a cappella* masses. Hasse's 14 masses tend much more towards a *galant* interpretation of Neapolitan principles; the most attractive element occurs in the solo music, where an ability to write operatic arias for soprano clearly stood him in good stead. Here the straightforwardness of ornament (although the writing is still exceedingly florid) and the use of vocal colour more nearly approach operatic style than do his Italian models. His choral writing uses both the *stile antico* and the orchestral style, the latter less purposeful in its development of material, giving rise to pleasant rather than taut music. This is the feeling of much church music of the mid-18th century, as for example that of Haydn's teacher in Vienna, the younger Georg Reutter, whose solo writing cannot compare with Hasse's and whose choral movements often consist of purely routine homophony for the choir, accompanied by constant movement with little thematic significance in the violins ('rauschende Violinen'). It was nevertheless the Viennese who pointed the way from the strictly sectional nature of the Neapolitan mass to something more integrated, by making the separate sections of Gloria and Credo join more satisfactorily, and by taking more trouble to make the vocal parts tuneful.

(ii) Viennese. Even in Austria the *stile antico* persisted in the mid- and late 18th century, with examples by Reutter (3), Werner (5), Wagenseil, Albrechtsberger (4), Michael Haydn, Leopold Hofmann and Salieri, and the *Missa 'Sunt bona mixta malis'* by Joseph Haydn. Neverthless, the mainstream of the Viennese tradition derives largely from the work at the Viennese court, early in the century, of the highly influential Kapellmeister J.J. Fux and his Venetian colleague Antonio Caldara. Of the three important composers of masses in the Austrian tradition in the later 18th century, both Joseph and Michael Haydn were pupils of Reutter, also a Viennese court Kapellmeister, whose work their early essays in the genre resemble. Michael's *Missa in honorem sanctissimae Trinitatis* has the same busy violin figuration for solos and rather dull choral parts, while Joseph's *Missa 'Rorate coeli desuper'* and *Missa brevis* in F show the same technique, though occasionally investing such words as 'incarnatus' with deeper feeling. His *Missa in honorem BVM* (HXXII:4, by 1774) has a concertante part for organ, and uses the solo quartet as a concertino to be set against orchestra and tutti, which, together with some modern (as opposed to *stile antico*) counterpoint, puts more emphasis on the voice without being operatic. Mozart, whose complete masses all date from the period 1768–80, showed his operatic leanings in his earliest works (K139/47*a* and K66) by following the Neapolitan model closely, in the former

even using the brass to give a theatrical atmosphere in the 'Crucifixus'. A similar influence may be seen in his treatment of the 'Et incarnatus', usually with a hushed tone, chromaticism and often a move to the minor mode. Mozart's main preoccupation in the early 1770s, however, was with the *missa brevis*, forced on him by the reforming taste of the Salzburg archbishop, sometimes resulting in polytextual word setting and in less fugal writing (most of his longer mass settings, in the Salzburg tradition of Eberlin and Michael Haydn, have extended fugues on 'Cum Sancto Spiritu' to end the Gloria and 'Et vitam venturi' to end the Credo). From this period come his 'Credo' masses (K192/186*f* and 257), in which he used the Austrian tradition of having a figure set to the word 'Credo' recur throughout an entire section. He also introduced symphonic devices, especially in the 'Coronation' Mass (K317), which has virtually a complete thematic recapitulation in the Gloria and music from the Kyrie returning in faster tempo at 'Dona nobis pacem'; however, the solo Agnus Dei, with its strong suggestion of 'Dove sono' (*Le nozze di Figaro*), serves to recall that his ecclesiastical and operatic idioms were close. Both Haydn and Mozart produced fine masses in the year before the abolition of elaborate church music by the Emperor Joseph II in 1783. Haydn's *Missa Cellensis* ('Mariazeller', HXXII:8) is notable for its imaginative treatment of sonata principles in the context of choral music and for its concertante interplay of solo quartet and chorus. Mozart's unfinished C minor Mass K427/417*a* is a 'Neapolitan' mass, but with the *stile antico* element now interpreted as the Handelian manner of choral writing, with Baroque dotted rhythms, ground bass techniques and the use of double choir.

Haydn resumed writing masses in 1796 as a direct result of new duties for the Esterházy household on the assumption of Prince Nicolaus II, and the six works he wrote, finishing in 1802, are among the greatest settings ever made. All are 'solemn masses' scored for medium or large orchestra and show an expansion of scale over previous masses in the Viennese tradition. Although there are operatic-style sections, notably at times in the 'Benedictus', the predominant manner is that of the symphony. Three of the Kyries have slow introductions which lead into Allegro movements, that of the 'Theresienmesse' being specially close to those of Haydn's London symphonies; and it is usual for the Sanctus to be similarly constructed, the Allegro arriving at the words 'Pleni sunt coeli' or 'Osanna'. The Kyrie is also often in a variant of sonata form, as in the *Missa in tempore belli*, where, after the slow introduction, the Allegro exploits the customary key structure. In both the *Missa Sancti Bernardi von Offida* and the 'Theresienmesse' a similar pattern is combined with fugal textures; and in the 'Nelsonmesse' (HXXII:11) the form is close to the concerto, with a ritornello section preceding the 'exposition'. In this work the concertante nature is emphasized by a florid part for solo soprano; but normally the soloists are used in the early Baroque manner as a quartet contrasting with the ripieno, rather than with individual roles. Other reminiscences of Baroque practice occur in the fugues that end both Gloria and Credo, although the counterpoint derives not from Palestrina as much as from the Fuxian fugal style of the op.20 string quartets. The orchestra is used in the longer movements to provide continuity, and there are still relics both of trio textures and of the rapid violin figurations of Reutter. There are also dramatic moments, in the 'Nelsonmesse' as in the *Missa in tempore belli*, where trumpets and drums play fanfares at the climax of the Benedictus and Agnus Dei, a tradition dating to at least the Fux era in Austria.

4. 19TH CENTURY. Haydn' 'Nelsonmesse' and the *Missa in tempere belli* may have been written with knowledge of French church music of the Revolutionary period. This was mainly the work of Italians living in Paris, and was an offshoot of Neapolitan traditions, though with some distinctive stylistic features, notably in the use of wind instruments encouraged by the nature of the new Conservatoire. Of Paisiello's masses, one (*I-Nc* 1268–9) for double choir uses a large orchestra divided so that the strings support the first choir and a full wind band the second choir. The Gloria is especially expansive, with horn and trumpet fanfares at solemn moments. Another for similar forces (*I-Nc* rari senza numero) puts more emphasis on the solo voices, especially the soprano who has several highly decorated arias, one with a pause for a cadenza, a feature that approaches the later style of Rossini. A *Messa in pastorale per il Natale per la cappella del Primo Consolo* (1802) uses the wind instruments for concertante solos; its siciliana rhythms reflect a tradition, deriving from Charpentier's *Messe de minuit*, of pastoral Christmas masses (*see* PASTORAL, §5), of which there were several other 18th-century examples, notably by Durante, G.O. Pitoni, Zelenka, Abbé Vogler, Vanhal and the Czech J.J. Ryba (to a vernacular paraphrase). Cherubini's eight surviving masses also show an individually French approach. His earliest settings (now lost) were probably student works, and a Credo for eight voices in double choir, completed in 1806, shows his intensive practice in the *stile antico*. His first complete mass of importance, in F, dates from 1808–9; although in general it approaches the forms used by Haydn, whose works he admired, it is more consistently contrapuntal, with a fugal passage in the 'Christe eleison' and extended fugues in the usual places. The solo writing is much less florid than that of 18th-century composers. These features reappear in his first really mature setting, in D minor (1811); the soloists are used entirely in ensemble with the writing a little more decorated than that for the chorus. The chorus itself is the protagonist: sometimes it is used in a quasi-dramatic manner, as in the 'Et resurrexit', accompanied by trumpet fanfares, following a 'Crucifixus' in which funeral march rhythms are prominent in the orchestra; at other times the choruses are in a heightened *stile antico*, with specially extensive treatment of the second Kyrie and the 'Cum Sancto Spiritu'. In scale the mass as a whole is comparable to Beethoven's *Missa solemnis*, while Cherubini's later setting, in C major (1816), may well have been influenced by Beethoven's mass in the same key. In his last mass (1825), written for the coronation of Charles X in Reims, Cherubini's attitude is distinctly more theatrical, including a 'Marcia religiosa' for the communion. It is significant that Spohr, visiting Paris in 1820, found church music more completely operatic there than anywhere else.

In southern Germany and Austria the symphonic manner was more influential, perhaps because (with the main exception of Weber) the composers were less often involved in the theatre. Two types of setting are discernible, both using choir, orchestra and soloists, and symphonic procedures. The first is modest in scale (though

not so short as to be a true *missa brevis*), derived from the early style of Haydn and Mozart. It is characterized by comparatively simple melodic lines for the soloists, who are treated as a concertante group rather than as individuals, and homophonic treatment of the choir (except in traditionally fugal sections, which are usually brief). The orchestra provides unifying material, though rarely in the intense way of Haydn. The masses of Hummel are typical: his Gloria openings are often recapitulated at the 'Osanna' of the Sanctus; similarly, the opening of the Credo often recurs at 'Et resurrexit', without any close thematic development during the remainder of the movement. The choral writing in such masses also differs from Haydn's in being more obviously melodious, as in Schubert's G major Mass (D167), which has a distinct pastoral flavour, its tunes close to folksong or the simple songs of Singspiele; folksong influence is even stronger in Weber's G major Mass. The 'pastoral' mass as a recognizable type continued to be developed, as in Diabelli's mass of 1830 and in the work of such minor composers as Ludwig Rotter, Schiedermayr, Lidl, F.M. Kníže and Kempter. The work that pushes this short mass technique and style to its limits is Beethoven's C major setting, with the melodious opening of the Kyrie recapitulated at the final 'Dona nobis pacem'. The quasi-sonata form of the Kyrie is, significantly, worked out in the vocal parts rather than in the orchestra, in contradistinction to the usual 18th-century practice as exemplified by the Neapolitans; the contrapuntal textures of the Gloria approach Cherubini's style, especially the extensive concluding fugue.

Larger settings also develop the forms through the vocal rather than the orchestral material. Schubert's last two masses, in A♭ and E♭, both recapitulate material in the symphonic manner in the Kyrie and Gloria sections, but the structure is contained in the choral writing, even though there are relics of 18th-century procedures, as in the Gloria of the A♭ Mass, which has the rushing violinistic accompaniment of the kind used by Reutter. The most notable features of these works are the sophisticated chromatic harmonies which infect even the *stile antico* fugues, and Schubert's penchant for interesting orchestral effects, now distinctly non-thematic and Romantic. The writing for solo voices owes little to opera: the quartet is used as an entity rather than as individuals, with songlike melody for soprano predominating. The largest setting of this period is Beethoven's conventionally named *Missa solemnis*, intended for the enthronement of Archduke Rudolph of Austria as Archbishop of Olmütz in 1820, though completed only in 1823. Though the scale is considerably greater than even the largest mass of Cherubini, and the manner of writing, especially for the voice, goes beyond the potential of normal church circumstances, in many respects it is a continuation of the symphonic settings of the Viennese school. The formal patterns are extensions of Haydn's procedures, as in the Kyrie which, in the light of Beethoven's late style, may be interpreted as being in sonata form. The vocal writing contains both choral recitative and fugues, the soloists again used mostly as a group, although the way the 'Benedictus' grows out of a bass solo adding voices until the quartet are all involved is slightly more elaborate. The contrapuntal style is an individual interpretation of the *stile antico*, with dissonance largely confined to suspensions and passing notes, and the arrangement of note values for individual melodic lines is derived from the species of Fux's *Gradus ad Parnassum*. The orchestration is typical of Beethoven's later years; the 'Preludium' (so entitled by the composer) between the Sanctus and Benedictus, an interesting traditional feature, fulfils essentially the function of the Baroque *sonata da chiesa*. The occasional military calls for brass and drums derive from Haydn's late masses. Thus the *Missa solemnis* can in no sense be considered unliturgical by the light of its own time. Its difficulties lie in the treatment of the performers, especially the high tessitura of the vocal parts.

In the post-Beethoven era there came to be an essential divorce between sacred music conceived for the concert hall and that conceived for the church, a division accentuated by the growth of amateur choral societies in both Great Britain and Germany. The trend towards antiquarianism, particularly in the Cecilian movement (which although officially begun in the 1860s had much earlier roots), stressed the revival of older church music but did not provide incentives for composers to write new masses in a contemporary idiom. Furthermore, the decline of royal chapels after the French Revolution meant that few composers of significance had to compose church music as a major duty. Thus masses tend to be isolated, either student works or occasional music. In Italy the 'cantata mass' was dominated by the operatic idiom, the most distinguished example being Rossini's *Petite messe solennelle* (1864), written after his retirement from opera and scored for piano and harmonium accompaniment. The chorus sings either in a freely contrapuntal *stile antico* or as the background to operatic scenas, while the solo music is in an operatic style somewhat less florid than usual. This tradition is also found in the many mass movements by Donizetti and in Puccini's one mass. In France, the style of Cherubini and the study of counterpoint at the Paris Conservatoire helped to preserve church music from this domination. This is to be seen in the 'orchestral' masses of Gounod, who used orchestral effects freely in a quasi-dramatic manner but gave the greater part of the material to the chorus rather than to soloists, using traditional choral homophony in the Gloria and Credo and maintaining a remarkably pure harmonic style. It was in that ambience, under the tutelage of Le Sueur, that Berlioz composed his very early, rejected *Messe solennelle* in 1824 (presumed destroyed by the composer until its rediscovery in 1991), a setting in 14 movements for three soloists, choir and orchestra, from which he later quarried material for re-use in the *Symphonie fantastique*, *Benvenuto Cellini*, the Requiem and the *Te Deum*.

In Germany and Austria the most interesting large-scale settings are those by Liszt and Bruckner. Liszt's mass for the coronation of Emperor Franz Josef as King of Hungary in 1867 uses a large orchestra, to which much of the thematic material is given; the choral homophony, in which soloists and tutti are frequently contrasted, is used imaginatively to gain additional effects of colour, even though it is based, in the Credo, on the plainchant style. The two smaller works for chorus and organ revert to the manner of the *missa brevis*, where simple counterpoint and often richly harmonized homophony alternate. The obvious attempt to make this music suitable for liturgical use, both in the use of limited forces and in the retrospective style, does not preclude strong emotional effects, such as the breaking up of the melodic line in the

Kyrie or the anguished harmonies of the 'Crucifixus' of the *Missa choralis* (1865). Bruckner's masses were also conceived as an attempt at combining traditional means of expression with novel ones. In the masses with full orchestra he used symphonic patterns, even though this could involve the repetition of words in an unliturgical manner (as in the Credo of the F minor Mass). The choral writing, both in homophonic and in fugal sections, has at times a chant-like quality, at others a resemblance to the 'old' polyphony, although the latter contains much dramatic and angular melody. The E minor Mass is even nearer Austrian tradition in its use of wind band mainly to support a choir of up to eight parts (although significant material is occasionally given to the instruments rather than the voices). In none of these works is there any resemblance to a purely secular style, and yet they are far from being classifiable as *stile antico*.

The solutions to the liturgical problem offered by Liszt and Bruckner did not lead to any substantial developments, and by the end of the 19th century settings were of two kinds: the 'concert' mass for soloists, full choir and orchestra, with virtually no attempt to provide suitable music for use in church, and the small-scale setting, often in a completely retrospective style and of little musical ambition. Examples of the first may be found among British composers' works such as the settings by Stanford (1893), which follow the style of Brahms's *Ein deutsches Requiem* in their conception for amateur choral societies or *Singvereine*, and particularly Ethel Smyth's Mass in D (1891), in which the order of movements places the Gloria at the end (as in the Book of Common Prayer), making a more obviously effective concert conclusion. Masses of the second kind were widespread in origin, assisted by not only the Cecilian movement in Germany but also the work of the Ecole Niedermeyer and Schola Cantorum in Paris. The decline of this type was assisted by the new printed editions of the original models, mainly from the 16th century, which became universally known by the beginning of the 20th century.

5. 20TH CENTURY. The reluctance of major 20th-century Christian composers to set the Mass texts is best exemplified in Messiaen, whose only setting, a Mass for eight sopranos and four violins (1933), remains unpublished. The outstanding modernist setting is Stravinsky's Latin Mass for soloists, choir and ten wind and brass instruments (1944–8). The writing is uncompromising, and the aesthetic is closer to the Russian Orthodox than the Roman Catholic Church, but its scale is entirely appropriate to the liturgy even if it is more often performed in the concert hall. This work was composed in the USA, as was Hindemith's only Latin mass (1963), which harks back to the polyphony of Bach. By contrast, the unaccompanied Mass in G by Poulenc (1937) adapts the lyricism and harmonic colour of French *mélodie* to unaccompanied sacred music. Chromatic colour is also a feature of the Mass for double choir by Frank Martin (1922–6, first performed 1963).

Settings of the Mass text with orchestra continued in Janáček's large-scale *Glagolitic Mass* (1926) with Slavonic text, and Kodály's more modest *Missa brevis* (1948). In the aftermath of World War II, Alfredo Casella set the Mass Ordinary in his *Missa solemnis 'Pro pace'* for solists, chorus and orchestra (1944), but Britten chose to combine the Requiem text with poems by Wilfred Owen for the comparable *War Requiem* (1961–2). This technique of collage was taken a step further by the American-Jewish composer Leonard Bernstein in his Mass, a theatre piece for singers, players and dancers (1971). Peter Maxwell Davies's *L'homme armé* (1968) represents a more radical transformation of a 15th-century mass with superimposed narrative of the Last Supper into an ironic secular music-theatre piece. Much earlier Delius took texts from Nietzsche for the work he entitled provocatively *A Mass of Life* (1904–8).

The revival of choral celebration of Holy Communion in the Anglican Church in the late 19th century marked the beginning of a steady stream of liturgical settings of Mass texts in English, mostly for choir and organ. Those of Stanford belong to complete cycles of service music, with linked themes and elements of sonata principle in their construction. Similar choral settings have been composed by English organist-composers, including Harold Darke, Francis Jackson, Herbert Sumsion and Arthur Wills, as well as by Herbert Howells, Kenneth Leighton and William Mathias, together with Roman Catholic Latin masses by Edmund Rubbra, Egon Wellesz and Lennox Berkeley. In the first quarter of the century Charles Wood's unaccompanied setting in the Phrygian mode (1919) attempted to match the modal language of the 16th century vernacular parish worship, while Martin Shaw's *An Anglican Folk Mass* (1918) for unison voices drew on native hymn melodies. These last two works reflect the worthy but self-conscious stance adopted by some composers in writing for the liturgy. Far more important and successful are the unaccompanied double-choir Mass in G minor by Vaughan Williams (1920–21), which draws heavily on 16th-century polyphonic and modal idioms, and the striking *Missa brevis* in D for boys' voices and organ by Britten (1959) written for Westminster Cathedral.

The move to reinvigorate Lutheran church music during the 1930s can be observed in the mass settings of Hindemith's contemporaries and pupils Hugo Distler, J.N. David and Ernst Pepping. European organist-composers have also made regular contributions to the repertory, among them Maurice Duruflé, Jean Langlais (notably the *Mass 'Salve regina'* for choir, congregation, organ and brass, 1954), Hendrik Andriessen, Flor Peeters and also Anton Heiller, whose masses break away from the modally derived, chromatically coloured idioms typical of these composers by employing 12-note methods in the *Missa super modos duodecimales* (1960) and the *Kleine Messe über Zwölftonmodelle* (1961). In Canada the organist-composer Healey Willan wrote 14 settings of the *missa brevis* (1928–63).

The movement for liturgical reform which had been gaining ground during the 20th century began to take effect especially from the 1960s, when most Christian churches with formal patterns of worship reviewed and revised their orders of service. This radical and continuing process has resulted in revised forms of the Mass, comprehensible modern texts (especially in the Roman Catholic Church, where the local vernacular has largely displaced Latin) and new pastoral theology which emphasizes the active participation of all present. This has stimulated a plethora of functional mass music using a variety of accessible styles, some popular and some genuinely ethnic, generally local in production and use, some with new procedures of refrain and response to encourage congregational involvement, often led by a

solo cantor rather than a choir. Some of the most striking results come from Africa and South America. At the same time the availability of new editions of early music and the freer migration of sacred music across denominational boundaries have allowed professional and able amateur church choirs to sing the mass repertory of the 16th to early 19th centuries. Since the 1970s much significant music based on Christian spirituality has been written (in Europe, for instance, by Messiaen, Penderecki and Pärt, in Britain by John Tavener, Jonathan Harvey and James MacMillan) but not settings of the texts of the Mass. At the end of the 20th century the requirements of a pastoral liturgy offered little opportunity for musical creativity. The tension between the liturgical purpose and creative treatment of the texts of the Mass Ordinary, apparent since the 16th century, may have fractured permanently.

Massa, Nicolò (*b* Calice Ligure, 26 Oct 1854; *d* Genoa, 24 Jan 1894). Italian composer. He studied with Giovanni Papa, Giovanni Rinaldi, Martin Roedel and, from 1875, with Antonio Bazzini, the teacher of Catalani and Puccini, distinguishing himself as one of the best students at the Milan Conservatory. His test pieces included the nautical fantasy *Maria e Taide* (1876) and the medieval scena *Aldo e Clarenza* (1878). He composed various songs, published by Lucca and Sonzogno, and some chamber music which has not been published. After taking his diploma in 1877, he played a part in Milanese musical life for the next decade, and was on friendly terms with the composers and librettists involved in the renewal of opera: Puccini, Catalani, Boito, Franchetti, Fontana and Ghislanzoni. His first opera, *Il conte di Chatillon*, was a success in Reggio nell'Emilia in 1882, but the score was destroyed in a fire. His second opera, *Salammbò*, given at La Scala, Milan, in 1886 (with Gemma Bellincioni in the title role and Franco Faccio conducting), reduced Flaubert's novel to a love story whose exotic location allowed for some colourful effects. It was considered favourably for its melodies and orchestration, and was revived in Turin (1887) and Genoa (1889). Two other operas followed in quick succession: *Eros*, which won the approval of Eduard Hanslick when it was performed in Vienna in 1893, and *Onesta*. The former was performed in 1895 in Florence (with Bellincioni, and Leopoldo Mugnone conducting), while the latter was not seen until 1929 in Genoa, on the initiative of the composer's daughter. Massa died of pneumonia while working on *Taide*, a grand opera on a Greek subject, just when he was about to be appointed professor of composition at the Milan Conservatory. Giuseppe Verdi wrote a letter to the family, dated 31 January 1894, expressing his admiration for Massa's work.

A composer with a strong dramatic sense, Massa was notable for the elegance and spontaneity of his melodic language. Critics of the day noted the influence of Wagner on his use of the orchestra, and drew an interesting parallel with Catalani for his melancholy, tone, misty atmospheres and detailed instrumentation.

WORKS

unpublished works in Massa's archives (private collection, Rapallo) unless otherwise stated

Maria e Taide (fantasia marinaresca, F. Fontana), 1876, lost

Aldo e Clarenza (scena medioevale, Fontana), 1878, *I-Mcom*

Il Conte di Chatillon (op, 4, R. Paravicini), 1880, Reggio Emilia, Municipale, 11 Feb 1882, lost

Salammbò (op, 4, A. Zanardini), Milan, Scala, 15 April 1886

Eros (op, 4, E. Golisciani, after G. Bellincioni), ?1892, Florence, Pagliano, 21 May 1895

Onesta (op, 3, A. Ghislanzoni), ?1893, Genoa, Carlo Felice, 9 March 1929

Taide (op, G. Piaggi), inc., 1893–4, lost

Inst: Armonia degli astri, str qt, ?1875, *I-Mcom*; Quartetto vn, va, vc, pf, 1875; Il torneo di Val d'oro, prologo sinfonico (from Aldo e Clarenza), orch, 1878, *Mcom*; Melanconia, pf (1882); Luna e Amore, Strimpellata, mand, pf (1892); Ineunte vere, piccolo valzer, pf (1887); Intermezzo (from Onesta), org; Valzer

FLAVIO MENARDI NOGUERA

Massaino [Massaini], **Tiburzio** [Tiburtio] (*b* Cremona, before 1550; *d* Piacenza or Lodi, after 1608). Italian composer. He was a member of the Augustinian order, and lived at the Piacenza convent until he became *maestro di cappella* at the church of S Maria del Popolo, Rome, in 1571. In about 1578 he was in the service of the Rangoni family of Modena. In 1580 he was in Lodi and, by 1587, at Salò Cathedral. After two years (1589–90) as chaplin and singer in the court chapel of Archduke Ferdinand II at Innsbruck he moved to Salzburg to the household of the Archbishop Wolf Dietrich von Raitenau. He was forced to leave Salzburg in 1591 after a criminal conviction for homosexuality. He probably went to the court of Rudolf II at Prague, where he met Philip de Monte. In 1594 he was at Piacenza and then Cremona; in 1598 he was back at Piacenza, and between 1600 and 1608 he was at Lodi where, according to Antegnati, he was *maestro di cappella* in 1608. In 1609 Banchieri referred to him as *maestro di cappella* of Piacenza Cathedral.

Massaino's earliest publication (1569) contains some youthful madrigal exercises, probably associated with circles close to the Farnese court of Parma. In addition to many books of madrigals, masses and motets for five and six voices, he published solo motets and sacred polychoral music. The latter show the influence of Giovanni Gabrieli; the grandiose sonorities of Gabrieli's instrumental music also permeate Massaino's canzonas for eight or sixteen trombones.

DAVID BRYANT

Massana (Bertrán), Antonio (*b* Barcelona, 24 Feb 1890; *d* Raimat, Lérida, 9 Sept 1966). Catalan composer and organist. He began his musical education in Barcelona with Domènec Mas i Serracant, studying piano (with Frank Marshall and Enrique Granados), organ (with Vicenç Maria de Gibert), and harmony and composition (with Enrique Morera and Cristòfor Taltabull). In 1911 he joined the Jesuits, becoming a priest in 1922. A year later, at the Scuola Superiore di Musica Sacra (Rome), he studied with Raffaele Casimiri and Eduardo Danigno, obtaining a degree in Gregorian chant and a doctorate in composition. He completed his education in Munich and Solesmes. From 1925 to 1936 he lived in Spain, composing, teaching and performing. He later lived in Italy (1936–9) and in several Latin American countries including Uruguay, Argentina and Brazil (1949–53), where his music was performed with great success. He settled permanently in Spain in 1953.

Massana's output is enormous and includes pieces in all the major genres and forms. His compositions tend to be on a grand scale and are often characterized by an epic tone. A good example is his opera *Canigó* (1953), a work that draws on medieval heroic legends and on a world of fairies, knights and monks. *Canigó* uses a musical language rooted in late Romanticism – large vocal and instrumental resources, complex formal design, a wide range of dynamics and overall grandiosity. Generally speaking, Massana's music shows the direct influence of Wagner (in its epic themes and grandiose musical language) and to a lesser extent that of Strauss and Debussy. Equipped with a solid compositional technique and a broad musical education, Massana's music avoids the main currents of his time (nationalism and the avant garde), withdrawing into *fin-de-siècle* aesthetics. With acute perception, Massana defined himself as a 'moderately modern' composer.

WORKS
(*selective list*)

Op: Canigó (J. Carner, after J. Verdaguer), concert version, 1936, stage version, 1953, op version perf. Barcelona, Liceo, 1953; Nuredduna (M. Forteza, after M. Costa i Llobera), 1947, unperf.; El paradís perdut (after Milton: Paradise Lost), 1953, unperf.

ANOTI PIZÀ

Massarani, Renzo (*b* Mantua, 26 March 1898; *d* Rio de Janeiro, 28 March 1975). Italian composer and critic. He studied in Rome with Respighi, and in the early 1920s was associated with Labroca and Rieti in the group I Tre (named in imitation of Les Six). For a time he was music director of Vittorio Podrecca's famous puppet theatre, the Teatro dei Piccoli, with which he travelled widely during the mid-1920s. Between the wars he wrote occasionally

for the newspaper *L'impero*. When Mussolini adopted Hitler's race policies, however, his works were banned, and much material was destroyed during World War II. He emigrated to Brazil, where he took citizenship in 1945 and wrote music criticism for the newspapers *Jornal do Brasil* and *A manhã*. But after his traumatic experiences, he preferred to forget about his own music, forbidding its republication and performance, and refusing access to the manuscripts even of his best compositions. Only since his death have his many unpublished pieces (which include the successful puppet ballet *Guerin detto il meschino* as well as several operas) again become available, at least for inspection; and some of them were not brought back to Italy until 1991.

In the 1920s and 30s Massarani was highly regarded by some of the most intelligent Italian critics. For instance, Rossi-Doria (1924) wrote of 'compositions saturated with life and with warm, red, very Italian blood like that of our rough Lombard craftsmen'. He especially praised the *Due canzoni corali*, the Sinfonietta and the Pastorale, while having serious reservations about the composer's sense of form. Among the long-concealed operas, *Il pozzo* and *La donna nel pozzo* are indeed full of explicitly Lombard local colour; but probably the most interesting (and certainly the most widely performed) part of Massarani's output consists of the works that he wrote specifically for Podrecca's puppets. The brief 'inter-mezzo grottesco' *Bianco e nero* (also described as an 'operina') is an amusing early example; but it was with *Guerin detto il meschino* that he came to international notice. Though not strictly speaking an opera the work contains extensive vocal narrations (alternately lyrical and rapidly declamatory) which introduce the danced action and owe something to Falla's *El retablo de maese Pedro*. The freshness of the melodic invention, and the well-judged excursions into irregular barring and polytonality as foils to the simple ostinatos of other passages, suggest a composer of real, if unassuming, individuality. The few other works available for study confirm the impression that Massarani was potentially the most original of I Tre, though not always the best at giving his ideas coherent shape. The improvisatory piano pieces *Dal lago di Mantova* reveal an interest in unusual sonorities and textures, while *Il vero segretario galante*, with its neat rhythmic asymmetries, shows a bright and pungent sense of humour. Massarani's neo-classical pieces of the 1930s, such as the Cello Sonatina, are less personal and convincing; but *Boè*, whose success was tragically cut short by anti-Semitic persecution, shares many of the best qualities of *Guerin* while being much more complex and sophisticated. Massarani's critical writings include booklets on Verdi, *Lohengrin*, *Tristan*, *Don Pasquale* and *L'elisir d'amore*.

JOHN C.G. WATERHOUSE/R

Massarano [Isaaco], **Isacchino** (*fl* Mantua, 1580–1608). Italian singer, lutenist, dancer and choreographer. He appears in court records from Mantua from about 1580. For the wedding of Duke Vincenzo I and Margherita Farnese, he arranged the dances for Bernardo Pino da Cagli's *Ingiusti sdegni*, presented in Parma in 1584 by the Jewish theatrical company of Mantua. In 1591–2 he was commissioned to provide the dances for the performance in Mantua of Battista Guarini's *Pastor fido*, which was postponed until 1598; Massarano planned the dance scheme for the 'Gioco della cieca'. Other productions on which he collaborated were Leone de' Sommi's *Le tre sorelle* (1598) and Torquato Tasso's *Delli intrighi de amor* (1606). In 1608 Massarano appeared, together with Salamone Rossi, in an entertainment at the home of the Paduan nobleman Pietro Priuli.

DON HARRÁN

Massard, Robert (*b* Pau, 15 Aug 1925). French baritone. After studying in Pau and Bayonne, he made his début on 8 June 1952 as the High Priest in *Samson et Dalila* at the Paris Opéra, remaining with the company until 1976. In 1952 he also scored a success as Thoas (*Iphigénie en Tauride*) at the Aix-en-Provence Festival, an interpretation preserved on disc. His big, easy baritone established him from the outset as a favourite for repertory parts throughout France. He sang in many leading houses, his roles including Thoas, Enrico Ashton, Ramiro (*L'heure espagnole*), Valentin and Escamillo. But it was in the important revivals of Gluck and Berlioz that he proved indispensable: his Orestes with the Covent Garden Opera at the 1961 Edinburgh Festival was praised as stylish,

vigorous and impassioned; by contrast, his slow-witted Fieramosca (*Benvenuto Cellini*), which he sang in Paris and London, was a clever character study. Massard created the Harpist in Barraud's *Numance* in 1955 and sang the Count in the first Opéra-Comique production of *Capriccio* (1957), as well as Orpheus in Milhaud's *Les malheurs d'Orphée* and Nero in *L'incoronazione di Poppea* at Aix. Successes outside France included Rigoletto (1962, Bol'shoy) and Valentin (1967, La Scala). Among his recordings, his Orestes, Escamillo (to Callas's Carmen), Fieramosca and Athanaël (*Thaïs*) stand out for the compact vigour of his singing.

ANDRÉ TUBEUF/ALAN BLYTH

Massarenghi [Mazarenghi], **Paola** (*b* Parma, 5 Aug 1565; *fl* 1585). Italian composer. Her parents were probably well-to-do bourgeois, perhaps civil servants, as they were able to obtain the aid of Duke Ranuccio Farnese in the education of her younger brother, Giovanni Battista (*b* 3 April 1569), also a composer. One madrigal by Massarenghi was published in Arcangelo Gherardini's *Primo libro de madrigali a cinque voci* (RISM 1585[24]).

THOMAS W. BRIDGES/R

Massarengo, Giovanni Battista (*b* Parma, 3 April 1569; *d* after 1595). Italian composer and poet. He was known as 'Accademico Innominato'. His extant musical works are a collection of 19 *canzonette alla napolitana* (RISM 1591[22]) and an eight-part motet, *Altitonans cunctasque* (*D-Rp* Butsch 205; inc.). Typically for the period Massarengo's canzonettas are short strophic pieces on amorous, often pastoral, texts. In binary form with each half repeated, they are generally homophonic and syllabic, with brief passages of imitation and word-painting, showing the influence of the madrigal on this lighter genre. A number of madrigal texts by Massarengo were printed in a volume of poems by Angelo Peregrino (Pavia, 1592); they were republished in Massarengo's *Rime* (Pavia, 1594). His annotations of Jacopo Sannazaro's *Arcadia* appeared in at least three editions of the work (Pavia, 1596, 3/1723).

PATRICIA B. BRAUNER

Massart, (Joseph) Lambert (*b* Liège, 19 July 1811; *d* Paris, 13 Feb 1892). Belgian violinist and teacher. He was taught music first by his father and his brother Jean-Joseph, then studied the violin with Ambroise Delaveux. After his début at the Théâtre Royal de Liège on 26 March 1822, he was given financial help by the king and the local authorities to study in Paris. Cherubini blocked his admission to the Conservatoire on the grounds that he was a foreigner, but Kreutzer made him his pupil and protégé. In 1829 he was finally admitted to the Conservatoire as a composition student and studied theory there with P.J. Zimmermann and counterpoint and fugue with Fétis. In the 1830s, after early successes in the *concerts spirituels* at the Opéra, he won recognition as an outstanding violinist. In 1837 he played in concerts with Liszt, Thalberg and Labarre, as well as at the Conservatoire, all within a two-week period, 'thereby doubling his reputation', according to a critic for the *Revue musicale*; his association with Liszt continued for several years. After being named violin professor at the Conservatoire in 1843, Massart confined his playing to chamber music. He performed quartets with his prize-winning pupils and with the pianist Louise Agiaé Masson (1827–87) whom he married. The Massarts, their pupils and relatives, and distinguished artists performed frequently at musical soirées held at their home; but after 1850 Massart's public appearances were rare. He continued to teach until his retirement in 1890; his pupils came from all over Europe as the administration of the Conservatoire no longer barred admission to foreigners.

Massart was shy and modest; he had the equipment, but not the temperament, of a violin virtuoso. He preferred playing chamber music to solo performance. Unlike his colleagues, Allard and Dancla, or his compatriot Léonard, he wrote no original didactic works and had little interest in composition. He nonetheless had a remarkable number of outstanding pupils, of whom Wieniawski and Kreisler were the most illustrious. His success as a teacher may be attributed to his intelligence, his command and knowledge of the violin, and the high standards of performance he demanded.

ALBERT MELL

Massé, Denis. *See* MACÉ, DENIS.

Massé, Victor [Félix Marie] (*b* Lorient, 7 March 1822; *d* Paris, 5 July 1884). French composer. He moved to Paris as a child and entered the Conservatoire in October 1834, where he gained the second solfège prize (1837), and first prizes for piano (1839), harmony (1840) and fugue (1843). Finally, after some years of study with Halévy, he won the Prix de Rome in 1844 for his cantata *Le rénégat de Tanger* which was given three times at the Opéra in February 1845. During his two years in Rome he composed a mass performed at the church of S Luigi dei Francesi in May 1846, as well as an opera, *La favorita e la schiava*; before returning to Paris he travelled through Italy and Germany. He composed songs and romances, including some to words by Victor Hugo, but found little success in opera until his one-act *La chanteuse voilée* was produced at the Opéra-Comique in 1850, to be followed by the more ambitious *Galathée* (1852), in which Jean-Baptiste Faure made his début. The following year he achieved a major success with the one-act *Les noces de Jeannette*, the title role being sung by Marie Miolan (later known as Caroline Carvalho). The work was mounted at Covent Garden in the 1860s. His subsequent works generally were received less well, apart from *La reine Topaze* (1856) which incorporated into the second act some variations on *The Carnival of Venice* for Carvalho, who again had the title role.

In 1860 Massé replaced Dietsch as chorus master at the Opéra, and his own opera *La mule de Pedro* was produced there in 1863. He was appointed professor of advanced composition at the Conservatoire in 1866, and six years later he was elected to the Institut in place of Auber. In 1877 he was appointed an Officier of the Légion d'Honneur, having been made a Chevalier in 1856. His opera *Paul et Virginie* was given at the Opéra National Lyrique in 1876 and was produced at Covent Garden in 1878, though with no lasting success. It was written, however, when Massé was already suffering from a nervous disease which forced him to give up his position at the Conservatoire in 1876 and which increasingly restricted his movements before eventually confining him to his home. He retained his mental powers and worked

on an opera *Une nuit de Cléopâtre*, which was in the preliminary stages of preparation for production at the Opéra-Comique when he died. As with *Paul et Virginie*, however, it served to demonstrate that Massé was inclined to aim above his talents. As early as *Galathée* he had tended to adopt too heavy an approach and in *Paul et Virginie* it is the simpler numbers that are the most effective. His talents are better represented by three collections of romances, some drawing-room operettas published during the 1870s (apparently written for private performance) and, above all, by the unassuming *Les noces de Jeannette*, among the most delightful of one-act *opéras comiques* and his only work to retain its popularity.

WORKS
(*selective list*)

STAGE
first performed in Paris unless otherwise stated; for full list see GroveO

Op: La favorita e la schiava, *c*1845; La mule de Pedro, 1863; Paul et Virgine, 1876

Oc: La chambre gothique, 1849; La chanteuse violée, 1850; Galathée, 1852; Les noces de Jeannette, 1853; La fiancée du diable, 1854; Miss Fauvette, 1855; Les saisons, 1855; La reine Topaze, 1856; Le cousin de Marivaux, Baden-Baden, 1857; Les chaises à porteurs, 1858; La fée Carabosse, 1859; Mariette la promise, St Petersburg, 1862; Fior d'Aliza, 1866; Le fils du brigadier, 1867; Une nuit de Cléopâtre, 1885

OTHER WORKS

2 cants., ?unpubd: Le rénégat de Tanger, 1844, Paris, Opéra, Feb 1845; La France sauvée, Paris, Opéra, 28 Oct 1852

Messe solennelle, Rome, 1846, ?unpubd

Over 100 songs and romances, incl. Les chants d'autrefois (Paris, 1849), Les chants du soir (Paris, 1850), Les chants bretons (Paris, 1853), 3 collections of 20 romances each (Paris, 1868, 1874, 1877)

ANDREW LAMB

Masselos, William (*b* Niagara Falls, NY, 11 Aug 1920; *d* New York, 23 Oct 1992). American pianist. He studied at the Juilliard School, New York, where his principal teacher was Carl Friedberg, and also worked for a time with David Saperton. He made his début in New York in 1939 and quickly became known for his sympathies with contemporary music. He gave the belated first performance, 17 February 1949, of Ives's First Piano Sonata (the work was finished ten years before Masselos was born), and of Copland's Piano Fantasy in 1957, both of which are among his recordings. Through a Ford Foundation grant he commissioned a piano concerto from the American serialist Ben Weber, and played it in 1961. Satie interested him particularly, but he also played Schumann and Brahms with rare penetration. A strong technician, Masselos was one of the most individual and interesting American performers of his generation. He experimented with changing the customary concert format, particularly by playing programmes of unusual length and diversity. He taught at several American music schools, colleges and universities, including the Juilliard School (from 1976). His honours included the Elizabeth Sprague Coolidge Memorial Medal, the Harriet Cohen International Prize, the Award of Merit of the National Association of American Composers and Conductors and a doctorate from Hamilton College.

MICHAEL STEINBERG/R

Massenet, Jules (Emile Frédéric) (*b* Montaud, St Etienne, 12 May 1842; *d* Paris, 13 Aug 1912). French composer. He was the most prolific and successful composer of opera in France at the end of the 19th century and into the beginning of the 20th.

1. Life. 2. The operas. 3. Other stage works. 4. Instrumental music. 5. Choral music and songs. 6. Style and standing.

1. LIFE. Born into a commercial family in the provinces, Massenet followed the archetypal course for a French composer by moving to Paris, studying at the Conservatoire and pursuing a career based firmly in Paris for the rest of his life. His father was director of an engineering company making agricultural implements. Jules was the youngest of four children of his father's second marriage, and their mother, born Eléonore-Adelaïde Royer de Marancour, 'the very model of a wife and mother', as Massenet described her, took care of his moral and musical upbringing. She was a gifted pianist who composed a little and gave piano lessons, especially after her husband retired from the business in 1847 and the family moved to Paris.

At the age of ten Massenet was admitted to the Conservatoire for piano and solfège studies while still attending school on the left bank. For ten years, with an interruption when his parents moved to Chambéry in 1854, he expanded his musical studies with a sure ambition to pursue a musical career. He won a *premier prix* for piano in 1859 and a *second prix* for counterpoint and fugue in 1862. In 1861 he entered the composition class of Ambroise Thomas, whose teaching he always held in grateful respect. He supported himself giving piano lessons and, importantly for the development of his theatrical instincts, playing timpani at the Théâtre Lyrique. This position, which he held for almost four years, gave him a close familiarity with the works of Gounod (especially *Faust*), Reyer and other contemporary French composers, as well as operas by Gluck, Mozart, Beethoven and Weber. He had been deeply impressed by hearing Berlioz conduct *L'enfance du Christ* in 1855 and he responded eagerly to Pasdeloup's performances of Berlioz and Wagner at the Cirque Napoléon and also to Wagner's own concerts in Paris in February 1860.

Massenet's impulse to compose was relatively late in manifesting itself, especially in view of his later fluency. In 1861 he published a bravura fantasy for piano on themes by Meyerbeer, and in 1862 he felt ready to enter for the Prix de Rome. This attempt was not successful, but the following year he won the *premier grand prix* with his cantata *David Rizzio*. During his two years in Italy, like many other laureates before and since, he travelled widely and composed little. He met Liszt and, through Liszt, a young French woman, Mlle de Sainte-Marie, who played the piano and was to become his devoted wife Ninon. The main fruits of his stay were a Requiem, some songs and a suite for orchestra, originally designated a symphony. This was to be the first of a series of orchestral suites which flowed from his pen in the next 15 years.

On his return to Paris in 1866, while making a living by teaching the piano, he sought to publish songs and piano pieces of a fashionable cut. He and Ninon were

married in October 1866 and their only child, Juliette, was born in 1868. Two factors propelled his career forward at this point: one was his meeting with the enterprising Georges Hartmann, who was to be his publisher and mentor for 25 years; the other was the commission of a one-act stage work by the Opéra-Comique, offered to some (but not all) Prix de Rome winners. The support of Thomas was certainly an important factor in the theatre's decision to approach Massenet, and whatever progress he may have made with the opera *Esmeralda* in Italy (it has not survived), *La grand' tante*, first played at the Opéra-Comique on 3 April 1867, was a first step towards an illustrious career in opera that was to continue for the next 35 years.

Massenet quickly became a member of a group of gifted young composers making their name in the capital and seeking to emulate the success of Gounod and Thomas: these were Saint-Saëns, Bizet, Delibes, Lalo, Fauré, Lacombe, Castillon, Duparc and others, with all of whom Massenet was on friendly terms at this stage. Nearly all of them aspired to write operas, songs, piano music, orchestral music and chamber music, although Massenet contributed very little in this last domain. Many of them competed in the opera competitions that both the Opéra-Comique and the Théâtre Lyrique organized. Pasdeloup continued to play his suites, the song-cycle *Poème d'avril* did well, and his cantata *Paix et liberté* was performed on the Emperor's birthday in 1867. Girod, Flaxland and Hartmann published his music. Only in the field of opera did Massenet find progress difficult. One critic, after seeing *La grand' tante*, declared Massenet to be a symphonist, not a theatre composer, a stigma also borne by Saint-Saëns and Lalo. His competition operas won no prizes; *Manfred*, after Byron, was unfinished, and *Méduse*, to a libretto by Barbier and Carré, was cut short by the outbreak of the Franco-Prussian war in 1870 and by the siege of Paris in which Massenet served in the national guard.

In the vigorous mood of reconstruction that characterized French culture after the war, Massenet's career moved forward with a sense of purpose, though not exclusively towards opera. A series of successful premières climaxed with the grand opera *Le roi de Lahore*, one of the first new works to be heard in the Palais Garnier in 1877, and with his appointment as professor of composition at the Conservatoire the following year. The four-act *opéra-comique Don César de Bazan*, staged thirteen times at the Opéra-Comique in 1872, can hardly be considered a success, but the incidental music for Leconte de Lisle's *Les Erinnyes* and the *drame sacré Marie-Magdeleine* both made a deep impression in 1873. The *Scènes hongroises* (1871) were followed by several more suites, notably the *Scènes pittoresques* in 1874, the *Scènes dramatiques* in 1875 and the *Scènes napolitaines* in 1876. Throughout this period Massenet was refining the regular work-habits and supreme technical skill on which his most productive years were based. Not all works were composed easily or to his own satisfaction, however. A number of pieces have disappeared, either destroyed or absorbed into later works, and *Le roi de Lahore*, his most ambitious work to date, cost him many years of labour.

The spectacular production of this work at the Opéra and its lasting success ensured Massenet's prominence among young French composers and led to considerable international fame, especially in Italy. Ricordi was much

1. Jules Massenet

taken by it, and a grand opera based on Flaubert's recently published *Hérodias* was planned. Zanardini, Ricordi's agent, and Hartmann called in the librettist Paul Milliet. Massenet began work on it in the autumn of 1878, just when his appointment to a professorship at the Conservatoire in succession to Thomas (now the director) and his election to the Institut enormously enhanced his prestige at home (this election seems to have permanently soured his relations with Saint-Saëns, who was also a candidate). Massenet retained his composition class for 18 years, earning a reputation as a kindly and scrupulous teacher. Among his pupils were Pierné, Charpentier, Schmitt, Bruneau, Ropartz, Hahn, Koechlin and Enesco. He now consolidated a working routine which kept him in Paris during the winter months and took him every summer to various country retreats to compose. Performances of his operas abroad, which he liked to attend whenever possible, sometimes interrupted this pattern.

Hérodiade was completed in vocal score in 1879, but Vaucourbeil, director of the Opéra, turned it down on account of its biblical-amorous subject (the same objection that kept Saint-Saëns's *Samson et Delila* from that stage for many years). Massenet gladly accepted an offer from the Théâtre de la Monnaie, Brussels, a much more enterprising stage for young French composers in those years, and its première was given there in December 1881, followed by performances in several other countries. After two more suites, the *Scènes de féerie* and the *Scènes alsaciennes*, his next operatic project was very different from the previous two: a libretto by Henri Meilhac (one of Offenbach's regular partners) and Philippe Gille drawn from Prévost's novel *Manon Lescaut*. Begun in March 1882, *Manon* was conceived as an opéra-comique with some speech over music and a more continuous and

integrated structure than usual. It called for some 18th-century pastiche and a more intimate manner. It was completed later that year, and although Massenet visited Prévost's own rooms in The Hague as a spur to inspiration, not much was actually written there. Its première at the Opéra-Comique in January 1884 launched the opera on a dazzling international career and confirmed Massenet's now unchallenged position as the leading opera composer of his generation in France. Its popularity has never dimmed. Wealth and honours now flowed, so that Massenet was able to handle his career henceforth with something of the detachment, if not quite the fastidiousness, that we associate with Verdi, picking his librettists, his theatres and his singers with care. He composed a further 20 operas in the next 28 years, along with a number of other works for the stage (ballet and incidental music), while his contributions to other genres declined, without ever dwindling altogether. The chronicle of his life is essentially the cycle of composition, orchestration, publication and production that each opera demanded, with the regular migration between Paris and his country home, and with quite frequent trips to foreign capitals to see his works staged.

The next opera in fact came to nothing. *Montalte*, on a libretto by d'Ennery and Gallet, was aborted, with much of the music finding a place instead in *Le Cid*, based on Corneille's drama, composed in 1884 and performed in 1885 at the Opéra. It reverted to the spectacular manner of *Hérodiade*. After *Le Cid* came a second opera in the more intimate style of *Manon*, and another masterpiece: *Werther*. The idea went back to 1880 but no work was done until 1885. When inspiration faltered, Hartmann, knowing Massenet's need for appropriate stimuli, acquired an 18th-century apartment in Versailles for him to work in, and then on a trip to Bayreuth in August 1886 suggested that they visit Wetzlar, north of Frankfurt, where Goethe had conceived the epistolary novel on which the opera is based. This visit, though not the original inspiration for the work as Massenet's autobiography claims, provided a tremendous spur to the completion of the opera. In 1887 it was turned down by the Opéra-Comique, a theatre still less than comfortable with tragedy, as too depressing. Thus *Werther* did not appear in Paris until 1893; its première took place in Vienna in February 1892, following the great success there of *Manon* two years before. It soon conquered every stage and has been a repertory work ever since.

In 1887 Massenet met the 22-year-old American soprano Sybil Sanderson, a strikingly beautiful singer endowed with a voice of remarkable range and quality. For her he modified the role of Manon and went on to compose his next opera expressly as a vehicle for her voice. *Esclarmonde* is an 'opéra romanesque', full of enchantment and spectacular effects evoking the world of medieval chivalry with a splendid scene set in the Byzantine court. Perhaps the most Wagnerian of his works, it was an appropriately colourful display-piece to be heard within the framework of the 1889 Exposition Universelle.

Amadis, on which he next embarked, has a similar setting, but it had a troubled history and was not heard until ten years after Massenet's death. *Le mage* was another grand opera with crowd scenes and ballet with some resemblance to *Aida* in its plot, but although it was played at the Opéra in 1891 it was one of the least successful operas of his career and has never been revived. Massenet was considerably affected by the collapse of Hartmann's fortunes in 1891 and the sale of his catalogue to Heugel, henceforth Massenet's publishers, although his income from the performance of his works was not threatened.

In 1892 he travelled to Vienna for the opening of *Werther* and of a new ballet, *Le carillon*. He then selected as his next work for Sybil Sanderson Anatole France's sensational novel *Thaïs*, with its remarkable description of the Thebaid and the story of Paphnutius the desert monk who converts the Egyptian harlot Thaïs to the faith but falls himself a victim to the very carnality he professes to reject. The interlocking claims of religion and love were now established as his special dramatic domain. His output was astonishing at this time, for within a few months of the opening of *Thaïs* at the Opéra in March 1894 two more operas saw their premières: *Le portrait de Manon* at the Opéra-Comique in May and *La Navarraise* at Covent Garden in June. In addition he completed and orchestrated Delibes's *Kassya*, left unfinished at his death. *Grisélidis* and *Cendrillon* were complete by the end of 1895.

He was still teaching at the Conservatoire, moreover. But with Thomas's death in February 1896 his situation there changed. When offered the post of Director he had little difficulty in refusing, but with the appointment of Dubois to that post Massenet took the opportunity to resign his composition class, having already found that his own work often forced him to send a deputy, usually Gédalge, to take his class in his absence.

With *Grisélidis* and *Cendrillon* still awaiting performance, his next undertaking was *Sapho*, based on a novel by Daudet. It was played at the Opéra-Comique in November 1897, and the bitter-sweet story of the love of a naive young man from Provence for a wordly-wise Parisienne contains much charm and passion. Although it was successful in Massenet's lifetime it has been seriously neglected since. *Cendrillon* finally appeared in the rebuilt Opéra-Comique in May 1899, and at this time Massenet established his permanent country residence in an imposing chateau at Egreville, 20 miles south of Fontainebleau. Here he finished the last in the series of sacred concert works, *La terre promise*, describing the fall of Jericho and the arrival of the Hebrews in Canaan, performed the following year in the church of St Eustache, in Paris.

As the century turned Massenet found himself in the enviable position of seeing his works almost permanently on the *affiches* of both the Opéra and the Opéra-Comique. They were regularly performed in London, Milan, Vienna and other capitals of the operatic world. His scores were handsomely published by Heugel. Although he had absorbed the Wagnerian ethos as far as he felt it to be useful, he was untouched by new trends emerging in the 1890s from Russia, Vienna and on his very doorstep in Paris. Few would have expected him to change direction as he approached the age of 60, nor did he. He had perfected his craft, which left little room for manoeuvre in any new direction that might have seemed appropriate for the new century. He thus had little need to react with hostility or envy, as did Saint-Saëns, to Debussy's startling novelties, nor had he any wish to emulate the supercharged scores of Strauss.

His music for Racine's *Phèdre* was heard at the Théâtre de l'Odéon in December 1900 and *Grisélidis*, a story

based on Boccaccio, reached the Opéra-Comique a year later. His next opera, *Le jongleur de Notre-Dame*, a humorous piece about piety and monastic life for an all-male cast, was first performed at Monte Carlo, which was to be a favourite venue for enterprising operatic productions in the years before World War I. Four more operas would first appear there in his lifetime and three more after his death.

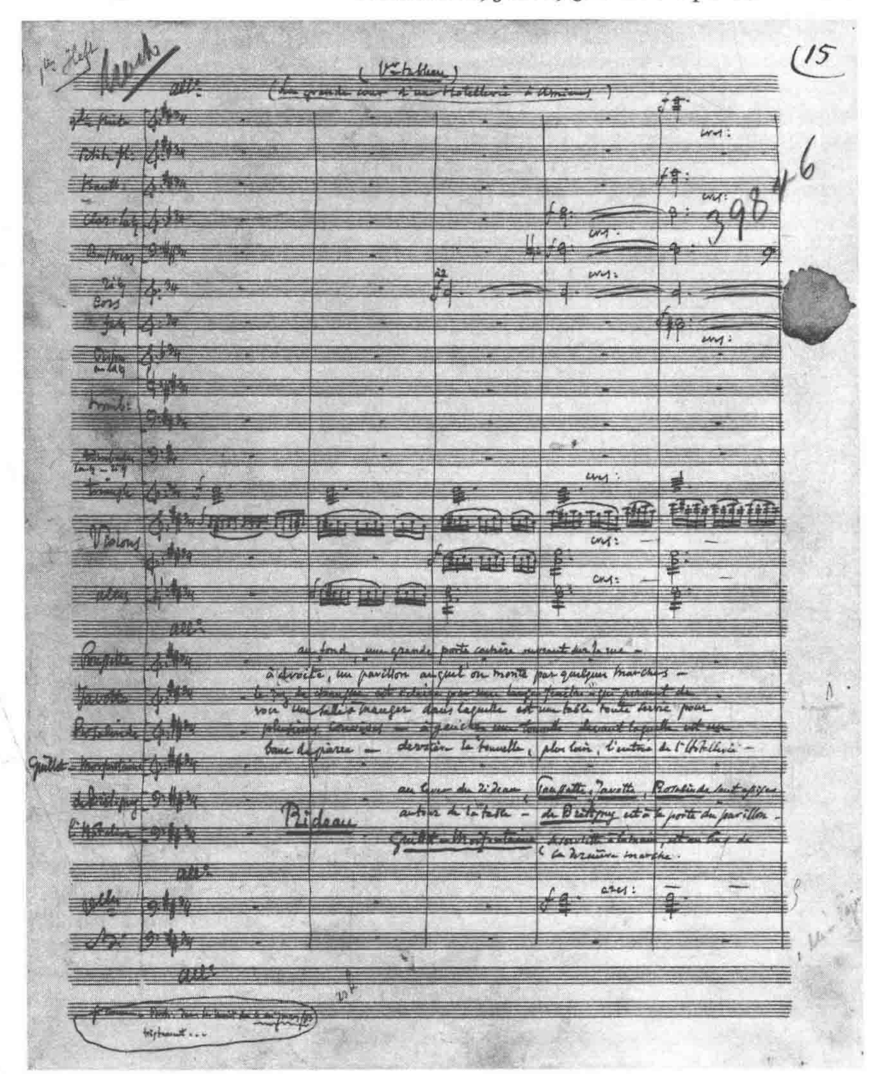
He next embarked on a piano concerto, one of his few essays in the larger instrumental forms, and it was performed by Louis Diémer at the Conservatoire early in 1903. It has never won many admirers or exponents and has remained on the fringe of the piano concerto repertory. Massenet passed it over without a mention in his autobiography. He was never short of operatic projects, so he was soon at work on the next in the series, *Chérubin*, a touching fantasy about the later career of Cherubino from Mozart's, or rather Beaumarchais's, *Les noces de Figaro*. As in Mozart's opera, Cherubino is a *travesti* role, played in the first performance (Monte Carlo, 1905) by Mary Garden. He then composed a ballet, *Cigale*, for the Opéra-Comique and began two more operas, *Ariane*, on the Theseus myth, and *Thérèse*, a compact and compelling drama set during the French Revolution. He was now writing for another favourite singer, Lucy Arbell, who appeared in many of his later operas. *Ariane*'s success at the Opéra in 1906 called for a sequel, *Bacchus*, though this enjoyed no success at all, and with the exception of *Don Quichotte* (Monte Carlo, 1910), Massenet's remaining operas have all suffered from at least a perception that his muse was running dry. He showed little sign of slackening, however, for in the last five years of his life despite failing health he composed five full-length operas – *Bacchus*, *Don Quichotte*, *Roma*, *Panurge* and *Cléopâtre* – as well as some smaller works. *Panurge*, *Cléopâtre* and *Amadis* were not performed until after the composer's death.

Unlike Berlioz or Reyer or Saint-Saëns, Massenet never regarded himself as a writer and never held any journal's *feuilleton*. He had always been reluctant to give interviews or discuss his own work in public. In February 1911, nevertheless, the *Echo de Paris* published five articles by Massenet under the title 'Souvenirs de théâtre'. The following November the same journal began publishing more reminiscences with 29 chapters appearing almost weekly, concluding with 'Pensées posthumes' on 11 July 1912, a month before Massenet's death. It appeared in book form, as *Mes souvenirs*, the same year. Despite many omissions, inversions and errors of detail, the book is a convincingly true record of his thoughts and memories, generous to a fault, touchingly grateful for the kindness of fate, yet conscious of the inexorability of death.

In his personal character Massenet lacked all trace of the abrasiveness or aggression that we have come to expect from great composers. He was not dishonest, nor scheming nor grasping, and although he was envied, sometimes bitterly, by less successful musicians and scorned by the younger generation, he seems to have harboured little of the malice that bedevilled some of his contemporaries. This was in part due to the fact that he did not have to wrestle with his creativity to write his music nor fight with impresarios and publishers to get it heard. It may well be that a more arduous career might have engendered more searching or experimental music, but it was not in his nature to leave such things to chance and he preferred to enjoy the fruits of success and maintain a regularity in his working routine that protected him from external or internal shocks. Like Tchaikovsky, whose prodigious fertility was similar, he rose early. In his *Souvenirs* he reports:

> I have long been in the habit of rising early. My work occupied me [in the 1870s] from four o'clock in the morning to noon, and my teaching filled the six afternoon hours. In the evening I would visit my pupils' parents where there was some music and we were so spoiled and pampered! I will have known that early-morning work all my life, since I still keep it up today.

Later this routine start settled at five o'clock in the summer and six o'clock in the winter. 'Save your mornings for composing or orchestration without waiting for inspiration,' was his advice to Busser, 'which otherwise never comes.' He preferred to work at a 'table-piano' constructed for him which offered a leather-covered table surface to write on, while containing a Pleyel piano beneath. His addiction to work is echoed in the title of chapter 22 of the *Souvenirs*: 'Du travail! Toujours du travail!'. As an example of the prodigious amount of work he could accomplish, the orchestration of 257 pages of *La Navarraise* was completed in just nine days.



When he had selected a subject and a librettist, and when he had a libretto to work from, he studied it intently, learning it almost by heart:

> When I have reached the heart of my characters' world, when they are thoroughly alive in my imagination, I let about two years go by without writing a thing. I wait for inspiration which comes very freely and I make up the music in my head ... When the score is written in my head, that's to say usually in about two years, I copy it out from memory, a task that takes me about six months.

For his later operas he would draft a complete vocal score to be sent to the printers before rehearsals began, sometimes even before the orchestration (which was always speedily completed) was under way. His manuscript full scores, mostly now housed at the Bibliothèque de l'Opéra, are marvellously neat, written on rectos only, and showing little sign of agony or doubt (fig.2). Often, as on the pages of *Hérodiade*, *Manon*, *Le Cid*, *Werther* and *Esclamonde*, he used his scores like a diary, making notes on the weather, on daily events in his life and other jottings. Those composition drafts in vocal score that have survived reveal, however, even to the end of his career, that composition was never as facile a process as many have believed and that he could change his mind many times in quest of the simplicity that so many critics have regarded as jejune.

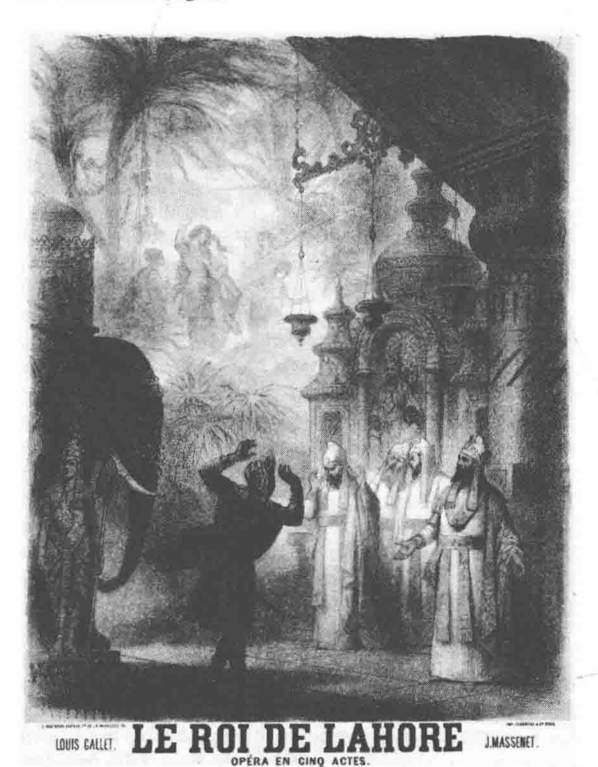
Massenet was not unsociable but he had little taste for Parisian café life and he avoided larger functions and banquets, especially if he might have to make a speech. He developed the habit of not attending his own first nights, not because he was nervous about a work's reception, but because he shunned the attention those occasions always showered upon him. He loved the tranquillity of country life. In Paris he would rather spend his evenings at home than go to the theatre. 'I am a fireside man, a bourgeois artist,' he said in a rare interview, 'That's my way of working. Whether that's good or bad I have no idea, and I don't have the courage or the ability to change it.'

He was unquestionably a devoted admirer of the female sex, but evidently not a womaniser. Eyebrows were raised when he became so involved with his leading sopranos, especially Sybil Sanderson and Lucy Arbell, and modern prurience tends to encourage winking and leering at such

2. Autograph score of the opening of Act 1 scene i of Massenet's 'Manon', composed in 1884 (F-Po)

friendships. But his bourgeois principles had no difficulty in accommodating this kind of personal admiration, even intimacy, within the bounds of social correctness. He was, after all, equally admiring of his male singers, especially Lucien Fugère, the brilliant comic baritone who featured in many of his later operas.

He was devoted to his family and generous-hearted towards colleagues and friends, especially his pupils, and he was morbidly distressed by ill-health and death. His reluctance to make speeches was always overcome when called to deliver funeral eulogies for those he admired and loved.



2. THE OPERAS. Massenet was first and foremost a man of the theatre. The Paris Conservatoire's training in the 19th century was primarily directed towards the lyric stage, with more emphasis on vocal writing than on principles of construction. Massenet was the ideal product of this training, and one should not underestimate the comprehensiveness of this musical education. In matters of vocal style and orchestration he was a thorough professional, quickly mastering all problems of operatic timing and balance. He also had a gift for matching his aural imagination to the stage picture, for he liked to evoke time, place, mood and character with a few deft orchestral strokes.

No one librettist served him for very long. Of some 30 collaborators Louis Gallet and Henri Cain were the most enduring, with six or more librettos to both their names, while many other authors worked with him only once. Cain also wrote ballet scenarios for Massenet, and Gallet wrote two of the oratorios. In matters of genre he naturally, with such a large output, came back to well-tried operatic genres from time to time, but he also sought to break away from the conventional frameworks of grand opera and *opéra-comique*, loose though these patterns had become by the 1870s. His operas are thus variously identified by such terms as 'saynète', 'opéra romanesque', 'épisode lyrique', 'opéra féerique', 'miracle', 'haute farce musicale', 'comédie chantée', and so on. Elements of grand opera, which contributed much to the impact of *Le roi de Lahore*, are found throughout his work, up to and including *Cléopâtre*, for he liked to write for large choral masses, with offstage brass, ballet and complex ensembles. But except perhaps in *Esclarmonde*, his spectacular scenes often lack individuality. He enjoyed comedy, although again the purest comedies, such as *Don*

César de Bazan and *Panurge*, are less to be admired than the more delicately tuned operas such as *Manon*, *Le portrait de Manon* and *Le jongleur de Notre-Dame*, where comedy serves a more complex purpose. *Cendrillon* and *Don Quichotte* are truly effective comic operas.

La grand' tante, being a one-act *opéra-comique*, contains only six numbers with a cast of three. Two features of the score deserve notice: first Massenet's palpable gift for a beautifully shaped vocal line for Alice's Romance (no.2), and, second, the 'mélodie bretonne' for the maid, an exercise in local colour (Breton folk style) illustrated better at that time by the orchestral suites. *Don César de Bazan* is a much more sophisticated comedy based on a successful play by d'Ennery and Dumanoir. Vincent Wallace's *Maritana* is derived from the same story, and both ultimately go back to Hugo's *Ruy Blas* (1838). The local colour here is Spanish, with a 'Ballade aragonnaise' and an 'Entr'acte sevillana'. The first-act quartet is a true comic ensemble, fugal in places, in which Don César, much like Don Quichotte in a later opera, betrays a headlong folly that prevents him from saving a tricky situation and instead makes it worse. In the roles of Charles VI and the boy Lazarille the opera brought together Lhérie and Galli-Marié, who were to sing the leading roles in Bizet's *Carmen* two years later.

Le roi de Lahore displayed for the first time Massenet's capabilities on a large canvas and also his taste for religious themes intertwined with traditional romantic love. The combination, already explored in depth by Spontini, Bellini, Meyerbeer, Gounod, Bizet and others, was much to the public's taste in a period of religious revival, although here the cult is Hindu and the local colour Indian (fig.3). The alternation of scenes on earth and in paradise, where the dead are given a second incarnation, is cleverly effective, and although the heroine, Sita, kills herself, she and her lover, Alim, have a glorious apotheosis in heaven. Here on display for the first time is the pre-eminent role of vocal melody, against an abundance of scenic colour and a clear control of scene structure. The libretto is full of Meyerbeerian conventions but it aptly served the needs of the grand new Palais Garnier and of its fashionable patrons.

3. Massenet's 'Le roi de Lahore', Paris Opéra, 1877: colour lithograph

Hérodiade is conceived on an even grander scale. Salome is imagined as being in love with John the Baptist (a tenor) and also to be the long-lost daughter of Herodias, producing a typical grand opera climax at the end when Salome learns who she is and kills herself, depriving the executioner of his obligation. Originally in three acts, Massenet expanded it for its Paris première to four, but it is exuberantly overlong in this version with a weighty chorus of Roman soldiers and some ballets in the last act preceding the dénouement. The opera prefigures *Thaïs* in some ways, particularly in Salome's power over John the Baptist and the contrast between sensuality and asceticism. There is much exotic local colour. Until the advent of Strauss's more sensational version of the story, the opera enjoyed considerable success, and has occasionally been revived in modern times.

In *Manon* Massenet found a subject entirely to his taste which brought out his true gifts. The tension here is between Manon's adolescent craving for pleasure and the single-minded devotion which her love for Des Grieux draws out of her. It is hard perhaps to believe in her attachment to him once she has strayed into other company, but the crucial scene at St Sulpice is superbly handled and the lovers' devotion in the final scene never fails to be affecting. Massenet obviously relished the opportunity for 18th-century pastiche in the Cours-la-Reine scene and elsewhere; this serves to heighten the impact of truly passionate music when that is needed. He also displays his mastery of scenic management, both in the sense of controlling groups of people on stage and keeping them musically distinct, but also in formal terms. His timing and theatrical sense was never surpassed, and the shaping of melodies and motifs to give a scene an individual character was to become a hallmark of his operatic style and a touchstone of his skill. The opera contains a well developed set of leitmotifs, two for Lescaut, one each for De Brétigny and Guillot, for example. Manon's earlier motifs pass out of sight as she grows up with great rapidity. In *Manon* Massenet used speech over music, an adaptation of traditional *mélodrame*, as a telling dramatic device (although in a New York performance he allowed these passages to be sung).

Le Cid reverted to the grand style for the benefit of the Paris Opéra. Corneille's drama had served many earlier composers, including Bizet, whose *Don Rodrigue* remains a very substantial fragment, and Debussy, with a similarly unfinished *Rodrigue et Chimène*. The libretto provided ample opportunities for Spanish and Moorish colour, which Massenet exploited with his customary flair, particularly in the still popular ballet movements. There is a clear kinship with the Meyerbeer/Verdi principle of casting the heroic passions of individuals against a backdrop of larger conflicts, and the vision of Don Rodrigue in which St Jacques of Compostella promises him victory in the war with the Moors contributes a devotional flavour to the mix.

4. *Scene from Act 4 of Massenet's 'Manon', Opéra-Comique (Salle Favart), Paris, 1884: engraving from 'Le théâtre illustré'*

Few would challenge the claim of *Werther* to be Massenet's masterpiece, a work in which intense personal feeling is expressed in a modern chromatic language, touching on the sentimental at times, and crafted with immense skill. The power of Goethe's epistolary novel was a mighty challenge, yet Massenet's librettists supplied a living drama in which the predicament of Charlotte and Werther leads to the inevitable catastrophe while the ordinary life of the Bailli and his family continues, an irony encapsulated in the sound of children's voices singing 'Noël' at the end. As in *Manon*, Massenet's command of an intimate style, without the paraphernalia of chorus and ballet, is complete. The smaller characters, such as Charlotte's young sister Sophie and the two semi-comic figures Schmidt and Johann, are touchingly depicted, yet the intensity of feeling suffered by both Charlotte and Werther is never out of sight. Two scenes stand out: the opening of Act 3 when Charlotte confesses that her thoughts are all with Werther and that his letters stir her deeply (a neat echo of the novel's literary form), and the tableau entitled 'Christmas Night' at the opening of the last act in which the orchestra alone provides a desolate setting for Werther's despair. The orchestration is masterly, especially the use of english horn and saxophone, and the harmonic style is intensely powerful, borrowing to some extent from Wagner but never stepping beyond the boundaries of advanced tonal practice as understood in 19th-century France.

Esclarmonde is a magic opera that might be linked to a similar strain in baroque opera, depending on dazzling stage transformations and a highly coloured stage setting, as well as great vocal riches for both soloists and chorus. The title role is especially elaborate, with a range up to g''' and much coloratura, but the part of Roland is scarcely less impressive. Massenet often spoke of this as his favourite opera. It enjoyed little success beyond its earliest years, although it was revived as a vehicle for Joan Sutherland in 1974. The style is deliberately and effectively seductive with wonderfully delicate and elaborate orchestration and it demands scenic magic to match that of the music, depicting in turn the Byzantine court, a magic island and King Cléomer's court near Blois. There are echoes of Wagnerian dramaturgy without the obligatory sacrifice or renunciation of music-drama so that the lovers can be happily united at the end. It was after all at the Opéra-Comique, not the Opéra, that it was first played.

Le mage followed, and although it was played 31 times in 1891, its disappearance from the stage and Massenet's apparently little regard for it seem to reflect the demise of unalloyed grand opera at this period. It has crowd scenes, ballet, big ensembles, large-scale conflicts of peoples, and requires large vocal and orchestral resources. Zarâstra, the Persian general, is secretly in love with Anahita, a Turanian captive, who, unknown to him, is queen of Turan. Priestly and religious scenes mingle with scenes of jealousy and amorous passion. Massenet admitted that he used some earlier compositions, notably *Apollo's Invocation*, an ode in English written for a London performance in 1884, for *Le mage*. The best music is found in the big ensemble at the end of Act 2.

After *Le mage* Massenet seemed intent on fashioning each opera according to its individual character, as he had already successfully done in *Manon*, *Werther* and *Esclarmonde*. *Thaïs* was an important departure from normal practice in using a prose libretto, with rhyme and metre replaced by what Gallet, the librettist, termed 'poésie mélique', relying on assonance and evocative language to give the text poetic resonance. Massenet had evidently discussed this topic with his pupil Charpentier, whose *Louise*, also on a prose libretto, was already well advanced. *Thaïs* had the advantage of a well-known novel by Anatole France as its basis, with an unusual but exotic setting, Coptic Egypt, and a plot that intertwined religious fervour and erotic passion to an extreme degree. Massenet certainly relished the singing of Sybil Sanderson in the title role, and the baritone part of Athanaël, who is converted from asceticism to carnal passion, is a great test for a singing actor. The famous Méditation, an entr'acte between Acts 2 and 3, symbolising Thaïs's awakening conscience, is one of the most famous of all violin solos. This is truly an intimate opera, centrally concerned with conflicts within the hearts of the leading figures, but dependent too on a remote and exotic background. Some of Massenet's most lyrical and subtle vocal writing is to be found in *Thaïs*.

Two short operas followed, Massenet's first since *La grand' tante*. They could could hardly be more dissimilar in style or story. *Le portrait de Manon*, in one act, imagines an older Des Grieux treasuring a portrait of his beloved Manon and given over to a life of sorrow. His heart is warmed by Manon's niece, Aurore, and her lover, his nephew, the young Vicomte de Montcerf (sung by a soprano). There is more 18th-century pastiche (as in *Manon* itself), some mystical touches and much humour and sentiment. The opera is not ashamed of its manifest charm, not a grain of which is to be found in the next

opera, *La Navarraise*, a bloodthirsty piece of stage realism in two short acts. The score is full of strong effects of local and scenic colour: deep bells, trumpet fanfares from the trenches, the click of castanets, the clapping of hands. The immediacy of war called for a wild manner not previously found in Massenet's music which may be compared with Mascagni or Puccini. Each act is preceded by an orchestral symphony depicting in turn the clamour of battle and the tranquillity of night.

Grisélidis has a medieval setting and a leading part for the Devil, treated as a comic figure. While her husband the marquis is away on a crusade, Grisélidis is wooed by a young shepherd, Alain, whose ardour brings her almost to the point of infidelity, urged on by the Devil. She is reunited with her husband when their son is abducted by the Devil but regains him through prayer to St Agnes. Humour, religiosity and sentimental passion mingle in a characteristic blend, not much valued by operatic connoisseurs since the 1890s. The best pages of the score are the evocations of nature painted with Massenet's consummate orchestral craft.

Cendrillon, entirely lacking any religious overtones, is much more successful. Perrault's well-known story allows some sharp comic characterization in Pandolfe and his awful family. Mme de Haltière's snobbery and her two daughters' selfishness are deftly painted, while Cendrillon is disarmingly attractive. Her suitor, Prince Charming, is sung by a 'soprano falcon ou soprano de sentiment', and the love music for the two sopranos is some of the finest Massenet ever wrote. There is some Handelian pastiche and much witty music somewhat reminiscent of Verdi's *Falstaff*. There seem also to be parodies of Meyerbeer and Wagner, and even hints of Debussy's manner. This is an opera that cannot fail to bring a smile to the lips, a truly effective and satisfying operatic comedy.

In *Sapho* Massenet made his first attempt at an opera in a modern setting. Dramatically too, with its basis in Daudet's novel, it recalls *La traviata*. Without an opportunity for historical scene-setting, Massenet inserted some Provençal flavour in his depiction of the young man, Jean Gaussin, whose provincial ways conflict so sharply with modish Parisian life. Jean's impossible passion for the wordly Fanny, known as Sapho, leads only to psychological conflict and ultimate despair. Massenet handles the vicissitudes of love with enormous skill and imagination, and the solo scene for Fanny in the last act may be compared with Charlotte's great monologue in *Werther*; both scenes use the device of reading a letter. *Sapho* is certainly one of Massenet's finest works, but it has been unaccountably neglected. It exists in both an original and a revised version.

Le jongleur de Notre-dame is also little known, considering its unusual appeal. Religious practice is here at the centre of a little drama that combines humour and piety. The only female voices are those of invisible angels as the Virgin Mary appears at the end enthroned in glory. The central figure is the juggler, acrobat and minstrel, Jean, who finds himself a member of the Benedictine order but has only his street entertainment skills to offer to the Almighty, while around him the monks are poets, artists and musicians. It is the monastery's corpulent cook, Boniface, who persuades Jean that all skills are equal *sub specie aeternitatis*, even cooking, even dancing. The musical pastiche is here imprecisely medieval/Renaissance, with a charming parody of a choral rehearsal and a lively street scene in the first act. At the New York première the tenor role of Jean was sung by the soprano Mary Garden, by which Massenet confessed that he was 'somewhat bewildered'.

In *Chérubin* Massenet and Cain developed an idea from Francis de Croisset's play, advancing Beaumarchais's adolescent to the age of 17 and providing him with new ladies to pursue – a Spanish singer named L'Ensoleillad and Count Almaviva's ward Nina. The opera offers some music in 18th-century style and ends appropriately with a reference to the serenade from *Don Giovanni*. This 'comédie chantée' has three fine female roles and a fluent conversational manner appropriate to its intimate theatrical style. The lure of Mozartian classicism is never far from view in Massenet's work, and here the subject obviously allowed more than a suggestion of such nostalgia.

5. Act 3 scene ii of Massenet's 'Cendrillon', Opéra-Comique (Salle Favart), Paris, 1899, with (from left to right) Julia Guiraudon (Cendrillon), Georgette Bréjean-Gravière (Fairy Godmother) and Mlle Emelen (Prince Charming): photograph from 'Le théâtre' (July 1899)

Ariane was designed on a grand scale and grandly staged at the Opera in 1906. Catulle Mendès's libretto treats Theseus's flight from Crete with Ariadne as well as her sister Phaedra, with whom he falls in love. Its success was largely built on the fourth act, in which Ariadne descends to the underworld to plead with Persephone to restore her dead sister. Lucy Arbell, from then on to be closely associated with Massenet's operas, made a great impression in the role of Persephone, especially with her aria 'Des roses, des roses', a late addition to the score. The third act, in which Ariadne pleads with Phaedra to intercede with Theseus on her behalf, is scarcely less touching. Of all the many operas on the Theseus myth, this is one of the few to include Phaedra and to dramatize the rivalry of the two sisters for Theseus's love. The sequel, *Bacchus*, in four acts with a prologue, was a resounding failure at the Opéra in 1909. Mendès imagined Bacchus, after his rescue of the abandoned Ariadne, to be the reincanation of Theseus in a Buddhist afterlife. Massenet's treatment of scenes of Bacchic frenzy could no longer compete in a world where Strauss and Schmitt were the latest fads, although his representation of the battle with the monkeys in the forest, for which he sought inspiration in the Jardin des Plantes, is certainly clever and effective.

Between these two grand operas Massenet composed *Thérèse*, a 'drame musical' in two acts on a libretto by Jules Claretie who was also the librettist of *La Navarraise*. *Thérèse* is not quite so blatantly violent as that opera, but nonetheless abrupt and forceful. Set during the French Revolution, the dramatic story is deepened by Massenet's skill in including placid scenes of nature (autumn in Act 1 and summer in Act 2) to heighten the effect of urban terror. Part of the love music is a minuet in 1790s style, accompanied by an offstage harpsichord.

The last of Massenet's operas to achieve enduring success was *Don Quichotte*, indirectly based on Cervantes via Jacques Le Lorrain's 1906 play *Le chevalier de la longue figure*. It has often been observed that the Don is an eccentric old man with a fondness for beautiful women, not unlike Massenet himself, although in truth the wordly, successful composer had nothing in common with the great non-achiever of Cervantes's novel. The title role was written for Chaliapin, and that of Dulcinée for Lucy Arbell. Sentiment, for which Massenet is often chided, contributes much to the charm and effectiveness of the work; comedy, mostly in the person of Sancho Panza, draws a frequent smile; and local colour, of a traditional Spanish kind, provides a recognizably stagey backdrop. The scene of the Don's death is especially touching. The boisterous music of Act 1 recalls both *Cendrillon* and *Falstaff*. Nowhere, perhaps, in all of Massenet's operas is his skilful and instinctive handling of stagecraft so refined or so effective. Timing, character and *ton* are judged to perfection.

After *Don Quichotte* only *Roma* of the four remaining operas reached the stage during Massenet's lifetime, and none of them drew much response from a public now accustomed to more startling Parisian novelties. Massenet's creative fertility never waned, but his dependence on antique subjects in *Roma* and *Cléopâtre* drew from him a broad, dignified style that belonged unmistakably to the 19th century. He could now barely escape the echoes of earlier works in everything he did. *Roma* has scenes of great nobility and solemn breadth, and the opening choral dirge 'O tristes jours' may be compared to a similar opening scene in Saint-Saëns's *Samson et Dalila*. It has never been revived. *Cléopâtre*, Massenet's last opera, is also broad-ranging with scenes of tenderness and intimacy contrasted with the noisy and spectacular scenes which cry out for extravagant staging. Cléopâtre's death, like Quichotte's, is very affecting, and the title role (to which Lucy Arbell laid claim in the courts) is one of Massenet's most demanding. *Amadis*, which, like *Cléopâtre*, is set to a prose libretto, echoes the world of *Esclarmonde* with tournaments, minstrels and horn-calls in the forest. The lament for Floriane in Act 4 is as fine as anything Massenet ever wrote, and the sustained *mélodrame* of Act 1 is a remarkable achievement. But there is no real dramatic tension over the two brothers' failure to recognize one another, and although much of the score was composed in 1889–90, there is a certain slackness in the score which suggests a lack of engagement or inspiration.

Panurge, which should have been a popular farce in the lineage of *Cendrillon* and *Don Quichotte*, never achieved any success despite the usual masterly timing which Massenet deploys. The adventures and misunderstandings of Panurge and his wife Colombe make excellent operatic comedy. But perhaps the *grossièreté* of Rabelais is more literary than theatrical. In truth this final endearing comedy, which had to compete for attention with such novelties as *Le sacre du printemps* when it was first performed, has never been put to a fair test on the stage.

3. OTHER STAGE WORKS. There is much additional music for the stage, incidental music for plays and a handful of ballets, although these scores have been rarely revived and are little known. Massenet never objected to inserting ballet into his larger operas and relished his prodigious orchestral skill and his ability to capture an atmosphere or a mood with simple orchestral gestures. His style, like that of Delibes, with its graceful movement and bewitching colour, was very sympathetic to classical French ballet. The one-act ballet *Le carillon* was composed for performance at the Vienna Hofoper in 1892; its scenario, by the Wagnerian tenor Ernest Van Dyck and Camille de Roddaz, treats a colourful story about a clock-tower in Courtrai, with a climax in which the great bronze bells of the town's belfry ring out. It was performed in Paris in 1899. *Cigale* has a cast of animals and a typical Massenet ending with Cigale dying of cold in the snow while distant angels sing a blessing. *Espada* is wholly Spanish in character, and *Les rosati* has a Flemish background appropriate for inclusion in the Fête du Nord given in Paris on 9 December 1901.

Of the many plays for which Massenet provided music, the most striking was *Les Erinnyes* (The Furies), a 'tragédie antique' by Leconte de Lisle, whose success brought Massenet's name to prominence before he was known as a composer of opera. The original version was scored for strings only, with trombones and timpani to represent the Furies. The desolate melody for muted cello that accompanies Electra's lament at her father's grave became a solo piece entitled Mélodie-Elégie that rivalled the Méditation in popularity, arranged for every instrument and even adapted to words as 'O doux printemps d'autrefois'. *Les Erinnyes* was expanded in a second version with some 'antique' Greek choruses and ballets.

Little of the incidental music was published and some of it is lost; no doubt Massenet was often able to do little more than send some divertissements or entr'actes without

involving himself too closely in the play or the production. However, Massenet's collaboration with Sardou on *Théodora* (1884) and *Le crocodile* (1886), for example, or his incidental music for Racine's *Phèdre* would certainly repay disinterment.

4. INSTRUMENTAL MUSIC. There is no doubt that Massenet's rare attempts to embark on the larger symphonic forms left a bitter taste in his mouth and that he preferred the format of the suite, with its more diverse array of movement types. His formal genius is best displayed in the operas, where control of individual scenes gives him much flexibility within the demands of key and motive. He attempted a symphony during his stay in Rome. He also wrote one during the siege of Paris:

> I asked M. Pasdeloup to try it over with his orchestra, and I saw that I had taken a completely wrong path ... I do not believe I have the temperament of a symphonist: to write a good symphony it is not a question of having lots of ideas, but of developing them artfully, to stretch them out, to play with them as you might say, to draw out of them everything they can give. That is not my nature. On the contrary, it bores me to spin out my thought, to chop it up, to pursue it incessantly, and even to keep coming back to it. What I have to say, musically, I have to say rapidly, forcefully, concisely; my discourse is tight and nervous, and if I wanted to express myself otherwise I would not be myself.

It is not true that his discourse is always 'tight and nervous', but he felt musical motifs in a thoroughly French tradition to be expressive gestures, not structural materials. When a passage or a scene had said what it had to say, he was ready to move on to the next. The Piano Concerto of 1903, with its three movements in different keys, illustrates Massenet's predicament well, since the first movement seems too long for the interest and variety of its material, while the colourful boot-stamping finale, 'Airs slovaques', belongs to the genre of suite or opera movement that he had long mastered. The *Fantaisie* for cello and orchestra (1897), with the concerto's traditional three movements compressed into a single continuous sequence, is much more successful in the vein of Lalo and Saint-Saëns. He never much cherished his symphonic poem *Visions*, which remains unpublished, and his piano music consists largely of short pieces grouped in sets, the best of which is the series of 12 pieces for four hands written in 1897 and entitled *Année passée*, comparable to Alkan's and Tchaikovsky's similar sets of 12 pieces intended to illustrate the months of the year.

The orchestral suites have a much more serious claim to attention. They are vigorous, colourful, evocative and picturesque, though never deep or disturbing, and they are surprisingly neglected considering how well they fit into the orchestral repertory and how warmly audiences, and not just French audiences, respond to them. The first suite, as we have seen, was originally designated as a symphony, with a particularly beautiful Nocturne as the slow movement. The *Scènes hongroises*, which followed, were orchestral arrangements of some pieces for four hands, which Massenet described as 'not the kind of music I would want to see esteemed. I do not value this suite of little pieces very highly.'

The *Scènes dramatiques* are really short symphonic poems on Shakespearean subjects, in turn Ariel, Desdemona and Macbeth, and whereas the first two are character studies, the third has a strong narrative structure. The *Scènes pittoresques*, the *Scènes napolitaines* and the *Scènes de féerie* all typify Massenet's easy command of the musical vignette, each characterized by a dance rhythm or a special combination of instruments or a touch of local colour. This kind of music came to him very easily, but it is never extended to the point where its facility becomes banal, his sense of an apt shape of such a piece being always alert. The *Scènes alsaciennes* were constructed slightly differently, for instead of being four disconnected pieces the movements have a suggestive narrative continuity, written by Daudet and obviously related in spirit to *Werther*: 'Sunday morning', 'In the cabaret', 'Beneath the Lindens' and 'Sunday morning'.

5. CHORAL MUSIC AND SONGS. Massenet's principal choral works are four biblical oratorios, all of which are designed somewhat like his operas with solo arias, choruses, dramatic tableaux, stage directions, local Middle-Eastern colour and an act-and-scene structure. Their tone ranges from the devotional to the erotic, and the solo parts are comparable to some of his operatic roles in range and expression. Méryem, for example, in *Marie-Magdeleine*, one of his first successes when sung on Good Friday 1873 with Pauline Viardot in the main role, has an impassioned C-minor solo aria in Act 3. Gallet's libretto develops the story of Méryem, with Judas Iscariot cast as a scheming seducer. Its realism, derived from Renan's *La vie de Jésus*, displayed a marked contrast with the traditional reflective oratorio, and the work was staged several times in Massenet's lifetime. The closing scene is a full-blooded Resurrection Hymn.

Eve (1875), a 'mystère', whose text is also by Gallet, is less stagey, and the style is simpler, as if the Creation demanded a certain lack of sophistication. With principal parts for Adam and Eve, the chorus remains present throughout as agents for both good and evil, even though the sense of sin is hardly persuasive. Those who suspected the veracity of Massenet's religious convictions were troubled by his apparent sympathy for the sinners.

La Vierge (completed in 1878) is a 'légende sacrée' with a text by Grandmougin and a considerable cast. Its four scenes are 'The Annunciation', 'The Wedding at Cana', 'Good Friday', and 'The Assumption'; there is a Galilean Dance during the wedding scene. The single movement that makes up the Good Friday scene is one of Massenet's best creations, broad in conception and strongly dramatic in character, but the work has never found favour, with the exception of the prelude to the last scene, 'Le dernier sommeil de la Vierge', featuring a solo cello and muted strings.

Massenet came back to this genre 20 years later with *La terre promise*, using Vulgate texts. The three parts are 'Moab (The Alliance)', 'Jericho (The Victory)' and 'Canaan (The Promised Land)', and the most spectacular section is the thrilling sounds of Jubel's seven trumpets giving their sevenfold call, with a huge shout of 'Jahvé' as the walls of Jericho fall. There is a strong flavour of Old Testament fanaticism in this work, tempered by the pastoral tone of the promised land itself at the end.

As in his operas, Massenet largely avoids counterpoint in his choral writing, preferring the clarity and realism of a chorus that acts rather than reflects. His scene structures are, as always, very precisely organized, and the motivic principle is more usually applied to the unification of a single scene than to the work as a whole.

Massenet composed many other choral works, sacred and secular, many pieces for two or three solo voices, and over 200 solo songs. The salon culture of his day absorbed songs in great numbers, and most of them were published

for an avid market, usually as individual songs, sometimes in collections or cycles. The series of 'Poèmes' contributed much to his early fame, especially the *Poème d'avril* (1866), a series of eight settings of Armand Silvestre, whose gentle lyricism appealed much to Massenet as it did also to Lalo and Delibes. The *Poème du souvenir* followed in 1868, the *Poème pastoral* in 1872, the *Poème d'hiver* in 1882, almost all to texts by Silvestre. As might be expected, Massenet always writes carefully and sympathetically for the voice, sets French with impeccable taste and devises idiomatic and evocative piano parts. His songs are faultlessly crafted and never fail to please, but they have been neglected as a body probably because Bizet's songs are more inventive, Duparc's and Fauré's more distinctive, and Debussy's more audacious. In truth they have never been subjected to careful or comprehensive scrutiny and survive in anthologies more by chance than by choice.

6. Style and standing. Massenet's style was built primarily on those of Gounod and Thomas. There are also many reminiscences of Meyerbeer and of Berlioz's later music, especially *L'enfance du Christ* and *Les Troyens*. He shared this background with Bizet and Delibes, and he showed less awareness of German classical traditions than Saint-Saëns. Although he learned much from Verdi's dramaturgy and a little from Mascagni's, his music rarely sounds like that of any Italian composer. The impact of Wagner was of course profound, and it accounts for the great enrichment of his orchestration in his middle years and perhaps also for his fluent handling of motifs. But he never lost sight of the formal scale of 'number' opera and preferred to think in units of ten or 15 minutes, not on the continuously unfolding scale that Wagner made his own. His Conservatoire training was thorough, especially in the areas of counterpoint and vocal writing, and he was aided by his fluency as a pianist and his experience as an orchestral timpanist.

Tonal melody, as with Gounod, is paramount and seemingly limitless. Supporting harmony can be simple, even naive; sometimes an orchestral instrument, such as a solo cello, supports the voice as if to exaggerate the function of melody. His harmony is fluid and expressive, as with Berlioz and Bizet. At its most advanced his harmony included dominant 9ths and whole-tone scales, either to suggest savagery or as a Debussyan evocation of sensuality; both are well illustrated in the second act of *Cléopâtre*. Rather than the brutal application of dissonance he preferred noisy ensembles and heavy orchestration for processions, hymns and the like, which throw into relief the softness and delicacy of his quieter scenes. The pervasiveness of simplicity, softness and sentiment has given rise to the charge of weakness, or a perceived femininity in his music, and there is no doubt that tender sentiment was very dear to his muse. Few of his operas are without it; in the best of them it is balanced by strong dramatic tension (as in *Werther*), theatrical action (as in *Thérèse*), scenic diversion (as in *Esclarmonde*), or humour (as in *Le portrait de Manon*).

Religious sentiment is also frequently present, an inheritance from Gounod. But whereas Gounod was certainly devout, Massenet's religious convictions were scanty. He was not ashamed of this, and is said to have told d'Indy that he was responding purely to the public's delight in such scenes. While the Catholic revival that grew in strength during Massenet's lifetime turned such men as d'Indy into zealots, it provided Massenet with an audience that responded warmly to prayer scenes and incantations in the theatre. The sound of offstage angels in *L'enfance du Christ* remained in Massenet's ears throughout his life.

The writing of exotic music, for which Parisian audiences had an unlimited appetite in the 19th century, had been shown to be an essential part of the composer's armoury by David, Halévy and others. Like Bizet, Massenet had a sharp ear for orchestral colour and always relished a chance to create a remote geographical or historical setting. The illusion of the theatre was well served by such skill. Coptic Egypt, mythical Greece, biblical Galilee, Byzantium, the crusades, imperial Rome, Renaissance Spain, modern Spain, India, Florence, Naples, 18th-century Wetzlar, Benedictine Cluny, Revolutionary Paris – all these and many more are evoked with remarkable suggestiveness in his scores. Massenet drew on folksong for this purpose too, never with any ethnological interest. His basic orchestra scarcely ever varied from the standard, although he liked offstage extras, especially brass and organ, and he used the saxophone and the viola d'amore for special purposes, like many of his French contemporaries. He included a part for an electrophone in *Visions*.

As for his vocal writing, he was unusual in indicating every slightest nuance in solo roles, rather than leaving such things to the singer's discretion, as had been customary before. In his scores he coaches his singers line by line, taking the greatest pains to match the music to the words, to bear the singer's voice-type in mind at all times, and to see that the vocal line is always audibly and correctly declaimed. Like Mozart he preferred to know his singers before he composed, although that was not often possible. He did not especially favour the female voice, as often charged, for he devoted equal care and craft to his male roles, such as Des Grieux, Werther, Athanaël and Don Quichotte. Many singers attested to his skill and patience as a vocal coach, but he only played the piano in private. His appearances as a conductor were likewise rather rare, usually as a special guest, even though, according to Bruneau, he had 'an enchanting, persuasive and irresistible talent as a conductor'.

Massenet's place in the history of French music is secure, for although he is not to be bracketed with Berlioz or Debussy or even Bizet, he generously satisfied the tastes of the *belle époque* and retained his standing as a master of the lyric stage for well over a generation. His pupils all revealed their debt to Massenet in their works, especially Charpentier, Bruneau and Hahn. For all his scorn of Massenet, Debussy was unmistakably susceptible to the style in his early works. If Bizet had lived beyond 1875, Massenet's road to success might have been more rugged, but from *Le roi de Lahore* in 1877 to *Don Quichotte* in 1910 he faced little challenge as an opera composer; despite individual works of great character, even genius, by Charpentier, Bruneau, Reyer, Debussy, Dukas and others, no one else sustained the flow of production or ranged so widely among operatic genres as Massenet, who always offered beautifully shaped music of exquisite craftsmanship and vital theatricality. In his prolonged exploration of the art of opera and in his sustained achievement he should be compared to Handel, Verdi or Strauss. *Manon* and *Werther* are recognized as his principal masterpieces, but a good case can be made for a

number of others, always bearing in mind that each work needs to be matched to its singers and its audience, and that a full understanding of his music requires an equal sympathy for his personality, his musical frames of reference and the attitudes and tastes of his era.

The understanding of Massenet's life remained for a long time dependent upon the biography of Louis Schneider, first published in 1908 and revised in 1926, and on Massenet's own *Souvenirs*. Bruneau published a useful memoir in 1935. In the long decline of his operas from favour little new knowledge was added, but in recent years Massenet studies have moved decisively forward thanks to the researches of Patrick Gillis and Gérard Condé, much of whose work has been published in the periodical *L'avant-scène opéra*. Demar Irvine's biography, completed in 1971 but not published until 1994, has contributed a fuller biographical narrative than any other work to date. In recent years the city of Massenet's birth, St Etienne, has mounted festivals in order to promote the revival and scholarly study of his music.

WORKS

printed works are full scores published in Paris unless otherwise stated; principal manuscript collections at F-Pc and Po

SONGS

date of publication refers to first publication, whether seperate or in an anthology, for solo voice and piano unless otherwise stated

song collections and cycles

3 mélodies, deux duos et un trio (C. Distel), op.2, ?1868 (?1872): Bonne nuit; Le bois de pins, souvenirs de Douarnenez; Le verger, ancienne chansonnette; Marine (S, Bar, pf); Joie (2 S, pf); Matinée d'été (3 female vv, pf)

Chants intimes (G. Chouquet) (1869): Déclaration, 1866; A Mignonne; Berceuse (rev. 1870)

4 mélodies, op.12 (1868): L'esclave (T. Gautier); Sérénade aux mariés (J. Ruelle); La vie d'une rose (J. Ruelle); Le portrait d'une enfant (P. de Ronsard)

Poëme d'avril (A. Silvestre), cycle with songs, declaimed poems and pf solos, op.14, ?1866 (1868): Prélude; Sonnet matinal; Voici les grands lys; Riez-vous; Vous aimerez demain; Que l'heure est donc brève!; Sur la source elle se pencha; Complainte

Poëme du souvenir (A. Silvestre), ?1868 (before 1878): [A la trépassée] Lève-toi; L'air du soir emportait; Un souffle de parfums; Dans l'air plein de fils de soie; Pour qu'à l'espérance il ne cède; [Epitaphe] Souvenir éternel

Poëme pastoral (Florian and A. Silvestre), Bar, 3 female vv, pf unless otherwise stated, 1870–72 (1872): Pastorale avec chœur (2 S, A, pf); Musette; Aurore; Paysage; Crépuscule; Adieu à la prairie (Bar, 2 S, A, pf) [Musette, Aurore and Crépuscule orch 1880 or 1885; Crépuscule also arr. fl, vn, vc, str qt, 1885]

Poëme d'octobre (P. Collin), ?1876 (1877): Prélude; [Automne] Profitons bien des jours d'automne; Hélas! Les marronniers qui bordent les allées; Qu'importe que l'hiver éteigne les clartés; [Roses d'octobre] Belles frileuses qui sont nées; Pareils à des oiseaux que leur aile meurtrie

Poëme d'amour (P. Robiquet), S, Bar, pf unless otherwise stated, 1878–80 (1880): Je me suis plaint aux tourterelles (Bar, pf); La nuit sans doute était trop belle (Bar, pf); Ouvre tes yeux bleus, ma mignonne (? also orchd); Puisqu'elle a pris ma vie (Bar, pf); Pourquoi pleures-tu? (Bar, pf); Oh! Ne finis jamais, nuit clémente et divine

Poëme d'hiver (A. Silvestre) (1882): C'est au temps de la chrysanthème; Mon coeur est plein de toi comme une coupe d'or; Noël! En voyant dans ses langes l'enfant radieux; Tu l'as bien dit: je ne sais pas t'aimer; Ah! Du moins, pour toi je veux être l'ami

Lui et elle (T. Maquet), 2 duets (1890): Du mal secret qui le tourmente; Pourquoi cette amère pensée

Poëme d'un soir (G. Vanor) (1895): Antienne; Fleuramye; Defuncta nascuntur

Chansons des bois d'Amaranthe (M. Legrand, after Redwitz), S, A, T, Bar, pf, orch unless otherwise stated, 1900 (1901): O bon printemps (S, A, Bar, pf); Oiseau des bois (S, A, pf); Chères fleurs; O ruisseau (S, A, T, pf); Chantez!

Quelques chansons mauves (A. Lebey) (1902): En même temps que ton amour; Quand nous nous sommes vus pour la première fois; Jamais un tel bonheur ne m'a rempli le cœur

Expressions lyriques, mélodies avec déclamation rythmée, ?1902–12 (1913): Dialogue (M. Varenne); Les nuages (comtesse M. Roch de Louvencourt); En voyage (T. Maurer); Battement d'ailes (J. Dortzal); La dernière lettre de Werther à Charlotte (comte R. de Gontaut Biron); Comme autrefois (J. Dortzal); Nocturne (J. Dortzal); Mélancholie (anon.); Rose de mai (S. Poirson); Feux-follets d'amour (M. Grain) [Dialogue, Les nuages, Battements d'ailes and Mélancholie orch 1909]

3 poèmes chastes (1903): Le pauv'petit (G. Boyer); Vers Bethléem (P. Le Moyne); La légende du baiser (J. de Villeurs)

Poèmes des fleurs, suite pour voix de femmes et pf (B. Allievo, trans. A. Gasquy), 2 S, A, pf unless otherwise stated, ?1907 (1908): Prélude; L'hymne des fleurs (A, pf); La danse des rameaux (2 S, pf); Chanson de mai

HUGH MACDONALD (text and bibliography), ANNEGRET FAUSER with PATRICK GILLIS (work-list)

Massenkeil, Günther (*b* Wiesbaden, 11 March 1926). German musicologist. He studied musicology (from 1950) at the universities of Mainz, under Arnold Schmitz, and Paris, under P.-M. Masson; he took the doctorate at Mainz in 1952 with a dissertation on early Latin oratorios and obtained a teacher's certificate in 1953. He then became a research assistant at the musicology institute at Mainz University (1954–62), completing his *Habilitation* there in 1961 with a study of symmetry in Mozart's instrumental music. He was appointed successively to a lectureship in musicology at Mainz (1962) and to the chair of musicology at Bonn (1966–91); he was also provisional director of the Bonn Beethoven Archive (1972–4) and director of the Max Reger Institute (1972–97). He also studied voice privately (1973–6) and worked as a bass-baritone singer in radio and the recording industry (1974–94). He has been editor of the *Kirchenjahrbuch* since 1977 and he retired as professor emeritus from Bonn University in 1991. The Festschrift *Beiträge zur Geschichte des Oratoriums seit Händel: Festschrift Günther Massenkeil* (ed. R. Cadenbach and H. Loos, Bonn, 1986) was published to mark his 60th birthday. His special field of research is Catholic church music, religious music from the 16th to the 19th centuries, the vocal music of Beethoven and the music history of the Rhineland.

HANS HEINRICH EGGEBRECHT/WOLFRAM STEINBECK

Massenus Moderatus, Petrus. *See* MAESSENS, PIETER.

Massenzio, Domenico (*b* Ronciglione, nr Rome; *d* Rome, 1650). Italian composer. Along with other figures who were to become important in Roman music, he was a boy singer at S Luigi dei Francesi, Rome, where he studied with G.B. Nanino. His voice broke in 1601, and his name reappears in the records as a tenor in 1604–5. In 1606 he entered the Seminario Romano for four years' study under Agazzari and possibly G.F. Anerio. He applied unsuccessfully for the post of singer in the papal chapel in December 1608, and again in 1616. From September 1610 to April 1611 he sang tenor in the Cappella Giulia under Soriano and in 1612 succeeded Anerio as *maestro di cappella* at the Seminario Romano. He was a canon of Ronciglione Cathedral from 1612 to 1614 and *maestro* to the Jesuit Congregazione dei Nobili in 1616–18. His talents were required by various institutions: at the Gesù from 1621 to 1623 (as *maestro* in 1623), at the Collegio Inglese in 1624–6 and in the 1620s to beat time for polychoral performances by the Cappella Giulia. In 1643 he was a beneficed canon at S Maria in Via Lata, Rome.

Massenzio's published volumes include five of motets, mostly from his earlier years, eight of psalms (unusually, one for Compline, the rest for Vespers) and one of secular works. Most of them were published in quick succession in the early 1630s (together with two lost volumes). His

style is typical of the concertato idiom that typifies church music in Rome after 1600. Massenzio preferred a through-composed approach, increasingly free of *stile antico* conventions. Some of his psalms change scoring from verse to verse, the style known as 'concertato alla romana'. His 1631 motet collection displays some imaginative touches, such as echo effects, and uses individual voices to assume particular roles.

JEROME ROCHE/GRAHAM DIXON

Massey, Roy (Cyril) (*b* Birmingham, 9 May 1934). English organist and choral conductor. He studied music at Birmingham University under Sir Anthony Lewis and Peter Wishart, and embarked on a career as organist and master of the choristers within the Anglican church. He became warden of the Royal School of Church Music in 1965, then moved to Birmingham Cathedral in 1968 and to Hereford Cathedral in 1974, where he stayed until his retirement. Massey made his début with the CBSO in 1953, and is widely respected among organists as a recitalist. He has a preference for 19th-and 20th-century English music, but is equally at home with the works of Bach or Messiaen. In 1974 he became conductor of the Three Choirs Festival, and gave premières of a number of choral works including the Requiem by Geoffrey Burgon, *Lux aeternam* and *Veni Sancte Spiritus* by William Mathias, and the *Te Deum* by Paul Patterson. He made a number of recordings with Hereford Cathedral Choir, including a collection of settings of the *Magnificat* and *Nunc dimittis*.

IAN CARSON

Massi, Luigi. *See* MAZZI, LUIGI.

Mässig (Ger.: 'moderate'). As a tempo indication it is the equivalent of the Italian MODERATO, used either alone or as a qualification of some other term such as BEWEGT; the Prelude to Act One of Wagner's *Die Meistersinger* is *sehr mässig bewegt*. In his C major Fantasia op.17 Schumann translated *mässig, durchaus energisch* as *moderato con energia*. Elsewhere he used *im mässigen Tempo* and *sehr mässig*.

□

Massima (It.). *See* LARGE. *See also* NOTE VALUES.

Massin, Brigitte (*b* Roubaix, 21 July 1927). French musicologist. After a career as a comedienne she became a producer with ORTF and RTB; she was responsible for broadcasts of Mozart, Schubert, Berlioz and contemporary music and (with Georges Léon) the programme 'La tribune internationale des compositeurs'. She has also been music critic for the newspaper *Matin de Paris* (1977–87) and editor-in-chief of the journal *Panorama-Musique* (1980–83). Her major interests are contemporary music and Beethoven, and she has written numerous articles for the *Encyclopedia universalis* and *Universalia*; for recording companies she has written on the Beethoven piano concertos (Col., 1962), Schumann's complete piano works (RCA, 1974) and Beethoven's complete quartets (Valois, 1973–4). She also produced two series of programmes in 1970 (50 for radio and 46 for television) for the bicentenary of Beethoven's birth and was responsible for organizing a number of publications and projects in 1991 for the bicentenary of Mozart's death. With her husband, the literary historian Jean Massin (*b* Paris, 5 Nov 1917), she has written two books on Beethoven, one on Mozart and one on the history of music. These publications combine aspects of the romanticized essay and the scholarly study, and have the dual merit of being accessible to the general public while maintaining a high level of originality and musicological precision.

Massine [Massin], **Leonid** [Miassin, Leonid Fyodorovich] (*b* Moscow, 28 July/9 Aug 1896; *d* Weseke, nr Borken, 15 March 1979). American choreographer of Russian birth. *See* BALLET, §3(i).

Massini, Angelo de. *See* OLIVIERI, ANGELO.

Massip, Catherine (*b* Paris, 12 May 1946). French musicologist. After studying at the Ecole Normale de Musique, she was taught by Norbert Dufourcq at the Paris Conservatoire (1964–71), winning first prizes in music history (1967) and musicology (1971). She studied at the Ecole Nationale des Chartes (1969–73), qualifying as an archivist-palaeographer in 1973, and concurrently studied history at the University of Paris IV, obtaining the degree in 1970 and the doctorat ès lettres in 1985. She joined the manuscripts department of the Bibliothèque Nationale in 1974, and in 1976 moved to the music department, where she became director in 1988 and in 1992 gained the title *conservateur général des bibliothèques*.

Massip has held many posts in both French and international musicological organizations. She has been secretary-general of the Société Française de Musicologie (1981–7), and vice-president (1986–9), then president (1989–92), of IAML; she was also president of the French division of IAML (1990–95). In 1996 she was appointed chairman of the editorial committee of the series Musica gallica, for which she prepared an edition of Campra's *De profundis* (Paris, 1997). She became a member of the joint committee of RISM in 1993 and was appointed vice-president in 1995, and after becoming a member of the Commission Internationale Mixte for RILM in 1996, she was appointed its vice-president in 1997. She is a member of the scientific council and board of management of the Centre de Musique Baroque of Versailles, and also a member of the editorial committee for the publication of the complete works of Lully and editor-in-chief of the thematic catalogue of the works of Rameau.

Massip's research activities are concentrated in four main areas. The first of these is 17th-century French music, particularly the works of Michel Lambert, the subject of her doctoral dissertation, and Lully. Her other fields of research are French music of the 18th century, the study of musical sources by analysis and interpretation, and the history of music collections.

JEAN GRIBENSKI

Massive Attack. British experimental dance music group. It comprises the former local graffiti star '3D' (Robert Del Naja) along with 'Daddy G' Marshall and 'Mushroom' Vowles, formerly of the influential Bristol collective, the Wild Bunch. They achieved instant acclaim with 'Unfinished Sympathy', a seminal combination of house rhythms mixed with a soaring orchestral score and the lead vocals of the soul singer Shara Nelson. This and the dub hit 'Safe from Harm' were part of the band's first album, *Blue Lines* (Wild Bunch, 1990). By the time of the release of their second album, *Protection* (Wild Bunch, 1994), Nelson had been replaced by Tricky and Nicolette, and the TRIP HOP sound they had pioneered was being developed by many other Bristol bands, notably Portishead. Typical of trip hop, *Protection* combined stripped-down instrumentation, both analogue and digital production and darkly atmospheric songwriting. Massive Attack also included experimental film and live jams in their performances. Despite the relative disappearance (or transformation) of trip hop, their third album *Mezzanine* (Virgin, 1998) received equal acclaim as its predecessors.

IAN PEEL

Massol, Jean-Etienne August [Eugène Etienne Auguste] (*b* Lodève, 23 Aug 1802; *d* Paris, 30 Oct 1887). French baritone. He made his Opéra début as a tenor, singing Licinius in *La vestale* (17 November 1825), but Nourrit's pre-eminence restricted him to secondary roles until the mid-1830s, when he began to appear, with increasing success, in baritone roles such as William Tell. In 1840 he created Sévère in Donizetti's *Les martyrs*. In 1845 he left the Opéra for Brussels, where he returned in 1848–9 as director of La Monnaie. He made his London début in 1846 as Nevers (*Les Huguenots*) at Drury Lane, and appeared with the Royal Italian Opera at Covent Garden, 1848–50, most impressively as Alphonse (*La favorite*), Pietro (*La muette de Portici*) and Nevers. In 1850 he returned to the Opéra as principal baritone and created Reuben in Auber's *L'enfant prodigue*, repeating the role at Her Majesty's Theatre in the following season. Massol's imposing physique and voice made him a most effective 'heavy' baritone. His last notable creation at the Opéra was Ahasuerus in Halévy's *Le Juif errant* (1852). (B. Lumley: *Reminiscences of the Opera*, London, 1864/*R*, 303)

PHILIP ROBINSON

Másson, Áskell (*b* Reykjavík, 21 Nov 1953). Icelandic composer. He studied the clarinet at the Reykjavík College of Music (1968–9), and later continued his studies in

London (1975–7), taking private lessons in composition with Patrick Savill and in percussion with James Blades. He was employed as composer and percussionist for the National Theatre Ballet in Reykjavík from 1973 to 1975. He also worked as a producer at the Icelandic State Radio (1978–83); since 1983 he has devoted himself entirely to composition. He served as secretary of the Society of Icelandic Composers (1983–5) and alternately as president and vice-president of STEF, the Icelandic performing rights society (1989–99). He has also been a prolific composer of theatre and film scores.

Másson's output consists almost exclusively of instrumental works, and his style combines a refined, impressionistic musical language with a high degree of virtuosity. His Clarinet Concerto (1980) explores a compendium of modern performance techniques set against an introspective orchestral backdrop, itself coloured by a large percussion section. Among his best-known works are those featuring solo percussion (with or without orchestra); his works for snare drum – *Konserttháttur* ('Konzertstück', 1982) and *Prím* ('Prime', 1984) – are more consistently extrovert and rhythmically driven than many of his other works. The three-movement Violin Sonata (1993), on the other hand, is notable for its broad, lyrical qualities.

ÁRNI HEIMIR INGÓLFSSON

Masson, Charles (*fl* 1680–1700). French theorist and church musician. According to the title page of his *Nouveau traité* he was director of music at Châlons-sur-Marne Cathedral, Champagne, around 1680, and later at the Maison Professe of the Jesuits in Paris. His *Nouveau traité des règles pour la composition de la musique* (Paris, 1697) was the main theory book used in France before Rameau. A second, heavily revised edition was brought out in 1699 (facs. (New York, 1967)) and had several reprintings (Paris, 1700, 1701, 1705/*R*; Amsterdam, *c*1708; Paris 1738, 1755). Masson also published *Divers traitez sur la composition de musique* (Paris, 1705).

In his *Nouveau traité*, Masson followed Jean Rousseau and M.-A. Charpentier by giving rules for composing in the major and minor modes, and for using the figured bass for writing tasteful vocal counterpoint as well as for improvising accompaniments. He insists on the importance of tempo and metre to move the soul, and justifies the use of intervals such as the augmented second, and the use of chromaticism in several voices. The work ends with a short theory of fugue and canon. His rules are close to the practice of his day, and he often cites specific compositions by Lully as examples. Rameau refers to Masson several times in his *Traité de l'harmonie* (1722). The treatise is a valuable tool for understanding French music of the late 17th century as well as a source book in the history of music theory.

IMOGENE HORSLEY/HERBERT SCHNEIDER

Masson, Diego (*b* Tossa de Mar, Spain, 21 June 1935). French conductor. He studied piano and composition at the Paris Conservatoire and conducting with Pierre Boulez. During the 1960s he worked as a percussionist in Paris, notably with the Domaine Musical, and in 1966 he founded his own ensemble, Musique Vivante. Under Masson's direction this group introduced compositions by French and foreign composers and worked closely with Stockhausen and Boulez. Masson conducted the première of Stockhausen's *Stop* (1969), which is dedicated to him, and the ensemble took part in the premières of *Setz die Segel zur Sonne* (1969) and the Bonn version of *Momente* (1972). Masson became music director of Ballet-Théâtre Contemporain, formed at Amiens in 1968 and from 1972 based at Angers, where it was combined with the opera company as the Théâtre Musical d'Angers under Masson's direction (1973–5); he brought it to London in 1971 and 1973. He was music director at the Marseilles Opera, 1975–81 (where he conducted a *Ring* cycle), and has appeared often in Britain, both in association with the London Sinfonietta and conducting *La damnation de Faust* and other works for the ENO, and the premières of Edward Harper's *Hedda Gabler* for Scottish Opera (1985) and of Saxton's *Caritas* for Opera North (1991). He has also worked frequently with the Xenakis Ensemble in the Netherlands and with Musik Fabrik in Germany. Masson's recordings include *Caritas* and several works by Berio, Boulez, Globokar and Stockhausen.

PAUL GRIFFITHS, NOËL GOODWIN

Masson, Elizabeth (*b* Scotland, 1806; *d* London, 9 Jan 1865). British composer, contralto and teacher. She was taught singing by Mrs Henry Smart senior, and by Giuditta Pasta in Italy. She made her début at John Ella's second subscription concert in the Argyll Rooms, London, on 11 March 1831, and sang afterwards at the Ancient Concerts, the Philharmonic Society and in oratorios of Handel. She helped to found the Royal Society of Female Musicians in 1839 and remained its honorary treasurer until her death. After her retirement from singing she devoted herself to teaching and composition.

Masson's Scottish origins are seen to advantage in her compositions. The *Original Jacobite Songs* (1839) were deservedly popular in their day; their authentic folk melodies are set to highly apposite accompaniments, written with a sparseness that is unusual for the period. In her settings of Byron she responded to his irregular metres with rhythmic flexibility, breaking up the music's phrase patterns with considerable subtlety. Her songs in

the Italian vein demonstrate an intimate knowledge of contemporary opera, and her vocal experience is reflected in their beautifully shaped melodic contours. Her sense of quasi-symphonic development results in some remarkable experiments with binary form in songs such as *Mary, adieu* (1837) and *The lark now leaves his wat'ry nest* (1840).

NIGEL BURTON

Masson, Paul-Marie (*b* Sète, Hérault, 19 Sept 1882; *d* Paris, 27 Jan 1954). French musicologist and composer. After completing his secondary education at the Collège de Sète, he attended the lycée and the arts faculty in Montpellier and then went to Paris, where he was first a pupil at the Lycée Henri IV (in the highest class) and then at the Ecole Normale Supérieure (Lettres), at the same time attending Rolland's courses at the Sorbonne and Abel Lefranc's at the Ecole des Haute Etudes. After obtaining the agrégation (1907) he was for two years a boarder at the Fondation Thiers. While pursuing post-graduate studies he attended d'Indy's and Koechlin's courses in counterpoint, fugue and composition at the Schola Cantorum.

He was appointed chargé de conférences at the University of Grenoble in 1910, and in the same year was seconded to the Institut Français in Florence to teach the history of French literature and French music. After World War I he resumed his duties in Florence before being sent to Naples (1919) to establish and direct a new Institut Français there. He achieved the doctorat ès lettres in 1930, and in 1931 joined the staff of the Sorbonne; he succeeded Pirro there in 1943 and in 1951 established the Institut de Musicologie at the University of Paris before his retirement in 1952.

Although Masson's early university research was concerned with *musique mesurée* during the 16th century (diplôme d'Etudes Supérieures) and musical humanism in France (diploma of the Ecole Normale), his preferred sphere was the 18th century and, in particular, opera and its related forms; this is the subject of his doctoral dissertation, a major work on Rameau's operas. Masson's compositions 'bear the imprint of sensitive and refined simplicity' (*Mélanges ... offerts à Paul-Marie Masson*, p.8). His work combines the erudition of an Ecole Normale student trained in Rolland's school and a musician's capacity for feeling and imagination. Masson was father-figure to a generation of French musicologists, including Verchaly, Favre, Ferchault, Launay, Gardien, Gergely, Hardouin and Honegger.

CHRISTIANE SPIETH-WEISSENBACHER

Massonneau, Louis (*b* Kassel, 10 Jan 1766; *d* Ludwigslust, 4 Oct 1848). German violinist, composer and conductor of French descent. He was a son of a French *chef cuisinier* at the Kassel court; there he studied the violin with the Kapellmeister Jacques Heuzé and composition with the violinist Joseph-Karl Rodewald. In 1783 he became a violinist and viola d'amore player in the Hofkapelle of Landgrave Frederick II. After the death of the landgrave in 1785 Massonneau moved to Göttingen to become first violinist at the Academic Concerts, under the direction of Forkel. In 1795 he was appointed conductor at Frankfurt. Two years later he occupied the same post at the new theatre in Altona and in 1799 he was conductor of the prince's chapel at Dessau. In April 1803, after a trial year as a soloist, he settled in Ludwigslust, serving as assistant to the Kapellmeister Eligio Celestino. When Celestino died on 24 January 1812, Massonneau assumed the roles of both orchestral conductor and Kapellmeister until his

retirement in 1837. In these roles, and as a soloist, he was often invited to Schwerin. The 'Ludwigslust' diary that he kept from 1803 to 1837, in which he noted all his concert activities, is a valuable historical source.

Massonneau's output may be divided into two principal categories: his published works, opp.1–12, which are almost exclusively instrumental and date from before 1800, and the mainly vocal works after 1800, preserved in autographs in the Schwerin Landesbibliothek. The early instrumental works, which show Massonneau to have been a capable, solidly trained musician, are in the tradition of the high Classical instrumental music of Germany, closely resembling the efforts of such contemporaries as Rosetti, Pleyel and Gyrowetz. The music also shows his thorough familiarity with the violinistic idiom, fine feeling for orchestral sonority and gift for lyricism.

Especially noteworthy among Massonneau's instrumental works are his three published symphonies, op.3 (books 1 and 2) and op.5. The first two have slow introductions and four movements. Although written for only oboes, bassoons, horns and strings, rich orchestral sonorities are achieved through the use of two violas (in Symphony no.2) and careful spacing and separations of the paired wind instruments. The first movement of the First Symphony presents an unstereotyped approach to sonata form: for example, the first theme undergoes many subtle transformations and appears in the dominant in place of a second theme; after an extensive development section, the Grave introduction reappears in abbreviated form before the recapitulation, and towards the end of the recapitulation, a motif from the introduction is used instead of a second theme. In both symphonies, the slow movements are elaborate theme-and-variation structures in the style of late Haydn. The sweet and unassuming minuets and sprightly finales are rather conventional. The Third Symphony op.5 in C minor and major, *La tempête et le calme*, is especially significant: it belongs with Justin Heinrich Knecht's symphony *Le portrait musical de la nature* (1784) as a direct forerunner of Beethoven's Pastoral Symphony. Resemblances to Beethoven's work go beyond the programmatic title: the movements of Massonneau's symphony are connected, birdcalls are featured in the second movement, and the harmonic language and wide dynamic range given to violent contrasts suggests Beethoven. Massonneau's work has three movements: the 'tempest' occurs in the first Largo-Allegro con fuoco, a dramatically powerful movement which dwindles to a *pianissimo calme* in the final bars, and is followed by a contrasting Andantino *sempre sotto voce*. The concluding rondo, however, is anticlimactic. *La tempête* is one of several 18th-century musical tempests, alongside Knecht's five-movement work and Filippo Ruge's symphony *La nova tempesta ou La tempête suivie du calme*, which caused great excitement in Paris in the 1760s.

WORKS

Sacred (all MSS, *D-SWl*): 22 offertories, chorus, orch, 1810–21; Missa brevis, 1812–20; TeD, 1813; Requiem, 1825; 2 Credos, 1827; 3 Benedictio ante sacrum and post sacrum; 4 masses

Other vocal: 12 Lieder, op.7 (Paris, 1790); Nach Trennung Wiedersehn (Lindheimer), 1v, kbd (Hamburg, n.d.); Frühlingsfeier (F.G. Klopstock), S, orch, *SWl*; 4 Lieder, chorus, orch, 1807–23, *SWl*; 3 works, 1v, orch, 1807–32, *SWl*

Orch: [2] Sinfonie, E♭, D, op.3, bks 1, 2 (Paris, *c*1792); La tempête et le calme, sym., c, op.5 (Paris, 1794); Concerto ... tiré d'un quatuor de ... Pleyel, C, vn solo, op.6 (Paris, ?1794); Concerto ... composé par Freyhold, arr. Massonneau, 2 solo fl, op.12 (?1802); Overture, D, 1804, 6 vn concs., 6 syms. (frags.), Polonaise, all *SWl*

Chbr: 6 duos, 2 vn, op.1 (Amsterdam, ?1791); 3 duos, 2 vn, op.1, bks 1, 2 (Göttingen, n.d.); 3 trios concertants, 2 vn, vc, op.2 (Göttingen, n.d.); 3 quatuors, str qt, op.4 (Paris, ?1793); 6 quatuors concertants, str qt, op.8 (Amsterdam, ?1797); 3 duos concertants, vn, vc, op.9 (Hamburg, ?1798); 3 quatuors, ob, vn, va, vc (Hamburg, ?1798); 1re recueil des airs variés, vn, va, op.10 (Brunswick, n.d.) [? = op.11]; 1re recueil des airs variés, vn, va, op.11 (Brunswick, n.d.); 3 quatuors, str qt, op.11 (Hamburg, *c*1800) [not op.12 as listed by Kade]; 6 trios, 2 vn, vc, *SWl*

Many lost works, incl. concs., ovs., vocal works

BARRY S. BROOK/MALCOLM MILLER

Massoudieh, Mohammad-Taghi (*b* Mashhad, 9 April 1927; *d* Tehran, 2 Feb 1999). Iranian ethnomusicologist and composer. He was educated at the Tehran Superior Conservatory of Music and the University of Tehran, where he took the BA in law in 1950. Then he moved to Paris, where he studied with Line Taluel, Georges Dandelot and Noel Gallant at the Paris Conservatoire and the Ecole Normale de Musique. In 1954 he moved to Leipzig to continue his studies in composition with Ottmar Gerster and Johannes Weyrauch at the Hochschule für Musik, where he received the Superior Diploma in composition in 1963. Afterwards he studied musicology with Karl Gustav Fellerer and ethnomusicology with Marius Schneider at the University of Cologne and took the PhD in 1968. Upon finishing his postgraduate studies Massoudieh returned to Iran and began teaching in the music department of the Faculty of Fine Arts, University of Tehran, where he held the position of professor of music.

He may be regarded as the first Iranian scholar to introduce and teach ethnomusicology in Iran. His approach was influenced by the Berlin school of comparative musicology and was mainly based on careful documentation of musical information, especially through detailed transcriptions and analyses. He was generally concerned with research on Iranian traditional and classical music, and his many publications on the subject marked him as a principal figure among Iranian ethnomusicologists and among scholars of Persian music internationally. He was also a revered composer whose work was usually inspired by Iranian traditional tunes. He served as a visiting professor and lectured widely in Germany, also making frequent presentations at international musicological and ethnomusicological conferences and symposia.

HOOMAN ASADI

Massucci, Teodoro (*b* Montelupone, nr Macerata; *fl* 1648). Italian composer. The title-page of his only known work, the *Dialoghi spirituali* (Rome, 1648), states that he was then *maestro di cappella* of S Francesco, Roccacontrada (now called Arcevia), near Ancona, and was also guardian

at the convent connected with the church. The five dialogues in Massucci's collection are for two and three voices and continuo and consist of recitatives alternating with ariettas. There is some conventional harmonic and melodic word-painting. The ariettas are generally syllabic with occasional melismas, not necessarily on important words. At the end there are texts for three additional ariettas on the penitence of Mary Magdalene, but it is not known whether Massucci ever set them to music.

JULIA ANN GRIFFIN

Massumoto, Kikuko. *See* MASUMOTO, KIKUKO.

Masterson, (Margaret) Valerie (*b* Birkenhead, 3 June 1937). English soprano. She studied at the RCM and with Adelaide Saraceni in Milan. In 1963–4 she made her début at the Landestheater, Salzburg, singing Frasquita, Nannetta, Fiorilla (*Il turco in Italia*) and in *Der Schauspieldirektor*. She then joined the D'Oyly Carte company, taking most principal Gilbert and Sullivan soprano roles (1966–70). After singing Konstanze at the Coliseum in 1971, she joined the Sadler's Wells Opera, later ENO; her roles have included Adèle (*Le comte Ory*), the Countess, Cleopatra (*Giulio Cesare*), Romilda (*Xerxes*), Violetta, Oscar, Manon, Sophie, the Marschallin, Louise, Mireille, Juliet, Pamina and Adele (*Die Fledermaus*). At Aix-en-Provence (1975–9) she sang Matilde (Rossini's *Elisabetta, regina d'Inghilterra*), Fiordiligi, Morgana (*Alcina*) and Countess Almaviva. At Covent Garden she appeared as Marguerite, Semele, Micaëla and The Anne who Steals in the British première of Sallinen's *The King Goes Forth to France* (1987), and she created the Wife of the Second Soldier in Henze's *We Come to the River* (1976). She made her début at the Opéra in 1978 as Marguerite, followed by Drusilla (*L'incoronazione di Poppea*) and Cleopatra (1987). In 1980 she made her American début, in San Francisco, as Violetta and appeared at Glyndebourne as Konstanze. Her clear voice, fluent technique and vital use of the text can be heard in her recordings of Gilbert and Sullivan, and in her Violetta from the ENO. (H. Rosenthal: 'Valerie Masterson', *Opera*, xxx (1979), 1128–34)

HAROLD ROSENTHAL/ALAN BLYTH

Mastini, Giovanni Battista (*b* Pennabilli, nr Urbino, or Rimini, *c*1700; *d* Fermo, 20 Feb 1771). Italian organist, composer and impresario. He was *maestro di cappella* of S Venanzo, Fabriano, where he was recorded as a priest from Rimini, from 12 April 1719 to 22 September 1722. On 14 August of that year he was appointed to a similar position at Fermo Cathedral, and on 1 August 1733 he became organist of the basilica at Loreto, where he remained until his death (from 20 February 1749 he had an assistant, Antonio Mencarelli). Mastini died in Fermo at the house of the Congregazione dell'Oratorio, where he had served as prefect of music.

Mastini composed many operas and oratorios, including *Li tre fanciulli resuscitati in Lima per miracolo di S Francesco di Paola* (D. Giupponi; Rimini, house of the Minim fathers, 28 September 1723, and Fermo, Palazzo Priorale, 1723), *Cartoccio speziale* (Perugia, Teatro dei Nobili, carn. 1725), *La benedizione di Isacco a Giacobbe* (Ancona, house of the Minim fathers, 29 September 1726) and *L'Amor fra gl'impossibili* (Perugia, ?Teatro dei Nobili, after 16 February 1726, and Ancona, La Fenice, 1727).

Mastini also worked as a director and impresario in theatres in Perugia, Ancona, Ascoli Piceno and Macerata. For the 1746 August fair in Ascoli Piceno he was in charge of the inaugural season at the new theatre, staging *Astianatte* by Niccolò Jommelli and *Tito Manlio* by Gennaro Manna, for which he composed the intermezzos. His extant works comprise 18 psalms for eight voices and double choir (SATB) with organ basso continuo, two offertories for two voices and basso continuo (all in *I-LT*); the motets *Terrae flores*, for soprano and strings, and *Sum ferita*, for soprano and organ, and a sacred cantata for two sopranos and strings (all in *Af*); and some sonatas for harpsichord or organ (in *AP*).

UGO GIRONACCI

Mastrogiovanni, Antonio (*b* Montevideo, 26 July 1936). Uruguayan composer. He began his music education with Nieves Varacchi, continued with Tosar and studied composition with Carlos Estrada at the National Conservatory, Montevideo (1963–8). The first of his works to be performed were chamber pieces (some were given at the Second Latin American Music Festival at Montevideo in 1966). During this period he also composed two works on a larger scale, the *Sinfonía de camara* (1966) and the Piano Concerto (1967), which won a Uruguayan radio composition prize.

Contraritmos for two string orchestras and percussion (1967) shows Mastrogiovanni moving towards new techniques, a development that was encouraged by his studies at the Di Tella Institute, Buenos Aires (1969–70), with Gandini (analysis), Kroepfl (composition) and von Reichenbach (electronic music). Subsequent study trips took him to Mexico and Rome under scholarships from the Organization of American States.

His *Reflejos* and *Sequencial I* won the Netherlands Gaudeamus Foundation Prize (1970 and 1971) and were first in a series of international awards in composition. From 1974 to 1988 he lived in Caracas with his wife, the composer Beatriz Lockhart (*b* 1944). He travelled to Mexico, Italy, the United States, France, Puerto Rico, Spain, Argentina and Chile to participate in music festivals and conferences. In Caracas he was professor of composition (1979–88) at the Conservatorio Nacional Juan José Landaeta and he taught at the National Conservatory, Montevideo (1972–3) and at the Escuela Universitaria de Música (1986–93), where he has served as director since 1988. In the earlier years he focussed on electronic music, but during his Venezuelan period his attention shifted towards works for ensemble, voice, chorus and orchestra, some of them influenced by indigenous themes.

SUSANA SALGADO

Masumoto [Massumoto], **Kikuko** (*b* Tokyo, 2 Feb 1937). Japanese composer and ethnomusicologist. Her musical studies began with piano lessons from her mother. In 1963 she graduated from Tōhō Gakuen College of Music, having studied with composers from various stylistic backgrounds: Minao Shibata and Yoshirō Irino (serialism) and Sadao Bekku and Akio Yashiro (French school). She went on to study ethnomusicology at the Tokyo National University of Fine Arts and Music with Fumio Koizumi and Shigeo Kishibe, and pursued private study of *gagaku* with Masataro Tōgi and Sukehiro Shiba. She became assistant professor (1982), professor (1992) and guest professor (1997) at Tōhō Gakuen College of Music.

Influences of *gagaku*, *nō* and *shōmyō* (Buddhist chanting), stemming from Masumoto's work in ethnomusicology, became apparent in her compositions in about 1976; these include microtones, proportional and free rhythm and, in *Ranjoh*, a meditative atmosphere. In general her works favour linear writing and gradual unfolding of themes rather than thematic contrasts. Her vocal music employs the range of timbres between singing and speaking, drawing on narration styles from *nō* (*sashi*) and *bunraku* (*jiai*) in, for example, *Three Songs from Medieval Japan*. In addition to composing for a variety of Japanese traditional instruments, her compositions for Western flutes utilise *shakuhachi* performance techniques such as multiphonics, pitch bending and breath accents. In ensemble works for Japanese and European instruments she combines related instruments, such as the three reeds in *Kawa* and the end-blown flutes in *Kaikō*. Her writings include articles on *gagaku*.

WORKS
(*selective list*)

Chbr and solo inst: Chiisa-na-kaze (A Short Piece), 2 koto, 2 shakuhachi, 1972; 12 Tableaux, 2 pf (6 hands), 1972; Bokka [Pastorale], descant + t rec, 1973; Kaikō [Encounter], sopranino + descant + t rec, sopranino + tr + t rec, 2 shakuhachi, 1974; Chaos, kotos, gagaku ens, perc, str ens, 1975; Rōei (Ancient Court Song in the Heian Era), va d'amore, 1976; Ranjoh, fl, 1983; Kawa (An Image of the Great River), ob, shō, hichiriki, ōtsuzumi/woodblock, 1984; Lamentation, pf (1984); Arabesque à la Japonaise, hpd, 1988; Kage [Reflections], pf, jūshichigen/koto (1994); Fragments, 2 rec, b viol, 1998
Vocal: 3 Songs from Medieval Japan, Mez, pf + handclapping + perc, 1980; Asaji-ga-yado [A Ruined Mansion in the Field] (chbr op, Masumoto, after kabuki lib by F. Enchi from A. Ueda: *U-getsu-monogatari*), 1984–6; Un: the Tale about a Young Woman (after R. Akutagawa), S, 17-str koto, Jap. perc, 1986; Scenes, chorus, kotos, 1990; Ha-Goromo Tale (op, after Okinawan fable), 1992

J. MICHELE EDWARDS

Masur, Kurt (*b* Brieg, Silesia [now Brzeg, Poland], 18 July 1927). German conductor. He studied the piano and the cello at the Landesmusikschule, Breslau (1942–4), and conducting at the Leipzig Conservatory (1946–8). He was appointed répétiteur and staff conductor at the Halle Landestheater in 1948, and was subsequently first Kapellmeister at the city theatres of Erfurt (1951–3) and Leipzig (1953–5). Masur served as conductor of the Dresden PO (1955–8 and 1967–72) and became Generalmusikdirektor of the Mecklenburg Staatstheater, Schwerin, in 1958. In 1960 he moved to the Komische Oper in Berlin; there, he collaborated with the producer Walter Felsenstein on several brilliant new productions. From 1964 he worked as a guest conductor before resuming his duties in Dresden. In 1970 he received the crowning appointment of his early career: music director of the Leipzig Gewandhaus Orchestra, a position he would hold for 26 years before being named the orchestra's first conductor laureate. While in Leipzig he was credited with restoring a vanished glory to that ensemble and city's musical life, and made recordings of Beethoven (including a complete cycle of the symphonies), Mendelssohn, Bruckner and Brahms, praised for their clarity, unforced expressiveness and warm, cultivated sonorities. On 9 October 1981 he conducted the inaugural concert of the new Leipzig Gewandhaus.

Masur made his British début with the New Philharmonia Orchestra in 1973 and his US début the following year in Cleveland. In 1976 he became principal guest conductor of the Dallas SO and in 1988 took the same position at the LPO. In October 1989, as the government of East Germany began a series of threatening military manoeuvres, Masur joined a group of leading citizens and before a Leipzig audience of 70,000 made a speech exhorting calm negotiation. Masur quickly gained heroic stature at home and an enhanced reputation around the world. In 1991 he became music director of the New York PO, with which he has recorded works ranging from Beethoven's *Egmont* incidental music to Janáček's Sinfonietta and Berg's *Lulu-Symphonie*. His appointment as musical director of the LPO from 2000 was announced in 1998.

Masur's conducting has been criticized in some quarters as prosaic and predictable, but more often praised for its discipline, integrity and commitment. In both Leipzig and New York he has worked impressively to build new audiences and restore old values. He received the German Grosses Verdienstkreuz in 1995 and was made a Commander of the Légion d'Honneur in 1996.

CHARLES BARBER

Maszkowski, Rafał (*b* Lemberg, 11 July 1838; *d* Wrocław, 14 March 1901). Polish conductor, violinist and viola

player. The son of Jan Kanty Maszkowski (1794–1865), a painter and teacher of drawing in Lemberg, he graduated from the High School of Engineering in Vienna in about 1859, having undertaken parallel studies of violin playing with Joseph Hellmesberger at the Vienna Conservatory. He continued his studies at the Leipzig Conservatory (1859–62) with Ferdinand David (violin), Maurice Hauptmann, Julius Rietz and Karl Reinecke (theory and composition). During his studies he was already making an active contribution to the musical life of Leipzig and Lemberg, respectively, including a period of two years (1858–60) as violinist in chamber music concerts of the Lemberg Music Society. In about 1862 he worked as leader and conductor of the symphony orchestra at Colmar in Alsace, and in 1863–4 as second conductor of the Singakademie in Hamburg.

From 1865 to 1868 Maszkowski was director of the music school and conductor at Schaffhausen in Switzerland. In 1869 he settled in Koblenz, where, until 1890, he was active as conductor and transformed the military orchestra into an excellent symphonic ensemble, and also helped to establish a conservatory. This 20-year period of his fruitful work in Koblenz later came to be known as the 'Maszkowski era'. He frequently visited Poland (staying longer in 1879–80), where his son and his pianist wife lived. In 1883 he initiated a recurrent music festival in Koblenz, at which Brahms and Joachim, among others, appeared. On their recommendation he became director of the orchestra at Wrocław succeeding Max Bruch; his début there, on 8 October 1890, was greeted with critical acclaim. He remained in this position until his death, and was held in the highest esteem by critics and public alike, and more highly regarded than even Mahler, Nikisch and Furtwängler.

Maszkowski declined several lucrative propositions to take up other conducting positions, for example, at Frankfurt and with the Berlin Philharmonic (immediately after the death of Hans von Bülow in 1894), although he accepted the position in Berlin for a short time in 1899. He advanced the cause of young composers, performing, among others, works by Richard Strauss, Bruckner, Grieg and Debussy; but above all he promoted the music of Brahms. He gave assistance to Polish musicians performing in Wrocław, and promoted the young Ignacy Paderewski in one of his concerts (9 February 1891). On 13 February 1901 he dedicated his last concert to the benefit of the musicians of the Worcław orchestra.

Maszkowski gave concerts as both violinist and viola player until 1889 when illness afflicted his left hand. As a conductor he performed, often from memory, in many European cities including Cologne (1877), Vienna, Moscow and St Petersburg, where he received great acclaim in 1899. He was the most significant Polish conductor of the 19th century, and his performances were characterized by his commanding temperament, excellent memory, deep understanding of works and precise manual technique.

BARBARA CHMARA-ŻACZKIEWICZ

Ma Szu-Ts'ung. *See* MA SICONG.

Maszyński, Piotr (*b* Warsaw, 3 July 1855; *d* Warsaw, 1 Aug 1934). Polish conductor, composer and teacher. He studied at the Warsaw Music Institute under Aleksander Michałowski (piano), Gustaw Roguski (harmony and counterpoint) and Zygmunt Noskowski (composition). In 1886 he established the Lutnia Music Society in Warsaw and directed its choir for nearly 50 years, developing it into one of the finest Polish ensembles and giving concerts in Polish towns and in Prague (1911). He conducted the choirs of Warsaw Cathedral and the Polish Theatre, as well as a student choir; he was also principal conductor of the Mazovian Choral Society. In 1884 he turned to teaching, and for some years was in charge of the choral class in the Warsaw Music Society school; from 1893 he was responsible for the choir school of the Warsaw theatres and became professor of choral singing at the Warsaw Music Institute in 1902. He published choral works (and choral transcriptions) by various composers in such collections as *Lirnik*, *Lutnia* and *Rybałt*, providing a wider repertory for the growing number of choirs in Poland. Maszyński's compositions are mainly choral: he adhered to the style of the German *Liedertafel*, but the harmony and structure of some of his works are more elaborate and marked by a fine sense of choral sonorities. He also composed some symphonic and chamber works, piano miniatures, songs, three cantatas and other choral works. His vocal pieces were particularly popular in Poland, where most of his works were published.

ZOFIA CHECHLIŃSKA

Mata, (Jaime) Eduardo (Vladimiro) (*b* Mexico City, 5 Sept 1942; *d* Xochitepec, Morelos, 4 Jan 1995). Mexican conductor and composer. He studied with Carlos Chávez, Rodolfo Halffter, Orbón and Moncayo at the National Conservatory. After some youthful compositions (*Trío a Vaughan Williams*, *Cantata fúnebre*), he produced several pieces based on Classical and Romantic models as part of his training with Chávez (*Sinfonía clásica*, *Sinfonía romántica*, songs). Mature compositions include a 12-note piano sonata, the three *Improvisaciones*, the Cello Sonata and the Symphony no.3, all written in an atonal,

partly aleatory style that made use of extended instrumental techniques. From 1965 he directed the music department of the University of Mexico (whose orchestra he founded and conducted, 1966–7); he also conducted the Guadalajara SO (1965–6), the Phoenix SO, Arizona (1975–8), and the Dallas SO (1977–93) and was guest conductor for numerous orchestras throughout the world. He made over 70 recordings with the Dallas SO, the LSO, the New Philharmonia Orchestra, the Solistas de México and Venezuela's Orquesta Sinfónica 'Simón Bolívar', winning two Grammy nominations. As a conductor he focussed on 20th-century music from Russia, France, Spain, Latin America and the USA, and, after 1982, also on opera and early music. His conducting was praised for its transparency, clarity and precision. In 1974 he received the Elias Sourasky Prize from the Mexican government and in 1984 became a member of Mexico's Colegio Nacional.

LEONORA SAAVEDRA

Mata (Oreamuno), Julio (*b* Cartago, 9 Dec 1899; *d* San José, 4 March 1969). Costa Rican composer and conductor. He was born into a large family of musicians. He began his musical studies in Cartago then, 1927–32, studied cello, composition and harmony at the Brooklyn Academy of Music, New York. On his return to Costa Rica in 1932 he was appointed secretary of the Banda Militar de San José and theory and solfège teacher at its music school. He became the band's conductor in 1941 and from 1947 was director-general of the military bands of Costa Rica.

He was a founder member of the National Music Conservatory and taught there (1942–53). He was also a founder member of the National SO, playing principal cello and conducting his own works. In 1952 he represented Costa Rica at the Pan-American Music Congress in Miami. From 1953 to 1954 he was inspector-general of government schools in Honduras. During his stay in that country he was invited to conduct his own pieces in Guatemala (1954).

Mata Oreamuno composed numerous chamber pieces and formed part of the most important chamber groups of the time, including the Ars Nova String Quartet. He wrote orchestral pieces for the National SO, band pieces and didactic material for schools and colleges, including anthems, songs and children's plays. He is the author of *Música Lablada* (Tegucigalpa, 1954).

Four fencing gestures and one figure for the matachin, showing the correlation of fencing gestures and turns with the music, from Arbeau's 'Orchésographie' (Langres, 1588)

derive from the Spanish *matar* ('to kill') or the Italian *matta* ('buffoon'); another, less plausible theory suggests Moorish origins and a relation to the Arabic *mutawajjihin* ('maskers' or 'masks'). The dance reached the height of its popularity in Europe from the 16th century to the 18th and from there spread to Mexico and Spanish-speaking America; it is still performed there and in southern Europe. There seem to have been two distinct types, both usually involving a mock combat and both performed for show rather than as social dances. In one case it was a grotesque dance of 'fools' and in the other a skilfully simulated sword fight danced by young noblemen before an aristocraticaudience; in parts of Europe it also became a ritual dance, either as a DANCE OF DEATH or to celebrate church feasts.

Ex.2 *Bufons*, from the Otley MS, f.39*v*, printed in Ward (1994)

References to the grotesque aspects of the *matachin* abound. Alcocer (in J. Corominas, *Diccionario … de la lengua castellana*, 1599) referred to ridiculous disguises and grimaces associated with it, and Negri (*Le gratie d'amore*, 1602) mentioned his *mattaccinata* of 1572 performed by dwarfs with cudgels and shields. Juan de Esquivel Navarro (*Discursos sobre el arte del dançado*, 1642/*R*) referred to the awkward bent knees of a *mattachino*, The Real Academia Española (*Diccionario de la lengua castellana*, iv, 1734) included in its definition of the dance a mention of the traditional bladders used by clowns, and Molière, in his *comédie-ballet Monsieur de Pourceaugnac* (1669), called for six 'matachins, with syringes', and two grotesque doctors to attack the comic hero in a wild ballet and chase. According to John Florio (*A Worlde of Wordes*, 1598), who called it 'a kind of antique [i.e. antic] moresca', the dance was synonymous with some other battle dances, whereas Randle Cotgrave (*Dictionarie of the French and English Tongues*, 1611) defined it as a 'morris' (both the MORESCA and morris also had multiple meanings, not all of which implied grotesquery or combat).

The 'noble' type of *matachin* was described fully only by Arbeau (see illustration), who assumed a direct lineage (which has not been proved) from the ancient Greek Pyrrhic dance. His is the only extant choreography with music giving precise instructions for costume, steps, rapidly moving 'passages' in which four dancers pass and twirl from one fencing partner to another in square formations, and for virtuoso sword-play clearly intended for young noblemen. Negri cited one *mattaccino* danced by eight of his noble students with swords and daggers and another danced with spears. He distinguishes between *combattimenti* and *mattaccini* but does not explain them. These showy martial exercises were apparently taught and choreographed by dancing-masters who may also have been fencing-masters.

The ritual type of *matachin*, and related sword dances, were popular in Spain and Portugal, from where they spread to the New World. The dance is still performed in Mexico and in Spanish-speaking communities in the south-west USA (*see* MEXICO, §II, 3(ii)) by teams of masked men who, dedicated to serving the Virgin Mary or their patron saint, sometimes re-enact the Aztec

Ex.3 *Matachins*, as given by Pedrell

conversion to Christianity. It is multi-sectional and does not always involve mock combat but is invariably connected with religious events. Costumes are based on European models (e.g. the Christian bishop's mitre), and although the rhythms are beaten with gourd rattles the melodies are played on the violin and guitar. Stock characters such as a bull, clown or Montezuma's bride appear with the dancers; their resemblance to characters often connected with English and European sword dances like the morris (the hobby-horse, fool and maid) is unmistakable.

The short melody given by Arbeau appears in other European sources from the mid-16th century to the mid-18th, called variously *matassins*, *bouffons*, *antycke* or *Todentanz*; it is closely related to *John come kiss me now*, and is usually accompanied by the ¢ *passamezzo moderno* bass (e.g. *Matassin oder Toden Tantz* in Nörmiger's tablature of 1598; *matachins* in a French gittern tablature, RISM 1570[35], ed. in Tappert). In Arbeau the simple tune becomes powerful and highly percussive with the rhythmically clashing swords, jingling bells on the dancers' legs, and strong footwork (ex.1). Other *matachin* music, however, indicates that this particular bass and melody were not universal. Sometimes the music is only distantly related and is virtually a recitation (ex.2) (see also Ward, 1994, for extensive lists of continental and English concordances and for the names and sources of about 300 related tunes); a version given by Pedrell is even more distant (ex.3). Musical distinctions among the different types of danced *matachins* may once have been made for which no documentation is available as yet. Later *matachin* music by, for example, Lully (for *Monsieur de Pourceaugnac*) appears to be unrelated to Arbeau's version. There is no extant music for the American *matachines* from the colonial period, but none of the current tunes appears to be related to the European melody (see Robb).

JULIA SUTTON

Matačić, Lovro von (*b* Sušak, 14 Feb 1899; *d* Zagreb, 4 Jan 1985). Croatian conductor. A member of the Vienna Boys' Choir, he later studied at the Vienna Hochschule für Musik. After a period as chorus master of the Cologne Opera, where he made his conducting début in 1919, and work on the music staff of the Salzburg Festival, he returned to Yugoslavia, appearing at Ljubljana and Zagreb and, from 1938 to 1942, was Generalmusikdirektor of the Belgrade Opera and conductor of the Belgrade PO. From 1942 to 1945 he conducted at the Vienna Staatsoper, and after World War II helped to establish the festivals of Dubrovnik and Split. He was Generalmusikdirektor at Dresden, 1956–8, and, jointly with Konwitschny, at Berlin during the same period. In 1961 he succeeded Solti as Generalmusikdirektor at Frankfurt remaining until 1966 and from 1970 to 1980 was music director of the Zagreb PO and (from 1973 to 1979) of the Monte Carlo Opera Orchestra. He made guest appearances at the Lyric Opera of Chicago (1959), La Scala, Milan and the Vienna Staatsoper and conducted the Frankfurt company at Sadler's Wells (1963) in *Salome* and *Entführung*. Matačić's programmes suggested a preference for large-scale Romantic scores like the symphonies of Bruckner and Tchaikovsky, but his sparkling recording of Lehár's *Die lustige Witwe* with Schwarzkopf also demonstrated an ability to set off sumptuousness with lighter qualities.

BERNARD JACOBSON

Matamoros, Gustavo (*b* Caracas, 8 April 1957). Venezuelan composer and sound installation artist. He experimented with short-wave radios and tape recorders before earning a Bachelor of Music in theory and composition from the University of Miami (1979–83). He has collaborated with several important arists in the United States and Latin America, including Anthony de Mare, Turetzky, Lucier and Eduardo Kusnir, and has participated in seminars with Earle Brown (1987, 1990) and Cage (1991). He has won the Juan Bautista Plaza and Caro de Boesi composition awards in Venezuela and several grants in the United States. His music has been performed in New York, Miami, Caracas, Bourges, Toronto, Chicago, Mexico City, Los Angeles and several other American and European cities. Matamoros is the founding director of the South Florida Composers' Alliance and has run the Subtropics New Music Festival in Florida since 1989.

Matamoros's creative processes are guided by sound properties. Sounds may have diametrically opposed sources, as in *RCA Victor's True Story* (1999) for piano, electronics and a dog. He prefers indeterminate forms in which composed or improvised performances, live electronics, stage action, video, radio broadcasting, collages and sound installations all interact and emulate the fluidity of unfocussed consciousness. These aims are well represented in his *Fishtank* series of 1996 and 1998, which have earned critical and audience praise.

CARMEN HELENA TÉLLEZ

Matanga. A sage (*muni*) in ancient Indian legend. Matanga was the putative author of the *Bṛhaddeśī*, a Sanskrit verse and prose work on music composed, or compiled from earlier sources (including many now lost), probably before 900 CE. Its stated aim is to bring a comprehensive account of *deśī* ('regional' or 'provincial') music into line with the theoretical norms of what was already an established system as seen in Bharata's *Nāṭyaśāstra*. It is thus an interesting early example of musical and musicological documentation.

Nothing is known for certain about the circumstances of its composition. Recent scholarly examination of the text, which has attempted to restore some of the missing passages from quotations in other early Sanskrit treatises, suggests some textual corruption and contamination in the form in which we have it. Thus the Delhi edition and translation, while representing an improvement on the earlier Trivandrum text, must still be read with caution. The work is nonetheless highly important in the history of Indian music-theoretical texts principally because it is the first extant source describing a detailed system of rāga, which it classifies according to scalar and melodic type; some limited information is given about the stylistic and functional aspects of some of these basic melodic structures.

Some sections of the original work are now lost, including parts of the chapter on compositional forms and the information on musical instruments. The *Bṛhaddeśī*, however, preserves a considerable number of important notated musical examples (Widdess, 1995, 125–42) and the first detailed listing and typology of secular song forms (Rowell, 1992). A volume of new critical essays on the text and its contents was due to be published in Delhi, at the beginning of the 21st century.

See also INDIA, §II, 2(i)(a).

Matej, Daniel (*b* Bratislava, 6 March 1963). Slovak composer. From 1983 to 1992 he studied theory and composition (with Parík) at the Bratislava College of Performing Arts. Additionally, he studied with Jolas at the Paris Conservatoire (1988–9) and with Andriessen at the Royal Conservatory, The Hague (1990–91). In 1995 he was awarded a one-year Deutscher Akademischer Austauschdienst residency in Berlin, and after his return to Bratislava was appointed lecturer in 20th-century music history at the College of Performing Arts.

Matej's composition is inseparably linked with his activities as a performer and music administrator. In 1987 he founded the contemporary music ensemble Veni, a group specializing in the performance of postmodernist composition. Most of his works have arisen from his close cooperation with Veni and with groups such as Vapori del cuore, Appendix Consort and the Hilliard Ensemble. At the start of his career he shared the ideals of leading postmodernists, but has since rejected defined traditions in favour of more synthetic forms that are unidentifiable within contemporary trends. His search for individual expression is inspired by singular figures of 20th-century music such as Satie, Ives and Cage.

Many of Matej's works start from a fixed idea such as a Baroque motif, rock riff, or gospel phrase. This becomes transformed or recycled as a new shape, often through variation (several works exist in several different versions, while others are completed only in the course of performance). Novelty is a condition he applies to all parameters of his composition, including articulation and temporal structure.

VLADIMÍR GODÁR

Matěj, Josef (*b* Brušperk, Moravia, 19 Feb 1922; *d* Frýdlant nad Ostravicí, Moravia, 28 March 1992). Czech composer. His first studies were with František Míťa Hradil at the Masaryk Institute of Music and Singing in Ostrava. He studied composition (with Hlobil) and organ at the Prague Conservatory (1942–7) and then spent four years at the Academy of Musical Arts with Řídký and Janeček. In 1952–4 he was lecturer in music theory and composition teacher in the drama faculty of the academy; thereafter he gave all of his attention to composition. His music draws on Moravian folk melody. The orchestral works demonstrate a marked predilection for wind instruments, particularly for the brass.

Matelart [Martellato, Matalarte, Matelarte, Matelartus, Mathalart, Mattlart], **Ioanne** [Giovanni, Ioannes, Johannes] (*b* before 1538; *d* Rome, 7 June 1607). Flemish composer. He may have come from the province of West Flanders, where his name is frequently found. From about 1558 to 1562 he is likely to have been in Italy, and about 1565 he was appointed *maestro di cappella* at the Roman church of S Lorenzo in Damaso (the note in the Rome archives of his death records his service there as over 40 years). His book of lute music (in Italian tablature) contains arrangements of music by Francesco Canova da Milano and Morales as well as 15 fantasias by Matelart himself. The book of *Responsoria* includes 21 of his own chants and music by Clemens non Papa, Festa, Lassus and Palestrina. To account for the early and late dates of his published works it has been suggested that there were two composers of his name, but since in his preface to the *Responsoria* Matelart wrote that he was then quite old, these theories can be discounted.

GODELIEVE SPIESSENS

Matern, [Mattern], **A.W.F.** (*d* Brunswick, 1789). German cellist and composer. A self-taught cellist, he was a chamber musician at the ducal court of Brunswick and made many concert tours throughout Germany. He retired from solo performing in 1770 because of age, but continued playing in the orchestra at Brunswick until 1784. Schilling called him one of the best cellists of the 18th century. Matern composed several concertos and solos for the cello, now lost; his only surviving symphonies are two sinfonie concertanti, one with solo violin and cello, the other with solo flute, violin and cello, presented to the Musikgesellschaft at Wolfenbüttel (*D-W*) in 1787. According to Gerber he had two sons who studied with him.

The cellist Ludwig Anton Wilhelm Mattern (*b* Brunswick, 27 Jan 1756; *d* Brunswick, 29 Aug 1802), son of the court string player Johann Gottlob Matern(e), was a chamber musician at Brunswick by 1775, and 'an excellent accompanist of recitative' (*AMZ*, v/3, 13 Oct 1802). He is not known to have been related to Matern.

ANDREW D. McCREDIE

Materna(-Friedrich), Amalie (*b* St Georgen, 10 July 1844; *d* Vienna, 18 Jan 1918). Austrian soprano. She made her début in 1865 at Graz and then appeared in operetta at

the Karlstheater, Vienna. In 1869 she first sang at the Vienna Court Opera, as Selika in *L'africaine*, and was engaged there for 25 years. She sang Amneris in the first Vienna performance of *Aida* (29 April 1874) and the title role at the première of Goldmark's *Die Königin von Saba* (10 March 1875). Her voice grew to be immensely powerful, but never lost its youthful bright timbre and was ideal for the role of Brünnhilde, which she sang in the first complete *Ring* cycle at Bayreuth (1876), in the first Vienna performances of *Die Walküre* (1877) and *Siegfried* (1878), and in the first Berlin *Ring* at the Victoria Theatre (1881). In 1882 she sang Kundry at Bayreuth in the first performance of *Parsifal*, repeating the role there at every festival until 1891. After a concert tour of the USA with Winkelmann and Scaria, she made her début at the Metropolitan, New York, on 5 January 1885 as Elisabeth in *Tannhäuser*, and also sang Valentine in *Les Huguenots*, Rachel in *La juive* and Brünnhilde in *Die Walküre*. Her final performance in Vienna was as Elisabeth on 31 December 1894. After her retirement she taught in Vienna, where she made one last public appearance in 1913, singing Kundry at a concert commemorating the centenary of Wagner's birth.

Mather, Bruce (*b* Toronto, 9 May 1939). Canadian composer and pianist. He studied the piano with Alberto Guerrero and composition with Oskar Morawetz, Godfrey Ridout and John Weinzweig. During the summers of 1957 and 1958 he attended the Aspen Festival, where his *Venice* (1957) and Piano Concerto (1958) were premiered. At the Festival he studied the piano with Alexander Uninsky and also met Milhaud. After taking the BMus at the University of Toronto (1959) he was awarded a grant from the Canada Council to study at the Paris Conservatoire (1959–62). His teachers there included Milhaud and Messiaen. In 1964 he completed the MA at Stanford University, studying with Leland Smith and Roy Harris. He joined the McGill University faculty in 1966 as a teacher of composition, analysis and harmony. In 1967 he was awarded the DMus from the University of Toronto.

An admirer of French poetry, Mather shows a great sensitivity in his songs to the nuances of the French language and the inner meanings of the poems. *Musigny* (1980), a work for orchestra, displays an interest in complex orchestral textures. In the piece individual parts repeat at unique time-intervals determined by the length of the characteristic phrase associated with each instrument. Relationships among the parts, therefore, are constantly changing. Mather has compared the aural effect of this type of textural manipulation to the visual effect of a blinding Canadian snowstorm. In 1974 Mather became acquainted with the Russian microtonal composer Ivan Wyschnegradsky and subsequently wrote a number of works involving microtonal tuning. These include *Poème du délire* (1982), *Vouvray* (1986), *Saumur* (1990) and *Yquem* (1991).

As a pianist Mather has performed many premières of contemporary works, including piano duos which he plays with his wife Pierette LePage. In 1981 he became the director of the McGill Contemporary Music Ensemble. He is also active with Ten Centuries Concerts (Toronto) and the Société de Musique Contemporaine du Québec (Montreal). A four-record set of his compositions was released by RCI in the *Anthology of Canadian Music* series in 1981.

ELAINE KEILLOR

Matheus de Brixia [Betini, Matteo; Matteo da Brescia] (*d* Vicenza, 1419). Italian composer. He is assumed to be the canon of Vicenza whose will was made on 5 April 1419 and proved on 3 October. This document yields his paternal name: 'Dominus presbiter Matheus quondam ser Betini de Brixia canonicus Vincentine'. No document is now available to support the older claim that he was already a canon in 1412, though long service is likely. He bequeathed a '*Musica*' (probably a copy of Boethius's treatise) and a 'liber de cantu' (probably a book of

polyphony) to the Vicenza chapter, and endowed a position for a singer-priest 'because it is hard to find good singers'. His sole surviving composition is a four-part motet, *Jesus postquam monstraverat*, in *I-Bc* Q15. It is in the post-Ciconia equal-discantus style, with the same octosyllabic text in hymn metre, paraphrasing the Transfiguration story, in both upper parts.

He is not to be confused with his fellow citizen, PREPOSITUS BRIXIENSIS.

MARGARET BENT

Matheus de Perusio. *See* MATTEO DA PERUGIA.

Matheus de Sancto Johanne [Mahuetus, Mayshuet (de Joan)] (*d* by 10 June 1391). French composer. He came from the diocese of Noyon (not Thérouanne as once thought), and is one of the best-documented examples of a musician whose career straddled the English and French courts in the mid-14th century. A native of France, by 1366 he was in England as a clerk in the service of Edward III's son-in-law, Enguerran de Coucy, Earl of Bedford and Count of Soissons. He also appears to have worked in the chapel of Philippa of Hainault, Queen of England, whose employ he left in May 1368 to return to France. In November 1378 he was described as a clerk in the chapel of Louis I, Duke of Anjou; by then he had also already served Robert of Geneva, who was crowned Pope Clement VII in 1378, and for whom (as pope) Matheus had written the Latin ballade *Inclite flos orti Gebenensis*. Matheus is recorded as a chaplain in the papal chapel at Avignon from 1382 to 1387. He held preferments at the collegiate churches of St Jean, Laon, and St Piat, Seclin, and in parish churches at Beaurevoir, Routier and Saint Quentin. Other individuals formerly, but implausibly, identified with Matheus include 'Mathieu de Monastère Saint-Jean', an Italian Cistercian, and a Mathieu once thought to be a singer in the service of Louis I, Duke of Orléans, but in fact employed by his son Charles in 1455.

Three ballades, two rondeaux and a motet by Matheus survive, and he may also be the composer of an unattributed ballade on Louis I of Anjou, *Los prijs honeur*. He is one of a group of composers in the generation after Machaut, close to or within the circles of the Avignon papacy, who have been credited with the 'Ars Subtilior'. Matheus's three-voice songs (in *F-CH* 564 and *I-MOe* α.M.5.24) display much of the notational and rhythmic complexity found in the work of his contemporary Solage; his four-voice songs are simpler in style though not necessarily much earlier. The rondeau *Je chante* is isorhythmic, as is the five-voice motet *Are post libamina/Nunc surgunt*, whose text relates how 'the active, distinguished Frenchman composed the song on French melodies but after he had revised it with the Latin language it more often became sweet to the English, replacing *Deo gratias*'. Closely related to the motet *Post missarum solennia/Post misse modulamina*, this work was still being copied in England in the 1430s and may be the most telling legacy of Matheus's early career at the English court.

ANDREW WATHEY

Mathew, Richard (*d* ?London, ?*c*1660). English amateur lutenist and author. The British Library holds the one surviving copy of his book *The Lutes Apology for her Excellency* (London, 1652), the only tablature publication for solo lute between Robert Dowland's *Varietie of Lute Lessons* (London, 1610) and Mace's *Musick's Monument* (Cambridge, 1676). It contains 32 pieces for 12-course lute in what Mace called 'the Flat French Tuning'. Mathew prefaced the book with addresses to the 'Masters in Musick' and 'The Industrious Practitioner', stating that he had served 'two apprenticeships unto my lute', meaning he first learnt to play in the old 'Renaissance' tuning and had then taught himself on the French lute. His book consists of arrangements of three types of music: popular tunes, many borrowed from Playford's prints; English masque or court music by Charles Coleman, William Lawes and Simon Ives (i); and pieces that had circulated as solo lute music before 1630, including works by Robert Johnson (ii), Charles de Lespine (*fl* 1610–27), ?Jacques Edinthon and Charles Bocquet. Mathew stated that he had found 'nothing in print to the French Lute', suggesting that he did not have access to the more fashionable music of Mesangeau, Dufaut or any of the Gaultiers. His arrangements are often so simplified as to make them unsatisfactory except for beginners' use.

Richard Mathew the amateur lutenist is almost certainly the author of a quack medical pamphlet *The Unlearned Alchymist* (London, 1659), sold by Chapman, the publisher of *The Lutes Apology*. If this is so, Mathew lived near the Tower of London and died in 1660. The family connections between Chapman and John Playford (Playford married Chapman's step-daughter) may account for the musical borrowings of Mathew from Playford, as Chapman would have been in a good position to draw attention to Playford's first books and their success. The single surviving uncut copy of Mathew's book suggests

that *The Lutes Apology* was not a success; this may well have discouraged Playford himself from producing a book of tablature for solo lute.

MATTHEW SPRING

Mathews, Max V(ernon) (*b* Columbus, NE, 1926). American engineer, inventor and composer. One of the pioneers of computer music, he was a member of the Bell Telephone Laboratories group that included John Pierce and Newman Guttman. He studied electrical engineering at the California Institute of Technology (BS 1950) and MIT (MS 1952, ScD 1954) before working in acoustic research at Bell Labs (1955–87). In 1987 he was appointed to a professorship at Stanford University's Center for Computer Research in Music and Acoustics (CCRMA). His many honours include the SEAMUS Award from the Society for Electro-Acoustic Music (1989) and the French Legion of Honour (1994).

Mathews' best-known composition, his rendition of *Bicycle Built for Two* using instrumental and vocal sounds synthesized by the computer (1961), became a cultural icon when it was used as the basis of the final scene of Stanley Kubrick's film *2001: a Space Odyssey* (1968). His other creations include computer composition languages (Music I–V, GROOVE: Generated Real-Time Output Operations on Voltage-Controlled Equipment), musical instruments (radio drum, radio baton) and a performance language (Conductor Program). His radio instruments, played like the theremin, use low frequency radio signals that enable the computer to track the movement of drum sticks or conductor's batons in three-dimensional space. In early 1960 he and Guttman assisted Varèse in the revision of the tape portion of *Déserts* at the Columbia-Princeton Electronic Music Center. He has also worked with James Tenney and Jean-Claude Risset, and influenced younger composers such as David Jaffe, Andrew Schloss and Ami Radunskaya, all of whom have composed for radio instruments.

OLIVIA MATTIS

Mathías, Juan (*b* Zaapache [now San Bártolo Coyotepec], Oaxaca, 1618; *d* Oaxaca, *c*1667). Mexican composer. A Zapotec, he was the first indigenous musician to reach the position of *maestro de capilla*. He joined the *capilla* of Oaxaca Cathedral at an early age under the *maestro* Juan de Ribera. A remarkable singer and organist, he was adept at many instruments, including the clavichord, lute, viola and flute. In 1638 he was scheduled to travel to Spain to be shown off as a curiosity at court, but when his ship failed to appear in Veracruz he returned to Oaxaca. On Ribera's death in 1655, and after competing against renowned musicians from Puebla and Mexico City, Mathías was appointed *maestro de capilla*, a position he held until his death. His works include an eight-voice villancico, *Quien sale aqueste dia disfraçado* (ed. R. Stevenson, *Inter-American Music Review*, vii/1 (1985), 69–73), and a *Stabat mater* (excerpt in R. Stevenson: *Music in Mexico: a Historical Survey*, New York, 1952, p.136) which is still performed in Oaxaca on Good Friday. His compositions reflect a preference for a homophonic style with instrumental accompaniment rather than the contrapuntal style popular in his day. He should not be confused with Juan Mathías de los Reyes y Mapamundi, who was *maestro de capilla* at Oaxaca more than a century later. Many works by Mathías de los Reyes have been misattributed to the Zapotec composer.

MARK BRILL

Mathias, William (James) (*b* Whitland, Carmarthenshire, 1 Nov 1934; *d* Menai Bridge, Anglesey, 29 July 1992). Welsh composer and pianist. He studied at the University College of Wales, Aberystwyth (BMus 1956) with Ian Parrott, among others, and at the RAM (scholarship winner, 1956), where his teachers included Lennox Berkeley (composition) and Katin (piano). From 1959 to 1968 he was a lecturer at the University College of North Wales, Bangor. He was elected a Fellow of the RAM in 1965 and the following year received the DMus from the University of Wales. Appointed to a senior lectureship at Edinburgh University in 1968, he returned to Wales on the death of his father in 1969. The following year he was appointed to a professorship at Bangor, a post he held until his retirement in 1987. He founded the North Wales Music Festival at St Asaph Cathedral in 1972 and continued to serve as its director until his death. His honours include the Bax Society composition prize (1968), appointment as CBE (1985) and an honorary doctorate from Westminster Choir College (1987). From 1990 to 1991 he served as president of the ISM.

Mathias is regarded as one of the most significant Welsh composers of the 20th century and one of the few to establish an international reputation. He enjoyed early success with instrumental and orchestral music, but eventually composed in virtually all musical genres. His later popularity in the fields of choral and particularly church music gave him a high profile. He often stressed that he did not regard his church music as peripheral in any way to his main output, observing no distinction between the sacred and the secular and viewing his vocation very much in line with the medieval Welsh 'praise' poets. At the outset he felt the need to establish a fully professional compositional technique in order to advance from the predominantly amateur vocal culture which surrounded him in rural south Wales, and which had dominated Welsh musical life for generations. The

result was a wide-ranging and eclectic style which nevertheless exhibited its own distinctive voice.

An early work such as the *Divertimento* for strings (1958) reveals Mathias's fondness for syncopated jazz-inflected rhythms, tonally-based but modally-coloured harmonies and taut neo-classical structures articulated by contrapuntally-developed lyrical lines. As these elements can be traced to much of the juvenilia he rigorously withdrew (but which are evident in the Flute Sonatina of 1953, published in 1986), they clearly represent his instinctive musical impulses. A brief period of serial experimentation while a student in London convinced him that he should remain true to his instincts. Success quickly followed with a series of major commissions. With the chamber and orchestral works of the early 1960s he continued to develop his personal idiom. These works also show the influences of Bartók and Hindemith on the one hand, and Walton and Tippett on the other, particularly in rhythmic and harmonic domains. Mathias was never concerned with originality for its own sake and was happy to view his eclecticism as part of a search for a modern lingua franca which could communicate readily. Choral commissions for church performance at this time, such as the colourful masque *St Teilo* (1962), confirmed the validity of his idiom for such a purpose. The culmination of this early style in orchestral terms came in the vibrant First Symphony (1966), which suggests a Celtic kinship with the sound world of Tippett's *The Midsummer Marriage*.

An important feature of Mathias's early music is a sense of ritual, manifested in musical terms as a tendency to unfold an argument through sequential figuration and repetition within a developmental framework. By the late 1960s he radically transformed the surface of his music by highlighting sequential repetition without the presence of transitional material. Such a move, precedented in works by Stravinsky and Tippett, is evident in *Invocations* for organ (1967) which is also the first work in which Messiaen's influence becomes apparent, both harmonically and colouristically. The most impressive of Mathias's works in this idiom is the First String Quartet (1967), in which the music possesses a new astringency of tone within an integrated single movement. Characteristically, however, Mathias's next concern was to integrate this approach within a more traditional framework. Diverse elements rub shoulders bracingly in the jazzy Third Piano Concerto (1968), featuring a virtuoso solo part that Mathias performed at the première himself, while the Harp Concerto (1970) for Osian Ellis achieves a richer blend alongside an articulation of the ritualistic archetype from a specifically Welsh perspective. The Harpsichord Concerto (1971) sharpens the neo-classical framework of Mathias's style together with melodic, intervallic and rhythmic elements which introduce a neo-medieval flavour into the language.

During the 1970s Mathias composed a series of single-movement orchestral scores which he described as 'landscapes of the mind', each exploring a specific theme suggested by the respective titles: *Laudi* (1973), *Vistas* (1975), *Helios* (1977) and *Requiescat* (1977). The cantata *This Worlde's Joie* (1974) crystallized his popular vocal and choral style on a large scale; its dramatic character led to his only full-scale opera *The Servants*, a collaboration with Iris Murdoch. Set in a remote and claustrophobic country mansion, notionally in a snow-bound eastern Europe at the turn of the last century, the scenario blends philosophy with melodrama in a typical Murdochian brew combining the themes of freedom and servitude. Mathias's score achieves a glowering immediacy which brings the varied characters vividly to life against a striking choral backdrop.

Mathias's next large choral work *Lux aeterna* (1982) is an imaginative requiem with interpolations from St John of the Cross. Elements of this work resound through the Second Symphony 'Summer Music' (a meditation on the Celtic concept of time) and the Organ Concerto (a *via crucis* based on the stations of the cross) for Gilian Weir which quickly followed. In a sequence of late chamber works (Second and Third Quartets, Violin Sonata) Mathias introduced a darker, introspective element in which the influence of Shostakovich is apparent. This tendency reached its culmination in the powerful Third Symphony (1991). At the same time much of his later music is suffused with light. The summation of his output in the choral sphere *World's Fire* (1989), on poems of Gerard Manley Hopkins, inhabits both extremes.

Illness in 1990 curtailed Mathias's career and his last major works have a valedictory air, most notable in the Violin Concerto for Pauk (1991) and the orchestral *In Arcadia* (1991), based on a carol written during his student days. His reputation as a composer of church music received both acknowledgement and stimulus when he was invited to compose an anthem for the wedding of the Prince of Wales and Lady Diana Spencer in 1981. The popular success of the setting of Psalm lxvii led to numerous commissions from churches in America, and regular visits to the USA for festivals and performances followed. Remaining unfinished, his final project was a Fourth Symphony for the Santa Fe SO; his last completed work was a setting of *Ad majorem Dei gloriam*.

Acutely conscious of the way in which the general musical climate was becoming more pluralistic during the last decade of his life, Mathias felt that his own work contributed to this broader view. His contribution to a Welsh context lay in his ability to channel wider musical trends into an accessible and communicative language without losing personal identity.

WORKS

DRAMATIC

The Servants (op, I. Murdoch), Cardiff, Sept 1980; music for the theatre, cinema and TV

ORCHESTRAL

Pf Conc. no.1, op.2, 1955; Berceuse, op.4, 1956 [withdrawn]; Divertimento, op.7, str, 1958; Music, op.14, str, 1960; Pf Conc. no.2, op.13, 1960; Dance Ov., op.16, 1961; Invocation and Dance, op.17, 1961; Serenade, op.18, small orch, 1961; Conc. for Orch, op.27, 1964; Prelude, Aria and Finale, op.25, str, 1964; Sinfonietta, op.34, 1966; Sym. no.1, op.31, 1966; Litanies, op.37, 1967; Pf Conc. no.3, op.40, 1968; Festival Ov., op.42, 1969; Hp Conc., op.50, 1970; Conc., op.56, hpd, str, perc, 1971; Holiday Ov., op.57, 1971; Intrada, op.54, 2 ob, 2 hn, str, 1971; Celtic Dances, op.60, 1972; Laudi, op.62, 1973; Cl Conc., op.57, 1975; Vistas, op.69, 1975; Dance Variations, op.72, 1976; Melos, op.73, fl, hp, str, perc, 1976; Helios, op.76, 1977; Requiescat, op.79, 1977; Vivat regina, op.75, brass, 1977; Investiture Anniversary Fanfare, brass, 1979; Reflections on a Theme by Tomkins, op.86, fl, ob, org, hpd, str, 1981; Sym. no.2 'Summer Music', op.90, 1983; Hn Conc., op.93, 1984; Org Conc., op.91, 1984; Anniversary Dances, op.95, 1985; Carnival of Wales, 1987; Ob Conc., 1990; Threnos, str, 1990; In Arcadia, 1991; Sym. no.3, 1991; Vn Conc., 1991; Fl Conc., 1992

CHORAL

With orch: Cantata in Praise of Love (Fletcher, Greene, W. Shakespeare, Skelton, Spenser), op.11, S, A, T, chorus, orch, 1959 [withdrawn]; St Teilo (dramatic cant., G. James), op.21, nar, A, T, chorus, boys' chorus, org, chbr orch, 1962; Veni creator spiritus, op.47, spkr, chorus, boys' chorus, orch, 1969 [withdrawn]; This Worlde's Joie (medieval), op.67, S, T, Bar, chorus, boys' chorus, org, orch, 1974; Te Deum, op.85, S, A, T, chorus, orch, 1981; Lux aeterna (liturgical texts, St John of the Cross, trans. R. Campbell), op.88, S, Mez, A, boys' chorus, chorus, org, orch, 1982; Salvator mundi (medieval), op.89, female vv, pf duet, perc, str, 1982; Let us now praise famous men, op.91/2, chorus, orch/org, 1983; Jonah (musical morality play, C. Causley), T, B, boys' chorus, chorus, org, orch, 1988; World's Fire (G.M. Hopkins), S, B, chorus, orch, 1989

With kbd: 3 Partsongs (E. Wyn, anon.), op.12, male vv, pf, 1959; All Thy Works Shall Praise Thee (Ps cxlv), op.17b, chorus, org, 1961; Festival Te Deum, op.28, chorus, org, 1964; Make a Joyful Noise (Ps c), op.26/2, chorus, org, 1964; Wassail Carol (16th century), op.26/1, chorus, org, 1964; O Sing unto the Lord (Pss xcvi, xcviii), op.29, chorus, org, 1965; Culhwch ac Olwen [Culhwch and Olwen] (G. Thomas), op.32, nar, chorus, pf duet, perc, 1966; 3 Medieval Lyrics (trans. Waddell), op.33, chorus, 2 tpt, perc, org, 1966; Communion Service (Eng./Welsh), C, op.36/1, unison vv, org, 1967; An Admonition to Rulers (Apocrypha), op.43, chorus, org, 1969; Ave rex, op.45, carol sequence, chorus, org/orch, 1969; Ps cl, op.44/1, chorus org/orch, 1969; Bless the Lord, O my Soul (Ps civ), op.51, chorus, org, 1970; Gloria, op.52, male vv, org, 1970; Mag and Nunc 'Jesus Service', op.53, chorus, org, 1970; A Babe is Born (15th century), op.53, chorus, org, 1971; Alleluya psallat, op.58, chorus, org, 1972; Ceremony after a Fire Raid (D. Thomas), op.63, chorus, perc, pf, 1973; Missa brevis, op.64, chorus, org, 1973; Communion Service, op.71, unison vv, org, opt. chorus, 1976; Arise, shine, for your light has come, op.77/2, chorus, org, 1978; Nativity Carol, op.77/3, chorus, org, 1978; 8 Shakespeare Songs, op.80, chorus, pf, 1978; Let the people praise thee, O God (Royal Wedding Anthem) (Ps lxvii), op.87, chorus, org, 1981; Praise Ye the Lord, op.87/2, chorus, org, 1981; All wisdom is from the Lord, op.88/3, chorus, org, 1982; Except the Lord Build the House, op.89/2, chorus, brass, org, perc, 1982; Hear, O Thou Shepherd of Israel, op.89/4, chorus, org, 1982; Alleluia! Christ is risen! (C. Wordsworth), op.91/3, chorus, brass, org, 1983; Angelus, op.90/5, female vv, pf, 1983; Jubilate Deo, op.90/2, chorus, org, 1983; Missa aedis Christi, op.92, chorus, org, 1983; O how amiable (Ps lxxxiv), op.90/3, chorus, org, 1983; Tantum ergo, op.90/4, chorus, org, 1983; The Echoing Green (W. Blake), op.95/2, female vv, pf, 1985; Gogoneddawg Arglwydd (medieval), op.95/5, chorus, brass, org, 1985; Let All the World in Every Corner Sing, op.96/2, chorus, 3 tpt, 3 trbn, perc, org, 1985; O aula nobilis, op.95/4, female vv, brass, pf, perc, 1985; O Clap your Hands, op.96/3, chorus, org, 1985; Veni sancte spiritus, op.96, chorus, 2 tpt, perc, org, 1985; I will lift up mine eyes unto the Lord, op.99/2, chorus, org, 1986; Rejoice in the Lord (Ps xxxiii), op.99/1, chorus, org, 1986; As Truly as God is our Father (Julian of Norwich), chorus, org, 1987; Cantate domino, chorus, org, 1987; O Lord our Lord, chorus, brass, perc, org, 1987; Riddles (medieval), 6 solo vv, chorus, bells, pf, 1987; Thus saith God the Lord (An Orkney Anthem), chorus, org, 1987; I will Celebrate, chorus, org, 1988; Learsongs (E. Lear), female vv, pf duet/(cl, tpt, db, pf, perc), 1988; Sweet with the Song (W. Balet), chorus, org, 1988; Y Nefoedd sydd yn datga Gogoniant Duw [The Heavens Declare the Glory of God] (Ps xix), chorus, org, 1988; Bell Carol (Mathias), chorus, 2 tpt, 3 trbn, perc, org, 1989; The Doctrine of Wisdom, chorus, org, 1989; Praise is due to you, O God in Zion, chorus, org/(brass, perc), 1989; Yr Arglwydd yw fy mugail [The Lord is My Shepherd] (Ps xxiii) (male vv, pf)/(chorus, org), 1989; In the Time Appointed, chorus, org, 1990; Lord, Thou hast been our dwelling place in all generations, chorus, org, 1990; Mag and Nunc 'St David's Service', chorus, org, 1991; Ad majorem Dei gloriam, chorus, org, 1992; Ave verum corpus, chorus, org, 1992; Come, Holy Ghost, chorus, 3 tpt, timp, org, 1992; Gweddi'r Arglwydd [The Lord's Prayer], male vv/chorus, org, 1992

A cappella: In excelsis gloria, 1954, rev. 1991; A Refusal to Mourn the Death, by Fire, of a Child in London (D. Thomas), op.41, 1968; 4 Welsh Folksongs, op.39, 1968; Lift up your Heads, op.44/2, 1969; O salutaris hostia, op.48, male vv, 1969; The Law of the Lord (Ps xix), op.61/2, 1972; Carmen paschale, 1976; A Royal Garland, op.77, 1977; Rex gloriae, 4 motets, op.83, 1980; A Grace, op.89/3, 1982; Salve regina, op.96/5, male vv, 1986; Hodie, Christus natus est, 1990; Alleluia, 1991

Other choral works: The Nightingale (G. Thomas), chorus, insts, 1968; 4 Songs for Children (G. Thomas), unison vv, insts, 1971; A May Magnificat (G.M. Hopkins), op.79/2, chorus, perc, 1978; hymn tunes, arrs.

OTHER VOCAL

7 Poems (R.S. Thomas), op.6, T, hp, chbr orch, 1957; 4 Welsh Folksongs (Ton y Melinydd, Y Gwydd, Suo-gan, Dafydd y Garreg Wen), 1v, pf, 1962; Pan Oeddwn Fachgen (A. Llywelyn-Williams), T, pf, 1970; A Vision of Time and Eternity (H. Vaughan), op.61, A, pf, 1972; Elegy for a Prince (G. ab yr Ynad coch, trans. A. Conran), op.59, Bar, orch, 1972; The Fields of Praise (D. Thomas), op.74, T, pf, 1976; Songs of William Blake, op.82, Mez, cel, hp, pf, str, 1979

CHAMBER AND SOLO INSTRUMENTAL

Sonatina, op.98, fl, pf, 1953, rev. 1986; Divertimento, op.1, vn, va, 1954; Sonatina, op.3, cl, pf, 1956; Sextet, op.8, cl, pf qnt, 1958 [withdrawn]; Improvisations, op.10, hp, 1958; Sonata, op.15, vn, pf, 1961; Wind Qnt, op.22, 1963; Divertimento, op.24, fl, ob, pf, 1964; Pf Trio, op.30, 1965; Musette and Dance, 2 vn, 1966; Str Qt no.1, 1967; Capriccio, op.46/2, fl, pf, 1969; Concertino, op.65, rec/fl, ob, bn, hpd, 1973; Sonata, op.66, hp, 1974, rev. 1992; Zodiac Trio, op.70, fl, va, hp, 1975; Ceremonial Fanfare, 2 tpt, 1979; Str Qt no.2, op.84, 1981; Sonata no.2, op.94, vn, pf, 1984; Str Qt no.3, op.97, 1986; Santa Fe Suite, hp, 1988; Soundings, brass qnt, 1988; Summer Dances, brass qnt, 1990

KEYBOARD

Suite parisienne, 2 pf, 1953, rev. 1992; Little Suite, pf, 1955; rev. 1987; Toccata alla danza, pf, 1961; Partita, op.19, org, 1962; Postlude, org, 1962; Variations on a Hymn Tune, op.20, org, 1962; Sonata no.1, op.23, pf, 1963; Processional, org, 1964; Chorale, org, 1966; Invocations, op.35, org, 1967; Toccata giocosa, op.36/2, org, 1967; Sonata no.2, op.46, pf, 1969; Jubilate, op.67/2, org, 1974; Canzonetta, op.78/2, org, 1978; Fantasy, op.78, org, 1978; Antiphonies, op.88/2, org, 1982; Berceuse, op.95/3, org, 1985; Recessional, op.96/4, org, 1986; Fanfare, org, 1987; Carillon, org, 1989; Fermata, org, 1989

Mathias Fiamengo. *See* WERRECORE, MATHIAS HERMANN.

Mathiesen, Thomas J(ames) (*b* Roslyn Heights, NY, 30 April 1947). American musicologist. He earned the BA in 1968 from Willamette University, Oregon and completed his graduate studies at the University of Southern California, where his professors included Pierre Tagmann, Halsey Stevens, Ingolf Dahl and Arthur Ness (MM 1970; DMA 1971). He taught at the University of Southern

California (1971–72), then joined the faculty of Brigham Young University, where he was professor of music (1972–88) and associate dean (1986–8). He was made professor of music at Indiana University in 1988 and named Distinguished Professor of Music in 1996.

Mathiesen's academic interests include textual criticism, editorial technique, bibliography and codicology. He has done much work on the music and music theory of ancient Greece and other ancient cultures, and he has written on the history of music theory, particularly Latin theory of the Middle Ages and Renaissance. Mathiesen is project director of Thesaurus musicarum latinarum, a full-text database of Latin music theory from the Augustine era up to the 16th century. In 1982 he founded Greek and Latin Music Theory, a series of critical editions of ancient texts with translations and annotations.

PAULA MORGAN

Mathieson, Muir (*b* Stirling, 24 Jan 1911; *d* Oxford, 2 Aug 1975). Scottish conductor. He studied conducting with Sargent at the RCM and made his début conducting the Royal Choral Society in Coleridge-Taylor's *Hiawatha* in 1932. He became musical director of London Films in 1934. Thenceforward his career was mainly identified with the cinema, and, more than anyone else, he was responsible for the British practice of engaging independent composers for films, instead of maintaining (as did Hollywood) a localized core of 'film composers'. His first major capture was Bliss (*Things to Come*, 1935), to be followed by many others. He persuaded Vaughan Williams, at the age of 69, to write his first film score (*Forty-Ninth Parallel*, 1941), while from Walton, who had already begun to write for films, he commissioned such notable scores as those for *The First of the Few* (1942) and *Henry V* (1944). In more than 500 British films Mathieson's role was that of music director; but he acted as film director for *Instruments of the Orchestra* (1946; Sargent was the conductor and commentator for Britten's original score, which became known as *The Young Person's Guide to the Orchestra*), and also for *Steps of the Ballet* (1948; original score by Arthur Benjamin). After ceasing to be salaried, Mathieson worked as a freelance music director; he commissioned the score of *Interpol* (1956) from the 19-year-old Richard Rodney Bennett. During the war he conducted some performances for Sadler's Wells Opera and was also active in broadcast concerts and as conductor-commentator in children's concerts. He was awarded the OBE in 1957.

ARTHUR JACOBS

Mathieu. French family of musicians.

(1) Michel Mathieu (*b* Paris, 28 Oct 1689; *d* Versailles, 7 or 9 April 1768). Composer, violinist, viola player and possibly oboist. A musician of some reputation, he is first known as a violinist or viola player working in the Opéra orchestra in 1718. He joined the Musiciens du Roi in 1728 and remained in the service of French royalty throughout his professional career. At an unknown date he apparently became music master of St Louis Cathedral at Versailles. Divertissements by him were performed at Versailles in 1739. In 1743 he published numerous compositions, both instrumental and vocal. The 1761 merger of the Musique de la Chapelle and the Musique de la Chambre seemingly prompted his retirement. His wife Jacqueline-Francoise Barbier (1708–73) was a renowned soprano soloist at the Versailles court.

WORKS

Divertissement sur la paix (?ballet), 1737
4 cantatilles françoises avec simphonies (Paris, 1743)
Junon et la douce vengeance (?cant.) (Paris, 1743), lost
Concs., trios, sonatas, other inst. pieces (Paris, 1743), lost
3 motets, inst pieces, 2 divertissements, cited by La Borde

(2) Julien-Amable Mathieu (*b* Versailles, 31 Jan 1734; *d* Paris, 6 or 9 Sept 1811). Composer and violinist, son of (1) Michel Mathieu. He probably first studied the violin with his father. At the age of 14 he received the reversion of a position in the '24 Violons du Roi'. By 1754 he was giving concerts at Versailles and in 1756 he published several instrumental compositions. He was given a pension when the Musique de la Chambre disbanded in 1761. Although he continued in the early 1760s to write collections of instrumental chamber music (dedicated to his patron, Mme Victoire, and the dauphine, Marie-Josèphé de Saxe), his apparent goal of becoming music master of the royal chapel probably inspired his motets for large chorus that were performed at the Concert Spirituel. This goal was attained in 1765; he held the

appointment until the end of Louis XVI's reign in 1792. Numerous motets appeared after 1770, including a *Te Deum* for the birth of the dauphin in 1781. The high esteem with which he was regarded is demonstrated by the numerous honours and monetary gifts which the royal family awarded him.

Mathieu's best-known compositions are his sonatas and duets for violins (1756–64), all of which have three movements. His earliest works are highly virtuoso pieces, but the later ones are simpler. Many of his compositions suggest a knowledge of both Tartini and the Mannheim school.

WORKS

Inst: 6 sonates, vn, bc, op.1 (Paris, 1756); 6 trios, 2 vn, bc, op.2 (Paris, 1756); 6 sonates, 2 vn, op.3 (Paris, 1764); 6 sonates, vn, bc, op.4 (Paris, 1764); 3 duos à violon seul ou exercice pour la double corde, vn (Paris, *c*1800); 6 duos à violon seul ou études pour la double corde, vn (Paris, *c*1800); 6 sonates ... faciles et a l'usage des jeunes élèves, 2 vn (Paris, n.d.); trios (n.d.), qts (?pubd), syms., concs., cited in La Borde
Choral motets: Notus in Judea, 1762; Quemadmodum, 1763; Qui confidunt, 1773; De profundis, 1774; Te Deum, 1781; 45 others cited in La Borde
Mass, acc. orch, cited in La Borde

Doubtful: 12 petits airs, arr. 2 fl (Paris, 1788); 10 petits airs, 2 fl (Paris, 1789); Nouveau recueil de petits airs tirés des opéras et autres, ii (Paris, n.d.): ? by Julien-Amable or Michel-Julien Mathieu

(3) **Michel-Julien Mathieu** [Lépidor] (*b* Fontainebleau, 8 Oct 1740; *d* after 1777). Composer, violinist and writer, son of (1) Michel Mathieu. Apparently he spent much of his life in Paris. His wide-ranging works include numerous literary translations (from English), texts to several plays, music for plays, musical additions to an opera, his own operas (some never performed), and considerable instrumental and vocal music. He used the name Lépidor for what little music of his was published.

WORKS

Stage: additional and rev. music for C.-H. Gervais: Les amours de Protée (op, J. de la Font), Paris, 1778; ?ops, *F-Po*, cited in *MGG1*; incid music for the plays Marthésie, 1777, Le départ des matelots (J. Rutledge), 1778, L'école des filles, ?1787, La brune et la blonde (M.-J. Favart), Le renversement du Dagon (F.-F. Nogaret) and Le sacrifice d'Abraham (Nogaret), *Po* [the last two attrib. Michel Mathieu by Brenner]
Other vocal (all ?lost, cited by La Borde): 2 collections of airs and chansons, acc. vn, bc (Paris, 1765); 2 collections of airs and chansons (Paris, 1766); 2 ariettes, acc. 2 vn, va, b (Paris, 1766); Les cieux instruisent la terre (J.-B. Rousseau), motet, chorus, 1778; other ariettes, motets, 1v, inst
Inst (all ?lost, cited by La Borde): 9 vn sonatas; 6 hpd pieces; 6 trios, 2 vn, vc; 3 str qts

Relationships between this family and the numerous other musical Mathieus of the 17th and 18th centuries have not been discovered. An elder Mathieu (first name unknown), a clergyman at St André-des-Arts in Paris in the late 17th century, organized concerts at which music of contemporary Italian masters (Corelli, Carissimi etc.) was performed, and he owned a significant music library. A Jean-Baptiste Mathieu (*b* Billone, Auvergne, 2 Jan 1762; *d* Versailles, 1847) taught solfège and later the serpent at the Paris Conservatoire (from its establishment in 1795 until 1802), taught singing at the Institut des Jeunes Aveugles, and was *maître de musique* at Versailles Cathedral from 1809; he composed sacred works and a *Méthode de plain-chant* (Paris and Versailles, 1838).

JEFFREY COOPER

Mathieu, Emile (Louis Victor) (*b* Lille, 18 Oct 1844; *d* Ghent, 20 Aug 1932). Belgian composer and teacher. His father was a singer and director of the theatre at Antwerp; his mother was a singing teacher at the Académie des Beaux-Arts in Leuven. Mathieu was to have studied medicine, but after the death of his parents devoted himself to music. He studied the piano with Pierre-Auguste Dupont, harmony with Bosselet and counterpoint with Fétis at the Brussels Conservatory. In 1867 he became a teacher of the piano and harmony at the music school in Leuven. In 1869 he won the second Belgian Prix de Rome with the cantata *Torquato Tasso's dood*, which was performed four years later in Brussels; he won that prize in 1871 and again in 1873. He went to Paris, where he conducted the orchestra of the Théâtre du Châtelet from 1873 to 1875. Returning to Brussels, he became an accompanist at the Théâtre Royal de la Monnaie. In 1881 he became director of the music school in Leuven, and in 1898 succeeded Adolphe Samuel as director of the Ghent Conservatory, a post he held until 1924. He was a member of the Académie Royale de Belgique. Most of Mathieu's operas were composed to his own librettos; though possessing a certain elegance and charm, they are also somewhat academic in nature and have seldom been revived.

WORKS

STAGE

BRM – *Brussels, Théâtre de la Monnaie*

L'échange (oc, 1, Mathieu), Liège, Royal, 25 April 1863

ANNE-MARIE RIESSAUW

Mathieu, Abbé **Nicolas** (*b c*1650; *d* Paris, 30 March 1706). French musical amateur. The son of a Parisian doctor, Mathieu was inducted into the living of Saint-André-des-Arts, Paris, in 1678. In 1685 he commissioned Alexandre Thierry to improve the church organ; the organist was Claude Rachel de Montalan, Molière's son-in-law. For several years Mathieu presided over weekly concerts

which took place in his presbytry in rue du Cimetière-Saint-André (now rue Suger) and were attended by his parishioners, many of whom belonged to the famous families of the *parlement*. The spacious room on the first floor contained a chamber organ, a harpsichord by Philippe Denis, viols and violins. According to Jean de Serre de Rieux the only vocal music at the concerts was 'Latin music composed in Italy by the greatest masters since 1650' (*Les dons des enfans de Latone*, 1734). Italian composers represented in Mathieu's 200-item library were G.B. Bassani, Melani, Lorenzani, G.P. Colonna and Foggia. French vocal music included works by Lully, Du Mont, Robert, M.-A. Charpentier, Nicolas Bernier, André Campra and J.-B. Morin. The library also contained instrumental music by Rebel and 'Italian symphonies' which may have included sonatas by Corelli. (M. Le Moël: 'Un foyer d'italianisme à la fin du XVIIe siècle', *RMFC*, iii (1963), 43–8)

MICHEL LE MOËL

Mathieu, Rodolphe (Joseph) (*b* Grondines, PQ, 10 July 1890; *d* Montreal, 29 June 1962). French-Canadian composer. He first became interested in composition in Montreal under Alexis Constant. He went on to study in Paris (1920–25) with Vincent d'Indy (composition) and Louis Aubert (orchestration). On returning to Montreal, he founded the Canadian Institute of Music (1930–62) and devoted himself to the career of his son André (1929–68).

His early works, in particular the *Trios préludes* (1911–15), show the influence of both Debussy and Wagner. The last *prélude*, a fantasia in sound, is one of Mathieu's best works. After 1920, however, he sought to organize his use of chromaticism more systematically, a concern exemplified by the Quartet of that year. The Trio of 1921, is a major work, exploits a process of resolution through complementation, animating the variation technique to a state of high dynamic potential. Performances of the Piano Sonata (1927) and Quintet (1942) by the Société Radio-Canada in 1956, led to the rediscovery of Mathieu's music. The Sonata, a spontaneous manifestation of a Romantic sensibility, recalls his particular interest in the music of Scriabin.

WORKS

JULIETTE BOURASSA

Mathieux, Johanna. *See* KINKEL, JOHANNA.

Mathis, Edith (*b* Lucerne, 11 Feb 1938). Swiss soprano. After studying at Lucerne she made her début there in 1956 as the Second Boy (*Die Zauberflöte*). She appeared in 1959 at the Cologne Opera, then, in 1963, at the Deutsche Oper, Berlin. She first sang at Salzburg in 1960 as Ninetta (*La finta semplice*), returning regularly. She took part in the première of von Einem's *Der Zerrissene* (1964, Hamburg) and created Luise in Henze's *Der junge Lord* (1965, Berlin), later recording the part. At Glyndebourne she sang Cherubino (1962–3) and Sophie (1965). She made her Covent Garden début in 1970 as Susanna, a role she recorded for Böhm, later singing Sophie and Despina. At the Metropolitan (1970–76) her roles included Pamina (which she recorded with Karajan), Marzelline, Aennchen and Zerlina. She sang in Vienna and Munich, where she created Queen Mary in Sutermeister's *Le roi Bérenger* (1985). Mathis's repertory also included Nannetta, Zdenka, Mélisande, Agathe and the Marschallin. Her fresh, pure-toned voice, instinctive sense of style and attractive stage manner made her one of the outstanding Mozart sopranos of her day. She has also been a distinguished concert singer and recitalist, as can be heard in her recordings of Bach cantatas, Haydn's *The Creation* and *The Seasons* and lieder by Schubert and Brahms. She was married to the conductor Bernhard Klee.

ALAN BLYTH

Mathis, Johnny [Mathis, John Royce] (*b* San Francisco, 30 Sept 1935). American popular singer. He was trained as a singer and performed in a jazz sextet while a student at San Francisco State University. He won a recording contract with Columbia Records and engagements at prestigious New York clubs in the summer of 1955 after an audition in a San Francisco night club. He formed a smooth style of ballad singing that was tinged with black-American nuances and achieved great success despite the ascendancy at the time of rock and roll as the dominating form of popular musical expression. Mathis excelled in the performance of sentimental love songs in the Tin Pan Alley tradition, such as *Wonderful, Wonderful* (1956), *Chances are* (1957), *The Twelfth of Never* (1957) and *Misty* (1959). He remains a popular night club artist and has enjoyed considerable chart success, particularly in Britain. Two duets, one with Deniece Williams (*Too much, Too little, Too late*, 1978) and one with Dionne Warwick (*Friends in Love*, 1982), are among his best-known recordings.

MICHAEL J. BUDDS

Matho [Matau, Mataut, Mathaut, Matos, Matot, Mattau], **Jean-Baptiste** (*b* Brittany, *c*1660; *d* Versailles, 16 March 1746). French composer. His name is first mentioned in the *Mercure galant* of August 1687, but the *Mercure* of May 1688 is more informative:

> Mme la Dauphine has chosen M Matho, of the *musique du roy*, to have the honour of teaching her. He had already acquired great fame for his voice . . . and his knowledge of music . . .. Last year he gave a

divertissement, or pastorale, entitled *Tircis et Célimène*, performed at Marly before the king and in the apartments at Versailles to great applause. M Morel, who is a member of the *musique du roy* and *valet de chambre* to Mme la Dauphine, wrote the words, which were thought very pleasing on account of the author's natural style.

In October 1699 the *Mercure* mentioned a performance in the royal apartments at Fontainebleau of the opera *Coronis*, though 'neither the king nor their British Majesties heard the music which was judged to be most beautiful'. *Coronis* was performed again three days later on 21 October 1699.

According to the *Journal du marquis de Dangeau* (24 April 1700) the Duke of Burgundy provided Matho, who was teaching him to sing, with a pension. *Coronis* was revived before the duke on 22 October 1702, and was the only operatic work performed during the court's entire stay at Fontainebleau. Matho can next be traced to Clagny in 1703. In August that year *Philémon et Baucis* was put on by Nicolas de Malezieu for the festivities at Châtenay in honour of the Duke and Duchess of Maine. The *Mercure* printed the entire text along with a laudatory commentary. Matho is also known to have composed a motet for the offertory of the mass for the same occasion. He continued to write musical divertissements for comedies at Chatenay with *Le Prince de Catay* (1704), *La Tarentole* (1705) and *L'hôte de Lemnos* (1707).

An article in the *Journal du marquis de Dangeau* (September 1714) implies that Matho acted as Lalande's deputy in the royal chapel: 'When he [Lalande] is unwell and cannot carry out his duties, Matho beats time in his place, and for this reason, and because he is always in attendance at the *musiques du roy* in the evenings, the king is increasing Matho's pension'.

Le ballet de la jeunesse was performed on 16 February 1718 to celebrate Louis XV's eighth birthday the previous day. In August 1720 Matho was appointed *maître de musique du roi* as well as *maître de musique des enfants de France*. In 1734 he went into semi-retirement and J.-N.-P. Royer was appointed as joint *maître de musique des enfants de France*. The following year Matho resigned and Royer obtained the reversion of the post. Matho does, however, seem to have retained his position in the royal chapel until his death. His daughter Andrée Denise was granted a pension of 400 livres in consideration of his work in the king's service.

Contemporaneous accounts of Matho's works are unanimously positive, sometimes overflowing with praise. The *Mercure galant* wrote of *Tircis et Célimène*: 'Its music is extremely graceful and in good taste, with excellent workmanship and articulation: the singing is moving, the symphony harmonious, and the choruses pleasing and appropriately filled'. The same journal wrote of *Philémon et Baucis*: 'all agreed that M Mataut had surpassed himself both in the expression of the words and the excellence of the vocal music, and in the admirable violin airs which alternated with the singing'. The one unhappy event was the failure of *Arion*, Matho's only *tragédie en musique*, but as it came during a period of general crisis at the Opéra it is not of any great significance. It is unfortunate that a large proportion of Matho's output is lost. Neither his religious works nor his *comédies-ballets* (an extremely rare genre at this period) have survived. *Philémon et Baucis* and its airs for violin are lost as is the *Ballet de la jeunesse*. His few surviving works show that he wrote in the purely French tradition, resisting any Italian influence but paying great attention to dramatic expression and to the quality of his orchestral writing. The tempest in *Arion*, which unlike other 'tempests' of the period is entirely orchestral and without choral passages, is remarkable for the quadrupling of the bass part: bass viol, 1st and 2nd bass violin and bassoon. The orchestral writing thus occupies eight staves, something unique at that time, with subtle doubling and exchanging of melodic patterns between the parts. From *Coronis* onwards the sophisticated contrapuntal writing of some of Matho's choruses breaks with the tradition of Lully, and, with its concern for dramatic expression, his chromaticism is very much in advance of its time.

ROBERT FAJON

Matičič, Janez (*b* Ljubljana, 3 June 1926). Slovene composer. He completed his studies in composition with Škerjanc (1950) and in conducting with Švara (1951),

both at the Ljubljana Academy of Music. Having taught theory and the piano at the intermediate music school and at the academy in Ljubljana, he moved to Paris in 1959. At first he took composition lessons with Boulanger, and he was active in the Groupe de Recherches Musicales with Schaeffer (1962–80). He lectured on music at Ljubljana University (1983–6), then at various conservatories in Paris. His early work had elements of late Romanticism and Impressionism, then after drawing on neo-classicism, he moved in the 1960s towards a more radical modernism. The emphasis of his output has moved from electro-acoustic to orchestral, chamber and piano music.

ANDREJ RIJAVEC/IVAN KLEMENČIČ

Matiegka [Matějka], **Wenzel** [Václav] **Thomas** (*b* Choceň, Bohemia, bap. 6 July 1773; *d* Vienna, 19 Jan 1830). Austrian composer, guitarist and Kapellmeister of Czech descent. His earliest musical training was as a chorister in Kroměříž. In the late 1780s he studied law in Prague, where he developed into a promising keyboard performer under the Abbé Gelinek. After a short tenure as a legal functionary for Count Kinsky, Matiegka moved to Vienna to make a living in music. Shortly after 1800 he was active in Viennese amateur music circles. The guitar being as popular as the piano at that time, Matiegka perfected himself on both instruments, but the guitar became his favourite. By 1809 he was publishing sonatas for solo guitar with the best printers in Vienna and was billed as a 'piano and guitar master' on these editions. He married and settled in the suburb of Leopoldstadt, where he became the Kapellmeister at St Leopold's parish church. Here he composed sacred vocal music 'in the strictest style'. His only published works were those involving the guitar, an instrument which he handled expertly. He arranged Beethoven's Serenade op.8 (for violin, viola and cello) and *Adelaide* op.46, in versions with guitar (replacing cello and piano respectively), and similarly transcribed works by Zumsteeg and Mozart. In turn, Schubert arranged Matiegka's Nocturne op.21 for flute, violin and guitar as a quartet (DAII/2) by adding a cello part.

WORKS

32 published opp. include 23 works (sonatas, variations, etc.) for solo guitar; duets, trios and chamber music with guitar; also a number of trios, quartets, graduals, offertories, motets and masses in MS (sacred works in *CZ-KRa*).

THOMAS F. HECK

Matins (Lat., from *matutinus*: 'early in the morning'). A service in the DIVINE OFFICE of the Roman Catholic Church, traditionally performed during the night, often at about 3 a.m. Originally called Vigils, Matins now consists of an introduction and one, two or three nocturns.

1. History. 2. Structure.

1. HISTORY. Many patristic writings from the beginning of the 3rd century onwards distinguish between prayer at night and prayer in the early morning. By the early 4th century these two hours of prayer, which were originally private, had developed into forms of public worship corresponding to the later Matins and Lauds. (The Latin names for these services, respectively *vigiliae* and *matutinae laudes*, are a potential source of confusion in the secondary literature; for this reason it has become usual in liturgical scholarship to use the term Vigils for the early service.) A famous and instructive description of this dual pattern appears in the pilgrimage diary (381–4) of the Spanish nun Egeria, from which it is evident that the earlier service held in 4th-century Jerusalem was largely a monastic affair, whereas the service held after daybreak was celebrated by the bishop and his clergy. This would seem to confirm the existence of separate monastic and cathedral traditions for morning prayer, although the distinction is not entirely clearcut. A central difference between the two, and a source of some controversy, lies in the use of psalmody: in the earlier service the psalmody was variable, whereas in the later one fixed psalms such as the *laudate* psalms (cxlviii–cl) were included. It seems that urban monasticism took over the practice of extensive psalmody at Vigils from contemporary monastic communities in the deserts of Syria, Palestine and Egypt; the leaders of these communities, among them St Anthony (*c*356) and St Pachomius (*c*346), encouraged extensive psalmody not only within the liturgy but also on other occasions. Vigils was held only once a week during the later 4th century – on Fridays in Jerusalem and Saturdays in Bethlehem, often lasting the entire night. In addition to the Vigils of monastic origin, the cathedral tradition had its own types of Vigils services, many of them equally long, to be held on special occasions, for example, vigils for wakes, vigils at the tombs of martyrs, the baptismal vigil, and an extended form of Vespers. In time, Vigils, or the 'Great Vigil' as it was later called, became too burdensome for the monastic tradition and eventually died out in the West, but some aspects of an earlier form, the Sunday resurrection vigil, have survived in Eastern Churches.

The psalmody of the Great Vigil consisted in singing (or perhaps reciting) a portion of the Psalter divided into 'stations', a precursor of the later nocturns of Western Matins. Besides psalmody, readings and prayer, the Great Vigil also included hymns, as is attested in the later 4th century for Antioch (in the writings of John Chrysostom) and Milan (during the time of Ambrose). In the 6th century Western monastic Rules began to require a new type of Great Vigil service consisting of a prologue followed by antiphonal and responsorial psalms, lessons, collects and prayers organized in groups (nocturns). An early monastic form of this service, known also as nocturns (but without the prologue), was adopted at Rome and elsewhere for daily use among secular clergy; it too was often given the name Vigils. The extended nocturns for Sunday, first described in the anonymous Rule of the Master (first quarter of the 6th century), was further reduced in the Rule of St Benedict (*c*530), thus effectively abolishing the Great Vigil and setting the lead for further developments in the Middle Ages.

See also CHRISTIAN CHURCH, MUSIC OF THE EARLY, §I, 4.

2. STRUCTURE. As early as the Rule of St Benedict, the introduction to Matins in the monastic cursus is made up of the versicles *Deus in adjutorium* and *Domine labia mea* with their responses; Psalm iii (Vulgate numbering: *Domine quid multiplicati*); Psalm xciv (*Venite exsultemus Domino*), known as the invitatory, with its antiphon; and a hymn. In the monastic ferial Office there is a different invitatory antiphon and hymn for each day of the week, and Proper ones for feasts. In the Roman cursus there was at first no introduction to Matins. The invitatory seems to have been adopted in the Roman cursus at the time of the reform of the liturgy under Pope Gregory I (590–604); at certain times, such as the last three days of Holy Week, it is not sung.

Each nocturn consists of psalms with antiphons, and one, three or four lessons followed by responsories. The number of nocturns varies: in the Roman cursus there are three on Sundays and one on ordinary weekdays. In the monastic cursus there are two on weekdays. On most feasts in both cursus there are three nocturns. The number of psalms in each nocturn also varies: in the Roman cursus, as it is presented in the 11th-century antiphoner *I-IV* CVI, f.1*v* (CAO, i, 1963, no.1), there are 14 psalms in the first nocturn of Sunday, divided into groups of six, four and four, with one antiphon for each group. The second and third nocturns have three psalms, each with its own antiphon; this is the usual pattern for all the nocturns of feast days. On weekdays, when there is only one nocturn, there are 12 psalms divided into six groups of two psalms each, with an antiphon for each group.

In the monastic cursus there are on Sundays and feasts six psalms in each of the first two nocturns; three Old Testament canticles replace the psalms in the third nocturn. Usually only one antiphon is given for all three canticles. On feasts, separate antiphons are given for each of the six psalms in both nocturns. On Sundays, the psalms are grouped in pairs, with one antiphon for each pair. On weekdays, in each of the two nocturns, there are six psalms. In general, the procedure seems to have been to group them in pairs, as on Sunday, with one antiphon for each pair. However, the testimony of the most important antiphoner of the period, *CH-SGs* 390–391 (*c*1000; facs. in PalMus, 2nd ser., i, 1900, 2/1970) is not consistent. On many saints' days the ferial psalms of Matins are replaced by specially chosen ones; the manuscripts often disagree concerning the precise choice of psalms for a particular day.

A versicle with response follows the psalms. Next come, in the monastic cursus, four lessons, each of them followed by a greater responsory sung in a rather elaborate musical style, the last of them incorporating the doxology. The lessons are reduced in number and in length on weekdays. In each nocturn in the Roman cursus there are three lessons and responsories. The lessons are most often from the Bible; an old tradition required the reading of the entire Bible once a year. One method of organizing this is described in the *Ordo romanus XIII* (second half of the 8th century; outlined by M. Righetti, *Manuale di storia liturgica*, ii, Milan, 3/1969, 754–5). Other sources for lessons are the writings of the Church Fathers and the Lives of the Saints. From the 10th century it became the practice to include all the elements of the Office in a single book, the breviary; practical considerations required the shortening of the lessons, and thus the proportions of the Office changed considerably.

The texts of the responsories are often taken from the Bible. There is a cycle of them, beginning with the respond *Domine ne in ira*, which is assigned to the first Sunday after Epiphany. Most or all of these responsories (depending on the manuscript) take their texts from the Book of *Psalms*, in particular from Psalms i–xxv in order, though not consecutively. This series seems originally to have been created for use on ordinary Sundays as a complement to the ferial Office before the liturgical reform of Pope Gregory I. Later it was replaced, on the Sundays after Pentecost, by various series of responsories from the books of the Bible scheduled for reading at that time of the year. Amalarius of Metz (*c*830) reported a state of transition between the two practices. (*See also* RESPONSORY, §§1–2.)

After the last responsory on Sundays and some feasts the *Te Deum* is sung; in the Roman cursus this often replaces the last responsory. On rare occasions the *Te Deum* is preceded by an introductory trope: the St Gallen manuscript has one on the feast day of the patron of the monastery (p.324, no.131), *Gaudeat his festis*.

RUTH STEINER/KEITH FALCONER

Matos, Jean-Baptiste. *See* MATHO, JEAN-BAPTISTE.

Matoušek, Lukáš (*b* Prague, 29 May 1943). Czech composer. At the Prague Conservatory (1961–7) he studied the clarinet, composition and conducting. He then completed a two-year course in electronic music (at Czechoslovak Radio), took private lessons in composition

with Kabeláč and from 1976 attended Kohoutek's class at the Brno Academy. In 1981 he won a scholarship to study at the Early Music Centre, London. After returning to Prague he worked as a producer for Czechoslovak Radio before becoming musical director of an independent recording company. In 1963 he co-founded Ars cameralis, an ensemble dedicated to performing medieval and contemporary music.

Since the early 1960s Matoušek has tended towards modernism and 12-note composition. For a period in the 1970s he was also influenced by aleatorism and studies in timbre. The purpose of his work has been to demonstrate links between principles of contemporary music and those of earlier styles. This draws on his extensive knowledge of medieval music and on many years' experience of leading Ars cameralis. These strands come together to form an original and accessible style; the music is marked by rigorous, formal and expressive means.

In the 1970s and 80s few of Matoušek's works were performed in his native Czechoslovakia after a ban was placed on the Cantata no.3 for its criticism of the Soviet occupation of 1968. The pressure increased when the work received first prize at the international competition Musica sacra held in Nuremberg.

PETR POKORNÝ

Matoušek, Vlastislav (*b* Trutnov, Czechoslovakia, 8 Nov 1948). Czech composer. He studied in Prague at the Charles University (musicology, 1977–8) and at the Academy of Performing Arts (1978–89) with Václav Riedlbauch (composition) and Karel Riesinger (music theory). For six months in 1996 he studied Japanese traditional music and shakuhachi playing at the University of Osaka. In 1991 he was appointed to teach ethnomusicology and music theory at the Academy of Performing Arts in Prague. His compositions are strongly influenced by his research in ethnomusicology, using rhythmic and modal structures as well as instruments from non-European cultures. His activities also include electro-acoustic music and collaborations with rock musicians.

MIROSLAV PUDLÁK

Mátray, Gábor (*b* Nagykáta, 23 Nov 1797; *d* Budapest, 17 July 1875). Hungarian musicologist, composer and teacher. His family name was originally Róthkrepf. He first studied the piano with his father József Róthkrepf, an elementary school teacher in Nagykáta and from 1804 teacher and choirmaster in Pest. Mátray studied law and had piano, singing and theory lessons in Pest. From 1816 to 1817 he worked there as a tutor in the services of Baron Simon Prónay, and from 1817 until 1830 he was similarly employed by Count Lajos Széchényi in Vienna. There his first compositions were published, as were editions of collections of Hungarian dances for piano. He returned to Pest in 1830 to complete his law studies. In 1833 he founded the associated periodicals *Regélő* and *Honművész*, which he edited for eight years. He was made a corresponding member of the Hungarian Academy of Science in 1833, and in 1837, the inaugural year of the Hungarian National Theatre, was made its music director and composed the choral work *Rémalakok karéneke* for its opening performance. In 1837 he was elected notary of the music society in Pest-Buda, and in 1840 director of the music school of the society (from 1867, the National Conservatory). Mátray was appointed curator of the Hungarian National Museum in 1846.

As a composer Mátray was influenced by the Viennese Classical composers, but also by the *verbunkos*, and by Hungarian, Serbian and Turkish folk and popular music. His music for István Balog's historical play *Csernyi György* (1812) is the earliest surviving musical document in the history of Hungarian opera. A versatile and energetic initiator as a musicologist, he was the first to record the music history of his country. His activity as an informed professional music critic was epoch making. By organizing the orchestra and the singers for the newly opened Hungarian National Theatre in Pest, he also made a significant contribution to opera in Hungary, and as director of the National Conservatory he introduced historical concerts of early Hungarian music.

Mátray's 'complete' collection of folk music is in fact incomplete, and his musicological publications bear the mark of the nationalistic, Romantic spirit of the time; his activities, however, prepared the way for modern research

in early Hungarian music, and have earned him the title 'father of Hungarian musicology'.

FERENC BÓNIS

Matricale. *See* MADRIGAL.

Matsiyevs'ky, Ihor' (Vladimirovich) (*b* Khar'kiv, 28 June 1941). Ukrainian ethnomusicologist and composer. He studied composition with Adam Soltys at the L'viv Conservatory, graduating in 1965, and undertook post-graduate studies in composition with Orest Yevlakhov at the St Petersburg Conservatory, where after graduating in 1968 he became an assistant lecturer. He later studied ethnomusicology with Izaly Zemtsovsky at the Russian Institute for the History of the Arts, St Petersburg, gaining the doctorate in 1970 with a dissertation entitled *Hutsulskiye skrypychnïye kompozytsyi* ('Hutsul Violin Compositions'). He was a scientific officer at the institute (1971–90) and in 1991 became head of the section for the study of musical instruments. He was professor at the music schools of L'viv, St Petersburg and Petrozavodsk between 1972 and 1997, and in 1992 was appointed prorector of the Finno-Ugric Musical Academy in Petrozavodsk. In 1990 he gained the *Habilitation* with a dissertation on traditional instrumental music as a phenomenon of traditional culture. Matsiyevs'ky has made expeditions to the Trans-Urals region, Kirghizia, Uzbekistan, Poland, Lithuania, Romania and the Carpathian mountains. He has written on the traditional music and instruments of the Ukrainian, Russian and Belorussian peoples and has also edited collections of essays on the music of the Balts, Komis, Mordvins, Maris and Tuvan peoples. His areas of interest include the study of traditional instruments and instrumental music, musical form in the orally transmitted music of the eastern Slavs and the continuation of traditions in urban areas and among diasporas. His compositions include an opera, an oratorio, two violin concertos, two string quartets, six solo violin and cello sonatas, 12 song cycles and a number of film scores, including the award winning *Nebïval'shchina* ('Fantastic Events'), *Levasha* ('Left-Handed') and *Danchïk*.

VIKTOR ARKAD'YEVICH LAPIN

Matsudaira, Yori-aki (*b* Tokyo, 27 March 1931). Japanese composer. A son of Yoritsune Matsudaira, he studied science at Tokyo Metropolitan University and, after completing his graduate study in 1958, he was appointed to teach physics and biology at Rikkyō University (known also as St Paul's), Tokyo. Self-taught in composition and on the piano, he experimented with serialism (1957–60), later expanding his style to include indeterminacy, combination techniques, new modalism and pitch-interval procedures. His compositions were selected nine times for the ISCM World Music Days in and after 1958; he produced a concert series of his work in Tokyo (1982–92). The majority of his work is experimental, and he is best known for his creative use of modern and popular music techniques, technology and the arts as a means of composition. He has written and translated several books

on music and is an active music critic for the magazine *Ongaku geijutsu*.

MASAKATA KANAZAWA/JUDITH ANN HERD

Matsudaira, Yoritsune (*b* Tokyo, 5 May 1907). Japanese composer. The father of Yori-aki Matsudaira, he studied French literature at Keiō University, Tokyo, and at the same time took private composition lessons with Kōsuke Komatsu; his first published work was *Yōnen jidai no omoide* for piano (1928). At first he was influenced by French music from Impressionism to Les Six, and in 1930, on joining the Shinkō Sakkyokuka Renmei, he became an advocate of neo-classicism. He gave his first piano recital in 1931, performing Debussy, Ravel, Poulenc and Honegger. In 1935 he met Alexander Tcherepnin, who was impressed by his talent and arranged for the publication of his Prelude in D for piano. In 1937 the Pastorale for orchestra was performed by the San Francisco SO, and the Sonatine for flute and piano was presented in concerts throughout France, making Matsudaira one of the first pre-war Japanese composers to gain international recognition. He began to take a serious interest in gagaku at this time, and has since been inspired by its modes, rhythms and structure. The Flute Sonatine (1936) is an early example of a work showing this influence.

When the Nihon Gendai Sakkyokuka Renmei (subsequently the Japanese Society for Contemporary Music) was founded in 1935, Matsudaira became one of its directors. After World War II he grew more prominent and prolific, taking a deep interest in 12-note techniques. He combined these in sections of the Theme and Variations for piano and orchestra (introduced by Karajan in 1951), which is based on the medieval gagaku piece *Etenraku*; it won an ISCM prize in Salzburg in 1952. He again combined elements of gagaku style with 12-note methods in the *Metamorphosis on Saibara*, which won the Zerboni Prize in 1954. 15 of his compositions were featured at ISCM festivals (1957–92) and he has composed several pieces to commission: *Umai* ('Right Dance', for Darmstadt, 1957), *Bugaku kumikyoku* ('Dance Suite', for the Grosses Orchester des SWF, 1960), *Somakusha* (for Gazzelloni, 1961), Suite for ten performers (for the Koussevitzky Foundation, 1963) and the Rhapsody for 10 instruments (for the National Public Library in Washington, 1983), among others. He was secretary to the Japanese Society for Contemporary Music (1953–5) and its chairman (1956–60).

A pioneer in Japanese contemporary music, Matsudaira has influenced generations of Japanese musicians. Among his prizes are the Purple Ribbon Medal (1972), the Order of the Rising Sun (1979), the first prize at the Petrassi Concours (for *Shun-no-den*, 1993) and Bunka kōrōshō (Citation of Cultural Merit, 1996). His mono-opera *Genji monogatari* (1990–3) was presented at the Festival d'Automne (1997); *Kyrie* (1995), a movement of the Peace Mass jointly composed with Penderecki, Schnittke and others, was commissioned by and performed at the Nobel Prize ceremony.

In all of his instrumental and vocal works, the principal stimulus has remained gagaku, throughout his progression from French-inflected neo-classicism to 12-note techniques, total serialism and aleatory music. His preference for scoring for woodwinds (particularly flutes and oboes), a characteristic harmony based on clustered 4ths, the elaborate and improvisatory quality of melody, the diversity of rhythmic figures, the free-floating tempo and the frequent provision of optional parts are all derived from this source. Often the principal movement of a composition has a brief prelude or finale in an improvisatory style, and at times a leading soloist is required to choose from a variety of ornamental variants of essentially the same melody. These devices are also clearly derived from ancient Japanese court music. His writings include *Kindai waseigaku* ('Modern harmony', Tokyo, 1955, 2/1970).

MASAKATA KANAZAWA/JUDITH ANN HERD

Matsumura, Teizō (*b* Kyoto, 15 Jan 1929). Japanese composer. He studied composition with Ikenouchi (1949–55) then with Ifukube. In early works, such as the winning entry in the 1955 Japan Music Competition, *Josō to kyōsōteki areguro* (1955), and *Achime* (1957), Matsumura used Stravinsky-influenced ostinato techniques. Ostinatos continue to characterize Matsumura's later works. In *Prelude* (1968), which won the Otaka Prize, the increasingly chromatic and rhythmically intricate ostinatos pile up to create cluster-like sonorities, a texture inspired by Indian and Balinese music and by such Asian historic sites as Angkor Wat in Cambodia. In the two piano concertos (1972, 1978), which move away from such influences, Matsumura applies ostinato techniques to both the piano solo and to each section of the orchestra. In the opera *Silence* (1993), based on the novel by Shūsaku Endō, he uses imaginative text-setting to enhance dramatic continuity. While Matsumura was not a member of the culturally dominant avant garde in the 1960s, he has achieved a unique modern style through elaborately overlaid orchestral textures and vital melodic writing. A collection of his haiku has been published.

YOKO NARAZAKI

Matsushita, Shin'ichi (*b* Osaka, 1 Oct 1922; *d* Osaka, 25 Dec 1990). Japanese composer and physicist. He studied composition with his father from an early age and began to compose in his teens; he also pursued scientific studies to postgraduate level at Kyushu University. In 1956 Matsushita won third prize in the Japan Music Competition with Toccata and Fuga, and subsequently gained many awards; *Correlazioni* (1958) and *Succezioni* (1962) were selected for the International Composition Competition in Rome; his *Canzona da sonare* (1960–61) and *Fresque sonore* (1965) were selected for the ISCM World Music Days; and in 1965 he represented Japan at the ISCM conference. In 1963 he founded the contemporary music festival Osaka Autumn. While a guest professor at the institute of theoretical physics at Hamburg University (1964–80), he undertook research at the electronic music studio of the Swedish National Broadcasting Corporation. In his music Matsushita employed avant-garde techniques such as serialism, clusters and indeterminacy, and also applied mathematical devices including group theory. In 1971 he began to concentrate on works with a Buddhist orientation, such as *Sinfonia Samgha* (1974) and the late cantatas (1975–7). Further information is given in K. Hori, ed.: *Nihon no sakkyoku nijusseiki* [Japanese compositions in the 20th century] (Tokyo, 1999), 230–31.

YOKO NARAZAKI

Mattaccino (It.). *See* MATACHIN.

Mattan, Jean-Baptiste. *See* MATHO, JEAN-BAPTISTE.

Mattei, Filippo. *See* AMADEI, FILIPPO.

Mattei, Stanislao (*b* Bologna, 10 Feb 1750; *d* Bologna, 12 May 1825). Italian teacher and composer. He studied with Martini and became his disciple and closest friend, as well as the confessor and companion of his last years. Like his teacher he entered the Franciscan order of Friars Minor Conventual. From 1770 he worked closely with Martini at S Francesco in Bologna and in 1776 was officially chosen as his substitute and successor, taking up the post on Martini's death in 1784. In 1789 he became *maestro di cappella* at S Petronio. He was admitted to membership in the Ducal Accademia Filarmonica of Modena in 1780, and the Accademia Filarmonica of Bologna in 1799 which he served as *principe* in 1803, 1808 and 1818. On the founding of the Liceo Filarmonico

in 1804, he became professor of counterpoint and composition; among his more famous students there were Donizetti and Rossini. For a brief period in 1809 he was *maestro di cappella* at S Antonio in Padua. In 1824 he was elected an associate member of the Académie des Beaux-Arts de l'Institut Royal de France.

Mattei was a very conservative composer in the tradition of the late 18th-century Bolognese school derived from Martini. He was particularly celebrated as a teacher, though according to Fétis Rossini said of him:

> I would have had greater interest in cultivating stricter, more serious types of music if my counterpoint teacher had been someone who explained the purpose of the rules to me; but when I asked Mattei for explanations, he always replied: 'This is the way it has been done'.

However, Mattei's one published theoretical work, *Pratica d'accompagnamento sopra bassi numerati* (Bologna, *c*1824–5), was translated into French and widely used during the 19th century. His music, which has yet to be studied thoroughly, encompasses more than 300 sacred works, as well as several secular vocal pieces and 16 symphonies, in the Bologna Conservatory library, and more than 200, together with 12 symphonies and other instrumental pieces, in the library of S Francesco in Bologna (other works in *A-Wn*; *D-Bsb*, *Dl*, *Mbs*; *GB-Ge*; *I-Af*, *BGi*, *Bsp*, *CORc*, *Fc*, *Ls*, *Mc*, *Mcap*, *Nc*, *PAc*, *Vnm*, *VId*). Five of his symphonies are edited in The Symphony 1720–1840, ser. A, viii (New York, 1980). His younger brother, Padre Clemente Mattei (1760–83), was a composer at S Francesco in Assisi and also a student of Martini.

HOWARD BROFSKY

Matteis, Nicola (i) (*b* Naples; *d* Colkirk, Norfolk, after 1713). Italian violinist, guitarist and composer. He was resident in England; it seems that he arrived there in about 1670. According to Roger North (on whom we are dependent for details of Matteis's life) 'his circumstances were low, and it was say'd that he travelled thro' Germany on foot with his violin under a full coat at his back'. He must have been living virtually unnoticed in London for some years by the time John Evelyn first heard him play at a private music meeting in November 1674. Evelyn's reaction was one of amazement:

> I heard that stupendious Violin Signor *Nicholao* (with other rare Musitians) whom certainly never mortal man Exceeded on that instrument: he had a stroak so sweete, & made it speake like the Voice of a man; & when he pleased, like a Consort of severall Instruments: he did wonders upon a Note: was an excellent composer also ... nothing approch'd the *Violin* in *Nicholas* hand: he seem'd to be *spirtato'd* & plaied such ravishing things on a ground as astonish'd us all.

Matteis seems quickly to have consolidated this reputation for virtuosity – though, according to North, his progress in society was impeded at first by his arrogant manner ('no person must whisper while he played, which sort of attention had not bin the fashion at court'). He engaged in a contest with Michel Farinel, who, when he heard Matteis, simply stood stock still and stared at him.

An advertisement in the *London Gazette* announcing the publication of Matteis's *Arie diverse per il violino* (1676) also indicated his willingness to teach 'such as desire to learn Composition, or to Play upon the Violin' and mentioned the availability in manuscript of second treble and viola (tenor) parts. According to North, the compositions delighted the aged John Jenkins, who played through the G major suite at the beginning of the second part, and 'pulling off his spectacles, clapt his hand on the book and declared he had never heard so good a peice of musick, in all his life'.

In November 1678 a pass was issued for Matteis to go to France. He was back in London within 12 months when Evelyn again heard him play. Apart from being a first-rate violinist, Matteis was also (according to North) 'a consummate master' on the five-course guitar and 'had the force upon it to stand in consort against an harpsichord'. About 1680, he published *Le false consonanse della musica* followed in 1682 by an English-language edition, *The False Consonances of Music*. This is an important ground-breaking treatise on thorough-bass realization for the guitar (though Matteis several times stressed the applicability of his instructions to other continuo instruments and included some general advice on performance and composition).

The third and fourth parts of the *Ayres for the Violin* appeared in 1685 and ran to a second edition two years later (this time with the addition of a supplementary volume of optional second violin parts). The pedagogical strain evident in the earlier volumes is even more pronounced here. Matteis has two tables of contents, the first for 'the most easy Ayres in ye Book that may be play'd with the Flute as well as the Violin' and the second for 'ye Passages & Ayres a little harder to practice upon the Violin, wth double stops and divisions'. The double stops and a few flourishes are marked in hollow dotted notation indicating that they may be left out by less advanced players. The 1685 edition includes a piece for solo violin in imitation of a trumpet (*Arie è passaggi ad immatione [sic] della trombetta*); in the 1687 edition this reappeared as a trio actually for trumpets, with new titles: *Concerto di trombe a tre trombette con violini e flauti* in the first treble part and *Arie è passaggi per trè trombette* in the second treble part. It has been suggested that this piece may originate from a lost manuscript concerto for three trumpets with recorders, strings and continuo.

Matteis was active as a teacher and, according to North, had 'many scollars'. He was to have joined Purcell, Draghi, Keller and Finger on the staff of the proposed Royal Academy (1695). In 1696 John Walsh (i) advertised 'A Collection of new Songs set by Mr Nicola Matteis made purposely for the use of his Scholars'. Again, the compositions were being recommended as studies. Matteis is named in advertisements in the *London Gazette* (and on a broadsheet copy of the poem) as the composer of the now-lost 1696 St Cecilia Day Ode *Assist, assist! You mighty sons of art*. This ode was repeated a few days after its London première at a St Cecilia Day celebration in Oxford (for which Matteis was named as a steward) and again at a public concert in the York Buildings in January 1697. From about 1698 Matteis seems to have been less active as a violinist and composer and it was his son, Nicola Matteis (ii), who came into prominence. Nothing reliable is heard of Matteis after this date and he may, in fact, have died about 1700. He features as one of the imagined writers in Thomas Brown's *Letters from the Dead to the Living* (1702). Roger North claimed that

Matteis lived with a woman 'as one that was marryed' and that they had a child and moved to a great house where the violinist dissipated his by-now considerable wealth and undermined his health in extravagant living. This has led to some misunderstanding since it has been assumed that North was alluding to a marriage in 1700 to the widow, Susanna Timperley. But the recent discovery (by Simon Jones) of her will in Vienna proves that it was the younger Nicola Matteis (ii) who became her husband. The confusion must have arisen very early since *The London Post* reported in January 1700 that 'Signor Nicolao, the famous Italian Musician, is married to one Madam Timperley ...' (Despite the younger Matteis's growing reputation, it seems unlikely that he would be described in quite these terms at this time.) Matteis's works were still very much in demand. Roger published five books of *Les Solos de Nicolas Mathys* (Amsterdam, 1702) and in the following year, Walsh brought out a new edition of the first two parts of the *Ayrs* together with a second treble parts (presumably those mentioned in the advertisement for the original publication) to complement those published earlier for volumes 3 and 4. According to North, Matteis may have died about 1700.

Matteis was clearly an extraordinary violinist and a key figure in the development of violin playing in England. North informs us that he held his violin very low on his chest ('against his short ribs' or 'almost against his girdle'), used a long bow and 'touched his devision with the very point'. He added 'I have found very few that will beleeve it possible he could performe as he did in that posture'. He introduced the thumb-on-stick bow grip to England. The extent of his influence can be inferred from John Lenton's *Gentleman's Diversion* (1693), in which players are warned off placing the violin 'as low as the Girdle, which is a mongrel sort of way used by some in imitation of the *Italians*'.

North praised Matteis both for his eloquent cantabile (his 'arcata') and for the range of staccato bowings in his vocabulary. The four volumes of solo violin music reveal a great deal about the aspects of his performance that so impressed the English. Matteis claimed to have 'tried to accommodate the musical tastes of the inhabitants of this country, though not to so great an extent as to separate myself too much from the Italian school'. As Tilmouth has demonstrated (in what remains the most substantial study of Matteis), there is stylistically a new wind blowing through his works. The division mentality is displaced by the sweep and sponaneity of the Italian school and the variety of bowings far exceeds anything else in English sources. His harmonic language is spiced with dissonance and the music ranges from buoyant dance-based compositions to a more learned style. The 'Passagio rotto' and 'Fantasia' in A minor (both 'senza basso') from book two (a prelude and fugue) demonstrate both an advanced violin technique and a truly impressive command of well-structured contrapuntal writing. The added second violin parts for the *Ayres* are not, on the whole, of very great interest. But a few genuine ensemble pieces survive in manuscript (*GB-Ob*), including a splendid D minor ground for three violins which, with its robust rhythms and dissonances, seem like the work of an Italian who has assimilated something of English taste.

WORKS

INSTRUMENTAL

Arie diverse ... preludy, alemande, sarabande, correnti, gighe, fantasie, minuite ed altre toccate a due corde, libro primo, libro secondo, vn, b (London, 1676); as Ayrs ... Preludes, Allmands, Sarabands, Courantes, Gigues, Divisions and Double Compositions, 1st Part, and Other Ayrs, 2nd Part (London, 2/*c*1679); MS 2nd tr pt, *GB-Lbl*; as Senr Nicola's 1st and 2nd Book's of Aire's in 3 Parts ... the 2nd Treble Part Never Being Printed Before (London, 2/1703)

Ayres ... Preludes, Fuges, Allmands, Sarabands, Courants, Gigues, Fancies, Divisions, and Likewise Other Passages, Introductions and Fuges for Single and Double Stops, with Divisions Somewhat More Artificial, 3rd and 4th Parts, vn, b (London, 1685); as Other Ayrs and Pieces, 4th Part, and The 2nd Treble of the 3rd and 4th Parts (London, 2/1687) [incl. trio, 3 tpt, ed. P. Holman (London, 1982)]

Songs arr. fl, bc (1699), see VOCAL

Solo, A, vn secundo, bc (London, 1704)

PETER WALLS

Matteis [Matheis], **Nicola (ii)** [Nicholas] (*b* ?late 1670s; *d* Vienna, 23 Oct 1737). English violinist and composer, son of NICOLA MATTEIS (i). That he was probably born in the late 1670s is suggested by a 'Balleto for Young Nicola' in a manuscript volume by his father that can be dated to about 1682. He received instruction in violin playing from his father, though Roger North, who had seen him 'in coats play to his father's Guittarre', found his playing effeminate compared with his father's virile manner. Towards the close of the century he was very successful as a performer in London but soon left for Vienna, where he became a violinist at the Habsburg court on 1 July 1700. He married the widow, Susanna Timperley, in the

same year. In 1712 he became director of instrumental music there and for much of his life in Vienna he was also principal violinist of the Hofkapelle and musical director for court balls. From 1714 one of his principal duties was to compose music for the ballets in the court operas, following the tradition of Wolfgang Ebner, J.H. Schmelzer and others. This he continued to do after his retirement in 1730 from active service as a violinist.

The slow movements of Matteis's violin sonata published in 1704 suggest a mastery of Corelli's cantabile style. Some of his other instrumental music was known at Dresden; a violin concerto was performed there in 1710 by a distinguished group including Antonio Lotti. The bulk of his surviving work, however, consists of ballet music written for insertion into the *opere serie* of the Vienna court composers, most notably Fux, Conti, Ziani, Caldara and Predieri. The ballets generally provide conclusions for each act but occasionally have a dramatic function within an act. Music of a lighter character is written in short score for treble and bass only, but on occasions, such as in *Costanza e Fortezza*, written in collaboration with Fux for the coronation of Charles VI at Prague, a fuller ensemble is required, including antiphonal brass or chorus with a four-part string ensemble. French forms and styles predominate among the dances, but exotic or programmatic elements are conspicuous too. About 20 of the dances are designated 'aria grotesca', a type of dance that involved unusual leaps, movements and gestures, with a predomination of syncopation. The unity of tonality in Matteis's ballets is on occasion tempered by the introduction of related or even alien tonal centres, distinguishing these works from his violin sonatas. As regards instrumentation, he drew upon the diverse resources of the Habsburg Hofkapelle, sometimes incorporating instruments such as the cornett and chalumeau; e.g. the ballet music for Caldara's *Ormisda* includes a passecaille with a trio for two flutes and chalumeau. Extravagant figuration in Matteis's string writing points to the possible influence of Matteis the elder's compositions and style of performance.

WORKS

Music for 59 ballets written between 1714 and 1737 for insertion into ops by Conti, Ziani, Caldara, Lotti, Fux, Bononcini, etc. (listed in McCredie, 1967); edn of Costanza e Fortezza (op by Fux with ballet music by Matteis), in DTÖ, xxxiv–xxxv, Jg.xvii (1910/*R*)

Matteo [Betini] da Brescia. *See* MATHEUS DE BRIXIA.

Matteo da Perugia [Matheus de Perusio, de Perusiis, Perusinis] (*fl* 1400–16). Italian composer. He was presumably from Perugia. He was the first *magister capellae* and the only cantor at the as yet unfinished Milan Cathedral from 1402 to 1407. His duties as described in the cathedral records were to 'biscantare' during solemn feasts as well as to teach music in a school connected with the cathedral, and to offer free instruction to three boys chosen by the cathedral deputies.

Matteo's appointment to Milan Cathedral coincided with the ordination of the theologian Pietro Filargo da Candia (1340–1410) as Archbishop of Milan. This may not have been a coincidence, for it appears that by 1406 Matteo was at least intermittently in the service of Filargo, who had by that time been made a Cardinal and papal legate in Lombardy by the Roman Pope Innocent VII; in that year the cathedral deputies agreed to pay Matteo's salary even though he was absent from the cathedral and in Pavia at the wish of the cardinal. From July 1407 Matteo's monthly payments from Milan Cathedral ceased, presumably because he became a permanent member of Filargo's household. Filargo was an important figure in both church and secular politics of his day. He studied at Oxford and Padua and received the doctorate in theology at Paris in 1381. Described by a contemporary as 'luxury-loving', Filargo established a household in Pavia, the seat of the Milanese territories, where he lectured at the university and served as advisor to and ambassador for the Milanese ruler Giangaleazzo Visconti (*d* 1402). Filargo's activities in these years to end the papal Schism led to his being elected Pope Alexander V by the church council at Pisa on 26 June 1409 (making him the third simultaneous pope), but he died only ten months later. Matteo may have accompanied Filargo to Pisa, but he did not remain long in the antipapal court after Filargo's death, for he is not listed as a member of the chapel of his successor, John XXIII (1410–15). Matteo's name reappears in the records of Milan Cathedral in 1414, and he continued to receive a monthly salary there until October 1416. The last record of him in Milan Cathedral dates to January 1418, which, contrary to Nava, does not contain a notice of Matteo's death, but merely records a complaint by Matteo's successor, Ambrosino da Pessano, that his salary was not as high as Matteo's had been. The date of his death is unknown; that he wrote contratenors to works of Grenon and Fontaine suggested to Pirrotta that he was active in the 1420s, when those composers are known to have been in Italy, but their works could have been circulating in Italy before they worked there, perhaps in the previous decade. The recent discovery that the fragment *I-PAas* Armadio B 75 (the remains of a sizable manuscript, whose five surviving works contain three contratenors by Matteo) was recovered from the binding of a convent account book in Piacenza might suggest an as yet unexplored chapter of his career in that city.

The manuscript *I-MOe* α.M.5.24, probably compiled in the first two decades of the 15th century (*see* SOURCES, MS, §VII, 3), includes among its total of 103 pieces 30 works and two single parts ascribed to Matteo as well as seven works and three substitute contratenors that can be attributed to him with great probability. Except for the contratenor to *Tu me solevi donna*, these *opera dubia* all appear together in the first fascicle, which begins and ends with works by him and contains the names of no other

composers. Most of these compositions show clear signs of his style and there is little doubt that they are his. The fragment *I-PAas* contains three further contratenors by Matteo to works by Antonello da Caserta, Ciconia and Pierre Fontaine. Apart from these, one song in a recently discovered fragment (*CH-BEb*, Fragm.827) and a single voice in the Boorman fragment, all Matteo's works survive in *I-MOe* 5.24 alone (the suggestion in PMFC, xx, 1989, that the extremely abbreviated ascription to two untexted works in *I-Fn 26* reads 'Matheus' is unconvincing).

His surviving compositions include mass movements, two isorhythmic motets and both Italian and French secular songs. Willi Apel regarded Matteo as the principal composer of his generation, in whose compositions one could trace the stylistic transition between the mannerism of the 1380s to the 'modern style' of the early 15th century. This viewpoint was challenged by Besseler; since then Matteo's position in history has remained an open question, and his music awaits a thorough stylistic study. Some preliminary observations can be made, however. His cantus lines contain quirky leaps (the diminished 4th is a favourite interval), often from unstable sonorities that precede expected cadential arrivals. He often surrounds structural pitches with appogiaturas and auxiliary notes and embellishes his melodies with detailed, fast-moving ornamental figurations, notated in *I-MOe* α.M.5.24 with an expanded arsenal of italianate figures. A favourite device in the songs is to construct a melodic sequence upon a complex or syncopated rhythmic pattern (for example in *Le greygnour bien* and *Le grant desir*). He often begins phrases with imitation in all three voices. Several of his works explore a more adventurous chromaticism than is typical of this period. The ballade *Le greygnour bien*, with a moralizing text in the form of a sonnet, is one of the most complex of his works in its rhythm and notation, containing reverse coloration and elaborate syncopation. *Se je me plaing de Fortune* quotes the opening texts of Machaut's *Se je me plaing* and *De Fortune me doit plaindre*, as well as the cantus and tenor of the opening eight bars of the latter. In addition, the texts of both Matteo's *Se je me plaing* and Machaut's *De Fortune* complain about the vagaries of fortune, using the female voice. The female voice is also found in *Par vous m'estuet/Soyes par moy*, a rondeau scored for two equal cantus lines whose double text contains a dialogue between a man and a woman. Several works, including the ballade *Pres du soloil* and the virelai *Belle sans per*, have the simplified texture and slower harmonic movement associated with a slightly younger generation.

Sera quel zorno may displays an italiante sensibility in the long ornaments using both duplet and triplet semiminims; the work is notable for its phrase endings on unresolved triads and a sequential motif of a scalic descent through a tritone, significantly setting the word 'guai' ('troubles'). His one other Italian song, *Già da rete d'amor*, is composed in a strikingly low tessitura and has a three-flat signature.

The isorhythmic motet *Laurea martirii/Conlaudanda est/Proba me Domine*, shown by Maiani to be based on an Ambrosian Vespers antiphon for the Feast of St Laurence, was probably written for the Ambrosian Rite at Milan or Pavia. As in his isorhythmic Agnus Dei motet, the tenor is stated three times with a canon explaining that it is diminished in each of his repetitions. His mass movements explore various techniques of construction. One Gloria (FG 11), a beautiful cantilena setting, has a pan-isorhythmic Amen; another (FG 12) is scored for tenor and two canonic cantus parts, indicated with the rubric 'fuga'. The four-voice Gloria (FG 14) and three-voice Gloria (FG 15) are based on the same isorhythmic tenor and share many structural features, discussed by Layton and Maiani; one is clearly a reworking of the other. The latter work (FG 15) has a particularly virtuosic cantus part, whose notational subtleties include semiminims with half-drawn note heads that signify diminution (a device found in several works in the later layer of *I-MOe* 5.24).

While many works of this period are transmitted with different contratenors, it is an unusual feature of his output that some of Matteo's contratenors to works by other composers are actually ascribed to him (those for songs by Grenon, Ciconia, Antonello da Caserta and Fontaine). Grenon's *Je ne requier* is transmitted with Matteo's contratenor in a fragment in Stanley Boorman's private collection, New York, making this single voice-part among the best-travelled of Matteo's works.

Mattern, A.W.F. *See* MATERN, A.W.F.

Mattern, Ludwig Anton Wilhelm. German cellist, possibly related to A.W.F. MATERN.

Matters, Arnold (*b* Adelaide, 11 April 1904; *d* Adelaide, 21 Sept 1990). Australian bass-baritone. After winning the Sun Aria Competition at Ballarat, he was invited by Melba to sing with her in Melbourne and encouraged by her to seek training and a career abroad. He studied in Adelaide with Frederick Bevan and Clive Carey and in London with W. Johnstone Douglas. From 1932 he sang with Sadler's Wells Opera, combining a fine voice with admirable theatrical gifts; his Falstaff, in particular, was a ripe and humorous study. His repertory included Don Giovanni, Hans Sachs and Wotan. He also sang small roles during international seasons at Covent Garden and produced opera for Sadler's Wells and elsewhere. Matters returned to Australia in 1941 for war service with an entertainment unit. He again joined Sadler's Wells in 1944 and sang the title role in the first performance in England (1948) of *Simon Boccanegra*. He was the original Pilgrim in Vaughan Williams's *The Pilgrim's Progress* (1951) at Covent Garden, and created Cecil in Britten's *Gloriana* (1953). In 1954 he returned to Adelaide to teach at the Elder Conservatorium (1954–66), producing *Tosca* and *Otello* for the Elizabethan Trust Opera (now Opera Australia) 1957 touring season. His recordings include the role of Mícha in *The Bartered Bride*, conducted by Beecham.

HAROLD ROSENTHAL/ROGER COVELL

Matteuccio. *See* FORNARI, MATTEO.

Matthaei, Conrad (*b* Brunswick, 1619; *d* ?Königsberg [now Kaliningrad], 1667). German composer and theorist. He was a pupil of Heinrich Grimm at Brunswick. He apparently spent the major part of his life at Königsberg. He studied law and philosophy at its university about 1650 and seems to have continued his association with that institution on receiving the degree of doctor of law; he acknowledged the support of its faculty in the preface to his treatise *Kurtzer, doch ausführlicher Bericht von den Modis Musicis*, which was published in Königsberg in 1652 (reprinted 1658). In 1654 he became Kantor of the Old Town church. It is generally believed that he remained in that appointment until his death, though according to Walther he returned to Brunswick and practised law. No evidence supports this statement, and the fact that all his known compositions were published at Königsberg seems to contradict it. All Matthaei's compositions are occasional sacred pieces. They display features similar to those found in the music of Johannes Eccard and his pupil

Johann Stobaeus, particularly those in cantional style. This led Winterfeld to suggest that he studied with Stobaeus; he also believed that he may have been influenced by the *Arien* for several voices of Heinrich Albert. Matthaei's mentors as a theorist are more easily determined. In addition to the treatises of his teacher Grimm it is apparent that he relied on those of Seth Calvisius and Johannes Lippius.

WORKS

all published in Königsberg, many lost since 1945

Neue Hertzens-Freude (1650), *GB-Lbl*
Der CXXXI Psalm, 8vv (1653)
Der LXVII Psalm, 4, 8vv (1654)
Hochzeit-Lied aus dem 95. Psalm, wedding song, 8vv (1654)
Psalm CXVI, wedding song, 8vv, bc (1655), *PL-Wn*, inc.
Hochzeit-Lied ... aus dem 30. Psalm, wedding song, 4vv, 2 vn (1655)
Psalm CXXXI, 12vv (1655)
Tanz, du suchest deine Lust, bridal dance, 4vv (1657)
Hochzeit-Lied aus dem ... XVIII Psalm, wedding song, 10vv (1657)
Fidentem nescit deservisse Deus, funeral song, 5vv (1657), *WRu*
Christliche Sterb- und Siegeslied, funeral song, 5vv (1657)
Sterb-Lied, 6, 9 or 13vv (1658), *WRu*
Eucharistēs kai eukuikos hymnos, 5vv (1658)
Harmonia sacra, 12vv (1658)
Christliche Sterbens Gedancken, funeral song, 5vv (1658), *WRu*, inc.
Christliche Sterblied, funeral song, 5vv (1659)
Ehren-Lied, 6, 10 or 14vv (1659)
Diesen irdschen Leben muss die Liebe den Zusatz geben, bridal dance, 5vv (1662)
Frülings-Liebe, bridal dance, 2vv (1664)
Hymnus, 10vv (n.d.)
MS copies of printed works: 20 in *RUS-KA*, 4 in *D-Bsb*, according to Eitner

CHRISTOPHER WILKINSON

Matthay, Tobias (Augustus) (*b* London, 19 Feb 1858; *d* High Marley, nr Haslemere, 15 Dec 1945). English teacher, writer, pianist and composer. His parents were German; his father became a naturalized British subject. Matthay won the Sterndale Bennett Scholarship and entered the RAM in 1871 where his teachers were Bennett himself, Prout, Sullivan and Macfarren. He was appointed sub-professor there in 1876 and was a full professor from 1880 to 1925. His first London recital was at the Princes Hall on 28 November 1884. In 1900 he founded his own school as a means of propagating his theories of piano technique and his method of teaching based on them. Those theories were expounded in *The Act of Touch*, a pioneering work in which he attempted a full-scale analysis of the physical aspects of piano playing, categorizing the various vertical movements into touch-species and laying great stress on muscular relaxation and forearm rotation.

Many of Matthay's conclusions were called into question by other workers in the same field, notably by James Ching, who produced scientific evidence in support of his arguments. Yet the quality of Matthay's teaching was emphasized by the success of his students and associates, among them Hess, Scharrer, Cohen, Craxton, Bowen, Langrish, Lympany and Robertson: Ching himself acknowledged, in his *Piano Technique*, the unique value of Matthay's pioneering work. Matthay's compositions include an overture, *In May*, a piano quartet, some songs and much piano music.

FRANK DAWES

Mattheo de Sancto Paolo. *See* PAULLET.

Mattheson, Johann (*b* Hamburg, 28 Sept 1681; *d* Hamburg, 17 April 1764). German composer, critic, music journalist, lexicographer and theorist.

1. Life. 2. Music 3. Writings.

1. LIFE. Mattheson was the third and only surviving son of Johann Mattheson, a Hamburg tax collector, and Margaretha Höling of Rendsburg (Holstein). Details of Mattheson's life come largely from his autobiography published in the *Grundlage einer Ehren-Pforte*. His education was exceptionally broad, perhaps because his parents hoped he would gain a position in Hamburg society. At the Johanneum he received a substantial background in the liberal arts, including musical instruction from Kantor Joachim Gerstenbüttel. He also had private instruction in dancing, drawing, arithmetic, riding, fencing, and English, French and Italian. At six he began private music lessons, studying the keyboard and composition for four years with J.N. Hanff (later organist at Schleswig Cathedral), taking singing lessons from a local musician named Woldag and instruction on the gamba, violin, flute, oboe and lute. At nine Mattheson was a child prodigy, performing on the organ and singing in Hamburg churches. His voice was of such quality that Gerhard Schott, manager of the Hamburg opera, invited him to join the company, and he sang in J.W. Franck's opera *Aeneas*. In addition to performing and his studies at the Johanneum, Mattheson was sent for instruction in law. However, he realized that the opera was in itself a 'musical university' and decided not to pursue formal education

after completing the Johanneum curriculum in 1693. He became a page at the Hamburg court of Graf von Güldenlöw, 'Vice-König' of Norway and brother of Christian V, King of Denmark. His unusual talent attracted the court circle and he was frequently asked to play and sing. The experience left him with an indelible impression of the glamour and brilliance of Hamburg's aristocratic society, and, he remarked, he wept bitterly when his father broke the employment agreement and forced him to leave court.

Having previously sung mainly in the chorus and in minor roles, Mattheson made his solo début in female roles when the opera company visited Kiel in 1696. By the following year his voice had changed, and he began to take tenor roles in which he had considerable success up to 1705. Mattheson led an exceedingly rich musical life in these 15 years with the Hamburg opera; he sang and conducted rehearsals under such composers as J.G. Conradi, J.S. Kusser and Reinhard Keiser. He testified to learning the new, Italian manner of singing from Kusser. In 1699 he wrote and had performed his first opera, *Die Plejades*.

Mattheson met Handel in 1703, and a mutually beneficial friendship developed over the next three years: Mattheson said that he influenced the growth of Handel's musical style, particularly by teaching him how to compose in the dramatic style; he also probably obtained for Handel a position in the opera orchestra as second violinist and harpsichordist. In 1704 Mattheson's *Cleopatra* was performed with the composer in the role of Antonius. Handel conducted the performance from the harpsichord while Mattheson was on the stage. However, after Antonius's suicide in the middle of the third act, Mattheson returned to the orchestra, intending to take his place at the keyboard, but Handel refused to yield. An argument between the two young musicians led to the duel described by Mattheson in his *Ehren-Pforte* (1740); according to him, Handel's life was spared by a large button on his coat that Mattheson struck with his sword. Apparently, however, the two were soon reconciled, and Mattheson sang the leading roles in Handel's *Almira* and *Nero* at Hamburg in 1705, the final year of Mattheson's career with the theatre.

During his professional career Mattheson not only performed in some 65 new operas but wrote several of his own. He became a virtuoso organist and found time to become involved in numerous social and musical activities, including teaching. In 1703 he was invited (as was Handel) to apply for the position of organist to succeed Dietrich Buxtehude at the Marienkirche in Lübeck. Mattheson and Handel travelled together to Lübeck for the auditions, 'making numerous double fugues in the carriage'. However, they both turned down the position. Mattheson also declined invitations to other important positions as organist, including one at the Pfarrkirche in Haarlem and, as successor to the distinguished J.A. Reincken, at the Catharinenkirche in Hamburg.

In 1704 Mattheson became a tutor of Cyrill Wich, son of the English ambassador to Hamburg, Sir John Wich. This position was the turning point in his career, offering him employment with social status and a considerable salary. He proved himself so capable that in January 1706 he was made secretary to Sir John Wich, a position he retained for most of his life, continuing with the same responsibilities when Wich's son was appointed his father's successor in 1715. Mattheson's duties greatly exceeded routine secretarial obligations. He became indispensable to the ambassador's office, frequently travelling as Wich's official representative on important diplomatic missions. He immersed himself in the study of the English language, English law, politics and economics; and he became an expert in the intricate details of trade between England and Hamburg.

In 1709 Mattheson married Catharina Jennings (*d* 8 Feb 1753), daughter of an English minister. In 1715 he became music director of Hamburg Cathedral, a post of particular importance, for which he composed many works, including more than two dozen oratorios. He was forced to resign this position in 1728, primarily as the result of increasing deafness; he was completely deaf by 1735. In 1719 Mattheson was appointed Kapellmeister to the court of the Duke of Holstein. During the extraordinarily productive years between 1715 and 1740 he wrote not only numerous important scores and treatises but also many translations from English of books, pamphlets and articles, primarily connected with his duties as secretary to the English ambassador. He also translated several English histories, novels and philosophical works, and produced a steady flow of articles for journals published in Hamburg (Cannon gives a valuable bibliography).

In 1741 Mattheson received the title of Legation Secretary to the Duke of Holstein, and in 1744 was promoted to 'Legations-Rat'. After the death of his wife, he decided to donate the bulk of a considerable fortune, some 44,000 marks, to the Michaeliskirche in Hamburg for the rebuilding of the great organ destroyed by fire. He requested that in return he and his wife be buried in the church. On 25 April 1764 he was buried in the crypt of

1. Johann Mattheson: engraving by Christian Fritzsch after Johann Soloman Wahl, after 1717

that church following services at which Telemann conducted *Das fröhliche Sterbelied, womit der nunmehro wolseelige Legations-Rath, Herr Johann Mattheson, ihm selbst, harmonisch und poetisch, im 83sten Jahre seines Alters, zu Grabe gesungen*, which Mattheson had composed for his own funeral.

2. Music. Johann Mattheson was the most important contemporary writer on the music of the German Baroque. He documented in unparalleled detail the musical world of those critical years in the 18th century when musical styles and values changed radically in the transition from the Baroque to the Classical period. However, it has been previously impossible to assess much of Mattheson's music, particularly his operas and some two dozen oratorios. These were assumed to be lost in the destruction of the Hamburg Stadtbibliothek in World War II. Most of that music, however, had not been destroyed and in 1998 was returned to Hamburg from Armenia. Scholars will now be able to evaluate this music more fully than previously, and they will be able to integrate Mattheson's compositional achievements into the history of music in Hamburg during the early 18th century. Mattheson was a deeply devout man and committed himself energetically in word and music to preserving and strengthening music in the Protestant church; his oratorios formed the heart of his musical achievement. As shown in *Das Lied des Lammes*, his sacred music fully embraces operatic style; nevertheless, in its melodic simplicity, its dramatic, homophonic choruses, striking emphasis on Protestant chorales and sensitivity to the rhetorical values of the text, his oratorio has a popular appeal and an important position in the development of the form.

The opera *Cleopatra*, though an early work, is evidence of the composer's talent and individual style. While the opera is famous mainly for its connection with the Mattheson–Handel duel, its real significance lies in the supporting musical evidence it contributes to Mattheson's theoretical doctrines, codified several years later. Former opinions that Mattheson as a composer was insignificant and that he imitated the style of his favourite contemporary, Reinhard Keiser, can be disproved by this opera. He is clearly distinguishable from Keiser, particularly in his melodic writing: his melodies are usually smoother, more conjunct in motion and therefore less angular than Keiser's; he achieved a melodic and at the same time an expressive simplicity, taking more care than Keiser in maintaining poetic metres and usually avoiding long melismatic passages characteristic of Keiser's arias. There is a striking emphasis on folklike songs, often strophic in form. The folk element was a tradition of earlier Hamburg opera, and Mattheson employed it to special advantage in comic scenes (see Buelow, 1970). Mattheson was Hamburg's first native musical genius, and this is of the utmost importance when considering the substance and validity of his aesthetic and musical theories and critical judgments. Indeed, he wrote about music from the vantage point of enormous practical experience and professional expertise.

3. Writings. It is immediately clear that Mattheson's writings on music cannot be adequately summarized. In more than a dozen major volumes and a number of smaller publications, he discussed almost every aspect of the music of his day. In most instances he spoke as the rational man of the Enlightenment, a musician who believed in the progress of his art and did not hesitate to codify and rationalize all aspects of music. Mattheson honoured the musical past, but in general he found little in that past to preserve for the future and was often unsympathetic towards German writers and musicians steeped in the traditional musical values of the 17th century.

Mattheson's first musical book, *Das neu-eröffnete Orchestre* (1713), proposes to show 'the galant man how he can achieve a complete idea of the majesty and merit of the noble art of music', and undertakes a thorough discussion of basic questions of musical instruction. This instruction, however, is viewed from the present, not the past, and little time is lost in restating old rules of theory and practice. Mattheson quickly overturned the favourite theoretical concepts of the past, proclaiming, for example, that the interval of the 4th must be both consonant and dissonant, depending on the musical context and judgment of the ear. He attacked the old system of solmization and the church modes. Equally important are his explanations of the major and minor scales according to their affective connotations. *Das neu-eröffnete Orchestre* is rich in factual detail, such as definitions of the secular forms of music and the national musical styles. He pleaded for German musicians to achieve prominence in their own country, where Italian musicians 'make all the money and return home'. Reinhard Keiser served as the model of the great German musician; he was the 'premier homme du monde', to be emulated by all German musicians (see Cannon). As such, Mattheson championed the dramatic musical style in music, and this early work presents many of the ideas about theatrical music that will subsequently be expanded and refined.

In 1722 Mattheson began publication of *Critica musica*, the first German music periodical. It appeared in 24 numbers during 1722–5 and was later collected into two volumes. Each number includes news about recent musical events, new books and musical personalities from various European cities. *Critica musica* is one of Mattheson's most valuable works. Among its major contributions is the publication in German, with extensive annotations, of Abbé Raguenet's *Parallèle des italiens et des françois, en ce qui regarde la musique et les opéras* (Paris, 1702), and the reply to Raguenet by Le Cerf de la Viéville, *Comparaison de la musique italienne et de la musique françoise* (Paris, 1704–6). Other sections are devoted to continuing polemics regarding solmization, the writing of canons, a discussion of the 1704 Passion formerly attributed to Handel, and important material involving contemporary theories of melody. Not the least interesting are lengthy quotations from the correspondence between Mattheson and many leading musicians of his day, including Handel, Fux, Telemann, Kuhnau, Heinichen, J.P. Krieger and Johann Theile.

Der musicalische Patriot (1728) continues Mattheson's defence of the theatrical style in church music. There is also an important description of the Hamburg opera together with a detailed inventory by year of all the operas and composers included in the repertory of the Hamburg opera house from its founding to its closing. The work concludes with a lengthy theoretical and philosophical discussion of the true meaning and purpose of a good opera theatre, and attempts to show that the collapse of the Hamburg opera was a result of the deteriorating taste of the opera public.

Among Mattheson's numerous books, the most important is *Der vollkommene Capellmeister* (1739), an encyclopedia of knowledge that Mattheson believed should belong to the training of every Kapellmeister, i.e. music director in a church, municipal or court musical establishment. He brings together a vast array of facts as well as his most complete statement of several major theoretical concepts. These include the systematizing of the doctrines of rhetoric as they become the basis of composition. Since for Mattheson melody was the basis of all composition, he proposed a complete theory of good melodic writing. A lengthy discussion of emotion in music leads to his famous statement: 'Everything [in music] that occurs without praiseworthy Affections, is nothing, does nothing, is worth nothing'. Every aspect of music is viewed in relationship to the Affections, and this section of *Der vollkommene Capellmeister* is in fact the only attempt found in Baroque literature to arrive at a true 'doctrine' of the Affections (see Lenneberg for an English translation of the relevant portions). The treatise concludes with an elaborate examination of consonance and dissonance and the principles of contrapuntal practice. No brief description, however, can convey the breadth and depth of knowledge in this treatise. The author of *Der vollkommene Capellmeister* was someone of enormous learning in musical literature; but he was not simply a codifier of facts, and much of this work's value lies in the originality of the presentation and the author's reflections on the most important aspects of the musical thought of his time.

Among the other valuable works by Mattheson, one must cite the *Grosse General-Bass-Schule* (1731), an expanded version of the earlier *Exemplarische Organisten-Probe* (1719). These books give organists valuable assistance in learning how to improvise from a given bass, an ability vital to the daily musical responsibilities of organists at this period. The 48 examples, with Mattheson's extensive comments on their realization, are particularly important. The *Kleine General-Bass-Schule* (1735) takes up the other aspect of improvisation, the realization of a thoroughbass part, but (in distinction to the earlier two works) in the role of an accompanist, not as soloist.

Finally, among Mattheson's works none is of more lasting value and originality than his *Grundlage einer Ehren-Pforte* (1740), a lexicon giving biographical details of 149 of the best musicians known to Mattheson from the past as well as the present (fig.2). It has proved valuable to every subsequent lexicographer and music historian. Mattheson carried on a prodigious correspondence with many of his most important contemporaries, and their responses often supplied the factual information for their entries. In a large number of cases Mattheson received complete autobiographies, including those from J.P. Krieger, Kuhnau, Mizler, Printz, Scheibe, Telemann and J.G. Walther.

Mattheson's books are written in a difficult, exceedingly prolix style requiring considerable expertise in the German language. Very little from these texts is available in English and the definitive study of his treatises remains to be written. For the student of German Baroque music, however, they are a source of inestimable value, musical documents of unique importance to the history of 18th-century music in Germany.

2. Title-page of Mattheson's 'Grundlage einer Ehren-Pforte' (Hamburg, 1740)

WORKS

for a complete list see MGG1

OPERAS

Die Plejades, oder Das Sieben-Gestirne (Spl, F.C. Bressand), Hamburg, 1699, music lost

Der edelmüthige Porsenna (Spl, 4, Bressand), Hamburg, 1702

Victor, Hertzog der Normannen [Act 2] (3, H. Hinsch), Hamburg, 1702 [Act 1 by J.C. Schieferdecker, Act 3 by G. Bronner], music lost

Cleopatra [Die unglückselige Cleopatra, Königin von Egypten, oder Die betrogene Staats-Liebe] (drama per musica, 3, F.C. Feustking), Hamburg, 20 Oct 1704, *US-Wc*; ed. in EDM, lxix (1975)

Le retour du siècle d'or, das ist Die Wiederkehr der güldnen Zeit ('Operetgen', Countess Löwenhaupt), Nehmten and Perdoel, Holstein, 1705, music lost

Boris Goudenow, oder Der durch Verschlagenheit erlangte Trohn (drama per musica, 3, Mattheson), Hamburg, 1710

Die geheimen Begebenheiten Henrico IV, Königs von Castilien und Leon, oder Die getheilte Liebe (5, J.J. Hoë), Hamburg, 9 Feb 1711

ORATORIOS AND PASSIONS

all first performed in Hamburg

Die heylsame Geburth und Menschwerdung unsers Herrn und Heylandes Jesu Christi, 1715

Die gnädige Sendung Gottes des Heiligen Geistes, 1716

Chera, oder die Leidtragende und getröstete Wittwe zu Nain, 1716

Der verlangte und erlangte Heiland, 1716

Der Altonaische Hirten-Segen, nebst einer Passions-Andacht über den verlassenen Jesum, 1717

Der reformirende Johannes (J.G. Glauche), 1717

Der für die Sünde der Welt gemartete und sterbende Jesus (B.H. Brockes), 1718

Der aller-erfreulichste Triumph oder Der überwindende Immanuel, 1718

GEORGE J. BUELOW

Matthews, Artie (*b* Braidwood, IL, 15 Nov 1888; *d* Cincinnati, 25 Oct 1958). American ragtime composer and music educator. He grew up in Springfield, Illinois, where he learnt ragtime from two local pianists, Banty Morgan and Art Dillingham, and played professionally in the tenderloin district. After moving to St Louis about 1908 he studied the piano, the organ and theory, and composed and arranged for local theatres. He also transcribed rags by other composers for the music publisher John Stark, who issued Matthews's five *Pastime* rags. Jelly Roll Morton, who visited St Louis at this time, recalled Matthews as 'the best musician in town'. In 1915 Matthews took a position as church organist in Chicago and shortly thereafter one at the Berea Church in Cincinnati, where he settled at the end of World War I. There he earned a degree at the Metropolitan College of Music and Dramatic Arts (1918) and, with his wife Anna, founded in 1921 the Cosmopolitan School of Music, a classical conservatory for the black community, where he taught until his death.

Matthews's elegant *Pastime* rags were his greatest contribution to the literature. These dramatic, innovatory, highly pianistic pieces display the stylistic features of black ragtime pianists who performed in vaudeville: they abound in breaks, walking bass patterns, stop-time, chromatic runs, triplets, tango rhythms and, in no.4, dissonant tone clusters. These pieces form part of the second generation of St Louis ragtime which, like most of the better ragtime of the 1920s, was becoming increasingly virtuoso, reflecting both the physically demanding dances of the time and the emergence of jazz. Matthews notated two other masterworks of late St Louis ragtime, Robert Hampton's *Cataract Rag* and Charles Thompson's *Lily Rag* (both 1914), and arranged the first piece to be copyrighted with the word 'blues' in its title, *Baby Seals Blues* (1912). His most successful composition, *Weary Blues* (1915), became a jazz standard.

WORKS
(*selective list*)

Pf: Pastime Rag no.1 (1913); Pastime Rag no.2 (1913); Weary Blues (1915); Pastime Rag no.3 (1916); Pastime Rag no.5 (1918); Pastime Rag no.4 (1920)
Pf arrs.: Baby Seals Blues (1912); Lily Rag (music by C. Thompson) (1914); Cataract Rag (music by R. Hampton) (1914); Jinx Rag (music by L.P. Gibson) (1915)
Songs: Give me dear just one more chance (F.H. Hayes) (1908); Everybody makes love to someone (P. Franzi) (1912); Lucky Dan, my Gamblin' Man (C.A. Hunter) (1913); Princess Prance (Hunter) (1913); Everything he does just pleases me (Matthews) (1916)

Principal publisher: John Stark

TREBOR JAY TICHENOR

Matthews, Colin (*b* London, 13 Feb 1946). English composer. He studied classics at Nottingham University (BA 1966), and then composition there with Whittall and Maw (MPhil 1970); doctoral study on Mahler followed at the University of Sussex (DPhil 1978), where he also taught. During much of this time (1964–74) Matthews collaborated with Deryck Cooke on the performing version of Mahler's Tenth Symphony. He was also assistant at Aldeburgh to Britten (1971–6), with particular involvement in *Death in Venice* and the Third String Quartet, and he worked with Imogen Holst (1972–84). After Britten's death he edited for publication various works left in manuscript. Matthews's wider responsibilities have included the positions of director of the Holst Foundation, chairman of the Britten Estate, director of the PRS, trustee of the Britten-Pears Foundation and council member of the Aldeburgh Foundation and the SPNM. He is executive producer of NMC Recordings, which he founded in 1988, and he has also produced recordings for a range of companies, receiving a Grammy nomination for Górecki's Third Symphony with Elektra Nonesuch (NONE 7599-79282-2, 1993). Matthews's own Fourth Sonata for orchestra received the Scottish National Orchestra's Ian Whyte Award (1975) and *Renewal* the Royal Philharmonic Society Award for large-scale composition (1996). In 1992 Matthews was appointed associate composer with the LSO, which has stimulated a notable series of orchestral works.

Matthews's orchestral works demonstrate the archetypal weight and expressive seriousness of a major symphonic composer, an impression reinforced by his ability to generate and sustain musical argument across large structures. The Fourth Sonata for orchestra (1974–5), Matthews's first significant work, combines minimalist processes, Ligetian textures and expansive melodies in a striking synthesis. This work prefigures several characteristics of Matthews's compositional style. Perhaps the most significant is the sense of impetus generated by architectural and musical processes devised to intensify the cumulative effect of the material. The harmonic argument is defined through extended pedal anchors which coordinate the layered, often heterophonic textures. The linear element focusses on a principal or structural melody line which acts as a more localized means of intervallic control and generator of other elements in the musical fabric. The manner of the Fifth Sonata for orchestra (*Landscape*, 1978–80), an epic narrative in which Mahler exerts an influence, and the Cello Concerto no.1 (1983–4) tends more towards the traditional. But these works were immediately contradicted by the modernist energy and idiom of *Suns Dance* (1984–5) for large ensemble, in which Matthews redefined the nature of his musical discourse, replacing continuity with abrupt switches between contrasting musical sections as in a series of cinematic jump-cuts. *Suns Dance* and *Hidden Variables* (1988–9), both originally composed for large ensemble, have been amongst his most radical works. Both share similar opening strategies of short,

sudden bursts of sound followed by abrupt freezes. But *Suns Dance* focusses on a succession of melodic protagonists in a modern idiom, while in *Hidden Variables* continuous reference to the opening statement is made against a range of repetitive-style textures that throw punning glances at Reich and Adams.

In subsequent pieces, Matthews has continued to define for himself individual solutions to the orchestral medium, particularly in works which eschew narrative continuity, or where that continuity is deliberately broken. His music has been open to a range of influences including early Schoenberg, for example in the continuous four-movements-in-one structure of *Quatrain* (1989) and the energy and sound of *Suns Dance*; the hard-edged textures and timbres of Varèse, in *Two Part Invention* (1987–8); Berg's serial approach, in *Divertimento* (1982); and an affinity with Tippett in the cross-cut structures and fanfare-like riffs of some later music.

Orchestral compositions such as *Cortège* (1988) and *Memorial* (1992–3) have been characterized by a monolithic quality of sound, akin to a painter's application with a knife rather than a brush. *Memorial*'s strongly drawn gestures (prompted by the Thiepval war memorial) and structural compression produce a work of dramatic immediacy in which emphasis on linear energy is lessened in favour of greater harmonic effect. The tight focus of *Quatrain* introduces a new aggression and density of sound through high woodwind and low brass tessituras, an effect reinforced in *Broken Symmetry* (1991–2) by its sustained high energy and mechanistic pulses. *Renewal* brings together various strands of these works in four pieces collected together in a symphonic pattern that lasts nearly an hour, with *Broken Symmetry* placed third as the scherzo movement. The atmosphere of the final movement, *Metamorphosis*, a setting of Ovid for chorus and orchestra, achieves a quality of musical repose that reconciles the whole.

Throughout his career Matthews has also maintained a steady output of chamber music including three string quartets, two oboe quartets, songs, piano music (notably the *Eleven Studies in Velocity*, 1987) and arrangements or adaptions of music by other composers including Britten, Mahler, Dowland, Berlioz, Purcell and Schubert. The urgency of the dramatic cantata *The Great Journey* (1981–8) stands out as an example of Matthews's ability to treat the restricted resources of baritone and eight instrumentalists as a spur to musical invention. Its four parts suggest a symphonic frame, with the extended third (arranged separately for instruments as *Fuga*) the scherzo. The quality of its word setting and the responsiveness of the accompaniment to the nuances of the text underline the breadth of Matthews's expressive range.

WORKS

ORCHESTRAL

Sonata no.4, 1974–5; Night Music, small orch, 1976–7; Sonata no.5 'Landscape', 1978–80; Little Suite no.2, small orch, 1979; Divertimento, double str, 1982 [arr. of chbr work]; Canonic Ov. 'Arms Racing', 1983; Vc Conc. no.1, 1983–4; Toccata Meccanica, 1984, arr. sym. wind, 1993; Monody (Sonata no.6), (1987); Cortège, 1988; Quatrain, sym. wind, 1989; Chiaroscuro, 1990; Machines and Dreams (A Toy Sym.), toy insts, orch, 1990, rev. as 3 Machines, 1991; Hidden Variables, 1991 [transcr. of chbr work]; Broken Symmetry, large orch, 1991–2 [incl. as 3rd movt of Renewal]; Memorial, large orch, 1992–3; M50, 1994–5; Vc Conc. no.2, 1996

CHORAL

Second Hand Flames, vocalise, SSATB, 1982; Prometheus Fragment (Aeschylus), 12-part chorus, orch, 1989; A Rose at Christmas (W. Shakespeare), double chorus, 1990; Renewal, SATB, large orch, 1995–6

CHAMBER

DAVID WRIGHT

Matthews, David (John) (*b* Walthamstow, London, 9 March 1943). English composer. Elder brother of Colin

Matthews, he studied classics at Nottingham University, took lessons in composition with Milner, and received further advice and encouragement from Maw. He also collaborated with Deryck Cooke on the performing version of Mahler's Tenth Symphony, and during 1966–9 he was music assistant to Britten.

Although Matthews began composing at 16, his first acknowledged work dates from the age of 25. He soon found that his affinities led in an alternative direction to the post-Darmstadt trends of the 1960s. Drawing inspiration from the rhythmic vitality and spirited individual approach of Tippett, he has evolved his own deeply expressive sound world – Romantic in character, vibrant in melody and rooted in an expanded tonal harmony – while preserving a classical lucidity and poise, and striving to re-evaluate and breathe fresh life into the traditional 'objective' forms of symphony and string quartet. Like Tippett, Matthews responds readily to the inclusion of vernacular idioms in his work, such as the blues in the Oboe Concerto, or the tango in the Fourth Symphony. His rhythmically energetic Piano Sonata typifies this kind of adroit synthesis.

Although not averse to employing a conventional four-movement format, Matthews has made innovative use of other inherited forms: a powerful example is his dramatic orchestral *Chaconne*. He has also experimented imaginatively with single-movement and bipartite structures in which genuinely 'fast' music with a dynamic, thrusting, often syncopated bass line may cede ultimately to a rich, drawn-out Mahlerian apotheosis. While his First Violin Concerto recalls the expressiveness of those by Berg or Szymanowski, a Moravian influence stemming from Janacek may be noted in the chamber music, in his treatment of rhythm, melody and texture.

Matthews's programmatic works, such as *In the Dark Time*, *September Music* and *The Music of Dawn*, bear witness to his unusual gift for evoking Impressionistic nocturnal atmosphere, shimmering or energized seascape, a lyrical sense of place, or seasonal change – features that relate to certain writers he sets, including Hopkins and David Jones, in his alluring vocal settings with ensemble. *Cantiga* is a graphically intense dramatic scena. Matthews's significant setting of the *Vespers*, which juxtaposes extracts from Rilke with passages in Latin, typifies his flair for generating varied textures and finding fresh, vital and even voluptuous forms of expression in response to an established tradition. His writings include *Michael Tippett: an Introductory Study* (London, 1980) and articles on Mahler, English music and Britten especially.

WORKS

Orch: Little Conc., op.6, chbr orch, 1970–71; Sym. no.1, op.9, 1975–8; Sym no.2, op.17, 1976–9; Elegy, op.16a, chbr orch, 1977; Sonata Canonica, op.19, small orch, 1977; September Music, op.24, small orch, 1979; The National Anthem Strikes Back, 1980; White Nights, op.26, vn, small orch, 1980; Vn Conc., no.1, op.31, 1980–82; Introit, op.28, 2 tpt, str, 1981; Serenade, op.29, small orch, 1982; Sym. no.3, op.37, 1983–5; In The Dark Time, sym. poem, op.38, 1985; Variations for Str, op.40, 1986; Chaconne, op.43, 1986–7; Romanza, op.49, vc, small orch, 1989; The Music of Dawn, op.50, 1989–90; Sym. no.4, op.51, chbr orch, 1989–90; Scherzo capriccioso, op.52, 1990; Capriccio, op.54, (2 hn, str)/str, 1991; Ob Conc. op.57, 1991–2; From Sea to Sky, ov., op.59, small orch, 1992; A Vision and a Journey, op.60, 1992–3, rev. 1996–7; Adagio, op.56b, str, 1995; Sinfonia, op.67, 1995–6; 2 Pieces, op.70, str, 1996–9; Burnham Wick, op.73, small orch, 1997; Vn Conc. no.2, op.74, 1998; Sym. no.5, op.78, 1998–9

Choral: Stars (cant., P. Holman), op.3, SATB, orch, 1970; Moments of Vision (G. Hopkins, D.H. Lawrence, J. Keats, G. Hill, E. Thomas, T. Hardy), op.68, SATB, 1978–95; 4 Hymns (F. Hölderlin, J. Donne, anon., C.G. Smith), op.20, SATB, 1980; The Company of Lovers (5 songs, D. Campbell, J. Wright), op.25, SATB, 1980; The Rose Carol (trad.), SATB, 1986; The Ship of Death (Lawrence), op.46, double SATB, 1988–9; Fanfare for the Queen Mother, SATB, 1990; Vespers (R.M. Rilke, Lat.), op.66, Mez, T, SATB, orch, 1993–6; 2 Housman Songs, op.69, high v, str qt, 1996; Hurrahing in Harvest (Hopkins), op.71, SSATBarB, 1997; The Doorway of the Dawn (Pima Indian), op.76, 1999

Chbr: Str Qt no.1, op.4, 1970, rev. 1980; Str Qt no.2, op.16, 1974–6; Music of Evening, op.11, gui, fl, mar, hpd, db, 1976; Toccatas and Pastorals, op.13, 2 ob, bn, hpd, 1976; Str Qt no.3, op.18, 1977–8; White Nights, op.26a, vn, pf; Str Qt no.4, op.27, 1981; Duet Variations, op.30, fl, pf, 1982; Pf Trio, op.34, 1983; Cl Qt, op.35, 1984; Str Qt no.5, op.36, 1984; Aria, op.41, vn, pf, 1986; The Flaying of Marsyas, op.42, ob, str qt, 1986–7; Str Trio, op.48, 1989; Adagio, op.56a, str qt, 1990; Three to Tango, op.51a, pf trio, 1990–91; Four to Tango, op.51b, pf, vn, va, vc, 1990–93; Five to Tango, op.51c, pf, vn, va, vc, db, 1990–93; Long Lion Days, op.55, vc, pf, 1991; Str Qt no.6, op.56, 1991; Montana Taylor's Blues, op.57a, ob, pf, 1993, arr. op.576, vn, pf, 1996; Pf Trio no.2, op.61, 1993–4; A Song and Dance Sketchbook, op.65, pf qt, 1995–7; Str Qt no.8, op.75, 1998: see Solo vocal [Skies now are Skies (Qt no.7), 1994]

Solo inst: Fantasia, op.5, va, 1970; Fantasia, op.8, vc, 1971; Songs and Dances of Mourning, op.12, vc, 1976; 3 Preludes, op.15, pf, 1976–9; Etude, op.21, pf, 1978; Winter Journey, op.32, vn, 1982–3, arr. va, 1999; 3 Studies, vn, op.39, 1985; Sonata, op.47, pf, 1989; One to Tango, op.51d, pf, 1993; A Little Threnody, op.62, eng hn, 1993; Variations, op.72, pf, 1997; Fugue in 4 Parts, vn, 1998

Solo vocal: 3 Songs (V. Hugo, P. Eluard, C. Baudelaire), op.1, S, orch, 1968–71; 3 Songs (A. Lewis), op.2, Bar, pf, 1969–70; Upon Time (H. von Hofmannsthal, R. Herrick, G. Leopardi), op.7, medium v, pf, 1970–71; Ehmals und Jetzt (Hofmannsthal, Hölderlin), 6 songs, op.22, S, pf, 1972–9; The Book of Hours (R.M. Rilke), op.10, high v, pf, 1975–8; Eclogue (H. Vaughan), op.14, S, fl, perc, pf, vn, va, vc, 1975–9; 4 Yeats Songs, op.23, T, pf, 1976–9; The Golden Kingdom (K. Raine, P. Shelley, W. Blake), op.33, high v, pf, 1978–83; A Cloud Sequence (Shelley, W. Wordsworth, Hopkins, J. Thomson, R. Brooke), nar, ens, 1979; Cantiga (M. Hemingway), op.45, S, chbr orch, 1987–8; Marina (T.S. Eliot), op.44, Bar, basset hn, va, pf, 1988; From Coastal Stations (Hemingway), op.53, medium v, pf, 1990–91; The Sleeping Lord (D. Jones), op.58, S, fl, cl, hp, str qt, 1992; Spell of Sleep (Raine), op.33a, S, chbr ens, 1992, arr. op.336, Bar, cl, pf, 1995; A Congress of Passions (Sappho), op.63, Ct/medium v, ob, pf, 1993–4; Skies now are Skies (Qt no.7) (Lawrence, e.e. cummings, Song of Songs), op.64, T, str qt, 1994; Winter Passions (A.S. Pushkin), op.77, Bar, cl, pf, vn, va, vc, 1999

Film scores: Essington, 1974, collab. P. Sculthorpe, M. Hannan; Manganinnie, 1980, collab. Sculthorpe; Burke and Wills, 1985, collab. Sculthorpe

Arr. and orchs of works by J.S Bach, Beethoven, Brahms, Chabrier, Delius, Liszt, Mahler, Alma Mahler, Monteverdi, Poulenc, Prokofiev, Schubert, Tchaikovsky

Principal publishers: Faber Music, Boosey & Hawkes

RODERIC DUNNETT

Matthews, Denis (James) (*b* Coventry, 27 Feb 1919; *d* Birmingham, 24 Dec 1988). English pianist and writer. From 1935 to 1940 he studied the piano with Harold

Craxton and composition with William Alwyn at the Royal Academy of Music, where he won awards for the most distinguished student. He made his London début at the Queen's Hall in 1939; from 1940 to 1946 he was attached to the RAF orchestra. In 1950 he played the '48' at the Vienna Bach Festival, and later toured widely. He played with the Griller, Amadeus and Aeolian quartets, and formed duos with the hornist Dennis Brain, the violinist Ralph Holmes and with his second wife, the pianist Brenda McDermott.

In 1956 he gave the première of Rubbra's Piano Concerto. Fundamentally, however, his taste inclined to the Classics, which he played with a keen, unidiosyncratic mind behind stalwart fingers and a lively, informed interest in the performing practice of the period. His career as a pianist never quite fulfilled its early promise, and he was drawn to lecturing, broadcasting and writing about music (notably about Beethoven's compositional processes): his publications include several early compositions, an autobiography *In Pursuit of Music* (London, 1966), a booklet, *Beethoven's Piano Sonatas* (London, 1967), and the chapter on Beethoven, Schubert and Brahms in the symposium *Keyboard Music* (London, 1972), which he edited, as well as a readable and communicative Master Musician volume on Beethoven (London, 1985). From 1971 to 1984 he was professor of music at the University of Newcastle upon Tyne. He was made CBE in 1975.

JOAN CHISSELL/STANLEY SADIE

Matthews, Jessie (Margaret) (*b* Soho, London, 11 March 1907; *d* London, 19 Aug 1981). English soprano. She appeared in pantomime, revue and ingénue roles in London from the early 1920s, first visiting Broadway in 1924 with C.B. Cochran's revue by Noël Coward, *London Calling*. She gained major attention when she took over from Gertrude Lawrence in Toronto in *Charlot's London Revue* (1925) and then starred in Charlot's revue of the following year. She introduced several now standard songs, including Coward's 'A Room with a View' (*This Year of Grace*, 1928), Porter's 'Let's do it' (*Wake Up and Dream*, 1929), Rodgers and Hart's 'Dancing on the Ceiling' in the London production of *Evergreen* (Rodgers and Hart, 1930) and Wood's 'Over My Shoulder' in the 1934 film of the show, and the song with which she was thereafter identified. Her straight acting roles included the title role of the popular BBC radio series 'Mrs Dale's Diary' (1963–9), and she was made an OBE in 1970. Her last appearance in a stage musical was as Mrs Doasyouwouldbedoneby in *The Water Babies* (1973) and she presented a solo show in London (1976) and Los Angeles (1979).

□

Matthias Hansen, Hans. *See* MATTHISON-HANSEN, HANS.

Matthison-Hansen, (Johan) Gottfred [Gottfried] (*b* Roskilde, 1 Nov 1832; *d* Copenhagen, 14 Oct 1909). Danish organist and composer. He was taught the piano by his father, Hans Matthison-Hansen, and from 1842 to 1845 by W.H. Barth, who also taught him music theory. He studied philosophy and law at the University of Copenhagen from 1850, but decided on a musical career in 1855, later studying at Leipzig (1862–3). Having taught himself to play the organ he gave his first recital at Malmö in 1856; three years later he was appointed organist at the Frederiks Kirke in Copenhagen, in 1871 at St John's and 1881 at the Trinitatis Kirke (succeeding A.P. Berggreen). A partisan of Wagner and Liszt, in 1864 he founded Euterpe, a short-lived society for the performance of contemporary music in Copenhagen, together with Grieg, Nordraak and C.F.E. Horneman. From 1867 he taught the organ and from 1884 also the piano at the Copenhagen Conservatory; from 1900 to 1905 he was one of that institution's directors. As a virtuoso organist he continued to give frequent recitals: from 1874 to 1877 about 100 in Danish towns, in 1877 at Hanover, in 1878 at Leipzig (Thomaskirche) and in 1884 at Weimar. His afternoon recitals (*orgelforedrag*) at the Trinitatis Kirke, given three or four times a year from 1883 to about 1900, included his own works as well as music by Bach, Classical and contemporary German and French composers (Franck, Widor, Guilmant); these became a prominent feature of Copenhagen concert life. (*MGG1* (G. Hahne))

TORBEN SCHOUSBOE

Matthison-Hansen [Matthias Hansen], **Hans** (*b* Adelby, nr Flensburg, 6 Feb 1807; *d* Roskilde, 7 Jan 1890). Danish organist and composer. He showed early talent for both music and drawing; intending to become a painter he studied at the Academy of Art in Copenhagen from 1829, staying with his teacher C.W. Eckersberg, a friend of his father. Stimulated by the musical milieu of Eckersberg's house, he learnt to play the violin, viola and cello and composed his first quartets. After a few years he decided on music as a career, encouraged by C.E.F. Weyse, who became his teacher. From 1832 until his death he was organist at Roskilde Cathedral, becoming famous through his virtuosity and especially his improvisations. He introduced Bach's organ works to Denmark and gave recitals in northern Germany, Norway and Sweden (1861–2) and in London (1864). Most of his compositions, including two oratorios, two Easter cantatas (1843 and 1846) and four psalm settings, were intended for church use and written in a smooth and melodious style, influenced by the music of Bach and Weyse. He also composed a Symphony in G minor (1848, unpublished) and many organ works. Among his children and grandchildren were several distinguished musicians. (*MGG1* (G. Hahne))

TORBEN SCHOUSBOE

Matthisson, Friedrich von (*b* Hohendodeleben, nr Magdeburg, 23 Jan 1761; *d* Wörlitz, Anhalt, 12 March 1831). German poet. After study of theology, philosophy and philology at Halle, and a short period as a schoolmaster, he was appointed tutor and travelling companion to Princess Luise of Anhalt-Dessau, whose lady-in-waiting he married. For much of the remainder of his life he was on the move, meeting many of the leading literary figures of the age, and continuing to write poetry (there are also an early drama, travel diaries and other autobiographical writings). He received various honours and was later ennobled by the Duke of Württemberg. After a period as director of the Stuttgart Court Theatre, and subsequently also of the library, he retired to Wörlitz.

He was not a major creative figure, much of his output being indebted to the works of earlier poets such as Haller and Klopstock. He was however a more than competent versifier in the sentimental, gently melancholic vein of early Romanticism; his first volume of lieder was published at Breslau when he was not yet 21. The height of his

renown came with Schiller's long and enthusiastic review in the Jena *Allgemeine Literatur-Zeitung* in September 1794 of a new edition of Matthisson's *Gedichte* (a compilation first published at Mannheim in 1787).

Beethoven set 'An Laura', 'Adelaide', two versions of 'Opferlied' and 'Andenken'; Corona Schröter, Zumsteeg, Reichardt, Lortzing, Loewe and Wolf were others who set his poems, but for both quantity and quality Schubert's settings are outstanding; most date from his early maturity, but he returned briefly to Matthisson in 1822.

PETER BRANSCOMBE

Matthus, Siegfried (*b* Mallenuppen, East Prussia, 13 April 1934). German composer. He studied conducting and composition (with Wagner-Régeny from 1956) at the Deutsche Hochschule für Musik, Berlin (1952–8) and went on to study in Hanns Eisler's masterclasses at the Akademie der Künste, Berlin (1958–60). In 1964 he was appointed composer-in-residence at the Komische Oper, Berlin. He became a member of the Academy of Arts of the German Democratic Republic in 1969, serving as director of the music section between 1972 and 1990, a member of the West Berlin Academy of Arts in 1976, and a corresponding member of the Bavarian Academy of Fine Arts in 1978. In 1991 he was appointed artistic director of the Kammeroper Schloss Rheinsberg festival.

In the early 1960s, Matthus experimented with forms, sound combinations and alternative pitch organizations. During this period he began to use specific gestures, colours and combinations of sounds to depict characters and situations, a technique that became characteristic of his work as a whole. In *Der letzte Schuss* (1966–7), for example, each of the two principal characters has an 'interior voice', sung by a second singer, through which their private thoughts are expressed. A similar division of the orchestra and chorus into ensembles with different functions allows, in a manner reminiscent of Brechtian epic theatre, space for reflection amidst streams of thoughts and feelings. Large-scale choral scenes, a love duet for four voices and a passacaglia foreshadow the operatic style of later works.

Matthus's second compositional phase was dominated by concertos: the effervescent and virtuosic Violin Concerto (1968), a piece based on 12-note rows; the Piano Concerto (1970), a rhapsodic work based on recurrent chordal structures; and the Cello Concerto (1975), an example of *Klangfarbenkomposition* involving quarter-tones and natural sounds. In the late 1970s, however, Matthus began to reassess and question established musical models. The most important work of this third period, *Responso* (1977), a concerto for orchestra, was composed between *Revue* (1977), a tape collage featuring 20th-century musical documents, and *Visionen* (1978), a neo-Baroque work for strings. Around 1983 he began to combine traditional and post-serial techniques, using four-note chords to provide the basic material for a work. In this fourth compositional phase, his works include pronounced programmatic and extra-musical references.

Motivic thematic material, the use of *Klangfarben* to create dramatic structures, and the musical description of emotional states led Matthus to develop a personal musical language first heard clearly in *Die Weise von Liebe und Tod des Cornets Christoph Rilke* (1983–4). Later operas include *Judith* (1980–84), *Graf Mirabeau* (1987–8) and *Desdemona und ihre Schwestern* (1990–91).

WORKS
(*selective list*)

OPERAS
Berlin premières at the Komische Oper unless otherwise stated

Lazarillo vom Tormes, oder Spanische Tugenden (7 scenes, H. Seeger), Karl-Marx-Stadt [Chemnitz], Städtisches, 23 May 1964
Die Heimkehr des Odysseus (G. Badora, after C. Monteverdi), Berlin, 19 April 1966, collab. G. Bahner and V. Rohde
Der letzte Schuss (2, Matthus and G. Friedrich, after B. Lawrenjow: *Der Einundvierzigste*), 1966–7, Berlin, 5 Nov 1967
Noch einen Löffel Gift, Liebling? (komische Kriminaloper, prol, 3, P. Hacks, after S. O'Hara: *Heiraten ist immer ein Risiko*), 1971, Berlin, 16 April 1972
Omphale (3, Hacks), 1972–4, Weimar, National, 7 Sept 1976; rev. Cologne 1979
Judith (2, Matthus, from historical documents), 1980–84, Berlin, 28 Sept 1985
Die Weise von Liebe und Tod des Cornets Christoph Rilke (Opernvision, Matthus, after R.M. Rilke), 1983–4, Dresden, Staatsoper, 16 Feb 1985
Graf Mirabeau (2, Matthus, from historical documents), 1987–8, Berlin, Staatsoper, and Karlsruhe, Badisches Staatstheater, 14 July 1989
Desdemona und ihre Schwestern (Opernmonologe, Matthus, after C. Brückner and the Old Testament), 1990–91, Schwetzingen, 12 May 1992

ULRIKE LIEDTKE

Matthysz, Paulus (*b* Harderwijk, 1613/14; *d* Amsterdam, bur. 5 Dec 1684). Dutch bookseller, printer and publisher. His shop 'in't Musyckboeck' was in the Stoof-Steegh, Amsterdam, and his business (not exclusively musical) began in 1640; his heirs, Alida and Maria Matthysz, continued it from 1681 to about 1720. He printed several editions for booksellers in Amsterdam (E. Cloppenburch, J. Jansz, Ludwig Elzevier etc.) and brought out others on his own account, including reissues. He sometimes accompanied the text with a Dutch translation or replaced it with an original Dutch text, as in Gastoldi's *Balletten . . . met drie stemmen: ende nu verrijckt met de vierde partije ... ende op gheestelijcke gesangen gheset* (1641). Matthysz also published compositions and treatises by local composers, including Ban, Jacobus Haffner, Joseph Butler, Van Eyck, G.Q. van Blankenburg and Carolus Hacquardt. Among his most important publications are collections of instrumental pieces, 20 *Koninklijcke fantasien* (1648), *Der gooden fluyt hemel* (1644/*R*) and *'t Uitnemend kabinet* (1646–9); in this last collection he published his own 'brief dissertation on the hand-flute', and he probably composed pieces for that instrument.

HENRI VANHULST

Matti [Del Matta], Fra **Mauro** [Domenico; Fra Mauro de' Servi] (*b* Florence, *c*1545; *d* Florence, 31 Jan 1621). Italian composer and organist. He was baptized Domenico, the son of Giovanbattista del Matta, and was accepted as a novice in the Servite order on 21 May 1561. On 6 August 1563 he was given the name Mauro in memory of Fra Mauro (i), the famous member of his order who had died six years previously. He was ordained a priest on 18 April 1568. In 1578 he served briefly as an organist at Florence Cathedral, and the dedication of his first publication mentions a period of residence in Venice. However, his principal activity as an organist was assisting his teacher Fra Maurizio, with whom he is frequently mentioned in documents, at the SS Annunziata, Florence, where from 1568 to 1594 he served as administrative head of the monastery and as teacher of chant. In the early 1600s he was prior of the Servite convent at Firenzuola. His principal works are two books of madrigals, *Il primo libro de madrigali a quattro voci* and *Il primo libro de madrigali a cinque voci*, both published in Venice in 1571. Only the volume for four voices survives complete; it contains cyclic settings of two complete canzoni by Petrarch as well as 15 other texts. The settings reveal Mauro's mastery of contemporary madrigal techniques and his sensitivity to the nuances of Italian poetry.

FRANK A. D'ACCONE

Mattila, Karita (*b* Somero, 5 Sept 1960). Finnish soprano. In 1981, while still a student at the Sibelius Academy in Helsinki, she won the Lappeenranta Competition and made her professional début, as Donna Anna at Savonlinna. In 1983 she became the first Cardiff Singer of the World. She made her international début in 1984 as Mozart's Countess Almaviva in Brussels, and Mozart dominated the early part of her career. Donna Elvira was the role of her British (Scottish Opera) and American (Washington) débuts, both in 1985, and over the next few years she added Fiordiligi (Covent Garden and Paris débuts, 1986), Pamina and Ilia. By the early 1990s she had broadened her repertory; Agathe, Eva and Chrysothemis reflected an increasing weight and richness in her voice, and Elsa followed in San Francisco in 1996. She was Hanna Glawari at the Opéra Bastille in 1997 and sang her first Leonore in Helsinki in 2000. She appeared as Emma in Schubert's *Fierrabras* at the 1988 Vienna Festival. Her Italian roles have included Musetta, Manon Lescaut, Amelia Boccanegra and, above all, Elisabeth in *Don Carlos*, which she has recorded both on disc and video. Mattila's voice is also well suited to Slavonic music, and in addition to Tatyana she has been an outstanding Lisa (*Queen of Spades*), notably at the Metropolitan Opera (1995), and Jenůfa (Hamburg, 1998). She is a communicative interpreter of lieder and Finnish song. Her radiant voice has a grandeur that is indivisible from her strikingly tall and blonde stage presence, making Mattila the leading lyric soprano of her generation.

JOHN ALLISON

Mattinata (It.). A term for a morning song, equivalent to the French AUBADE.

Mattioli, Andrea (*b* Faenza, *c*1620; *d* Mantua, 2 Oct 1679). Italian composer. The designation of his op.1 as 'immature first fruits' suggests a birthdate not much before 1620. He was a beneficed priest and *maestro di cappella* of Imola Cathedral in 1646. In 1649 (or possibly 1656) he was described as a vicar of S Romano, Ferrara. By early 1650 he was *maestro di cappella* of the Accademia dello Spirito Santo at Ferrara, the city for which he composed most of his operas; he was succeeded late in 1654 by Tricarico. From at least 1656 until his death he served as court *maestro di cappella* to the Duke of Mantua; in 1658 he was listed among the foreigners living in the parish of S Pietro, Rome. According to Schmidl he was a Franciscan friar. Little of his secular music survives;

his sacred works range from concerted solo motets in several contrasting sections to psalm settings 'alla moderna' for two choirs.

WORKS

OPERAS

music lost unless otherwise stated

THOMAS WALKER

Mattlart, Ioanne. *See* MATELART, IOANNE.

Matton, Roger (*b* Granby, Quebec, 18 May 1929). Canadian composer. He studied composition with Champagne at the Montreal Conservatory (1943–8) and then went to Paris for four years, studying there with Boulanger, Messiaen and Vaurabourg-Honegger. He was on the staff at the folklore archives of Laval University, Quebec (1956–76), where he also taught ethnomusicology (1963–89). He is a leading authority on the folklore of Quebec and Acadia. Folk music has played a significant, though decreasingly substantial, part in his work as a composer: the cantata *L'escaouette* is based on four folksongs from different regions of Canada, and folk music constitutes the main material of *L'horoscope*. It forms a kind of sound backcloth in the *Te Deum*, Matton's most elaborate work. His style is lyrical and conventional, though employing a wide range of techniques. An interest in jazz is evident in the insistent rhythm of his music, further accentuated by the use of large percussion forces in his orchestral scoring. (*EMC2*, H. Plouffe)

MARC SAMSON/ROBIN ELLIOTT

Mattos, Cleofe Person de (*b* Rio de Janeiro, 17 Dec 1913). Brazilian choral conductor and musicologist. She studied composition and conducting at the National School of Music of the University of Brazil (now the Federal University of Rio de Janeiro), graduating in 1941. She also went through special training for teachers of music and choral singing at the University of the Federal District. From 1941 to 1993 she was director of the Côro Feminino 'Pro-Música' (from 1946 the Associação de Canto Coral). This association became the most celebrated mixed choral group in Brazil, performing and recording an eclectic repertory, from the standard oratorios to European and Brazilian church music of various styles. In 1947 Mattos began teaching music theory at the National School of Music. She collaborated with the Brazilian SO and the Radio MEC (Ministry of Education) in preparing the choruses for the celebration of the bicentennial of J.S. Bach's death. In 1959 she was promoted to a full professorship in music theory at the School of Music and in 1964 she was inducted into the Brazilian Academy of Music.

As a musicologist, she specialized in Brazilian colonial church music, first cataloguing the 18th-century music of the province of Minas Gerais, then dedicating herself to the life and work of José Maurício Nunes Garcia, whose thematic catalogue and biography took her several decades of assiduous work. She wrote articles for the *Revista brasileira de música* and the newspaper *Tribuna da imprensa*. She also served as president of the International Federation of Choral Conductors (1978–9) and the Sociedade Brasileira de Musicologia (1983–5). In 1995, FUNARTE (the National Arts Foundation) awarded her the National Music Prize in the musicological category, in recognition of her numerous contributions.

GERARD BÉHAGUE

Maturana, Eduardo (*b* Valparaiso, 14 April 1920). Chilean composer and viola player. He studied privately in Valparaiso (1936–8) and then at the Conservatorio Nacional de Música in Santiago (1939–44) with Allende (composition) and Mutschler (viola). In 1947–8 he was secretary to the Musicians' Union and he was a founder of the Agrupación Tonus (1954). He joined the viola section of the Santiago Municipal PO in 1958 and was president of its board from 1966 to 1968. In addition, he was secretary-general of the Chilean National Association of Composers (1963–5), coordinator of the Municipal Theatre Chamber Opera (1968–9) and a delegate to the National Council of Art Workers (1970). He has received several prizes and commissions, and he has also won renown in the field of anthropology as assistant to Strozzi. He has presented his memoirs in 'Veinte años en mis recuerdos', *RMC*, no.187 (1997), 48–9. In the piano pieces he wrote in 1947–8 he began to employ 12-note serial techniques under the influence of writings by Leibowitz, Krenek, Eimert and others; subsequently he came to use electronic and aleatory methods.

JUAN A. ORREGO-SALAS/LUIS MERINO

Matuszczak, Bernadetta (*b* Torun, 10 March 1937). Polish composer. She attended the State Higher School of Music in Poznań (1953–8), where her teachers included Szeligowski, and studied composition with Sikorski at the Warsaw Academy (1960–64); she completed her studies under Boulanger in Paris (1968). A freelance composer, she has worked frequently with Polish music theatres, enabling her to pursue an avid interest in composing operas and oratorios. The distinctive feature of her compositional style is strong expressivity realized using frugal means. Her works have received prizes in Poland and at international competitions, and have been performed at numerous European music festivals; the choral work *Septem tubae* was performed at the ISCM Weltmusikfest in Hamburg (1969) and her opera *Julia i Romeo* was first given at the Internationale Maifestspiele in Wiesbaden (1972); the title roles in the latter piece call for actors and dancers as well as singers.

Matys, Jiří (*b* Bakov, nr Náchod, 27 Oct 1927). Czech composer. He studied organ with František Michálek and composition with Kvapil in Brno at the Conservatory (1942–7) and Janáček Academy (1947–51) respectively. He was an assistant at the Academy (1953–7), secretary of the Czechoslovak Composers' Union (1967–9) and a professor at the Brno Conservatory (1969–77). Long influenced by neo-classicism, his work is characterized by diatonic harmony, a strong sense of melody and by poetic expression. He has laid particular emphasis on solo instrumental pieces and on music for children and amateurs. Chamber music is predominant in his output.

IVO MEDEK

Matyushin, Mikhail Vasil'yevich (*b* Nizhniy Novgorod, 1861; *d* Leningrad, 14 Oct 1934). Russian composer, theorist and painter. He studied at the Moscow Conservatory (1875–80). He then worked as a violinist in the St Petersburg court orchestra (1882–1913) but also studied art during this period. His first compositional efforts, which include romances and works for violin and piano, were hampered by a tendency to lapse into a Romantic, salon-like vein. His marriage in 1908 to the poet and illustrator Yelena Guro was decisive in stimulating his interest in experimental art; he also became acquainted with Nikolay Kul'bin who promulgated the synthesis of different art forms and who was an early champion of Kandinsky and Čiurlionis. Under Kul'bin's influence, Matyushin became interested in the reproduction of sounds from nature and attempted to notate these with quarter-tone systems. He is said to have started composing quarter-tone works in 1910, and two years later he published a brief treatise about performing quarter-tone music on the violin (*Rukovodstvo k izucheniyu chetvyortey tona dlya skripki*, 'Manual for the Study of Quarter Tones for the Violin', 1912). This work not only influenced the first experiments of Vïshnegradsky but also stimulated two decades of microtonal research in Russia. Between 1909 and 1911 he wrote music for Guro's plays *Nishchiy Arlekin* ('Destitute Harlequin') and *Osenniy son* ('Autumnal Sleep'); in 1913 he collaborated with the

dramatist Kruchyonïkh and the painter Malevich on the 'opera' *Pobeda nad solntsem* ('Victory Over the Sun'), perhaps the best-known theatrical production of the futurist movement. The music, which provided a backdrop to Kruchyonïkh's scarcely intelligible dialogue and Malevich's notorious black square, may have been partly improvised. What appear to be fragments of the score appear in the published text of the opera; along with bold gestures not far removed from the naïve bombastics of Pratella, there are some passages notated in quarter tones and others involving the use of running motors. The remaining music consists of four-part recitatives and songs which, like those composed for *Nishchiy Arlekin*, are unpretentious in a manner that recalls Satie. As a painter he abandoned perspective and favoured abstraction; several of his canvases were exhibited in Europe during the 1920s. Matyushin spent his last years teaching and was involved with laboratory research on what he termed the 'natural law of changeability in colour combinations'. This work lead to the publication of his *Spravochnik po tsvetu* ('Handbook on Colour', Moscow and Leningrad, 1932), which concerns the relationship between the simultaneous perception of noise levels and colour intensity.

JONATHAN POWELL

Matzenauer, Margaret(e) (*b* Temesvár [now Timişoara, Romania], 1 June 1881; *d* Van Nuys, CA, 19 May 1963). American contralto. Born of German parents who were musicians, she learnt to play the piano as a child and had already appeared in opera before studying in Graz with Georgine von Januschowsky-Neuendorff and in Berlin with Antonia Mielke and Franz Emerich. She made her début in Strasbourg as Puck in *Oberon* in 1901 and sang more than 15 roles in her first season there. She made guest appearances with many companies (including those of Covent Garden and Bayreuth) before her American début at the Metropolitan Opera as Amneris under Toscanini (1911). During her 19 seasons at the Metropolitan she took part in a great number of new productions and revivals, notably *Fidelio*, *Samson et Dalila* and *Le prophète* (both with Caruso), and *Jenůfa*. Enthusiastically praised for her acting, Matzenauer had a photographic memory (she performed Kundry at 24 hours' notice having never sung the part before), and her musicianship was exceptional. Although her voice was a sumptuous contralto, she was often listed as a soprano and her repertory was vast. In a single season in the 1920s she sang Isolde, Brünnhilde, Delilah, Azucena and Amneris, and although her ventures into the soprano repertory took their toll on her voice, it retained its contralto richness. As a concert artist she is especially remembered for her performances of *Das Lied von der Erde* under Mengelberg, the American première of *Oedipus rex* under Koussevitzky and many Bach works under Bodanzky. After leaving the Metropolitan she continued to give concerts and recitals, appeared occasionally in opera, and was active as a teacher. She is known to have made 85 recordings. Her second husband was the tenor Ferrari-Fontana.

PHILIP LIESON MILLER

Mauceri, John (*b* New York, 12 Sept 1945). American conductor. He studied at Yale University (BA 1967, MPhil 1972), where he became an associate professor in 1968, and attended the Berkshire Music Center in 1971. He conducted the Yale SO (1968–74), and gave the European première of Bernstein's Mass (Vienna, 1973) and the first performance of the original version of Ives's *Three Places in New England* (1974). His début with a professional orchestra took place in 1973 with the Los Angeles PO; his operatic début, also in 1973, was conducting Menotti's *The Saint of Bleecker Street* at the Wolf Trap Festival. He has since developed a fine reputation as an opera conductor in the USA (at the Metropolitan, the New York City Opera, the Santa Fe Opera, and the San Francisco Opera, where he conducted the première of Imbrie's *Angle of Repose* in 1976) and abroad (notably in London and Italy). As an orchestral conductor he has appeared with the National SO, the San Francisco SO, and the orchestras of Cleveland and Philadelphia; he has also made guest appearances with the Orchestre National de France, the Israel PO and the LSO, among others. Mauceri has taken a keen interest in music theatre. He was involved in the compilation of the one-act revision of Bernstein's *Candide* (1972), produced by Hal Prince, and subsequently arranged a suite of music from the show for orchestral use. He later worked on the creation of the two-act version for the New York City Opera and the subsequent 1988 version for Scottish Opera, of which he was musical director from 1987 to 1993. Through his close professional association with Bernstein Mauceri conducted the world première of the revised version of *A Quiet Place* (1984, Milan), and was chosen to edit Bernstein's music from 1972 until his death. With Roger Stevens he produced a revival of the Rodgers and Hart musical comedy *On your Toes* (1982), for which he won a Tony Award. In 1979 he was appointed music director of orchestras at the Kennedy Center, Washington, DC, where he became consultant for music theatre in 1981; he also served as music director of the Washington Opera from 1980 to 1982. In 1984 Mauceri was appointed music director of the American SO, a post he held until 1987. In 1991 he became principal conductor of the Hollywood Bowl Orchestra, with whom in the same year he made the first complete recording of the overtures to Rodgers and Hammerstein musicals. His other recordings include works by Kurt Weill, notably *Street Scene*.

SORAB MODI/R

Mauduit, Jacques (*b* Paris, 16 Sept 1557; *d* Paris, 21 Aug 1627). French composer. Of aristocratic origin, he was schooled in the humanities and philosophy, travelled widely, and avidly studied Italian, Spanish and other European languages. Marin Mersenne praised him as the

'father of music' whose 'Airs brought life to the poems of his contemporaries'. His curiosity extended to science and even mechanics, but his main concern was music in which he was self-taught, having (according to Mersenne) 'no resources other than books'. An unambitious devoted friend, gentle, pious, sober in nature, he avoided courtly intrigue in his post as royal secretary and registrar in the judiciary (which he inherited from his father). He was the last survivor of Baïf's Académie de Poésie et de Musique.

In the 1581 St Cecilia's Day competition at Evreux Mauduit won the motet prize with his five-voice *Afferte Domine*. At about the same time he succeeded Courville as Baïf's main collaborator in the work of the Académie on *musique mesurée à l'antique*. Mersenne related how during the siege of Paris (1589–90) Mauduit rescued Baïf's unpublished works, aided CLAUDE LE JEUNE's flight and saved the latter's *Dodecacorde* manuscript.

The published *Chansonnettes mesurées* (1586) and *Psaumes mesurées à l'antique* (printed in Mersenne's *Quaestiones*, 1623) reveal how respectfully Mauduit set Baïf's verse. Unlike Le Jeune he never changed the text and he translated the metre exactly: in general, his music shows more harmonic than melodic invention, but he achieved variety by the subtle use of passing notes in subdivisions of the long and short basic values. The *chansonnettes* are subdivided into *chant* and *rechant*, but whereas Le Jeune tended to score the refrains for additional voices, Mauduit retained a consistently four-part texture in his settings. From Mersenne's writings it is clear that Mauduit's published work represents only a small part of his total output. It is therefore the more regrettable that Mersenne's avowed intention of publishing Mauduit's complete works, corrected and approved by the composer, does not seem to have been realized. Apart from the *Chansonnettes mesurées*, Mersenne (in *Quaestiones*) referred to two more settings by Mauduit of *chansonnettes* by Baïf (*Pour vous belle* and *Quiconques l'amour nomma*) and settings of Baïf's French and Latin metrical versions of the psalms. In his eulogy of Mauduit in *Harmonie universelle* Mersenne printed a 'Requiem aeternam' from a five-voice mass in the homophonic style of *musique mesurée* which Mauduit had composed for the funeral of Ronsard in 1586; the mass was repeated for the first anniversary of the death of Henri IV (*d* 1610) and for that of the composer himself. Mersenne also stated that after the 1586 *chansonnettes* Mauduit next composed a set of *Tenebrae* which were sung annually in the cloister of Petit St Antoine, and subsequently wrote a large amount of other sacred and secular vocal and instrumental music.

Mauduit had a fine ear and became the leading French conductor of his time, organizing concerts 'composed of voices and all sorts of harmonic instruments' and winning the approbation of 'people of all qualities who willingly trained under the justness of his beat'. Many of these concerts were on a grand scale and no doubt emulated the latest instrumental and polychoral fashions of Italy. Mauduit exploited and developed the principle of variety in performance, combining choir and orchestra with instruments grouped by family. Mersenne claimed that Mauduit introduced the viol consort into France and was responsible for the addition of the sixth string to the instrument. As well as organizing the Académie's musical functions (some of which in later years were held at his own home) he managed the St Cecilia's Day festivities at Notre Dame. In 1614 his *ode mesurée* marking Louis XIII's return to Paris from Brittany was performed by about 135 singers, lutenists and viol players, and in 1617 the ballet *La délivrance de Renaud*, composed in collaboration with Guédron, Boësset and Bataille, was given by 92 singers and 45 instrumentalists under his direction. Bataille's fifth book of *airs* for voice and lute (RISM 1614^{10}) includes two pieces by Mauduit – the melismatic *Pour vos yeux doux guerriers* and the unadorned sapphic ode for the queen, *Soit que l'oeil*, which may have been the one performed by the massed ensemble in 1614. Bataille's third book (1611^{10}) includes an anonymous setting of *Eau vive source de l'honneur* which Mersenne (*MersenneHU*, xix, 419) quoted as an example of 'la manière de chanter des vers mezurez de Baïf suivant l'opinion de Jacques Mauduit'. Although the 2:1 ratio of long and short syllables is observed, the piece is untypical in that the fourth and fifth lines of the poem are set in halved note values, a procedure more common in Le Jeune's *musique mesurée*.

WORKS

FRANK DOBBINS

Mauersberger, Rudolf (*b* Mauersberg, Erzgebirge, 29 Jan 1889; *d* Dresden, 22 Feb 1971). German choral conductor and composer. He was the brother of Erhard Mauersberger. He acquired a love of church music from his father, who was a Kantor and church-schoolmaster, and studied the piano with Robert Teichmüller and the organ at the Leipzig Conservatory (1912–14 and 1918–19). In 1914 he won the Nikisch Prize for composition and obtained his first church post at Lyck (now Ełk, Poland). After wartime service as director of a military band at Bad Lausick, he was appointed organist and choirmaster at

the Christuskirche, the Annakirche and the Konzerthaus at Aachen (1919–25), where he was succeeded by his brother. He also preceded his brother as director of church music for the province of Thuringia (1925–30). As choirmaster at St Georg, Eisenach, he founded the Bach and St Georg choirs there, establishing a flourishing Bach tradition. In 1930 Mauersberger was appointed choirmaster at the Kreuzkirche, Dresden, where he remained for 41 years directing the famous boys' choir, the Dresden Kreuzchor. He toured with the choir throughout Europe, twice visited the USA, and made the choir his life's work, developing a lasting transparency of tone and sensitivity of style. He was specially devoted to Schütz, but was also a strong advocate of contemporary choral music, notably by Britten, Distler, Fortner and Pepping. He edited several collections of liturgical music, and composed over 20 choral works, including a *St Luke Passion* (1947) and the *Dresdner Requiem* (1948, for three choirs a *cappella*, solo boys' voices, wind instruments and organ). He received several academic awards and, in 1950, the National Prize of the German Democratic Republic.

□

Maugars, André (*b c*1580; *d c*1645). French bass viol player and writer. He went to England about 1620 and remained there for nearly four years, part of the time perhaps in the service of James I. Back in France, he published in 1624 a translation of Bacon's *Advancement of Learning* and served at court as English interpreter. Thereafter he was employed by Cardinal Richelieu, who in 1630 made him prior of St Pierre-Eynac, near Le Puy, in the Auvergne; in 1634 he published a translation of another work by Bacon, *Considerations Touching on a War with Spain*. He went to Rome in 1637 or 1638. At the end of his stay there he wrote an open letter, which was published anonymously in Paris shortly afterwards, on his musical experiences in Italy; it is a most informative first-hand report on Italian church music, oratorios and instrumental music of the period and was the first of many 17th- and 18th-century comparisons of French and Italian music. Both Mersenne (*Harmonicorum libri*, 'Liber primus De instrumentis harmonicis', Propositio xxx, Paris, 1635) and Jean Rousseau (*Traité de la viole*, Paris, 1687) praised Maugars as a gamba player, especially as an improviser of divisions on a ground, and named him and Hotman as the first great French virtuosos on the instrument.

WRITINGS

Maundy music. Term referring to a set of antiphons accompanying the ceremony of the Washing of the Feet. This ritual, which commemorates Christ's washing of Peter's feet (as described in *John* xiii), was confirmed as part of the liturgy at the Council of Toledo in 694, though with a wording that suggests it was already well established, and is performed on Thursday of Holy Week. Manuscript sources show a wide number and variety of pieces: there can be as few as two antiphons or as many as 29. The *Liber usualis* lists nine antiphons for this ceremony, though not all were mandatory. The antiphon which most consistently heads these lists is *Mandatum novum* ('A new commandment I give thee'), and the entire action soon became known as the Mandatum. In England, the word was changed to 'Maundy' and used to designate Holy Thursday itself. It was in one of the added or occasional antiphons of the Use of Salisbury that Bukofzer discovered the long-sought source of the *Caput* melisma on which masses by an anonymous English composer, Ockeghem and Obrecht are based.

RICHARD SHERR/ANDREW KIRKMAN

Maupin [first name unknown] (*b* 1670; *d* Provence, 1707). French soprano. She was the daughter of a Sieur d'Aubigny, secretary to the Count of Armagnac. Her considerable physical beauty and natural talent were said to have compensated for a lack of musical training. She made her début at the Opéra in 1690, singing the role of Pallas in a revival of Lully's *Cadmus et Hermione*, but her career flourished only from 1698 (when Marthe le Rochois retired) until 1705. During that time she sang in new productions by Desmarets, Collasse, Destouches, Campra and La Barre as well as in the revivals of Lully *tragédies*. She made her final appearance in Michel de La Barre's *La vénitienne* (1705). The Marquis of Dangeau wrote in his journal of a performance given at Trianon of Destouches' *Omphale* (1701), describing Maupin's as 'the most beautiful voice in the world'. Campra is supposed to have written the first *bas-dessus* (contralto) role for her, that of Clorinda, in *Tancrède* (1702); in fact the part never descends below *d'* (at one time, however, she wanted to sing Lully's Armida a tone below its original pitch). In that same year she is recorded as having performed chamber music accompanied by Couperin (*Mercure galant*, 7 July 1702, pp.365–6); she also replaced Mlle Desmatins in Bouvard's *Médus, roi de Mèdes* winning acclaim in the role of Medea. She was considered an excellent comédienne.

Maupin was a colourful, tempestuous figure. According to La Borde, she married young and when her husband was posted away from Paris, she sought the company of other men. She eloped to Marseille. While there she became attracted to a young woman whom she pursued to a convent in Avignon, posing as a novice. She returned to Paris and the Opéra. La Cerf remarked on her success in roles in which she abandoned her hairdo and fan for a

helmet and lance, noting however that her lively and cavalier manner and unusually strong voice offended neither decency nor verisimilitude. She later became the mistress of others (including the Elector of Bavaria); but she returned to her husband in her last years, although not before attempting suicide when her love for the soprano Fanchon Moreau was spurned. These and Maupin's other adventures are chronicled by La Borde and Campardon. Théophile Gautier wrote a novel based on her life, *Mademoiselle Maupin, double amour* (Paris, 1835–6, many later edns to 1877).

JULIE ANNE SADIE

Mauracher. Tyrolean family of organ builders. There were two distinct branches, both descended from Georg Mauracher (1704–86) who worked as a joiner in Kapfing, near Fügen. Andreas Mauracher (*b* Kapfing, 8 Feb 1758; *d* Kapfing, 9 Nov 1824), son of Georg, worked first as a joiner, making altars, pulpits etc., before turning to organ building. He built about 40 instruments, including organs at Ruhpolding (1795), Ebbs (1796), Müstair (1802), Mals (now Malles; 1803–5) and Nauders (1812). The parish organist of Fügen assisted him in tuning his instruments. His son Karl (1789–1844) built about 50 organs, including instruments for the Seminary, Trent (1821–2), Niederdorf (now Villabassa; 1822), Oberndorf (1825), St Sebastians-Kirche, Salzburg (1828), and Kufstein (1842). Andreas and Karl also made pianos.

Karl's two sons Johann Nepomuk Carl (1818–84) and Ludwig (1820–85) were also organ builders. J.N.C. Mauracher transferred the family workshop to Braunau am Inn (1845), and later to Salzburg (1861). He exhibited an organ with 12 stops and front pipes made of zinc at the Industry Exhibition in Munich in 1854. He built more than 60 organs, including the abbey of St Peter, Salzburg (1863), Tulln (1873), Langenlois (1874), and Krems (1875); the latter three were highly esteemed by Bruckner. However, his instruments were soon considered to be old-fashioned as he retained the use of slider-chests and tracker action. Ludwig Mauracher trained with E.F. Walcker and J.F. Schulze (until 1850). He moved to Schwaz in 1860. He built only a few organs, and was active in the Tyrol, Salzburg, Styria and Switzerland. He finally worked for the Mayer firm in Feldkirch. Albert Mauracher (1858–1917), the son of J.N.C. Mauracher, established a new workshop in Mülln, Salzburg, in 1886. He designed his own pneumatic action, which he termed the 'Aerofunctionslade'. For small churches he designed a standard model of organ called the 'Coelesticon'. He built more than 100 instruments in Salzburg, Upper and Lower Austria, the Tyrol, Carinthia and Styria. In his later years he went into partnership with Adam Grünsfelder of Ochsenfurt.

The other branch of the family was founded by Mathias Mauracher (i) (*b* Oberbichl, nr Zell-am-Ziller, 24 Nov 1788; *d* Graz, 22 Nov 1857), a great-nephew of Andreas Mauracher. He began building organs in 1818, and constructed about 30 instruments in the Tyrol, Salzburg and Styria, including the Ursulinenkirche, Salzburg (1830); Algund (Lagundo), near Merano (1841); and the Franciscan church, Graz (1857). He cultivated the Philomela stop, a wooden flute with circular cut-ups, which was also used by other members of the family. He also built pianos and physharmonikas (a type of reed organ).

His son Mathias (ii) [Matthäus (i)] (1818–84) moved to Salzburg in 1863. He began by using the traditional action, and his specifications show dynamically graduated manuals (the first manual being louder than the second, which was supplied with fewer and softer stops). Together with his sons Josef (1845–1907), Johann [Hans] (1847–1900) and Matthäus (ii) (1859–1939), he later invented a chest with hanging pallets. Of some 120 organs his most notable are those built for the Studienkirche, Salzburg (1868); Admont (1870–71); St Florian monastery (1871–5; rebuilding of the Chrismann organ); Kremsmünster (1876–8); and Salzburg Cathedral (1880–83). Josef Mauracher founded his own workshop in St Florian in 1880. Hans and Matthäus (i) took over their father's workshop in Parsch, Salzburg, in 1884. In 1891 Matthäus (ii) became director of a newly founded workshop in Graz (which closed in 1910). He took over the Salzburg branch of the firm from Han's son Karl Franz (1881–1949) in 1907, where he continued until 1922, when it was sold to the firm Cäcilia-AG. Matthäus (ii) is noted for the 'Kaiserorgel' in Bad Ischl (1910) and his enlargement of the Salzburg Cathedral organ (1914; 101 stops).

In 1926 Josef Mauracher's sons Matthäus (iii) (1885–1954) and Anton (1896–1962) moved from St Florian to Linz, where they founded the firm Gebrüder Mauracher. Two of their most notable organs were those built for Klagenfurt Cathedral (1927) and Herz Jesu Kirche, Wels (1930–31). The firm closed at the end of 1955.

ALFRED REICHLING

Maurel, Victor (*b* Marseilles, 17 June 1848; *d* New York, 22 Oct 1923). French baritone. He studied in Marseilles, then at the Paris Conservatoire with Vauthrot and Duvernoy. He made his début in Marseilles (1867) in *Guillaume Tell*, and the following year appeared at the Paris Opéra as the Count di Luna and in *Les Huguenots*, *L'Africaine* and *La favorite*, but overshadowed by Faure he decided to continue his career abroad. After appearances in St Petersburg, Cairo and Venice, he made his début at La Scala as Cacico in the première of Gomes's *Il Guarany* (19 March 1870). He returned to the Paris Opéra in 1879 and sang there regularly until 1894. At La Scala he sang the title rolein the revised version of *Simon Boccanegra* (24 March 1881); his performance led Verdi

Victor Maurel, possibly as Hamlet in Thomas' opera

to choose him as the first Iago (5 February 1887) and the first Falstaff (9 February 1893). He sang at Covent Garden (1873–9, 1891–5 and 1904), where he was the first London Telramund and Wolfram and the first Covent Garden Dutchman. He sang Amonasro in the first American production of *Aida* (26 November 1873, Academy of Music, New York) and later appeared at the Metropolitan Opera (1894–6, 1898–9). He created the role of Tonio in *Pagliacci* at the Teatro Dal Verme, Milan (21 May 1892).

Maurel was outstanding not so much for the timbre or resonance of his voice as for his perfect breath control and skill as an actor. (He appeared on the dramatic stage for a brief period in the early 1900s.) In addition to his career as a performer, he was co-director of the Théâtre Italien, Paris (1883–5), and drew upon his training as a painter in designing the production of Gounod's *Mireille* at the Metropolitan (1919). For a time he had an opera studio in London, and from 1909 until his death he taught in New York. He wrote a number of books on singing and opera staging.

HAROLD ROSENTHAL/KAREN HENSON

Maurer, Ludwig (Wilhelm) (*b* Potsdam, 8 Feb 1789; *d* St Petersburg, 13/25 Oct 1878). German violinist and composer. He was a pupil of Karl Haack, Frederick the Great's Konzertmeister. After appearing successfully at a Berlin concert in 1802 he was admitted to the royal chapel (1803), and on its dissolution in 1806 travelled eastwards. In Riga he met Baillot and Rode, and during a six-month stay with Rode in Mitau, made a close study of the French violin style. After playing in St Petersburg he went to Moscow, where Baillot recommended him as director of Count Vsevolozhsky's orchestra. In 1817 Maurer left and toured through Germany to Paris. From 1819 to 1832 he directed concerts and opera in Hanover, but toured annually, and collaborated in writing *opéras-vaudevilles* with Verstovsky and Alyabýev. In 1833 he returned to Vsevolozhsky (now in St Petersburg), where in 1835 he became director of the French opera. Various other appointments continued his musical activities into old age.

Maurer's violin style, on the evidence of his compositions, was at times extremely virtuoso; although formed before Paganini, his technique included spiccato, multiple stopping and complex bowing and he was among the best German violinists of his time. Among his works are the Symphony op.67, a formerly well-known Sinfonia concertante op.55 for four violins and another for two violins, ten violin concertos, six string quartets opp.17 and 28, and other chamber pieces and studies. His compositions are listed (incompletely) in C. von Ledebur's *Tonkünstler-Lexikon Berlin's* (Berlin, 1861/*R*). Of Maurer's 12 operatic works, *Aloise* (Hanover, 16 January 1828) was the most successful, but *Der neue Paris* (Hanover, 27 January 1826) was also performed in Riga, London and Moscow.

Maurer's son Vsevolod (1819–92) was a violinist, later director of the Italian opera in St Petersburg. A younger son, Alexis, became a cellist. They gave concert tours together in Germany in 1832–3.

DAVID CHARLTON

Maurício, José (i) (*b* Coimbra, 19 March 1752; *d* Figueira da Foz, 12 Sept 1815). Portuguese composer. After preliminary studies for the priesthood, he began a theological course at Coimbra University in 1768 but

abandoned it for music. He studied at Salamanca and from about 1784 to 1786 was *mestre de capela* at Guarda Cathedral. He then returned to become organist of the priory of S Cruz at Coimbra. In 1791 he was invited to direct the music school in the bishop's palace and to become *mestre de capela* of Coimbra Cathedral. On 18 March 1802 John VI appointed him professor of music at Coimbra University. For his many students he published at Coimbra in 1806 his *Methodo de música, escrito e offerecido a Sua Alteza Real o Principe Regente Nosso Senhor*. During Massena's occupation he escaped to Lisbon, where on 5 July 1810 he joined the Brotherhood of St Cecilia. The next year he returned to his university post.

Maurício composed chiefly sacred works, of which his *Stabat mater* and *Miserere* settings were best known. He also composed many *modinhas*, two of which, along with a minuet, were published in *Nova arte de viola* (Coimbra, 1789), written by his pupil Manuel da Paixão Ribeiro. His *Magnificat* in G minor (*P-Ln* M.M. 183), his only large church work transcribed, reveals him as a highly competent follower of Haydn who modulated convincingly, had a fine sense of variety and climax and employed styles ranging from Italian vocal *fioriture* to a well-wrought fugal finale. (*DBP*)

WORKS

Sacred: at least 26 masses before 1803, incl. no.8, 1785, and no.19, 4vv, org, 1796, *P-Ln*; 4 Requiem; 2 sets of responsories for the Office of the Dead; music for Holy Week, 1801; 2 Mag, *Ln*; 3 sets of vesper pss; 3 sets of matins; 5 Miserere; 2 TeD; 2 Stabat mater, vv, orch, *Ln*; hymns, others, *Ln*

Secular: many modinhas, incl. A paixão qe. sinto em mim, in Jornal de modinhas (Lisbon, 1794); others

ROBERT STEVENSON

Maurício, José (ii). *See* GARCIA, JOSÉ MAURÍCIO NUNES.

Mauritania (Fr. République Islamique Arabe et Africaine de Mauritanie). Country in West Africa. The former French colony, which achieved independence in 1960, has an area of 1,030,700 km². The population of 2·58 million (2000 estimate) is composed of several peoples, most of whom are Arab-speaking Moors (Maures). These Moors, who call themselves the Beni Hasan, are mostly nomadic, descendants of Berbers who in the 11th century founded the Almoravide dynasty in Morocco, of Bedouin Arabs who arrived at a later date and of Africans. In the south, the Moors live in contact with sedentary settlements of Wolof from Senegal and Mbara (Bambara) from Mali, as well as with two other Mauritanian peoples, the Tukulor or Toucouleur (FulBe/Fulani group) and the Soninke (Sarakole).

Each of these peoples is subdivided into hierarchical castes, each caste often having its own characteristic musical activities. The common religion is Islam, which generally regards secular music, especially music for string instruments, as a somewhat disreputable form of entertainment. Nevertheless, hereditary classes of *griots*, professional musicians, who accompany themselves on string instruments, are found throughout Mauritania: the *īggīw* among the Moors; the *gawlo* and *bambado* among the Tukulor; and the *gesere* and *diare* among the Soninke. In the past, these *griots* depended on the patronage of chiefs and warriors and built up the reputations of their patrons and patrons' ancestors by praising the family's wealth and deeds. Thus they functioned as the historians of the various societies, and also as poets and buffoons. Today the *griots* can be employed by anyone, in return for numerous gifts, but their social status remains low.

It is important to distinguish the various musical traditions according to their folk or professional nature, the ethnic groups to which they belong and their origins – Arabo-Berber in the case of popular Moorish music, western Sudanic in the case of other groups (Tukulor and Soninke), of whose music, however, little is known.

1. MOORISH FOLK MUSIC. Each hierarchical group of Moorish society has its own musical practices in which it is possible to distinguish traces of the different cultural components.

The music of the nobles and their white tributaries is primarily vocal and performed chiefly by women who sing in groups for their own diversion, accompanying themselves on percussion instruments. In their simple repetitive songs, soloists' verses alternate with choral refrains within a limited vocal range. Girls of noble family also practise the custom of singing solo love-songs at night to their lovers.

The black tributaries have a musical style of their own, in which the songs are also responsorial and are sometimes accompanied by the *zawzāya*, a rim-blown flute, or the *neffāra*, a side-blown flute; they are performed at festivities in the course of animated dancing, or on Thursday evenings in praise of the Prophet.

Two instruments, the *gambra*, a single-string plucked lute, and the *rabāb*, a single-string fiddle, are usually played by soloists before a small audience of friends; these instruments are distinctly western Sudanic in manufacture and manner of performance.

Percussion instruments are used both by the tributaries and by the freed peoples. The *ṭabl*, a large kettledrum, and hollowed gourds are found throughout the country. Utensils such as upturned basins, millet mortars covered with skin, and tea chests may also be used. Only the freed peoples in the east of Mauritania use other kinds of drum.

2. PROFESSIONAL MUSIC.

(i) Musical forms and modal theory. The *īggīw*, professional musicians who hand down their skills from father to son, have cultivated an original musical tradition that shows both Arabo-Berber and western Sudanic influences. Traditionally the *īggīw* were the familiar attendants of noble warriors and especially emirs; they defended the honour of these patrons and their people through songs, and encouraged the warriors in combat. The music of the *īggīw* was also the most prized form of entertainment in the emirs' camps, with interludes reserved for dancing and poetic competition; they attended all festivities. They were the objects of both adulation and scorn, and considered to be as cowardly and grasping as their noble patrons were brave and generous.

As a result of contact with other forms of music, however, these traditional musical activities are changing. The modern *īggīw* repertory includes songs that are Middle Eastern in character and others that are simple enough to be taken up in chorus by young audiences. Some *īggīw* are endeavouring to 'modernize' local melodies and to establish orchestras, whereas traditional music was originally performed by only a few musicians often acting as soloists.

The music of the *īggīw* is based on a highly sophisticated modal system which derives from Greco-Arab music theory. It comprises five modal complexes, which should always be played in the order *karr*, *faaġu*, *lakḥal*, *labyaḍ*, *lebtayt*. Omissions are possible, but it is not permissible to reverse the order or to return to a *ḏhar* (mode) previously heard. Each modal complex consists of various individual modes that are related by their scale, generally with a pentatonic basis. All these scales have a single common tonic which must not change during performance. Each modal complex has its own ethos: *faaġu* corresponds with the excitement of fighting or dancing, *labyaḍ* with sadness and *lebtayt* with nostalgia.

The individual modes in each group are differentiated from each other by stressing certain degrees of the scale, adding particular ornaments or notes, or emphasizing specific intervals. A distinction is made between *lakḥal* ('black') modes, in which importance is given to degrees forming dissonant intervals with the tonic, and *labyaḍ* ('white') modes, which have simpler modal structures, and in which all the degrees of the scale are equally important. 'Blackness' renders the ethos of a modal group more forceful and tense, while 'whiteness' softens and embellishes it. Thus 'black' *faaġu*, which stresses the 2nd degree of the scale (*d'*) as well as the interval *b'–d''* (ex.1),

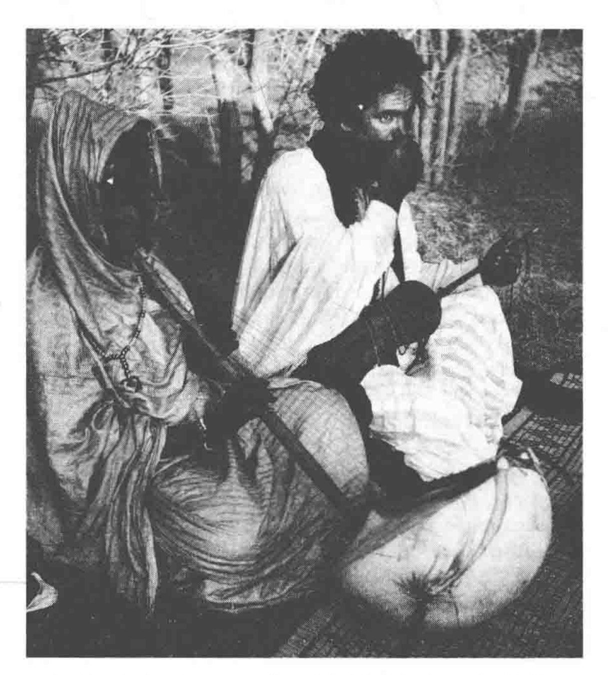
Ex.1 'Blackness' of *faaġu* on the *ardīn*: rec. and transcr. M. Guignard (Guignard, 1973)

incites to combat; while 'white' *faaġu*, which reposes on the tonic (*c'*) and stresses successively each degree of the scale (ex.2), incites to dance.

Ex.2 'Whiteness' of *faaġu* on the *ardīn*: rec. and transcr. M. Guignard (Guignard, 1973)

(tonic = c)

The Moors believe that this classification can be applied to all kinds of music and even to all natural sounds. There is, however, a series of intermediate stages between the black and white modes. When a musician performs a modal group, he must always move from blackness to whiteness: he begins with an introduction, which is typically black and whose rhythm is generally not measured; then he plays a series of *eŝwaar* (measured pieces) that mix in various proportions black, white and *zzraag* ('spotted') melodic formulae. At the end, he plays an introduction to the white mode; the pieces that follow must be entirely white. This sequence will allow for omissions, but never for a reversal of order.



The introduction and *eŝwaar* are composed on melodic and rhythmic motifs called *raddāt*, which are either traditional or invented by the performer. Each part of this sequence is associated with a certain type of poetry. Quatrains with a specified metre and rhyme scheme are sung in the *eŝwaar*; in the introductions, more complicated poems are sung on subjects and in metres that match the particular ethos of the mode. *Karr*, for example, is a suitable mode for praising the Prophet and for religious poems, black *faaġu* for praising princes and for martial poems, *lebtayt* for nostalgic poetry. All these modes have kept their traditional character except *lakḥal*, which has begun to be reserved for 'modern' compositions, generally inspired by music from the Middle East, so that it has lost most of its former characteristics.

(ii) Musical instruments. The only traditional instruments used by the *īggīw* were the *tidīnīt*, a plucked lute played by men, and the *ardīn*, a harp played by women (see illustration).

The *tidīnīt* has four strings: two long ones on which the melody is played, and two short, which provide a fixed accompaniment. Certain musicians from eastern Mauritania, however, use three or four accompanying strings. The soundboard is made of skin, and the unfretted neck allows for abundant ornamentation. It is an instrument ideally suited to art music.

The number of strings on the *ardīn* varies from ten to 14. They are tuned to the principal notes of the mode (usually pentatonic); other intervals cannot be played, nor can glissando ornaments. Consequently its music is more restricted than that of the *tidīnīt*, and it is less easy to distinguish between the black and white modes of the same modal complex. Musicians sometimes tap the soundboard of the *ardīn*, adding a percussive element to the melody.

Other features of the two instruments further differentiate their repertories. The lutenists are able to play the series of modal complexes in two different ways (once again distinguished as black or white), but it is not possible to make this distinction on the *ardīn*. When a mode is performed 'in the black way', the tonic is the lowest note of the range, whereas 'in the white way' (the plagal version of the black way) it falls in the middle of

Ardīn (harp) played by a member of the Mechdouf people (Hodh region) and tidīnīt (lute) played by an īggīw (professional musician) of the Kounta people (Tagant region), Mauritania, 1952

the range. The fixed accompaniment is also different for each of these two ways, as well as for an extension of the black way, called *gnaydiiya*. It should be noted that the 'way' is never changed during a performance.

The lutenists distinguish two white modes in the groups *karr* and *faağu*, whereas the harpists have only one. Here again, the *īggīw* differentiate these modes by the fixed accompaniment associated with each mode and by the location of the tonic in the range.

3. Modern developments. With the birth of the Islamic Republic of Mauritania in 1960, there has been a noticeable weakening of the *griot* art form in the new city of Nouakchott. The general Mauritanian public have for long known nothing about *griot* high cultural music traditions, since such music was written for the nobility; *griots* flattered and praised the nobility while ignoring the rest of the population. Music of the *griot* began to disseminate to the mass public in the 1960s, first by radio broadcast (Radio Nouakchott was founded in 1961), then through a series of concerts given by the *griots* at the Maison de la Culture in Nouakchott and elsewhere, and finally on television. Although the Ministry has declared its official protection for this music, a serious problem is likely to arise. The art form called *azawan* ('of the connoisseur') is threatened due to its difficulty and incomprehensibility. The meaning of *azawan* has been transformed and is now pejorative.

The *griot* is now urged by the public to be more accessible to the people and to update their repertories, that is to introduce new motifs, forms and melodies that are more accessible and appealing in order to enable Mauritania to share in the great popularity of music elsewhere in the Arab world. New terms for 'song' were introduced around 1988: *ughniya* or *loughniya ilmuritaniya* (*al-ughniya al-mūritāniyya*, 'Mauritanian song'). There are, however, groups of musicians who refuse to conform, forming a strong group of traditionalists. Sidaty Oul Abba, for example, has attempted to update the poetic content of his songs without changing the musical rules. In contrast, others such as Seymali Ould Hemed Wall, son of the great Mennina Mint Aliyen, began his career by fiercely defending his ancestors' art but now feels that it is time to open up and renew the musical genre, by bringing it closer to Arab music traditions and moving further away from the traditional music of the *griots*.

Thus, poetic texts such as those by the Syrian poet Nizār Qabbānī, particularly prized by the people of Nouakchott, are identified with a circle of reformers. Seymali Ould Hemed Wall exchanged the *tidīnīt* lute for the Arab *'ūd*, and was the first to introduce officially this instrument into the Mauritanian musical scene. Another technical innovation included structural modifications to the *tidīnīt*; Bouh Ould Mohamed Ali changed the instrument from two double strings to five in 1981. In addition, the popularity of acoustic and electric guitars led to their integration into the local instrumentarium from about 1975. The guitar is considered to be a superior kind of *tidīnīt* that has adapted to changes and thus functions as a renovated *tidīnīt* and not as a foreign instrument with a foreign technique. This instrument is always played by men. With the arrival of the guitar, other instruments were introduced to Mauritania, such as the saxophone, synthesizers and drums.

At the Lagos Festival of 1977, where Mauritania offered an impressive performance of all its ethnic musics, a clear line of demarcation was apparent between tradition and reformist *griots*. Among the most prominent representatives, the *griot* Malouma Mint el Meydah felt that this renewal of Mauritanian music could come only from the acknowledgement and approval from abroad, in particular at the Carthage Festival in Tunisia, where she appeared in 1988. On the other hand, her colleague Dimi Mint Abba, perhaps the best-known *griot* in Europe in the late 1990s, is only moderately in favour of this renewal.

This shift is also taking place at the level of the transmission of tradition. *Griots* now succeed one another within families; individuals of both genders are called to become musicians, whether they are gifted or not. In the context of the young republic, the question arises whether the profession of musician should be strictly limited to the *griot* or enlarged to include all those who aspire to it. During the 1990s, this debate has become the cornerstone of the country's musical future. The polemic that has arisen is gradually eroding the traditional monopoly, and traditional *griots* are now obliged to give ground.

Mauritania took part for the first time in the 6th Congress of the Academy of Arab music held in Tripoli in 1979, resulting in varied reactions that reflected the power of globalization and of the media. The classic image of the *griot* as practitioner and preserver of a scholarly art, sometimes hermetic, but in any case significant, has completely changed as a consequence.

Mauro (i), Fra [Mauro Fiorentino, Mauro di Firenze] (*b* Florence, *c*1493; *d* Florence, 26 Sept 1556). Italian theorist, organist, theologian and scientist. He was originally a member of the order of the Humiliati at the church of the Ognissanti and was organist at S Maria del Carmine in 1523. Admitted to the theological college in Florence in 1532, he became a deacon there in 1537. In 1535 he joined the Servite order and on 15 July he was appointed principal organist at the SS Annunziata, parent church of that order, a position he retained for the rest of his life. He was active in local literary, scientific and musical academies, where he was known by the titles 'Fonasco' and 'Filopanareto'. He was a friend of Antonfrancesco Doni, who mentioned him in *I marmi* and in his *Dialogo della musica*. He was the author, translator and commentator of several scientific and theological works including *Annotatione sopra la lettione della Spera del Sacro Bosco* (Florence, 1550). His musical treatise, *Dell'una et l'altra musica*, known also by its Latin title *Utriusque musices epitome* (ed. in CSM,.xxxii, 1984) remained unpublished. It is generally Boethian in its principles and leans heavily on such major theorists as Gaffurius, Aaron and Lanfranco. Conceived as a didactic work – it was written for his students at the SS Annunziata in 1541 – it discusses the basic elements of contemporary musical theory in a brief but thorough manner.

FRANK A. D'ACCONE

Mauro (ii). Italian family of stage designers. They had a crucial influence on the stage production of Italian opera in the 17th and 18th centuries. The first members to achieve significance as stage designers and designers of *peòte* (ceremonial barges for Venetian theatrical regattas) were the engineersand architects Gaspare (*fl* 1657–*c*1719) and Pietro (*fl* 1669–*c*1697) and the painter Domenico (i) (*fl* 1669–1707). They are known to have worked at the Venice opera houses of S Apollinare, S Cassiano, SS Giovanni e Paolo, S Moisè, S Salvatore and S Giovanni Grisostomo, and at theatres throughout Italy and in Munich. Developing the ideas of Giacomo Torelli and Giovanni Burnacini, the Mauros, often working in partnership, became leading exponents with Francesco Santurini (i) and Mazzarini of a style of stage design that attempted to realize visually the middle-class aspects of Venetian opera in the later 17th century: the powerful 'affects' of the emotions, the renunciation of mythology and allegory in favour of history and everyday life. Gaspare and Pietro did much to adapt traditional apparatus to the new requirements. They were involved in new Venetian techniques of illusion including split backcloths, quasi-enclosed rooms and other devices aiming at a naturally structured stage layout. Their work

1. Design by Gaspare and Domenico Mauro (i) for Steffani's 'Servio Tullio', Opernhaus am Salvatorplatz, Munich, 1686: engraving by Michael Wening

2. Design by Alessandro Mauro (i) for Lotti's 'Teofane', Dresden, 13 September 1719, performed in celebration of the marriage of Crown Prince Friedrich August and Archduchess Maria Josepha of Austria: pen and ink with watercolour (Kupferstichkabinett, Dresden)

was enhanced by Domenico's theatre painting. In the sketches ascribed to him for Legrenzi's *La divisione del mondo* (1675, Venice; *I-PAc*) and the engravings of his stage designs for Steffani's *Servio Tullio* (1686, Munich), Sabadini's *Il favore degli dei* (1690, Parma) and Pignatti's *Sigismondo primo al diadema* (1696, Venice), there are indications of a new approach, notably the emphasis on verticals in the often multi-storey stage buildings and the inclusion of the higher parts of the stage in the setting. Two vanishing-points, one above the other, and experiments with angled perspective show alternatives to the traditional central perspective *all'infinito*. They achieved a realistic, pictorially conceived stage design only in landscapes, in which contemporary painting and scenes from everyday life served as models.

Domenico's sons Antonio (i) (*fl* 1692–c1733), Gerolamo (i) (*fl* 1692–1719), Romualdo (*fl* 1699–1756) and Alessandro (i) (*fl c*1709–48), and Gaspare's sons Giuseppe (*fl* 1699–1722) and Antonio (ii) (*fl c*1709–1738) continued their fathers' work for the Venetian opera houses. Their work was inspired by the themes and structure of *opera seria*: spectacular mechanical devices were abandoned in favour of illusion techniques derived from painting, sometimes preserving the central perspective and sometimes adapting new techniques of illusionist wall-painting (angular perspective, diagonal view, worm's-eye view etc.). The most important member of this generation was Alessandro (i), who worked as a stage designer and architect in Venice, Dresden, Rome, Turin and probably Paris with such composers as Lotti, Leo, Porpora and above all Hasse. By integrating the techniques of perspective wall-painting into picturesque designs intended to suggest mood and setting, he introduced formal elements of realism into *opera seria*.

In the later 18th century the family tradition passed to Alessandro's sons Domenico (ii) (*fl* 1733–80) and Gerolamo (ii) (*c* ?Venice, 1725; *d* Venice, 4 March 1766) and Romualdo's son Gerolamo (iii) (*fl* 1750–88). Although they carried out a prodigious amount of work at all the Venetian opera houses, its quality was no longer uncontested (see Croce, 1891). It seems to have been beyond them to keep up with the multiplicity of requirements for the later forms of *opera seria*, as well as for *opera buffa* and related forms by composers like Galuppi, Gassmann, Bertoni, Piccinni, Anfossi etc. Antonio (ii) (*fl* 1774–1807), son of Domenico (ii), was the last member of the family to become a stage designer of any importance. He was responsible for more than a hundred productions for the opera houses of Venice and other north Italian theatres.

MANFRED BOETZKES/R

Mauro, (Bartolomeo) Ortensio (*b* Verona, 1632/3; *d* Hanover, 14 Sept 1725). Italian librettist. He was secretary and councillor to the dukes of Hanover from at least 1663, a priest and *abbate* from 1675, and a central figure in the Catholic community at Hanover. He was highly regarded by Duke Ernst August and Duchess Sophie and their circle (including Leibniz), and given diplomatic responsibility. He wrote the librettos of probably all but one of the operas performed at Hanover between 1689 and 1697. Six of these operas, with music by Steffani, were translated into German by Gottlieb Fiedler and given at Hamburg (1695–9), Wolfenbüttel, Stuttgart and elsewhere. Mauro also furnished two librettos for performance in Berlin under the Electress Sophie Charlotte, and probably wrote the libretto of Steffani's *Amor vien dal destino* (Düsseldorf, 1709) for a performance at Hanover in the 1690s that never took place. He supplied the words for eight Italian chamber duets by Carlo Luigi Pietro Grua (in *I-Bc*) and probably for the duets composed at Hanover by Steffani and Handel. He also provided texts for other musical entertainments at court and wrote poetry in French and Latin, some of which was published posthumously. His death occasioned a sonnet by the librettist S.B. Pallavicino.

COLIN TIMMS

Mauro, Tommaso de (*fl* Naples, 1701–16). Italian composer. He is historically important in early *opera buffa*. Prota-Giurleo called him a dilettante rather than a professional musician. When Carlo II died in Naples in December 1700 and the usual Carnival festivities were cancelled and the theatres closed, a hastily prepared comic opera, *La donna sempre s'appiglia al peggio* (text, C. de Petris) was produced with puppets in the Largo del Castello – the first such work in Naples in the 18th century. Mauro wrote the music; the libretto says that he was already known to the audience, and was 'a young man, and the elder practitioners of his profession vie with each other to imitate, if not to equal him'. On 23 July 1716 he applied to take the place of the late Gaetano Veneziano at the Royal Chapel but was turned down.

Mauro was chosen to set the first opera when the Teatro dei Fiorentini, under the impresario Giovanni Corbello, converted from spoken to musical theatre in October 1706: *L'Ergasto*, again with text by Petris, and performed by comedians to encourage them 'to acquire skills in greater work'. In October 1709 the first public performance of a Neapolitan dialect comic opera – *Patrò Calienno della costa*, text by 'Agasippo Mercotellis' (possibly Nicolò Corvo), music by Orefice – took place at the Fiorentini. It was followed, on 14 December 1709, by a similar work, *Lo spellecchia finto Razzullo* (Act 2 and some arias from Acts 1 and 3), with Mauro and Petris again collaborating. Dramatically this opera is superior to *Patrò Calienno*, showing a firmer grasp of the possibilities inherent in the *commedeja pe'mmuseca* form, with a better balance and a better rhythm established between recitatives and musical numbers. Although no scores survive, it can be inferred that the numbers were short (the opera contained at least 62); arias were often strophic and, as far as the libretto indicates, never da capo; ensemble numbers were frequent and concluded each act. Six of his pieces survive in manuscript cantata-aria miscellanies (*GB-Lbl*).

JAMES L. JACKMAN/PAOLOGIOVANNI MAIONE

Maurolico, Francesco [Francesco da Messina] (*b* Messina, 16 Sept 1494; *d* Messina, 21/22 July 1575). Italian mathematician and theorist. The son of a Byzantine physician who had fled to Sicily on account of the Turkish conquest, he became a Benedictine monk. He was co-opted by the Jesuits in 1569 to lecture on mathematics at the University of Messina, and the theory of music was among the topics on which he was expected to teach. Among his printed *Opuscula mathematica* (Venice, 1575) is the treatise *Musicae traditiones carptim collectae*, which contains an epitome of Boethius's *De institutione musica* together with a number of brief essays on the nature of sounds, musical notes and intervals, the seven-string lyre, the rudiments of counterpoint, the inventors of musical instruments and, most originally, the calculation of the proportions of intervals. The last topic bulks large in Maurolico's manuscript notebooks (*F-Pn* lat.7462), compiled between December 1566 and September 1570. He was among the first writers to discuss the manipulation of proportions in modern terms of division and multiplication, and he came to grips with the problem of the equal division of the tone, but his reluctance on theological grounds to consider irrational numbers prevented a solution. Maurolico also wrote a fair quantity of liturgical verse during the period 1521–35 – hymns, an Office of the Virgin and one of Our Lord, and a propitiatory liturgy and celebratory hymn for Charles V's expedition to Africa in 1535 – and he may have set these poems in plainsong.

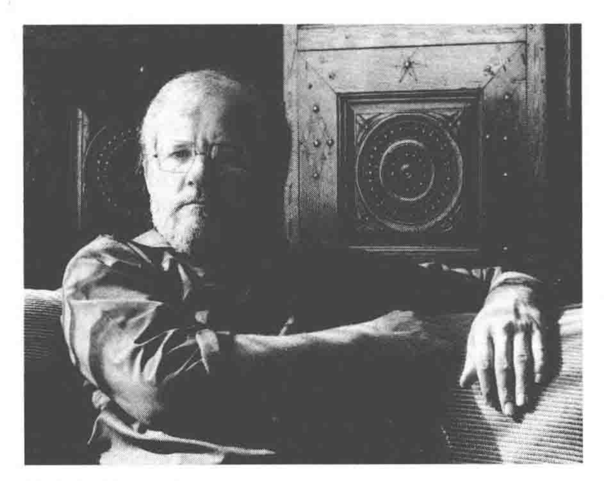
MARIO RUFFINI



Mauro Matti, Fra. *See* MATTI, MAURO.

Maurus Panhormita. *See* CIAULA, MAURO.

Maw, (John) Nicholas (*b* Grantham, 5 Nov 1935). English composer. He studied composition with Berkeley and theory with Steinitz at the RAM (1955–8), and then in Paris (1958–9) with Boulanger (composition) and Deutsch (analysis). He was Fellow Commoner in creative arts at Trinity College, Cambridge (1966–70); tutor in composition at the University of Exeter (1972–4); visiting professor of composition at Yale School of Music (1984–5, 1989); visiting professor of composition at Boston University School of the Arts (1986); and, from 1990, professor of music at Milton Avery Graduate School of the Arts, Bard College, New York.

Maw's student compositions demonstrate his stylistic struggles while finding his voice. The Flute Sonatina (1957) and *Six Chinese Songs* (1959), for example, embrace post-Webern serialism, though, significantly, the segments of the row in the latter suggest keys. The *Nocturne* (1957–8) is quasi-tonal, yet its motivic development uses serial procedures. A compositional block followed, broken by the *Essay* for organ (1961, rev. 1963), in which a personal style began to emerge. Its primary force is melody combined with a harmony that exploits serial and tonal tensions in a distinctive manner. Maw later commented that his roots belong to the period 1860 to 1914, and his music may be heard as an attempt to reconnect with the Romantic tradition that was broken with the onset of Modernism.

He now felt confident to follow the instinct of his inner ear in the major work that followed, *Scenes and Arias* (1962, rev. 1966), a post-Expressionist canvas in which Berg, Britten and Strauss jostle in a heady creative mix. Its broad span is expertly organized with the chromatically saturated harmony entirely derived from two germinal chords whose properties lead to the harmonic ambivalence at the heart of the work. Maw's natural melodic gifts give rise to arching lines for the three female soloists featuring favourite intervals of the 7th and the 9th. The work's vocal and orchestral writing is lush and dramatic, and its predominantly contrapuntal texture culminates in a compositional tour-de-force: a passacaglia which is itself a three-part canon on a ten-note melody journeying through its 11 possible transpositions.

Nicholas Maw, 1981

Maw described *Scenes and Arias* as a study for opera, and two followed in its wake. *One Man Show* (1964, rev. 1966, 1970), a two-act comedy, is mainly through-composed in accompanied arioso, out of which arias, duets and ensembles emerge allowing Maw's lyrical gifts sway. The musical material is closely developed around a number of leitmotifs, and the comedy wittily evoked in musical terms. The three-act romantic comedy *The Rising of the Moon* (1967–70) marked a significant advance in its more finely rounded central characters and the varieties of music to suit the dramatic moment. Again the action is taken forward in a fluid arioso influenced by Strauss and Britten, but more opportunities are made for set pieces to be interpolated. The British militia and Irish patriots are effectively contrasted, the former full of bluff and bluster, the latter in scherzo-like music synonymous with their furtive stratagems. As in *Scenes and Arias*, the opera's harmony is bound together by a particular complex chord. Alongside the operas Maw composed two chamber orchestra works: Sinfonia (1966) and Sonata for two horns and strings (1967). Their neo-classical titles mask formal structures that show his characteristic allegiance to Romantic experimentation: the Sonata is cast in one movement, within which material is stated, developed and restated, while the first section of the Sinfonia combines first movement with scherzo. These works form a precursor to the orchestral music of the 1970s; after that the orchestra became Maw's principal vehicle of expression, beginning with a piece of intense lyricism, *Life Studies* (1973–6). Its eight 'studies' exemplify one of the the composer's preferred formal models wherein a composition comprises a series of separate character pieces, which may be likened to the albums of studies in the Romantic tradition. Movements may exist by themselves, and in a complete performance the player is given choice over order; such controlled freedom appeared first in *Chamber Music* (1962) and also occurs in the six *Personae* for piano (1973, 1985–6). *Life Studies* is a fine example of Maw's mature language in which the melodic ideas, through their linear and harmonic components, are equally the driving force on the surface and the underlying means of structural organization. Harmonically fixed pitch formations within complex chords are used to signal the key of a phrase or section, or to pinpoint, both vertically and horizontally, formally significant groups of notes or intervals.

If *Scenes and Arias* had marked the first watershed in Maw's career, then *Odyssey* (1972–87) was the second. The choice of title is significant, synonymous both with Maw's own journey as a creative artist, and the vast scale of the work itself. Cast in a single massive Brucknerian span lasting over 90 minutes, the work again demonstrates Maw's predilection for extended melodies, and his method of self-generating melodic ideas, which are then structured into long-limbed paragraphs, at its most sophisticated. Its five sections constitute a gigantic upbeat, an exposition and development of a 44-bar *Ur* melody, a contrasting intermezzo, an adagio, a further development of earlier

M

[continued]

Monnet [Monet], **Jean** (*b* Condrieu, 7 Sept 1703; *d* Paris, 1785). French impresario and writer. Son of a baker, he was orphaned at an early age but benefited from the patronage of the Duchess of Berry until her death in 1719. According to his memoirs (*Supplément au roman comique*, 1772) he led a colourful but dissolute life for some years, was imprisoned briefly in 1741 for publishing scurrilous literature (*Les annales amusantes*), and thereafter embarked on a series of theatrical enterprises. In 1743 he paid 12,000 livres for the *privilège* of the Opéra-Comique and assembled a talented troupe which included the comedian Pierre-Louis Dubos, *dit* Préville, Charles-Simon Favart as *régisseur*, François Boucher as stage designer, and Dupré as *maître de ballet*, with his pupil, Noverre. (Rameau may also have directed the orchestra: see Sadler.) The troupe enjoyed such success that, in 1745, it was forced by the Opéra (from whom the *privilège* had been acquired) to close.

Later that year Monnet left Paris for Lyons, where he served briefly as director of the Opéra. Productions mounted in Dijon (1746) and London (1749) proved unsuccessful. In December 1751, however, he again secured the *privilège* of the Opéra-Comique and remained its director until 1758. This was an outstanding period in the development of the *opéra comique* and must be attributed in part to Monnet's extraordinary talent for surrounding himself with influential artists. Favart and Noverre continued to work for him, as did Boucher, who designed a new, impressive theatre for the Foire St Laurent in 1752; his friend Vadé wrote the libretto to the historically important work, *Les troqueurs*, set to music by Dauvergne and staged at the fair in July 1753; Michel-Jean Sedaine was encouraged to write his first opera libretto, *Le diable à quatre*, for the fair of 1756; and Egidio Duni composed *Le peintre amoureux de son modèle*, another highly influential work, for the fair of 1757.

Monnet's influence extended even to England, through his 30-year friendship and correspondence with David Garrick (whom he had first met on a visit to London in 1748). He offered much practical advice to Garrick on stage decoration and design, engaged French personnel for his friend's London troupe, and entertained Garrick and his wife on their visits to France. About 1766 he published his *Projet pour l'établissement d'un opéra italien dans la ville de Londres*.

Monnet has been credited with a number of librettos but only *L'inconséquente, ou Le fat dupé* (1787) can be attributed to him with certainty. His edition of the *Anthologie françoise* (1765) is of historical value to the study of French folklore. His life formed the subject of a vaudeville by Pierre-Yon Barré, Jean-Baptiste Radet and François-Georges Fougues, *dit* Desfontaines (1799).

ELISABETH COOK

Monnet, Marc (*b* Paris, 11 March 1957). French composer. Monnet studied at the Paris Conservatoire, then with Kagel at the Cologne Musikhochschule. He attended courses by Ligeti, Stockhausen and Xenakis at Darmstadt, winning the Kranichstein prize in 1974, and held a residency at the Villa Medici in Rome (1976–8). Among his collaborators have been Jean-Louis Barrault, Stanislas Nordey, Dominique Bagouet and Karine Sporta.

Many of Monnet's works are composed for unusual chamber-size ensembles. His music has a solemn ruggedness, sometimes described as expressionist, which conveys a predilection for gloomy and austere regions, where the uncanny sometimes rubs shoulders with reminiscences of Bartók's nocturnal pieces (*Les ténèbres de Marc Monnet*, 1984). Violent, if not frenetic, disintegration of form, and the rejection of any notion of development, leads to a sense of arbitrariness produced by abrupt stops and silences (*Fragments*, realized at IRCAM, 1990–93). Since 1986, the year in which he founded the theatre company Caput mortuum, the interpreters of his music are as likely to be 'vocalisateurs-acteurs-gesticulateurs' as musicians.

WORKS

(*selective list*)

Stage: Prologue, 2 actors, dancer, mime artist, trapeze artist, 8-track tape, 1987; A corps et à cris, 3 'vocalisateurs-acteurs' + MIDI, 1988; Probe, 3 'vocalisateurs-acteurs' + MIDI, 1989; Fragments, 5 'vocalisateurs-acteurs-gesticulateurs', 2 S, 4 cl + MIDI, 4 bn, 4 hn, synth, 12 str, 1990–91

Large ens: La scène, 17 insts, 1982; L'autre scène, 13 insts, 1983; Patatras!, 8 insts, 1984; Chants ténus, 23 insts, cptr, 1988–92 [orig. 18 Renaissance insts, 1988]

(2) Isḥāq al-Mawṣilī (*b* ?Arrajan, 767; *d* Baghdad, March 850). Arab musician of Persian origin, son of (1) Ibrāhīm al-Mawṣilī. He had an excellent education in all the Islamic sciences and received instruction in music from, among others, his father and the lutenist Zalzal. He was a court musician and companion (*nadīm*) under every caliph from Hārūn al-Rashīd (786–809) to al-Mutawakkil (847–61). As an upholder of the classical Arab music style, he stood in opposition to the innovator Ibrāhīm ibn al-Mahdī and his followers. His *Kitāb al-aghānī al-kabīr* ('Great book of songs'), the most extensive of almost 40 books that he wrote on music, was the main source for the book of the same name by al-Iṣfahānī (who included an exhaustive biography of Isḥāq al-Mawṣilī and details of his style of composition). Excerpts from his monographs on male and female singers and some quotations on musical theory are transmitted through the works of later writers on music. Without any knowledge of classical Greek theory of music, Isḥāq al-Mawṣilī provided Arab music with a theoretical system based on local traditions, the terminology of which was explained by Yaḥyā ibn 'Alī al-Munajjim and by al-Iṣfahānī. At the beginning of the 12th century, musical metres corresponding to his terminology and definitions were still used in Muslim Spain, and even as late as the 14th century Ibn Kurr (*d* 1358) was said to have defended his teachings against 'representatives of Greek musical theory'.

ECKHARD NEUBAUER

Mawṣilī, 'Uthmān (al-Mullā) al- (*b* Mosul, 1854; *d* Baghdad, 1923). Iraqi vocal performer of religious and secular genres, composer, instrumentalist, poet and Sufi. Born into a poor family, he became blind and lost his sight at an early age. He was brought up in Mosul by a nobleman who gave him the best available education; al-Mawṣilī studied Arabic, the Qur'an and music. At the age of 17 he was sent to Baghdad to learn the Iraqi *maqām* with Shaltagh (*d* 1871) and al-Karkūklī (*b* 1831), and his numerous talents soon became apparent. He became a famous reciter of the Qur'an and was designated Sultan Abdul Hamid II's personal reciter and occasional political envoy. Al-Mawṣilī recited the Qur'an in the biggest mosques of the Ottoman world and influenced a generation of important reciters in Egypt, Iraq, Syria and Turkey. He was famous for his performances of the *mawlid nabawī* (ritual for the anniversary of the Prophet) in which he sang Iraqi *maqāms* and religious *muwashshaḥs*; in the Arab world he was regarded as the master of *muwashshaḥs*. He was successively a member of three Sufi orders in which he sang. He also played the *qānūn*, the *nay* and the *ṭabl* and accompanied secular singing. Al-Mawṣilī taught Abū Khalīl al-Qabbānī of Syria and the Egyptians Kāmil al-Khulā'ī and Sayyid Darwīsh, and is regarded as the most important representative of Iraqi music of the late Ottoman period.

SCHEHERAZADE QASSIM HASSAN

Mawwāl. Important Arabic song form performed in melismatic style.

Maxfield, Richard (Vance) (*b* Seattle, WA, 2 Feb 1927; *d* Los Angeles, 27 June 1969). American composer. He studied with Sessions at the University of California, Berkeley, and with Babbitt at Princeton University (MFA 1955). His other teachers included Krenek, Copland (at the Berkshire Music Center, 1953), Dallapiccola (on a Fulbright scholarship in Italy, 1955–7) and Cage, whom he ultimately succeeded as teacher of the composition and performance class at the New School for Social Research in New York, 1959–61; during this time he also worked as a freelance technician and audio engineer. Maxfield is acknowledged as the first teacher of electronic music techniques in the USA. He founded and was briefly director of the electronic music studio at San Francisco State College (1966–7). In his contribution to La Monte Young's *An Anthology of Chance Operations* (1963) he established an aesthetic of electronic composition as an independent art form, in which he viewed the tape medium as similar to a poem being read: 'We become both the audience and interpreter, face to face with the poet's own writing without intermediary'.

Maxfield's *Five Movements* for orchestra won the Gershwin Prize in 1959, but his main contribution was as a composer of electronic music. He was one of the first in the USA to compose for acoustic instruments with tape. *Night Music* (1960), for tape, contains supersonic and infrasonic frequencies which are modulated to produce sounds; this has since become a classic technique of electronic composition. In *Clarinet Music* (1961) he prescribed unconventional playing techniques and in the prerecorded portions of *Dromenon* (1961) made use of unequally tempered tuning. He frequently composed more than one tape realization for performances of pieces including tape and live performers, to avoid rigidity. At the time of his death Maxfield had been working as a freelance composer and engineer in Southern California; his major works, including *Night Music*, *Amazing Grace*, and *Piano Concert for David Tudor*, were not recognized for their technical and musical innovations for over a decade afterwards.

may be obtained by the successive application of the sesquialtera proportion (beginning with the note F) or of the subsesquialtera proportion (beginning with B). The former will produce a series of perfect 5ths in descending order (called 'flat semitones'), and the latter a set of ascending perfect 5ths ('sharp semitones'). Arithmetical semitones are determined by an equal division of the difference between the string lengths of two pitches a step apart. This method was frequently used in post-medieval times even though the semitones are of unequal size. The mean proportional string lengths necessary for single equal semitones are usually determined by means of the Euclidean construction (a perpendicular erected at the juncture of two string lengths which are used as the diameter of a semicircle will equal the proportional length). To determine two or more mean-proportionals, a mechanical device like the mesolabium (a series of overlapping square frames) can be used to substitute for the mathematical function of the cube root; multiple mean-proportionals can also be formed by means of the sort of geometrical figures used by Lemme Rossi in the 17th century.

4. USES. In addition to its value as an experimental device, the monochord served throughout the Middle Ages as a teaching instrument. Monochord-based diagrams and sets of directions for determining the consonances abound in both speculative and practical treatises of this era. Until the adoption of sight-singing methods based upon the hexachord system, the monochord was used to produce pitches for rote singing; from then until the 13th century it was used mainly to check correct reproduction of intervals. The decline of its pedagogical use after this time is probably due to the introduction of keyboard instruments. The use of the monochord by teachers in the Renaissance was restricted to those few who rigidly maintained the Pythagorean scale as the basis of their musical instruction.

Because so much of the early use of the monochord was didactic, its users attempted to make the division as efficient and accurate as possible. The efficiency of a monochord division depends on the relation between the number of separate measurements and the number of notes produced. The results of these efforts are particularly noticeable after 1450 because after this date each new division often produced a new variation of a given tuning. Often the musician wished to change the tuning but not infrequently he was only seeking a simpler method of division. It would seem that the appearance of an altered tuning bothered the Renaissance musician little, for because of the monochord's inaccuracy, a variation of a few cents (in some cases as much as 22 cents) was a small sacrifice to make for a more efficient division. A case in point is the division of Ramos de Pareia whose monochord tuning varied widely from the accepted Pythagorean standard. Ramos, however, was apparently not bothered by the pitch deviation as long as he was able to simplify the division. To this end he stated: 'So therefore we have made all of our division very easy, because the fractions are common and not difficult'. In many cases this desire is not stated expressly, as it was by Ramos, but it may be suspected that it served as an underlying cause of many tuning variations in the Renaissance and later eras.

The other areas in which the influence of the monochord is evident are in its instrumental applications and its use as a symbolic device. In the former instance the use of the monochord in ensembles is cited in both Greek and medieval writings. In later times, however, the descendants of the monochord, the clavichord (sometimes called *monochordia* by 15th- and 16th-century writers), hurdy-gurdy and trumpet marine, were more frequently used. Throughout the late Middle Ages and the Renaissance the monochord is often mentioned as a basic tool in the design or measurement of bells and organ pipes. Finally, until about 1700 the monochord was commonly used to show the unity existing between man and the universe. It is represented as a divided string whose pitches may represent the solar system (*musica mundana*), the muses, the zodiac, or even bodily functions; often this is being tuned by the hand of God.

For Jacques de Liège's division of the monochord, *see* THEORY, THEORISTS, fig.4.

CECIL ADKINS

Monocordo (It.; Fr. *monocorde*). An instruction to a string player to execute a passage or piece on one string. The effect was first used by Paganini in his *Sonata Napoleone* (1807).

Monod, Jacques-Louis (*b* Asnières-sur-Seine, 25 Feb 1927). French conductor, composer and pianist. He entered the Paris Conservatoire below the official age of nine, taking courses in various disciplines. In 1944 he attended Messiaen's seminars, then went on to study theory, composition and analysis with René Leibowitz (1944–50). He went to the USA with Leibowitz in 1951, and studied at the Juilliard School of Music (composition with Wagenaar) and Columbia University (conducting with Rudolf Thomas). At Juilliard he was also a teaching assistant to Richard Franko Goldman, in whose class he prepared and directed the first all-Webern concert ever given, on 8 May 1951. Later he studied with Boris Blacher and Josef Rufer in Berlin. Monod made his piano début in a concert conducted by Leibowitz in Paris in 1949 to celebrate Schoenberg's 75th birthday. He was subsequently active as a pianist, in many song recitals with the American soprano Bethany Beardslee (then his wife), and as a conductor. He played or conducted the premières of Schoenberg's Songs op.48, Webern's Songs opp.17 and 25, the two versions of Berg's *Schliesse mir die Augen beide*, and Babbitt's *Widow's Lament* and *Du* (written for him and Beardslee). Between 1960 and 1966 he gave the first European performances of several American works, and he also made the first recordings of much 20th-century music.

Monod's compositions (published by Boelke-Bomart, of which he was chief editor from 1952 until 1982) include many settings of texts by Eluard, Valéry, Renard and René Char, chamber and solo works, two chamber cantatas and works for orchestra. He taught at the New England Conservatory, Princeton, Harvard and Columbia universities, and Hunter and Queens colleges, CUNY.

MICHAEL STEINBERG/R

Monodrama. In its narrow meaning, a form of MELODRAMA which features one character, sometimes with chorus, using speech in alternation with short passages of music, or sometimes speaking over music. Simultaneously with melodrama, the initial enthusiasm for monodrama occurred chiefly in Germany during the 1770s and 80s, and the two terms are often used interchangeably, since many of the early melodramas had only one character on stage at a time. The prototypical 'monodrama', Rousseau's *Pygmalion*, actually has two characters, but until the end, when Galatea comes to life and speaks four lines, Pygmalion holds the stage alone. Introduced in Weimar by Goethe in 1772, with music by Anton Schweitzer, *Pygmalion* became the model for several examples of monodrama and duodrama produced in Weimar and Gotha by J.C. Brandes, often as a vehicle for his wife Charlotte, and in Weimar, Dresden, Leipzig and Frankfurt by the Seylers. From 1775 to 1790 over 30 so-called monodramas were performed in Germany, though some of these are actually cantatas with one main character. In Darmstadt, where C.G. Neefe's *Sophonisbe* (1776) and G.J. Vogler's *Lampedo* (1779) were produced, there is now a large collection of monodramas in the Hessische Landes- und Hochschulbibliothek. Other significant monodramas include J.F. Reichardt's *Ino* (1779), Franz Danzi's *Cleopatra* (1780), and Goethe's *Proserpina*, with music by K.S. Seckendorff (1778), and revived in 1814 with new music by Carl Eberwein.

In modern times, the term has lost its exclusive association with the combination of speech and music characteristic of melodrama and is most often used as a synonym for a one-character opera, as in Schoenberg's *Erwartung* (1909) and Poulenc's *La voix humaine* (1958); as a non-staged dramatic work for singer and orchestra, as in Poulenc's *La dame de Monte Carlo* (1961), Floyd's *Flower and Hawk* (1972), Rochberg's *Phaedra* (1973–4), J.E. Ivey's *Testament of Eve* (1976) and Peter Maxwell Davies's *The Medium* (1981); or even as a purely instrumental work, as in Mordecai Seter's Chamber Music '70 for clarinet and piano (1975), and {*H*} *MWNWDRMH* {*R*}: II Monodrama for viola and piano (1979). In addition, some works are simply entitled 'Monodrama', for example the ballet for orchestra by Karel Husa (1976). In several of the vocal works, some techniques of Sprechstimme are used along with singing (e.g. Davies and Floyd), but these are properly seen more as an outgrowth of extended vocal techniques of the 20th century than as a continuation of melodrama techniques of the 18th and early 19th centuries. Moreover, 20th-century works incorporating speech and music are more often entitled 'monologues' or 'recitations with music' than monodrama.

ANNE DHU MCLUCAS

Monody. (1) Term applied to music consisting of a single line; *see* MONOPHONY. Historians and ethnomusicologists have variously applied it to ancient musics, chant and monophonic (e.g. troubadour) song. Some modern composers have also used it in titles or as a generic label, usually with archaizing intent and to indicate a set of technical and structural constraints applied more or less loosely.

(2) Accompanied Italian solo song, especially secular, of the period *c*1600–40. The term can either denote an individual song or define the entire body of such songs (and solo recitatives in operas and other works can also be described as monodic). Its use in these senses is a product of modern scholarship; the word was certainly never used by the composers themselves, although there are precedents in 17th-century theory of a more humanist bent (e.g. G.B. Doni). The songs that it embraces are those for solo voice and continuo dating from the inception of the medium at the close of the 16th century to the emergence of the chamber cantata. The accompanying instruments most frequently used were the lute, chitarrone, theorbo, harpsichord and, for lighter songs, guitar. Obbligato instruments occasionally appear, but there is no evidence that a bass viol or similar instrument doubled the continuo bass.

The medium to some extent grew out of late 16th-century solo arrangements of ensemble music, but the vast majority of monodies were composed as such. The main forms are broadly the madrigal and the aria: the distinction is primarily one of poetic structure. Monodic settings of lyric madrigals (or sonnets etc.) essentially continued the tradition of ensemble madrigals in a new guise (*see* MADRIGAL, §III, 3). There is a marked polarity between the bass and the vocal line, which is often embellished with quite elaborate ornamentation, some of it written out, some of it improvised according to tried formulae. The arias, which are to stanzaic poetic texts, are more varied in form and style (*see* ARIA, §2). They include examples of strophic bass (*see* STROPHIC VARIATIONS), with the earliest pieces called 'cantata', by composers such as Alessandro Grandi (i) and G.P. Berti, which are distinct from later chamber cantatas (*see* CANTATA, §I, 1). Most arias, however, are strophic songs, usually in triple time and with very little ornamentation, ranging from trifling canzonettas to longer, more serious pieces out of which grew the arias of chamber cantatas. Strophic arias gradually became more popular and began to supplant madrigals from about 1618; by the early 1630s the madrigal was virtually dead. Some monodies also include passages of recitative. Many favourite poems of the past were set, particularly as madrigals, but much contemporary verse was used too, especially for arias; much of this verse is anonymous, and a good deal of it must have been written for musical setting.

The terms 'madrigal' and 'aria' were established for monodies by Caccini in his *Le nuove musiche* (Florence, 1601/2/*R*), an epoch-making collection from which it is plausible and convenient to date the inception of genuine monody. The success of Caccini's songs was undoubtedly a major factor in establishing the popularity of monodies,

Clapton left the group shortly afterwards and Peter Green replaced him; Aynsley Dunbar replaced Hughie Flint. The new line-up recorded the album *A Hard Road* (Decca, 1966; released 1967), on which Green demonstrated that he was a worthy successor to Clapton on tracks such as 'The Supernatural'. Mick Taylor (later of the Rolling Stones) joined the group, recording *Crusade* (Decca, 1967), *Bare Wires* (Decca, 1968) and *Blues from Laurel Canyon* (Decca, 1968). His extended guitar solo on 'Fly tomorrow', from the last of these demonstrated the style he would later develop with the Rolling Stones. Mick Fleetwood and Jack Bruce (later of Cream) also played with Mayall for short periods of time, but Fleetwood, Green and McVie left to form Fleetwood Mac (1967).

In 1969 Mayall changed to more acoustically-based music with a version of the Bluesbreakers that was indebted to jazz. Without drums, the ensemble centered around the fingerstyle acoustic guitar playing of Jon Mark, the virtuosic tenor saxophone and flute playing of Johnnny Almond and Mayall's keyboards, as on the live album *The Turning Point* (Pol., 1969; released 1970), which also included the harmonica tour de force 'Room to Move'. Mayall changed direction to explore a more intense fusion of styles on the album *Jazz-Blues Fusion* (Pol., 1971), but eventually returned to his earlier electric blues style. Throughout the 1960s and early 70s his albums included increasingly more of his original pieces, many modelled on traditional blues, and fewer covers.

SUSAN FAST

Maya music. The term 'Maya' applies in a broad sense to a large group (about two million in the 1960s) of Amerindians speaking Maya languages; in this context it refers principally to the music of the pre-Columbian civilization.

1.To 1600. 2. Modern developments.

1. To 1600. The pre-Columbian Mayas inhabited the Yucatán peninsula of Mexico, as well as the Guatemalan highlands, present-day Belize and the eastern parts of the Mexican states of Chiapas and Tabasco. Maya culture reached its peak in such ceremonial centres as Copán, Tikal and Uxmal as early as 300–900 CE, during which centuries the Mayas developed systems for astronomy, mathematics and writing matched by no other pre-Columbian peoples. By 1517–18, however, when Spanish explorers first began skirting the coasts of the lowland Yucatán peninsula, they had long since fallen victim to conquering invaders from central Mexico.

Jaina island has yielded decorated clay flutes that reveal a flourishing music culture from about 500 CE: vertical flutes with six unequally spaced finger-holes (fig.1*a*); flutes producing an oboe-like sound by means of a goitre chamber deflecting the air near the animal-effigy neck (fig.1*b* and *c*); and multiple-tube flutes capable of sounding three-note chords. A clay trumpet in two joined sections with the proximal of almost cylindrical bore, the distal of conical bore, was found in Tabasco. (For descriptions of these instruments see Martí, p.123ff.)

Important archaeological evidence of pre-Columbian Maya aerophones has been found in: Jaina; Jonuta, Tabasco; Tuxtepec, Oaxaca; Campeche; San Andrés; Tuxtla, Veracruz; Cozamaloapa, Veracruz and Catemaco, Veracruz, including whistles made of clay from burials of the same period in Jaina. These whistles have mouthpieces in quadrangular, rectangular, ellipsoidal and conical shapes. Several whistles are in the form of human faces and also in the shape of animal figures representing Mayan deities.

Mayan wooden trumpets in two joined sections exceeding a man's arm in length were favoured about 775 CE when the walls of the Bonampak temple in dense jungles of Chiapas were painted (fig.2). Twin trumpeters standing side by side in a 12-man orchestra appear on one Bonampak mural; elsewhere trumpeters mix singly with the fighters. The lips of the players tightly pursed over the black-ring mouthpiece of each trumpet held aloft suggest the blowing of numerous higher partials. Unlike six-hole goitre and multiple flutes that died out long before 1500, 'long thin trumpets of hollow wood with long twisted gourds at the ends' were still a principal Mayan instrument when Diego de Landa wrote his *Relación* in 1566 and when Bartolomé Resinos Cabrera described the *loj-tum* dance in 1624 (Chinchilla Águilar, p.19):

> The [*loj-tum*] dance enacts the sacrifice of a prisoner taken in battle. Tied to a stake, he is attacked by four dancers disguised as a jaguar, a puma, an eagle, and another animal – these four representing his spirits. They try to kill him to a terrible din caused by yells and the calls of long twisted trumpets that look like sackbuts and whose frighteningly dismal sounds are enough to scare the wits out of anyone.

Not only the Bonampak murals but also two of the three surviving pre-Columbian Mayan manuscripts in European libraries testify to the popularity of the *kayum*, an upright single-headed cylindrical or kettle-shaped drum, played barehanded. The top and bottom panels in side 63 [34] of the Dresden Manuscript (*c*1200) show deities playing drums whose clay frames resemble two arms of a candelabrum. The top of the arm nearer each seated deity is covered with tied hide, the top of the other arm is open. The base joining the two arms is filled with water, enabling the player to adjust the pitch. The top panel shows in addition a deity shaking a large perforated rattle and another playing an end-blown flute. Glyphs for musical sound emanate from both the drum and flute. The drummers in sides 21–2 of the Tro-Cortesianus Manuscript in Madrid sit before kettledrums on tripods (fig.3*a*); the central panel of side 87 shows two seated players of flaring-bell trumpets, evidently made of wood (fig.3*b*).

Except for pellet-bell rattles (Sp. *cascabeles*; Maya *tzitzmoc*) metal instruments had no place in Maya organology. The hundred golden pellet-bell rattles found in 1926 at the Sacred Well at Chichén-Itzá, an archaeological site occupied from about 889 CE, were brought from afar. In Mayan manuscripts pellet-bell rattles are associated with Ah-Puch, the death god. Both the Dresden and Madrid manuscripts show gods decked with jingles, the Madrid at side 34 showing 24 jingles shooting out like sting rays, the seated Ah-Puch at 12b3 in Dresden surrounded by three different types of jingle.

The conquest of the Maya area, first by eagle and jaguar warriors from Tula, the Toltec capital, about 1000,

Monsardus, Hieronymus. *See* MONTESARDO, GIROLAMO.

Monserrate [Montserrat], **Andrés de** (*b* Codalet, Catalonia; *fl* 1614). Spanish theorist. He served as precentor (*capiscol*) of the church of S Martín, Valencia. His brief plainchant treatise, *Arte breve, y compendiosa de las dificultades que se ofrecen en la música practica del canto llano* (Valencia, 1614), is among the very few works on music theory published in Spain in the first half of the 17th century. Although intended as a practical guide, its approach is learned, and it is solidly based on past authorities, ancient and modern, who are listed at the beginning and cited throughout. In his second prologue Monserrate described the place of music among the arts and echoed Bermudo in his scorn of the practical musician ignorant of the foundations of the art. His work is divided into two parts, the first concisely summarizing the fundamentals, the second expanding them with quotations and musical examples. He included the customary topics: notation, solmization, mutation, accidentals, cadences and the modes. He dwelt on certain controversial topics at some length – for example the use of sharps and flats in plainsong and the reasons in favour of the use of B♭ in the 5th and 6th modes. His work was often cited by later Spanish theorists. A tiento and several villancicos by one 'Montserrat' are known; the tiento may be attributable to José Montserrat, an organist in Valencia and Murcia, or to Roque Montserrat, *maestro de capilla* at Cartagena.

ALMONTE HOWELL/LOUIS JAMBOU

Monsigny [Moncigny, Moncini, Monsigni], **Pierre-Alexandre** (*b* Fauquembergues, near Saint-Omer, 17 Oct 1729; *d* Paris, 14 Jan 1817). French composer. He was born into a noble but penniless family; his aristocratic origins were useful to him in his Parisian career, however, and are evident in the fact that all his scores were published anonymously, for it would have been improper for a nobleman to admit to being a musician. He settled in Paris in 1749, intending not to become a composer of operas but, according to Quatremère de Quincy, to 'throw himself into finance'; he did indeed enter the service of the receiver general of the Clergé de France about 1750, and then became *maître d'hôtel* to the Duke of Orléans about 1768. In Paris Monsigny continued the musical studies he had begun in his native province, first with a violin master, then with Pietro Gianotti, an instrumentalist at the Opéra and the author of a didactic work *Le guide du compositeur* (Paris, 1759). His first impressions of *grand opéra* were unfavourable ('I would rather try a different genre', he told his friends), and he therefore naturally found himself drawn to the nascent genre of *opéra comique mêlé d'ariettes*.

His first opera, *Les aveux indiscrets*, was performed in 1759 (the same year as Philidor's first, *Blaise le savetier*), but the preface to the libretto dates its composition four years earlier. *Les aveux indiscrets* is a mixture of elements borrowed from various different genres: the dominant influence is that of the Italian intermezzo, but it also contains characteristics peculiar to the French tradition, such as *petits airs*, a final *divertissement* and dialogue arias. Monsigny's personal touch already shows in the quality of the melodic invention, particularly noticeable in the duet 'L'amour veut du mistère' in the middle of the final *divertissement*. *Le maître en droit* (1760) and *Le cadi dupé* (1761) belong to the hybrid category of the *opéra comique mêlé d'ariettes et de vaudevilles*. Their strong points are the arias expressing an *amoroso* sentiment (this marking appears frequently in Monsigny's work and is generally associated with A or E major); the prototype is Lindor's aria 'Ah, quel tourment' (*Le maître en droit*, 2.i). However, Monsigny also shows an increasing mastery of action ensembles, such as the duet 'Prêtons un peu l'oreille' in *Le maître en droit* (2.vi) and the trio 'Entrez donc' in *Le cadi dupé* (scene vii). It was on hearing the duet 'Je veux former de nouveaux noeuds' (*Le cadi dupé*, scene viii) that the dramatist Sedaine, seeking a musician much as the Cadi was seeking a wife, cried, 'There's my man!' The first result of the collaboration between Sedaine and Monsigny, which proved one of the most fruitful in French opera, was *On ne s'avise jamais de tout* (1761); it was such a success that it was revived at court in December of the same year, an unusual distinction for an opera first performed at the Théâtres de la Foire, and was chosen, with *Blaise le savetier*, for the first performance given by the Comédie-Italienne after its merger with the Opéra-Comique, on 3 February 1762.

The comic vein still predominant in *On ne s'avise jamais de tout* gives way, in *Le roi et le fermier* (1762), to a far more complex dramatic conception, not only in the unexpected alternation between comic and serious scenes but also in the use of musical procedures still new to French opera (fig.1). If Monsigny displays a richer and

3. *(a) Drummers playing kettledrums on tripods, and (b) seated trumpeters: details from the Tro-Cortesianus MS, 14th century (Museo de América, Madrid, Inventory no.70300, sides 21 and 87)*

Ballet Folklórico de Mexico (directed by Amalia Hernández), *Xtoles* was first collected by José Jacinto Cuevas (1821–78), who included a triple-metre version of it in his *Mosaico yucateco*. Equally well ascribable to Africans, who by 1604 outnumbered Spaniards at Mérida, the melody cannot be authenticated as truly Mayan for lack of any music of a popular or folkloristic nature written down in Yucatán before the middle of the 19th century. On the other hand, the cathedral organist at Mérida in 1596 was Gaspar Antonio Chi (Xiu) (1531–*c*1610), a Maya priest's son who according to Sánchez de Águilar 'sang plainsong and figural music excellently, and after being *holpop* [choirmaster] at Tizimín became organist of Mérida Cathedral and the governor's official interpreter'.

2. Modern developments. Indigenous music with a strong Maya legacy can be found in the Yucatán and Chiapas. Max Jardow-Pedersen (1996) mentions the use of *tunkul* (slit-drum) in Dzitnup, Yucatán, and the *bulalek* (water-drum) in Chanchichimilá, Yucatán; both instruments are still in use for Christian religious festivities. In Chiapas there are a few European instruments made locally. Tzotzil and Tzèltal are indigenous people from the highlands of Chiapas who retain a great variety of traditional dances with strong Mayan roots but accompanied by groups of indigenous and European instruments. Mercedes Olivera (1974) offers good examples of various dances, including the *danza del agua* (water dance) of San Juan Chamula, performed to the music of a double-headed cylindrical drum and a rudimentary 12-string guitar at a number of Catholic festivities. Other dances of the same region of highland Chiapas include the *yojualelvinajil*, a religious dance performed with harp and the same rudimentary 12-string guitar; the *quintajimoltic*, a carnival dance performed with a single-headed drum and cane flute, the drum is made of a *cántaro* (clay pot) with a single skin head covering the mouth of the pot.

In Yucatán modern European instruments are found playing a regional music known as *jarana* with strong European roots. Jardow-Pedersen (1996) mentions the presence of brass bands playing *jaranas* characterized by hemiola rhythms. The *jarana* is danced as an offering to the patron saint at Christian festivities, and is still performed at certain Maya rituals in honour of ancient Mayan deities, including Chaak and the gods of the four winds. Pedersen mentions that among Mayan people from Yucatán, Christian practices have been integrated into Mayan rituals and other events. This is the case at the Christian festivity in Xalua, Yucatán, where *jaranas* are performed for the exorcism ritual, *tangas-ik* (evil winds); before a bull fight and also in honour of *wanthul* (god of cattle). Another modern reference to contemporary Mayan music by Thomas Stanford (1997) refers to the presence of a particular style of music called *son de maya pax* in Quintana Roo, with accompaniment by violins, cornets, snare drum and bass drum, also characterized by hemiola rhythms.

ROBERT STEVENSON (1), ARTURO CHAMORRO (2)

Mayboroda, Heorhy Ilarionovych (*b* Pelekhivshchyna khutir, Kremenchuk county, Poltava region, 18 Nov/1 Dec 1913; *d* Kiev, 7 Dec 1992). Ukrainian composer. A student of Revutsky, he graduated from the Kiev Conservatory in 1941 (completing graduate studies in 1949) and later taught there (1952–8). He was also head of the Composers' Union of Ukraine (1967–8) and in 1967, 1971 and 1975 served as a deputy to the Supreme Soviet of the Ukrainian SSR. He was nominated Outstanding Artist of the Ukrainian SSR in 1957 and People's Artist of the USSR in 1960. In 1963 he received the coveted Shevchenko Prize. Mayboroda is a profoundly conservative composer; his harmonic and melodic language is deeply rooted in the late 19th century with a hint of harmonic expansiveness that suggests aspects of Delius and Kodály. Influenced by Ukrainian folklore and the Russian romance style, he composed in many genres works that had an immediate appeal. In such works as the Second Symphony 'Spring' (1952, revised 1966) and the opera *Taras Shevchenko* (1964) he convincingly exhibits his considerable melodic gift, a good, if conventional, understanding of the orchestra and an ability to compose in clear and succinct musical structures. To many, his most important compositions have been his four operas, each one a carefully written work that projects an individual, if narrow, personality. They commonly feature heroic and patriotic themes as subject matter, with *Yaroslav mudryy* ('Yaroslav the Wise') of 1973 being the most ambitious and monumental, and *Taras Shevchenko* being the most intimate. Together with Revutsky he edited and orchestrated piano and violin concertos by Kosenko.

VIRKO BALEY

Mayeda, Akio (*b* Tokyo, 18 April 1935). Japanese musicologist. He studied music history at Tokyo University (MA 1961) and composition privately with Yoshirō Irino. He won a scholarship from the Austrian government to study at the Vienna Hochshule für Musik. In 1963 he moved to Vienna University and studied with Erich Schenk and Walter Graf, gaining the PhD in 1967 with a dissertation on Porpora's instrumental music. He then temporarily taught at the Kunitachi College of Music in Tokyo but returned to Europe in 1972 to teach at Zürich University, and at Heidelberg University as *Privatdozent* from 1987 and as professor from 1997. He has specialized in music of the 18th and 19th centuries, particularly Schumann studies. Since 1985 he has been an editor of the new Schumann edition. He received the Kyoto Music Prize (1986) and the Arima Prize (1988) for his work on Schumann.

MASAKATA KANAZAWA

Mayer [Mayr]. Austrian firm of music publishers. Johann Baptist Mayer founded a bookshop in Salzburg in 1655 which also published typeset music, including works by Andreas Hofer (1677). In 1704 and 1707 J.B. Samber's *Manuductio ad organum* and the *Continuatio* appeared; the firm was then J.B. Mayrs Witwe & Sohn, and in 1710 Samber's *Elucidatio musicae choralis* was published by Mayer's son Johann Joseph Mayr. The firm, subsequently called J.B. Mayrsche Buchhandlung, later issued sacred works by Michael Haydn (1797) and a *Te Deum* by J.J. Emmert. The firm continued into the 19th century.

Montagu-Nathan, M(ontagu) (*b* Banbury, 17 Sept 1877; *d* London, 15 Nov 1958). English violinist and writer on music. He was educated in Birmingham and studied at the Brussels Conservatoire as a violin pupil of Ysaÿe and at the Hoch Conservatory, Frankfurt. He also had private lessons with Wilhelmj in London. He appeared frequently at the Belfast University Chamber Concerts between 1900 and 1905, and took a teaching position about 1907 in Leeds, where he played violin concertos at the municipal concerts and acted as music critic to the *Yorkshire Observer*. He learnt Russian and became known as a specialist in Russian music, of which he gave pioneer concerts at Steinway Hall, London, in 1913–14. His writings include biographies of the major Russian composers as well as general histories of Russian music, about which he continued to write to an advanced age.

ERIC BLOM/R

Montalbano [Mont'Albano], **Bartolomeo** (*b* Bologna, *c*1598; *d* Venice, before 18 March 1651). Italian composer. On 20 October 1619 he entered the Franciscan order and settled at the monastery of S Francesco, Bologna; he took his vows on 22 July 1622. After a journey to Rome, he was taken to Palermo by Bonaventura Arezzo, head of the order in Sicily. When he published his only known music in 1629 he was *maestro di cappella* of S Francesco there. On 16 April 1633 he was again at S Francesco, Bologna, and he was *maestro* there from 20 April 1642 until his death. In 1647 he was among the musicians directed by Bonaventura Rubino in the music for the general chapter of his order, held at SS Apostoli, Rome. His trips to Venice are documented from 6 May 1649; he died there before 18 March 1651, when an inventory of the contents of his cell in Bologna was made. His brother, Guido (1600–98), also a Franciscan monk, succeeded him as *maestro* of S Francesco, Bologna, leaving the post in 1675.

He published two volumes of music at Palermo in 1629: *Sinfonie ad uno, e doi violini, a doi, e trombone, con il partimento per l'organo, con alcune a quattro viole*, and *Motetti ad 1, 2, 3, 4, et 8 voci, con il partimento per l'organo, et una messa a 4 voci* (both ed. in MRS, xiv, 1994). The latter appeared twice in the same year as opp.2 and 3, with different dedications; despite the title-page neither edition includes any three-part motets. The former volume comprises four pieces for solo violin, two for two violins, two for two violins and trombone all with continuo, and four for four viols; they are named after prominent citizens or Sicilian places. The three- and four-part sinfonias are modest examples of the instrumental canzona; one of the last includes musical quotations from Rore's *Anchor che col partire*. Those for two violins and especially those for solo violin are more interesting. They are structurally free and give the impression of being notated virtuoso improvisations, with contrasts of presto and adagio and of *forte* and *piano* in echo, and detailed indications of phrasing. The figuration, which is purely instrumental in conception, derives from the tuning of the violin in 5ths. Montalbano is thus, together with men such as Biagio Marini, G.B. Fontana and Camillo Cortellini (with whom he probably studied at Bologna), one of the founders of modern violin technique. In the mass of opp.2–3, he said, 'the Sanctus and Agnus are short in order to allow room for a motet or sinfonia'. Of the motets, one is for solo voice, seven are for two voices, one for four and one for eight (this last is in praise of St Bonaventure and was no doubt intended as a tribute to Father Arezzo). Montalbano's vocal style is to some extent an adaptation of his instrumental style; the music is fluent and serviceable in an idiom that can be seen as a stylized, debased simplification of the sacred concerto established by Giovanni Gabrieli and Monteverdi.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Montalto, Cardinal **Alessandro Peretti** (*b c*1571; *d* Rome, 2 June 1623). Italian patron of music. He received the title of cardinal from his great-uncle Pope Sixtus V in 1585. He became Cardinal Legate of Bologna in 1587 and vice-chancellor of the Church in 1589. A friend and protégé of Ferdinando de' Medici, he became the wealthiest and most powerful member of the curia, and the patron of many important painters and musicians. He trained as a musician, perhaps with Scipione Dentice, with whom he was associated before 1587. His household or chapel musicians included a 'Cavaliere del liuto' (possibly Lorenzino), Melchior Palentrotti, Cesare Marotta, Ippolita Recupito, G.B. Nanino, Ippolito Macchiavelli, Orazio Michi, Pellegrino Mutij, G.G. Maggi, P.P. Torre, and Giuseppe Giamberti. He was also a patron of Giuseppe Cenci, Luca Marenzio and Francesca Caccini. By bringing together composers and singers from Naples, Rome and Florence, Montalto fostered the development of a Roman style of monody that led to the emergence of the chamber cantata.

tablas make a significant appearance in his Violin Concerto. Rāgas, tālas and microtonal inflections are central features of the Flute Concerto, composed for James Galway, and the Concerto for Orchestra commissioned by the LPO. The latter suggests the additional influence of jazz, Mayer's enthusiasm for which, again combined with non-Western instruments and idioms, was given a more significant platform in the music he wrote as director of the group Indo-Jazz Fusions. In 1989 Mayer became composer-in-residence at the Birmingham Conservatoire, where he subsequently instigated the BMus Indian Music course in 1997. He was made an honorary ARAM in 1990.

Mayer, Sir **Robert** (*b* Mannheim, 5 June 1879; *d* London, 9 Jan 1985). English music patron of German birth. Son of a wealthy and musical German-Jewish brewer, he entered the Mannheim Conservatory when he was six. He was a gifted pianist, and at the age of 11 was encouraged by Brahms. He became a businessman, however, settling in England in 1896 and becoming a naturalized British subject in 1902. In 1919 he married the singer Dorothy Moulton. Having made his fortune in the metal business in the USA and the City by 1923, he sought to make a lasting contribution to music. His wife's recollection of a concert for children they had heard in New York decided the form their patronage would take. The first Robert Mayer Children's Concert (29 March 1923) coincided with a transport strike in London, but the audience (300 for the first concert) grew to 1360 by the third concert. Sargent succeeded Boult as conductor in the second season. Mayer retired from business in 1929 to devote himself to extending the scope of the children's concerts; he was knighted in 1939.

After World War II he further extended his activities by founding Youth and Music after the example of the continental Jeunesses Musicales (founded in wartime Brussels by Marcel Cuvelier). Youth and Music was to cater for an older age group than the audience of the Robert Mayer Children's Concerts, and in 1954 Mayer at last succeeded in rallying various musical interests to start it. In his 90s he was still seeking to expand the scope of Youth and Music. He was honoured by governments, and by universities and other institutions. His memoirs, *My First Hundred Years*, were published in 1979. His first wife, Dorothy (1886–1974), a soprano and a noted interpreter of contemporary music, played a prominent part in his activities as a patron, and wrote *The Forgotten Master: the Life and Times of Louis Spohr* (London, 1959).

Mayer, Werner. *See* EGK, WERNER.

Mayer, Wilhelm [Rémy, W.A.] (*b* Prague, 10 June 1831; *d* Graz, 23 Jan 1898). Austrian composer. He studied from 1846 at the Prague Organ School with C.F. Pitsch and belonged to the group of Davidsbündler which included Hanslick, Ambros and Savenau. He first appeared in public as the composer of an overture *Die Fanatiker der Cevennen* for Eugène Sue's drama *Jean Cavalier*. At the wish of his father, a Prague lawyer, Mayer studied law, taking his degree in 1856, and did not turn to music professionally until he became artistic director of the Steiermärkischer Musikverein in Graz (1862). There he wrote many orchestral works, including the overture *Sardanapal* (1868), the programmatic symphony *Helena* (1869) and a Symphony in F (1867). In 1870 he gave up his position in order to dedicate himself solely to composition and private teaching. He also wrote three more symphonies, an orchestral fantasia, *Slawisches Liederspiel* and *Östliche Rosen* for solo voices and chorus with two pianos, a concert opera *Das Waldfräulein* (Graz, 1876) and many songs. His music, which he published under the pseudonym W.A. Rémy, shows the influence of Schumann and has some similarities to Dvořák. His pupils included Busoni, Kienzl, Heuberger, Rezniček and Weingartner. He was a learned and strict but inspiring teacher: his theories of counterpoint were based on Cherubini, his orchestration principles on Berlioz, though he was anti-Wagnerian. Busoni's obituary speaks gratefully of his teaching, and observes, 'His universal erudition enabled him to elucidate, embellish and bring to life points in music and the history of music by drawing upon the entire history of civilization, giving character sketches of the masters where it was relevant, and adding his own highly personal observations, some factual, some joking, some poetic'.

JOHN WARRACK/BERND WIECHERT

Mayer, William (Robert) (*b* New York, 18 Nov 1925). American composer. He studied at Yale University, principally with Richard Donovan and Herbert Baumgartner, and received the BA degree in 1949. In the same year he spent the summer at the Juilliard School studying composition with Sessions. From 1949 to 1952 he worked with Salzer at the Mannes College and in 1960 studied conducting with Izler Solomon at the Aspen Music School. He has won various awards, including a Guggenheim

In 1600 Maynard was appointed a Commissary of Musters in Ireland, which would seem to rule out the identification with 'Johann Meinert', bass singer employed in Denmark in 1599–1601. Maynard's father Ralph left him St Julians in reversion by his will of 1607. The dedication of *The XII Wonders* to Lady Joan Thynne, of Caus Castle in Shropshire, implies that at some time Maynard had been in her service as music tutor to her daughter Dorothy.

The 'wonders' themselves are 12 satires on stock figures, such as the Courtier, the Lawyer, the Divine, and so on. The words were written by Sir John Davies around 1600 and first printed in the second edition of *A Poetical Rhapsody* in 1608. Maynard's settings are 'for the Violl de Gambo, the Lute and the Voyce to sing the Verse, all three joyntly, and none severall'. The insistence on the use of the bass viol is refreshingly unequivocal among English lute-song publications. The songs are followed by six 'Lute Lessons', which are really duets for lute and bass viol. The first three, 'A Pavin', 'A Galliard to the Pavin' and 'An Almond to Both', form a connected suite of dances – very rare at this period. The next pair, a pavan and galliard, use special tunings for the lute and a special pitch for the viol. The last piece for the two instruments, a pavan entitled 'Adew', returns to normal tunings for both instruments. The final section of the book contains seven pavans for the lyra viol using two different tunings, with optional bass viol in normal tuning 'to fill up the parts'.

Apart from *The XII Wonders* very little of Maynard's music survives. An organ 'Voluntary' turns out to be a transcription of 'The Maid' from the songbook. 'Maynard's Almain' in a collection of masque music (and actually a coranto) may well refer to the composer's cousin, a courtier who danced in several Stuart masques.

Maynard's songs are among the first to show a degree of independence between the lute and bass viol, for the lowest part is by no means simply doubled. They are of course lighthearted trifles in keeping with the spirit of the words, but the instrumental compositions show considerable depth of feeling and deserve to be taken more seriously.

WORKS

The XII Wonders of the World (London, 1611/*R*; ed. A. Rooley, London, 1985): 12 songs, 7-course lute, b viol; 6 dances, 7-course lute, b viol; 7 pavans, lyra viol, b viol ad lib

Voluntary, org, transcr. of no. 12 of The XII Wonders of the World, *GB-Lbl*

Pavan and galliard, lyra-viol, *Ob*

Maynard's Almain, 2vv, inc., *Lbl*; authorship doubtful

Mayo, Giovan Tomaso di. *See* MAIO, GIOVAN TOMASO DI.

Mayone, Ascanio (*b* Naples, *c*1565; *d* Naples, 9 March 1627). Italian composer, organist and harpist. He studied in Naples with G.D. da Nola; Camillo Lambardi was a fellow pupil. In 1593 he succeeded Scipione Stella as organist at the church of SS Annunziata with a salary of eight ducats per month. From 1595 he shared the duties of *maestro di cappella* with Lambardi. He remained at SS Annunziata until 1621 at the earliest, perhaps until his death. Scipione Cerreto listed him in 1601 among the excellent performers on the organ and the harp 'a due ordini' (a chromatic harp capable of playing sharps and flats). In 1602 he was appointed second organist of the royal chapel of the Spanish viceroys (the first organist was Trabaci). He probably performed in the houses of Marthos de Gorostiola and G.B. Suardo, Neapolitan noblemen to whom he dedicated his keyboard volumes. He became first organist of the royal chapel in September 1614 when Trabaci succeeded Macque as *maestro di cappella*. Among his pupils were Pietro Guarino and his own son Giulio, called 'Ciullo dell'Arpa', both of whom held major posts as organists in Naples.

Mayone's *Primo libro di diversi capricci* antedates Trabaci's *Ricercate* by five months and is the first publication containing keyboard music in a new style, full of the restless rhythms and abruptly contrasting sections associated with early Baroque instrumental music. His pieces, with those of Macque and Trabaci, are the direct ancestors of Frescobaldi's keyboard style. Mayone's figuration abandons the evenly flowing scales and cadential trills preferred by the Venetians in favour of short, distinctively patterned motifs. Sections, particularly in the toccatas and variations, are constructed of such short motifs repeated many times, a type of composition which owes much to Macque.

Mayone recognized the novelty of his keyboard music, and wrote in the preface to his book of 1609: 'Let him not be scandalized and adjudge me little observant of the rules of counterpoint. Whenever compositions are adorned with passage-work there will occur some false notes that pass contrary to the contrapuntal laws; but without them it is impossible to make a beautiful effect.' He indicated the inclusion of some ricercares in the strict style for those who might be displeased by his new manner of composition, adding that 'everyone should be nourished by what he finds most pleasing'.

His ricercares, although composed in a conservative contrapuntal style, are among the first to employ the same theme or themes throughout, and thus call to mind Frescobaldi's fantasias of 1608; they are original in their melodic and rhythmic transformations of themes. Three of the 'ricercares' in the book of 1609 are based on cantus firmi: one on *Ave maris stella* and two on *La spagna*. The last of these is one of the first pieces specifically calling for harp. The same book also contains an intabulation of *Io mi son giovinetta*, on which Stella and Montella collaborated with Mayone.

His partitas are more sophisticated than those of Valente; each variation is characterized by a particular motivic pattern repeated several times. They are less daring than Trabaci's, however, adhering closely to the original harmonic skeleton, whereas Trabaci's deviate considerably. His canzonas are among the earliest to reveal the abrupt changes of texture, from imitative to figural, typical of Frescobaldi's examples in this genre. Mayone's most advanced and original compositions are his toccatas. Two out of the five from the book of 1609 are composed for a *cimbalo cromatico* (these are the earliest known works that specifically call for a chromatic

harpsichord); they move to such distant chords as D♭ and F♯. Several of the toccatas open rhapsodically with unsteady rhythms over a sustained pedal note, followed by sections based on short repeated patterns; they are the prototype of the toccatas like those of Froberger. Some of the toccatas conclude with an imitative section, and thus approach toccata-and-fugue form.

ROLAND JACKSON

Mayr. *See* MAYER.

Mayr, Richard (*b* Salzburg, 18 Nov 1877; *d* Vienna, 1 Dec 1935). Austrian bass. Having first studied medicine in Vienna, he was persuaded by Mahler to take up a career as a singer. After several years' work at the Vienna Music Academy, he made his début in 1902 at Bayreuth, as Hagen, and was at once engaged by Mahler for the Vienna Hofoper. Making his début there as Silva (*Ernani*), he sang at Vienna for more than 30 successive years; he displayed amazing versatility in a round of leading parts of various schools, serious and comic, extending from Wotan, Gurnemanz and Sarastro to Figaro, Leporello and Ochs. The Strauss-Hofmannsthal correspondence shows that both men would have preferred Mayr for the original Dresden production of *Der Rosenkavalier*; he played the role a few months later in the Vienna première, and was soon recognized everywhere as the ideal exponent of a part which he sang to perfection and played with inimitable gusto and virtuosity. It was as Ochs that he made his first Covent Garden appearance, in 1924, in the famous cast that included Lotte Lehmann, Delia Reinhardt and Elisabeth Schumann with Bruno Walter as conductor; he often returned to London in this and other roles. He made his Metropolitan début as Pogner in 1927, soon adding *Der Rosenkavalier* to his New York repertory, and remaining for three seasons with the company. In

Richard Mayr as Ochs in Richard Strauss's 'Der Rosenkavalier'

Vienna he sang Barak in the première of *Die Frau ohne Schatten* in 1919. He was naturally a mainstay of the Salzburg festivals, taking part in every one between 1921 and 1934. The most important of his recordings is the abridged *Rosenkavalier* of 1933, which gives a capital impression of the ripeness and spontaneity of his style and the richness of his voice.

DESMOND SHAWE-TAYLOR

Mayr, Rupert Ignaz (*b* Schärding, nr Passau, 1646; *d* Freising, 7 Feb 1712). German composer and violinist. He is first heard of in 1670, when he entered the service of the Prince-Bishop of Freising as a violinist. After holding various posts at Eichstätt, Regensburg and Passau, he moved in 1683 to the Munich court. The Elector Max Emanuel, recognizing his talent as a composer, sent him to Paris to study with Lully. On his return to Munich in 1685 his post was still that of violinist and chamber musician, but he was also active as a composer. The outbreak of the War of the Spanish Succession brought the musical life of the Munich court almost to a standstill, and in 1706 he left Munich to return to Freising, this time as Kapellmeister. Here he continued to write church and chamber music, and also school operas for the students at the episcopal seminary.

Among the music listed in an inventory of the Freising court chapel in 1710 are masses by many of the important Munich composers of the late 17th century – J.C. Pez, the Bernabei family and in particular Kerll, who was largely responsible for bringing the Italian concertato style of church music to Munich: despite his sojourn in Paris the

influences on Mayr's church music seem to be Italian rather than French. His offertories and psalms, though published in 1702 and 1706 respectively, seem to belong more to the mid 17th century than to the early 18th. This is particularly noticeable in the shape of the short melodic phrases from which he often built up his choral textures and in his very fluid handling of triple time. His treatment of solo and tutti voices, alternating in the same section, shows the influence of Kerll, though Mayr made them alternate over longer periods, and his solo passages, especially in the psalms, tend to be longer and more developed than Kerll's. He was particularly fond of writing bass solos in which the voice forms the bass of a trio texture whose upper parts are violins.

The chief characteristic of Mayr's offertories is their close thematic integration, in which voices and instruments share equally. *Dominus regnavit* consists of several short sections, each based on one or two short themes, which are treated exhaustively by various combinations of solo and tutti voices and violins. As a result Mayr's choral textures tend to be imitative and broken up, rather than contrapuntal: his chordal tutti writing relies for its effect on rhythmic drive rather than varied textures. His solo writing is largely syllabic – the few melismas are used for expressive effect – and his word-setting is very careful; he introduced effective word-painting wherever the opportunity arose.

The solo writing in Mayr's school operas shows the influence of Carissimi and his followers. It is in his later instrumental music that the effects of his visit to Paris can be most clearly seen.

ELIZABETH ROCHE

Mayr [Mayer], **(Johann) Simon** [Giovanni Simone] (*b* Mendorf, nr Ingolstadt, Bavaria, 14 June 1763; *d* Bergamo, 2 Dec 1845). German composer, teacher and writer on music. He was a leading figure in the development of *opera seria* in the last decade of the 18th century and the first two decades of the 19th.

1. Life. Johann Simon, the second child of Josef Mayr, a schoolteacher and organist, and Maria Anna Prantmayer, a brewer's daughter from Augsburg, received his early musical education from his father. By the age of seven and a half he was an able sight-singer and by nine an accomplished pianist and budding composer of songs. Around this time his father refused the offer of a now unknown patron to provide him with further training in Vienna and instead sent him to the Jesuit seminary nearby at Ingolstadt, where he received a traditional education funded by a scholarship for his singing. In 1781 he began to study law and theology at the University of Ingolstadt, where he taught himself various orchestral instruments and supported himself by playing the organ. His first published work, *Lieder bei dem Clavier zu singen*, appeared in Regensburg in 1786.

In 1787, through a connection at the university, Mayr's talent was recognized by the lawyer Thomas von Bassus, who took him first to Poschiavo, a Swiss town close to the Italian border where he owned a printing business, and to Tirano nearby, then to Bergamo in 1789 to study with Carlo Lenzi, *maestro di cappella* of the basilica of S Maria Maggiore. This arrangement proved unsatisfactory for Mayr, and he would have returned to Bavaria except that the canon of the basilica, Count Pesenti, arranged for him to continue his studies in Venice with Ferdinando Bertoni, *maestro di cappella* of S Marco, a composer of opera and sacred music. Mayr's stay in Venice provided an ideal opportunity to hear a broad range of Italian sacred, theatrical and instrumental music and enabled him to have his first oratorio and several cantatas performed between 1791 and 1794.

During this period Mayr was encouraged by Niccolò Piccinni and Peter Winter to begin composing theatrical works. His first opera, *Saffo* (1794), was written for La Fenice, where he had probably been a viola player for several years. His next opera, *La Lodoiska*, also performed at La Fenice (1796), was sufficiently successful to earn him a reputation immediately as one of the best Italian composers, a position reinforced by the subsequent popularity of his first *opera buffa*, *Un pazzo ne fa cento* (1796, Venice, S Samuele), performed 17 times in Vienna during the next year. Mayr's fame enabled him to marry one of his pupils, Angiola Venturali, daughter of a wealthy Venetian merchant, whose death in childbirth in 1797 was followed a month later by the death of their baby. In 1804 Mayr married Angiola's sister Lucrezia, who bore him one child, Nina, in 1805.

Mayr [Mayer], **(Johann) Simon** [Giovanni Simone] (*b* Mendorf, nr Ingolstadt, Bavaria, 14 June 1763; *d* Bergamo, 2 Dec 1845). German composer, teacher and writer on music. He was a leading figure in the development of *opera seria* in the last decade of the 18th century and the first two decades of the 19th.

1. Life. Johann Simon, the second child of Josef Mayr, a schoolteacher and organist, and Maria Anna Prantmayer, a brewer's daughter from Augsburg, received his early musical education from his father. By the age of seven and a half he was an able sight-singer and by nine an accomplished pianist and budding composer of songs. Around this time his father refused the offer of a now unknown patron to provide him with further training in Vienna and instead sent him to the Jesuit seminary nearby at Ingolstadt, where he received a traditional education funded by a scholarship for his singing. In 1781 he began to study law and theology at the University of Ingolstadt, where he taught himself various orchestral instruments and supported himself by playing the organ. His first published work, *Lieder bei dem Clavier zu singen*, appeared in Regensburg in 1786.

In 1787, through a connection at the university, Mayr's talent was recognized by the lawyer Thomas von Bassus, who took him first to Poschiavo, a Swiss town close to the Italian border where he owned a printing business, and to Tirano nearby, then to Bergamo in 1789 to study with Carlo Lenzi, *maestro di cappella* of the basilica of S Maria Maggiore. This arrangement proved unsatisfactory for Mayr, and he would have returned to Bavaria except that the canon of the basilica, Count Pesenti, arranged for him to continue his studies in Venice with Ferdinando Bertoni, *maestro di cappella* of S Marco, a composer of opera and sacred music. Mayr's stay in Venice provided an ideal opportunity to hear a broad range of Italian sacred, theatrical and instrumental music and enabled him to have his first oratorio and several cantatas performed between 1791 and 1794.

During this period Mayr was encouraged by Niccolò Piccinni and Peter Winter to begin composing theatrical works. His first opera, *Saffo* (1794), was written for La Fenice, where he had probably been a viola player for several years. His next opera, *La Lodoiska*, also performed at La Fenice (1796), was sufficiently successful to earn him a reputation immediately as one of the best Italian composers, a position reinforced by the subsequent popularity of his first *opera buffa*, *Un pazzo ne fa cento* (1796, Venice, S Samuele), performed 17 times in Vienna during the next year. Mayr's fame enabled him to marry one of his pupils, Angiola Venturali, daughter of a wealthy Venetian merchant, whose death in childbirth in 1797 was followed a month later by the death of their baby. In 1804 Mayr married Angiola's sister Lucrezia, who bore him one child, Nina, in 1805.

in recitatives) and manipulation of orchestral and vocal texture to produce sharp dynamic changes often combine to create musico-dramatic effects of remarkable intensity for their time. Mayr avoided exaggeration, however. In fact, in his *Zibaldone* (1837; see Gazzaniga, 1977) he disparaged much of the opera written in the 1820s and 30s as degenerate for relying on excessive dramatic effects and lamented the expansion of the orchestra to include such trivial instruments as the triangle.

Mayr also bridged the 18th and 19th centuries through his treatment of form in his serious operas. Although they still consist of discrete numbers, they break with tradition in abandoning the exit convention in many scenes as early as *La Lodoiska* (1796); in including a high proportion of active, multipartite duets and ensembles; and in incorporating many expansive choral numbers, a reflection of Gluck's influence. Mayr's arias display a broad range of forms and may include as many as four movements (see the aria for Elfrido/Alfredo cited above), although one- or two-movement designs are the norm. His single-movement arias are the most traditional, generally adhering to the types of shortened da capo structures that were common at the end of the 18th century. His multi-movement arias, on the other hand, move towards Rossinian designs. In many cases their texts are longer than the conventional Metastasian pairing of quatrains, and they often include sections in which the principal soloist interacts with other soloists or a chorus. Moreover, they minimize recapitulations and instead allow the music to unfold in conjunction with the emotional progress of the character's thoughts as an asymmetrical series of new ideas. Some, though by no means all, of Mayr's closing fast movements even include repetitions of their principal themes, like those found in Rossini's cabalettas.

Mayr's duets also provide models for the later Rossinian form in four sections (for example, Telemachus and the Mentor's duet in Act 3 of *Telemaco*, 1797), although many contain fewer independent movements and resemble instead earlier duets by Mozart or Cimarosa. Mayr has been credited with adapting the comic central finale to serious opera, and, while his role in this development has yet to be established definitively, the complex designs of his finales do in many cases show their comic origins by beginning with an extended series of active and reflective sections or even independent movements. Yet these finales also anticipate Rossinian conventions by normally including a slow concertato movement (though it rarely attains the length of Rossini's), an active transition and a stretta-like final tutti.

Mayr's sinfonias, like those of his predecessors and Rossini, have no specific thematic relationship to the body of the opera which they precede, but several (e.g. the Venetian *Lodoiska*, *Ginevra di Scozia*, 1801, and *Tamerlano*, 1812) include melodies which evoke their locales. In most cases they consist of a slow introduction followed by a fast movement in some version of sonata form, normally with the development section or the reprise of the first theme group truncated or eliminated. However, Mayr also experimented with non-traditional designs, for example the theme and variations movement of the sinfonia for *Zamori* (1804), the two dance movements of the sinfonia for the Venetian *Lodoiska* and the rondo-like allegro of the sinfonia for *I misteri eleusini* (1802).

Although Mayr's contribution as a melodist was less distinguished, at their best his melting cantilenas can be moving and his cabalettas exciting. He anticipated an important aspect of Rossini's melodic style by moving towards the later composer's broad spectrum of lyric types, which ranges from his 'open' melodies – freely constructed, additive series of short phrases having an almost improvisatory character – to 'closed' tuneful themes, although in Mayr's style these extremes are somewhat less pronounced than in Rossini's operas. However, in their less vigorous profiles his melodies still adhere closely to the more refined language of such late 18th-century composers as Piccinni, Cimarosa and (to a lesser extent) Mozart.

Mayr's prodigious output of sacred music – beginning with several student works and the early Latin oratorio *Iacob a Labano fugiens* (1791) – is little known, partly because he refused permission for it to be published during his lifetime. His 12 oratorios conform to customary Italian practices: they consist of two parts, the first incorporating a brief sinfonia, an introductory chorus having sections for soloists, a sequence of recitatives, ariosos, arias and duets, and a concluding chorus, the second being similar except for a brief introduction. Other sacred works comprise 18 masses, seven requiem masses, and a plethora of single movements for the Mass and Offices. Mayr wrote more than 60 secular cantatas for one or more soloists, chorus and orchestra, many of them occasional works. He also produced instrumental music throughout his career, including more than 50 independent sinfonias for orchestra (and others for keyboard), two piano concertos, a string quintet, and two dozen works for wind sextet, septet and octet. His numerous writings on music and translations of foreign essays, mainly for his pupils at the Lezioni Caritatevoli, have begun to receive scholarly attention.

Mayr was well regarded by such later Italian composers as Bellini and Giovanni Pacini. Rossini credited him with being 'among the first to cause the *dramma musicale* to progress with dignity' and praised him for 'using the instruments with abandon rather than with diffidence dictated by the rules'. Donizetti, whose high regard for his teacher is evident in many of his letters, composed a cantata for the public celebration of Mayr's 78th birthday. Verdi attended his funeral. Although Mayr has not shared in the continued fame of his best-known successors, his musico-dramatic creativity and his importance for the development of Italian opera at the turn of the century are evident throughout his works. Far beyond his role in the musical education of Donizetti, Mayr played a crucial part in the transition from 18th-century to 19th-century opera. Moreover, his interest in and cultivation of the music of northern composers paralleled the aim of progressive aestheticians to invigorate Italian theatre through the study and assimilation of foreign culture. Thus he was one of the first musicians to adapt the ideals of nascent Italian Romanticism to operatic practice.

Mayr's sinfonias, like those of his predecessors and Rossini, have no specific thematic relationship to the body of the opera which they precede, but several (e.g. the Venetian *Lodoiska*, *Ginevra di Scozia*, 1801, and *Tamerlano*, 1812) include melodies which evoke their locales. In most cases they consist of a slow introduction followed by a fast movement in some version of sonata form, normally with the development section or the reprise of the first theme group truncated or eliminated. However, Mayr also experimented with non-traditional designs, for example the theme and variations movement of the sinfonia for *Zamori* (1804), the two dance movements of the sinfonia for the Venetian *Lodoiska* and the rondo-like allegro of the sinfonia for *I misteri eleusini* (1802).

Although Mayr's contribution as a melodist was less distinguished, at their best his melting cantilenas can be moving and his cabalettas exciting. He anticipated an important aspect of Rossini's melodic style by moving towards the later composer's broad spectrum of lyric types, which ranges from his 'open' melodies – freely constructed, additive series of short phrases having an almost improvisatory character – to 'closed' tuneful themes, although in Mayr's style these extremes are somewhat less pronounced than in Rossini's operas. However, in their less vigorous profiles his melodies still adhere closely to the more refined language of such late 18th-century composers as Piccinni, Cimarosa and (to a lesser extent) Mozart.

Mayr's prodigious output of sacred music – beginning with several student works and the early Latin oratorio *Iacob a Labano fugiens* (1791) – is little known, partly because he refused permission for it to be published during his lifetime. His 12 oratorios conform to customary Italian practices: they consist of two parts, the first incorporating a brief sinfonia, an introductory chorus having sections for soloists, a sequence of recitatives, ariosos, arias and duets, and a concluding chorus, the second being similar except for a brief introduction. Other sacred works comprise 18 masses, seven requiem masses, and a plethora of single movements for the Mass and Offices. Mayr wrote more than 60 secular cantatas for one or more soloists, chorus and orchestra, many of them occasional works. He also produced instrumental music throughout his career, including more than 50 independent sinfonias for orchestra (and others for keyboard), two piano concertos, a string quintet, and two dozen works for wind sextet, septet and octet. His numerous writings on music and translations of foreign essays, mainly for his pupils at the Lezioni Caritatevoli, have begun to receive scholarly attention.

Mayr was well regarded by such later Italian composers as Bellini and Giovanni Pacini. Rossini credited him with being 'among the first to cause the *dramma musicale* to progress with dignity' and praised him for 'using the instruments with abandon rather than with diffidence dictated by the rules'. Donizetti, whose high regard for his teacher is evident in many of his letters, composed a cantata for the public celebration of Mayr's 78th birthday. Verdi attended his funeral. Although Mayr has not shared in the continued fame of his best-known successors, his musico-dramatic creativity and his importance for the development of Italian opera at the turn of the century are evident throughout his works. Far beyond his role in the musical education of Donizetti, Mayr played a crucial part in the transition from 18th-century to 19th-century opera. Moreover, his interest in and cultivation of the music of northern composers paralleled the aim of progressive aestheticians to invigorate Italian theatre through the study and assimilation of foreign culture. Thus he was one of the first musicians to adapt the ideals of nascent Italian Romanticism to operatic practice.

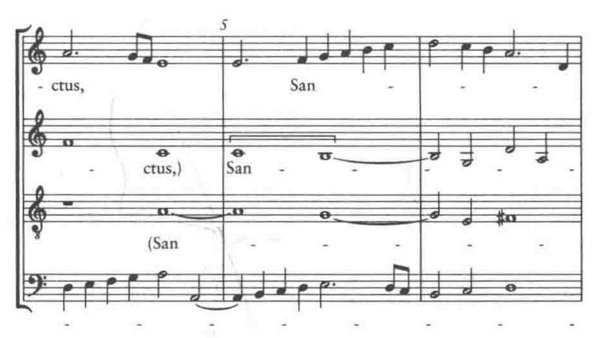
manuscript during his lifetime, the majority of his surviving motets, numbering about 250 pieces, appeared in prints dating from 1572 to 1600. The preponderance of his masses are parody compositions; the seven masses in his first book (1587), for example, are all based on motets. For models he turned not only to his own compositions, but also to those of Jacquet of Mantua, Josquin, Lassus, Palestrina, Rore, Alessandro Striggio (i), Verdelot and Wert. Although motets predominate as models, there are also masses based on chansons and madrigals, his own and those of others. In spite of the variety of sources, Monte's models have in common a certain stylistic gravity, perhaps most evident in his choice of Josquin's *Benedicta es*. In this his approach to parody technique differed slightly from that of Lassus, who occasionally turned pointedly to frivolous models (see, for example, his '*Missa Je ne mange poinct de porcq*'). Typical of Monte's approach to his models is a thorough appropriation and exploration of their materials (both melodic and harmonic), and a tendency to spin out the greater part of his music from the models. Freely composed passages are made to resonate stylistically with the chosen models (ex.1). Contrapuntal writing prevails; his music unfolds in unhurried, sometimes quite melismatic lines, and there is little evidence of post-Tridentine concerns about textual clarity.



Ex.1

(a) Rore: *Anchor che col partire* (RISM 1547 [14]), opening

(b) Monte: Sanctus, *Missa 'Anchor che col partire'*, opening

Monte's motets embody a classic late Renaissance style, in which the idiosyncrasies of his madrigalian style are largely set aside for a more impassive and restrained approach. Compositions for five voices predominate (of the single book for four voices of 1596 only one partbook survives). His motets are technically flawless, particularly in matters of dissonance treatment and text underlay; broadly responsive to their texts, though seldom to the point of extreme madrigalisms; expressive yet restrained. Chromaticism is rare, notwithstanding Cerone's statement in *El melopeo y maestro* (1613) that 'Filippo de Monte and Luca Marenzio like to use very pleasant and very sweet chromatic progressions, or to put it more appropriately, soft, sensuous and effeminate ones'. Continuity of motive, texture, and harmony predominates; obvious cadences are continually avoided, or deftly undercut. In his choice of mode and vocal scorings, Monte revealed a characteristic sensitivity to a text's predominant affect. For the most part, his motets rely on an unobtrusive technique more than on high artifice; puzzle canons and cantus firmi are exceptional reminders of the composer's Netherlandish background (see, for example, *Gaudent in caelis* and *Ad te, Domine, levavi animam meam*, both from the third book of motets for five voices, 1574). A unique example of his interest in polychoral writing appears in the 1585 collection of six- and 12-voice motets; its concluding piece, *Benedictio et claritas*, is scored for three four-voice choirs. For an example of his motet writing at its most effective and expressive, see *O suavitas et dulcedo* (from the *Libro quarto de motetti*, 1575).

Monte's sacred madrigals, a genre to which he devoted considerable energy – beginning in 1581 with his first book (five voices), and continuing until his *Eccellenze di Maria vergine* of 1593 – are closely allied in style to their contemporary secular counterparts, and evolved along similar lines. Monte produced more work in this genre than any of his contemporaries.

(ii) Secular music. Monte's secular works represent the larger part of his output; madrigals predominate. Indeed, Monte was the most prolific madrigalist in the history of the genre: he published 34 books, spanning his entire career, from 1554 to 1603. He showed much less interest in the French chanson, though his *Sonetz de P. de Ronsard mis en musique* (1575) is an attractive volume. Only his first four books of madrigals were published during his years of residence in Italy; the remaining books, all published during his lengthy period of residence at the imperial court in Vienna and Prague, take on the character

S.L. BALTHAZAR

Mayr, Wolfgang (*fl* 1616–41). German composer. He was a singer at the Michaelskirche, Munich, the archives of which refer to his (?second) marriage in 1641. Only two compositions by him survive, both printed in anthologies of church music: one in *Siren coelestis*, 2–4vv (Munich, 1616[2]), the other in Johann Donfrid's *Promptuarii musici* (Strasbourg, 1622[2]). The latter compilation contains mainly Italian music, and Mayr's presence among the few Germans represented may have resulted from his ability to write in an italianate style. Certainly his Purification Day motet *Hodie beata virgo*, for two sopranos and continuo, shows a complete assimilation of the post-Viadana Italian duet style: though not melodious it is pleasantly canonic, and Mayr was occasionally aware of the possibilities of dissonance.

JEROME ROCHE

Mayseder, Joseph (*b* Vienna, 26 Oct 1789; *d* Vienna, 21 Nov 1863). Austrian violinist and composer. The son of an impoverished painter, he showed talent as a violinist at an early age and was given lessons by Joseph Suche in 1797 and by Anton Wranitzky from 1798. Encouraged by Schuppanzigh, in whose string quartet he later played second violin as a 15-year-old, he made his first public appearance with brilliant success at a morning concert in the Augarten in 1800. Two more appearances followed within a month, and in 1802 he played before the Empress Consort Maria Theresa. In the same year he began piano and composition lessons with Förstner. From about this time he was active as a quartet player in such private circles as those of Beethoven's patrons Zmeskall von Domanovecz and Prince Lobkowitz; he was regarded as an unsurpassable exponent of the Mozart, Haydn and earlier Beethoven quartets. He was appointed leader of the Hoftheater orchestra in Vienna (1810), soloist at the

Hofkapelle (1816) and later soloist to the emperor (1835) and musical director of the Hofkapelle (1836). He also played in the orchestra at the Stephansdom and gave a series of concerts in association with Giuliani and Hummel, later with Moscheles and then the cellist Merk, until his retirement from concert life in 1837. His only musical journey was to Paris (1820) where he met, among others, Cherubini, Habeneck, Herz and Kreutzer, but he did not perform there publicly. He was awarded the Salvator medal (1811), the freedom of Vienna (1817) and the Order of Franz Joseph (1862), and was an honorary member of several musical bodies.

63 of Mayseder's compositions were published; most of these are conservative in style and were intended primarily for his own performance, including 20 sets of variations, seven of his eight string quartets and three violin concertos. A mass in E♭, written for the Hofkapelle in 1848, won wide approval. The majority of his autograph manuscripts and sketches are in the music collection of the Vienna Stadtbibliothek.

JOHN RUTTER

Mayshuet (de Joan). *See* MATHEUS DE SANCTO JOHANNE.

Maystre, Matthaeus le. *See* LE MAISTRE, MATTHAEUS.

Mayuzumi, Toshirō (*b* Yokohama, 20 Feb 1929; *d* Kawasaki, 10 April 1997). Japanese composer. He studied with Ikenouchi and Ifukube at the Tokyo National University of Fine Arts and Music, from which he graduated in 1951. As a student he distinguished himself as an adventurous composer, sometimes writing in the traditional idiom of late Romanticism (the Violin Sonata of 1946), sometimes experimenting with jazz rhythms (*Hors d'oeuvre* for piano and the Divertimento for ten instruments), sometimes drawing on Indian or Balinese music (the *Symphonic Mood* and *Sphenogrammes*). The last of these works brought him his first public success and marked the beginning of his international reputation when it was performed at the 1951 ISCM Festival. Mayuzumi went to Paris in 1951–2 to study at the Conservatoire with Aubin; while there he was also able to familiarise himself with the new developments of Messiaen and Boulez and with *musique concrète*. Returning to Tokyo in 1953 he founded (with Akutagawa and Dan) the Sannin no Kai (Group of Three).

Mayuzumi has consistently experimented with new ideas and techniques in his compositions. His *X, Y, Z* (1955) was the first Japanese example of *musique concrète*, and his *Shūsaku I* (1955) the first of synthetic electronic music. He also utilised prepared piano, 12-note, serial and aleatory methods; however, it is possible to identify in his work a predominant interest in the unique sonorities of instruments and voices. This has led him to employ such unexpected combinations as 'claviolin', electric guitar and vibraphone (in the orchestral *Ektoplasm*) or five saxophones, piano and musical saw (in *Tone Pleromas 55*).

In 1958 a new direction in Mayuzumi's music was opened by *Nehan kōkyōkyoku* ('Nirvana Symphony'). Obsessed by the sounds of Buddhist temple bells, he analysed the sonorities acoustically and tried to reproduce their profound sensation by means of tone qualities, volumes and the use of space in the composition; the result was an Otaka Prize in the following year. Many of his works are based on Buddhist philosophy and music, among them *Sange* for male chorus, the *Mandala Symphony*, the symphonic poem *Samsara* and the cantata *Geka* (*Pratidesana*). At the same time he developed interests in traditional Japanese music, such as *gagaku* and *shōmyō* (Buddhist chants), the nō drama and the *gidayū* singing which accompanies *bunraku*. In *Bugaku* for orchestra (1962), which won an Otaka Prize in 1967, he attempted to imitate the sounds and rhythms of the music for the court dance after which the piece is named, while *Shōwa Tenpyō-raku* (1970) was written for an actual *gagaku* ensemble. *A hun* for three nō instruments (1958) explores the rhythmic structure of the traditional play, and *Bunraku* (1960) is an evocation for solo cello of puppet drama. In his later years he composed only occasionally, presenting for many years the popular TV programme 'Dai mei no nai ongakukai' ('The Concert without Title').

Mayuzumi has often collaborated with and provided incidental music for such theatrical groups as the Bungaku-za or the Haiyū-za. In some dramatic ventures he worked with Mishima, whose nationalist ideology was similar to his own; their joint projects included *Bara to kaizoku* ('Roses and Pirates', 1958) and a version of Wilde's *Salome* (1960). He has also composed much music for films, including *Akasen-chitai* ('Red District'), the first Japanese film with electronic music, *Tokyo Olympic*, which won the Mainichi Music Prize for a film score in 1964, and *The Bible* (1965). His two operas, *Kinkakuji* and *Kojiki*, both commissioned by European opera theatres, also reveal his nationalist learnings.

with Nikolaus Reiter von Hornberg, administrator of bishop estates in Moravia. His melodies have a folklike simplicity, and his music is rich in sequences and mostly homophonic in texture. Though his harmony is still influenced by modal thinking, some of his works are in a clear-cut major tonality.

K. Ruhland has edited a *Magnificat* (Munich, 1983) and a *Missa brevis* (Altötting, 1989) by Mazak, as well as volumes of pieces by him for Christmas and Easter (Munich, 1981 and 1987 respectively).

Mazagau, René. *See* MESANGEAU, RENÉ.

Mazarin, Cardinal **Jules** [Mazzarini, Giulio Raimondo] (*b* Pescina, Aquila, 14 July 1602; *d* Vincennes, nr Paris, 9 March 1661). French politician of Italian birth. He is important in the history of music for his advocacy of Italian opera in France. In his youth he was exposed to Roman opera while serving Cardinal Antonio Barberini; he attended, and perhaps participated in, Landi's *Sant'Alessio* in 1632. From 1634 to 1636 he was in Paris as papal nuncio. He became a naturalized Frenchman in 1639, cardinal in 1641 (though he held only minor orders) and first minister in 1643 during Anne of Austria's regency. He saw Italian opera in France as a potential source of secret agents and as a smokescreen for political manoeuvres. He therefore brought Italians to Paris: in 1643 the composer Marazzoli, in 1644 the singers Leonora Baroni and Atto Melani, in 1645 the designer Giacomo Torelli and in 1646 the composer Luigi Rossi. Moreover, by the end of 1646 Cardinal Barberini and his secretary, the poet Francesco Buti, had found refuge at the French court from papal vicissitudes.

Through the efforts of Mazarin, seven Italian operas were introduced to Paris audiences between 1645 and 1662. Zaslaw has marshalled evidence that the first of these, identified by the *Gazette de France* only as an 'Italian comedy and ballet', was probably Marazzoli's *Il giuditio della Ragione tra la Beltà e l'Affetto* (for an opposing point of view see Murata), which was performed at the Palais Royal on 28 February 1645. This was followed on 14 December by Sacrati's *La finta pazza*, and Cavalli's *Egisto* was given on 13 February 1646. Except for their complicated machinery ('up to now unknown in France', *Gazette de France*), these first three productions excited little interest, but Rossi's *Orfeo*, first performed on 2 March 1647 (eight performances), at last provided the image of Italian opera that Mazarin so badly needed. *Orfeo* also gave anti-Mazarin forces a *cause célébre*, which the French parliament used to minimize its fiscal problems by exploiting the admittedly exorbitant costs of the production. Public opinion, as reflected in satirical 'mazarinades', blamed the economic miseries of the state on the cost of an Italian opera staged by an Italian designer and sponsored by an Italian-born cardinal. The Fronde (1648–53) forced Mazarin into exile and threatened with imprisonment those Italians who remained in France. However, with the defeat of the Fronde, and Mazarin's return in February 1653, plans were immediately undertaken for the next opera, Caproli's *Le nozze di Peleo e di Theti*, which was first performed in Paris on 14 April 1654 (nine performances). By 1659, when he was at the peak of his power, Mazarin was still unable to establish a permanent Italian opera company in France: after each opera the Italian troupe disbanded and left. His letters to Buti show a stubborn commitment to his ideal in which money was no object: 'I would rather have such [outstanding] performers and spend more money than have those of ordinary talent at a cheaper price' (letter of 8 August 1659). To celebrate the marriage of Louis XIV he commissioned Cavalli to compose *Ercole amante*, to a text by Buti. It was to be performed in a *théâtre à machines* that Gaspare Vigarini and his two sons were to build. Neither opera nor theatre was ready by the time the king and his bride returned to Paris in August 1660, and Cavalli hastily substituted his *Xerse*, which was performed many times, beginning on 22 November 1660. Mazarin was dead before *Ercole amante* was eventually performed in February 1662.

Mazarin had been forced to compromise with French taste. He saw his operas interlarded with ballets and prefaced by panegyric prologues. Because of the failure of these works over a period of nearly 20 years, Lully was discouraged from trying to establish French opera at the time of Mazarin's death, but when he eventually did so after the Académie d'opéra was established in 1669 Italian opera left its mark on it: *see* TRAGÉDIE LYRIQUE.

JAMES R. ANTHONY

Mazas, Jacques-Féréol (*b* ?Lavour, 23 Sept 1782; *d* ?Béziers or Bordeaux, 26 Aug 1849). French violinist and composer. He entered the Paris Conservatoire in 1802, studied with Baillot and won the first violin prize in 1805. He had already played a Viotti concerto at a pupils' concert on 18 March 1804, and attracted attention when he gave the first of several performances of Auber's new concerto on

10 May 1807, also at the Conservatoire. The *Décade philosophique* wrote:

His supple and agile fingers safely covered the most capricious shifts and hardly seemed to alight on the string: his bow, instead of remaining near the bridge, as is done to obtain a strong, bright tone, almost always came down on the finger-board and rendered the instrument soft, mellow and velvety.

After a period in the orchestra of the Théâtre de l'Impératrice, in 1811 Mazas went on a tour of Spain for about two years. In 1814 he undertook another tour, to England and the Low Countries. His third journey, in 1822 to Italy, Germany and Russia, seems to have ended in 1826 at Lemberg, where he was ill and almost penniless; however in 1827 he triumphed in concerts at Berlin and other large cities. But when he returned to Paris in 1829 he was received with indifference, and he left in order to teach, first at Orleans (after 1831) and then at Cambrai (1837–41). The next year his *Le Kiosque*, ran for eight performances at the Opéra-Comique; the plot is described in the *Dictionnaire lyrique*. Mazas' music is fashionable in style and was quite popular; his violin studies are still used.

WORKS
(*selective list*)

most published in Paris, n.d.

Vocal: Corinne au Capitole (opera), 1820, unperf., *F-Po*; Le Kiosque (oc, 1, Scribe, Duport), Paris, Opéra-Comique, 3 Nov 1842 (Paris, 1843); 2 cants, several songs, some *F-Pc*, others mentioned by Fétis

DAVID CHARLTON

Mazel', Lev [Leo] **Abramovich** (*b* Königsberg [now Kaliningrad], 13/26 May 1907). Russian music theorist. He studied at the department of physics and mathematics of Moscow State University, and at the research department of the Moscow Conservatory with Georgy Catoire, Anatoly Aleksandrov and Mikhail Ivanov-Boretsky, graduating in 1932; he took the doctorate in 1941 with a dissertation on melodic structure in homophonic textures. He taught at the Conservatory between 1931 and 1967, becoming a professor (1939), and headed the department of music theory there (1936–41). In 1949 he was expelled from the Conservatory on charges of formalism and cosmopolitanism, and he worked until 1954 as professor at the Institute of Military Conductors. Active in the Union of Soviet Composers from 1932, he was in charge of the musicological section of the Moscow branch for several years, and was awarded the title of Honoured Worker of Art of the RSFSR in 1966. From 1966 to 1972 Mazel' was on the editorial teams of the journal *Sovetskaya muzïka* and the theoretical and historical collection Muzïka i Sovremennost.

Mazel' was one of the founders of the Soviet/Russian theoretical school, and introduced the history of systems of music theory into the Conservatory curriculum. One of the main aspects of his activity is the study of styles. He has studied stylistic issues in the music of Classical and Romantic composers from Russia and the West, including Beethoven, Chopin, Grieg, Glinka, Tchaikovsky, Rachmaninoff, Skryabin and Shostakovich. The method of integral analysis of a musical work proposed by Viktor Zuckermann and which became the basis for Soviet musicology was brilliantly realized by Mazel' in many of his writings, and these principles of analysing music were elucidated in the manual he wrote with Zuckermann, *Analiz muzïkal'nïkh proizvedeniy* (1967), on which several generations of Soviet musicologists were trained.

Mazel' has researched the elements of musical language in detail. His book *O melodii* (1952) remained for a long time the only treatment of this subject in Soviet musicology, and he has devoted a number of essays to the analysis of melody. Other subjects which have interested Mazel' are harmony, thematicism and tonality; he has also investigated the construction and form of musical compositions. His history of theoretical musicology (1939), written with Iosif Rïzhkin, is of lasting value and remains unique. He has also devoted essays to the theoretical concepts of Riemann, Kurth, Catoire, Rimsky-Korsakov, Asaf'yev, and more recent musicologists, such as Kharlap and Nazaykinsky.

Through his work on the expressive possibilities of media, Mazel' has arrived at the necessity of a rapprochement between theoretical musicology and aesthetics. He is the first Russian musicologist to provide a theoretical foundation for this rapprochement in terms of both musical aesthetics and theoretical musicology. This became a basis for his theory on general principles of artistic effect. The obvious rationalism and logical marshalling of his theoretical concepts, however, do not hinder the precision of his characterization of musical style.

JAMES R. ANTHONY

Montella [Montelli], **Giovanni Domenico** [Mico] (*b* Naples, *c*1570; *d* Naples, Jan 1607). Italian composer, lutenist and organist. Along with Giovanni di Macque, Dentice and Gesualdo he was one of the most important figures in Neapolitan music in the last quarter of the 16th century. He was a lutenist in the academy of Don Fabrizio Gesualdo in the late 1580s and at this period worked in close association with his teacher, Macque. In 1591 Montella became a lutenist in the chapel of the Spanish viceroy in Naples, where from 1599 he again served under Macque, not only as a lutenist but also as an organist. He worked alongside G.M. Trabaci and Ascanio Mayone as well as Macque, an association that seems to have stimulated him to exceptional productivity: all but two of his 19 publications appeared between 1600 and 1607.

Montella published a considerable amount of secular music, of which, unfortunately, only about one half survives complete. None is widely available in modern edition, and his style – apparently central to the Neapolitan school – is thus little studied. The texts of his madrigals have a popular, villanella-like flavour. The madrigals fall into three groups: the first and second books for five

BERNARD BARDET

Mazur, Marilyn (*b* New York, 18 Jan 1955). Danish composer and jazz musician. She moved to Denmark at the age of six, and first studied the piano and later the drums and percussion at the conservatory in Copenhagen. In 1971 she began to work as a dancer with the Creative Dance Theatre, but from about 1973 concentrated on musicianship and composition. She was the organizer of several female groups, Zirenes, Primi Band and Feminist Improvising Group, and worked too with mixed groups, Six Winds and Mazur Markussen Quartet. After taking part in the first performance and recording of Mikkelborg's *Aura* with Miles Davis (1985), she worked with bands led by Davis, Gil Evans and Wayne Shorter, among others; since 1991 she has often performed with the Jan Garbarek Group. In 1990 she formed the band Future Song; it plays only her own music and has released *Future Song* (1992) and *Small Labyrinths* (1997). Her work on these recordings, containing elements of jazz, rock and ethnic music, is rich in tonal quality, ranging from the delicately lyrical to the wildly energetic. In form as well as sound and timbre Mazur's music is strongly experimental, and her band provides a distinguished vehicle for her ideas. Her works appear on several other recordings, including *Six Winds* (1982), *Primi* (1984), *MM 4* (1984), *Ocean Fables* (1986), *Havblik* (1992) and *Circular Chant* (1995). Among her major compositions is *Sofias Stemmer* for three solo voices, children's chorus, percussion and organ, commissioned to mark Copenhagen as Cultural Capital 1996. Mazur has won numerous prizes and awards.

INGE BRULAND

Mazurka (Pol. *mazur*). Polish folk dance from the Mazovia region. Mazovian folk culture is notably diverse; the 19th-century collector of Polish folksongs Oskar Kolberg divided the region into 'Polne' ('field'), 'Lesne' ('forest'), 'Stare' ('old') and 'Pruskie' ('Prussian') areas, but with social and environmental changes the boundaries between these traditions have not always remained distinct. The most clearly defined area is 'field' Mazovia, which has identifiable traditions in dress, decorative arts and architecture. Chopin spent his childhood in this area and was greatly influenced by its musical culture, features of which are still found in the repertory of folk ensembles today.

The basic mazurka rhythm (ex.1) shifts the accent to the weak beats of the bar within a triple metre. Triple metres became dominant in Polish folk music in the 17th and 18th centuries, while the displacement of the accent may have its origins in the paroxytonic accent in the Polish language. Mazurka rhythms occur in dances of differing tempos. The fastest is the OBEREK or *obertas*, a rapid whirling dance for couples; the mazurka itself (or *mazur*) is somewhat slower but still of lively character, while the KUJAWIAK is a dance of more moderate tempo, with longer phrase lengths. Within 'field' Mazovia the *oberek* exhibits local variations. It prevails in the central area, with the *kujawiak* more popular in the western regions.

Ex.1

The earliest mazurkas would have been accompanied by the *dudy* or *gajdy* (Polish bagpipes) with its characteristic drone on the tonic, or both tonic and dominant. In more recent times instrumental groups consisting of violins (which may play the melody or the drone), drum and harmonium became common. Traditionally, the melody might also be played on the *fujarka* (a shepherd's pipe), and lower stringed instruments (the *basetla* or *basy*) might add to the rhythmic accompaniment. Windakiewiczowa (1926) identified schematic melodic structures, for example, *AABB*, *AABC*, *AAAB* or *ABBB*. Tempo rubato is a feature of the performance, with accents and dynamics emphasizing the gestures of the dancers, especially stamping or heal-clicking leaps (*hołubiec*) on the displaced accents on the second or third beats of the bar (ex.2 shows some characteristic rhythms).

(b)

In the 17th century the popularity of mazurka dances began to spread from rural regions to other social and geographical contexts across Poland. Augustus II, Elector of Saxony and King of Poland from 1697 to 1704 and 1710 to 1733, introduced the dance to courts in Germany. Augustus, who was dependent upon the patronage of Peter the Great for the preservation of his rule, reigned over a decline in Poland's powers which was later to lead to the partition of Poland at the end of the 18th century. With the occupation of Polish territory the dance was adopted by musicians of the Russian courts and peasantry.

Chopin's mazurkas, of which there are over 50 authenticated examples, are by far the most famous examples of the genre. The dance had become popular in Parisian high society some time before Chopin arrived. In his examples the dance became a highly artistic, stylized piece for the fashionable salon of the 19th century, as well as a symbol of his native country. Chopin acknowledged the importance of his upbringing in Mazovia, once describing himself as a 'real blind Mazur', and although in his maturity he did not consider his mazurkas as written for dancing many features of the folk dances are clearly discernible throughout these works. The influence of the performing styles of traditional instrumental groups is apparent in Chopin's textural writing, for example in the drone and high melody of the middle section of his Mazurka op.68 no.3 (ex.3). Aspects of structure, melody, rhythm and harmony also betray the legacy of folk traditions. Windakiewiczowa has revealed, by comparing

Ex.3 Chopin: op. 68 no.3

Chopin's mazurkas with those collected by Kolberg, the retention of one- and two-bar structures and call and response melodic patterns. The striking accentual patterns of the mazurka rhythm are pervasive in Chopin's rhythmic writing, with the varying rhythmic and tempo characteristics of the *mazur*, *oberek* and *kujawiak* being freely interchanged, in some cases (e.g. op.7 no.3) employing all three within a single piece. Chopin delighted in the modal resources available, especially the Lydian mode with its sharpened fourth (op.24 no.2) but also the Phrygian (op.41 nos. 1 and 2) and Aeolian (op.17 no.4). Several examples explore some of the composer's most adventurous chromatic harmonies which, alongside the folk inflections, led many critics to recoil at the quirky, 'exotic' idiom. Chopin's mazurkas consistently exploit bold contrasts between joyous vigour and Polish *żal* (profound melancholy).

The most important contributions to this genre after Chopin are those written by Szymanowski nearly 100 years later. With Poland's regained independence in 1919 Szymanowski turned from his previous oriental inspirations to search for a modern national idiom. His 20 Mazurkas op.50 (1924–6) and Two Mazurkas op.62 (1933–4), represent a personal synthesis of mazurka triple

Ex.4 Szymanowski: op. 50 no.1

metre rhythm with melodic shapes derived from *góral* (highland) music (ex.4). This is symptomatic of the change in function of the title 'mazurka' from its original regional connotations to a symbol of Polish national identity. This association of 'Polishness' with the mazurka was by then long-established, and had been exploited for dramatic ends by Glinka in his opera *A Life for the Tsar* (1834–6). Glinka also wrote several mazurkas for piano and, with Chopin as their model, there are many similar pieces by later Russian composers: Borodin included two in his *Petite suite* (1885), and there are also examples by Tchaikovsky (e.g. op.39 no.10 and op.72 no.6) and Skryabin.

STEPHEN DOWNES

Mazurok, Yury (Antonovich) (*b* Kraśnik, 18 July 1931). Polish baritone. He studied in Moscow, and in 1963 he joined the Bol'shoy Theatre, where he later became a soloist. He won prizes in competitions at Prague (1960), Bucharest (1961) and Montreal (1967). His performances were noted for his firm, beautiful tone, vivid temperament and imposing stage presence, although he was criticized for a lack of wholehearted commitment in his acting and for his limited range of gesture and expression. His roles included Yevgeny Onegin and Yeletsky, Andrey and Tsaryov (*War and Peace* and *Semyon Kotko*), and Rossini's Figaro. In 1975 he made his Covent Garden début as Renato, and in 1978 his Metropolitan début as Germont. He frequently sang at the Vienna Staatsoper, including Escamillo in Zeffirelli's 1979 production of *Carmen*. In 1987 he sang Scarpia at Wiesbaden. He was also a noted interpreter of Russian songs.

I.M. YAMPOL'SKY/R

Mazza, Giuseppe (*b* Lucca, 3 March 1806; *d* Trieste, 20 June 1885). Italian composer. His first music lessons were in Lucca with Domenico Quilici; later he studied harmony and counterpoint at Bologna with Stanislao Mattei, the teacher of Rossini and Donizetti. He returned to Lucca, where his first opera was produced; the warm reception accorded *La vigilanza delusa* won him commissions to compose for Florence and Naples. His subsequent works were less successful and he turned to conducting operas. He finally found a secure niche when he was appointed *maestro di cappella* and organist at S Antonio Taumaturgo in Trieste, where he won a reputation as an excellent teacher of singing; he held this post until his death. His operas are now forgotten, with the curious exception of *La prova di un'opera seria* (1845; not to be confused with F. Gnecco's 1805 opera of the same title). A work in the tradition of Cimarosa's *Il maestro di cappella*, it was revived in Spanish in 1903 as *El maestro campanone*, revised by Vicente Lleó. Besides his operas, Mazza composed much sacred music.

WILLIAM ASHBROOK (with ANDREW LAMB)

Mazza, José (*b* ?Lisbon, *c*1735; *d* Lisbon, ? 14 Dec 1797). Portuguese writer on music. He belonged to a family of violinists that João V brought to Lisbon from Parma before 1719. While a chamber musician at the court of José I he won the favour of Frei Manuel do Cenáculo Vilas Boas, elected Bishop of Beja in 1770 and Archbishop of Évora in 1802. 17 poems by him, dedicated to the bishop, and a graceful *Canzoneta e minuete*, composed for the bishop's birthday (1 March 1791) are in the *Biblioteca Pública* in Évora. By 1791 Mazza had evidently left Lisbon to accept a post, which his patron had created for him, teaching Italian at Beja. A note in his manuscript translation of Iriarte's *La música* (in *P-EVp*) says that Mazza died at Faro in 1798 or 1799 but the records of the Lisbon Brotherhood of St Cecilia, to which he belonged, give the date as 14 December 1797.

Mazza's *Diccionario biographico de musicos portugueses e noticia das suas composicões* (manuscript in *P-EVp*, Cx IV/1–26) was serially edited with copious notes by José Augusto Alegria in the Lisbon periodical *Ocidente*, xxiii–iv (1944), xxv–vi (1945), and subsequently published separately with continuous pagination as an 'Extraido da revista "Ocidente" – Lisbon, 1944/1945'. Mazza antedated all other European music lexicographers by a century in including composers of the western hemisphere, among them contemporaries who were just coming to prominence, and composers of African descent.

ROBERT STEVENSON

Mazzaferrata [Mazza Ferrata], **Giovanni Battista** (*b* Como or Pavia; *d* ?Ferrara, 26 Feb 1691). Italian composer, organist and teacher. He stated in the dedication of his op.1 that he had been a pupil of Tarquinio Merula; this was probably while Merula was working at Cremona. In 1661, when his op.1 appeared, he was *maestro di cappella* of the cathedral at Vercelli and also a teacher at the seminary there. From 1668 at the latest he was *maestro di cappella* of the Accademia della Morte, Ferrara, of which he had once been organist. The title-page of the third edition of his op.3 indicates that he was still *maestro* when this was published in 1680, but in the third edition of his op.2, which appeared in 1683, it is expressly stated that he 'formerly' held the post. It is possible that he moved to Tuscany in the early 1680s (his oratorio *L'efficacia della fede* was performed at Siena in 1684 and his oratorios enjoyed some success in Tuscany even after his death), but according to Bennati, he returned to Ferrara before he died, and he was apparently *maestro di cappella* at the cathedral for a time.

Mazzaferrata was one of the most individual of the lesser Italian composers of his day. The sonatas of his op.5 are particularly interesting, not only for their intrinsic musical value but also for the organic nature of their form, and they seem to have influenced the sonatas of G.B. Bassani. They are in the usual four movements, generally with contrasting time signatures and tempos (though the last sonata has four Allegro movements), and are distinguished by an extraordinary vivacity. The contrapuntal writing is essentially harmonic rather than linear, the harmonic rhythm is slow, and several of the themes are characterized by repeated notes. The resulting lighter, more fluent style has been said to foreshadow the early Classical style. Mazzaferrata is otherwise known as a composer of both sacred and secular vocal chamber music, which, at its best, is fresh, lively and balanced; the chamber cantatas of op.4 are excellent examples.

NONA PYRON

Mazzaferro, Giorgio. Pseudonym of NICOLÒ FARFARO.

Mazzarini, Giulio Raimondo. *See* MAZARIN, JULES.

Mazzi [Massi], **Luigi** (*fl* Ferrara, 1591–1610). Italian composer and organist. He was associated with Ferrara by 1591, when his madrigal *Bella è la donna* appeared in

the Ferrarese collection *Giardino de musici ferraresi* (RISM 1591[9], inc.); this is his only surviving secular vocal work. According to the title-page of his *Ricercari a 4 et Canzoni a 4, 5 et a 8 da cantare et sonare* (Venice, 1596) he had served as organist to the fathers of S Benedetto, Ferrara. On 23 October 1603 he was named organist to the Duke of Modena and in 1607 organist of S Pietro, Ferrara. In addition to the *Ricercari* he published *Li Salmi ... libro primo* for five voices (Venice, 1610) and an eight-part motet in an anthology (1612[2]).

ROLAND JACKSON

Mazzi, Prospero (*fl* 1674–89). Italian composer. Nothing is known of his life, except that he was a Benedictine prior and in contact with the court of Francesco II, Duke of Modena and Reggio. His extant works (all in *I-MOe*) include four cantatas for bass and basso continuo, and two works dedicated to Francesco II, probably autographs: *Il Prencipe Corsaro* (text by G.B. Giardini), Modena, 11 November 1674; and *Laerte Porsena Re di Perusia*, Mantua, 25 April 1689. Both on historical subjects, they are notable for their large number of scenes (55 and 60 respectively) and characters (at least 12), and for their happy endings. *Il Prencipe Corsaro*, which uses theatrical machines, also includes mythological scenes and comic situations. The dramatic action is based on passages in recitative style and very short arias, usually in triple time. The cantatas are constructed from sections of contrasting metre: three (*Cupido, e non t'arresti*, *Fra taciti riposi* and *Io ve la voglio dir*) have as their central theme an unrequited lover; the fourth (*Venti turbini procelle*), clearly virtuosic, seems to be addressed to a courtly figure.

GABRIELE MORONI

Mazzinghi, Joseph (*b* London, 25 Dec 1765; *d* Downside, nr Bath, 15 Jan 1844). English composer of Corsican origin. He was the eldest son of Tommaso Mazzinghi, a London wine merchant and violinist who led the orchestra at Marylebone Gardens, published *Six Solos for the Violin* in 1763 and died in November 1771. John Mazzinghi, probably an uncle, made a number of English translations of librettos for the King's Theatre in the Haymarket, including several by Da Ponte. Felice Mazzinghi (possibly another uncle) published a keyboard sonata in 1765, and five other manuscript sonatas by him are in the British Library. Joseph's mother was English. Her sister, Cassandra Frederick, had played Handel concertos in public at an early age and sung contralto solos in Handel oratorios. Apparently at the instigation of both his father and aunt, Mazzinghi commenced lessons with J.C. Bach. He was appointed organist at the Portuguese Chapel in 1775 when only ten years old. He later studied with Sacchini, Anfossi and possibly Bertolini.

In 1779 Mazzinghi was apprenticed as copyist and musical assistant to Leopoldo De Michele, who was chief music copyist at the King's Theatre. Five years later he advanced to the position of harpsichordist and was then engaged as house composer to the King's Theatre (1786–9). In this position he provided ballet music, directed operas and was responsible for arranging pasticcios. The most successful production during these years was the adaptation of Paisiello's *Le gare generose* as *Gli schiavi per amore* (24 April 1787), in which Mazzinghi collaborated with Stephen Storace.

Following the destruction of the King's Theatre by fire in June 1789, Mazzinghi was engaged as house composer to the Pantheon Opera House at a salary of £300 for the season of 1790–91 and again in 1791–2; he appears only to have received £250 for the first season but was paid in full for the second. In addition to arranging ballets and pasticcios, he was commissioned to compose a new opera. *Zaffira*, with a libretto by Girolamo Tonioli, the house poet of the theatre, was never completed, though a duo may have been incorporated into J.B. Dauberval's ballet *La foire de Smirne* (14 April 1792). When the original score of Paisiello's *La locanda* was destroyed in the Pantheon fire of 1792, Mazzinghi and the leader of the orchestra, Wilhelm Cramer, apparently reconstructed from memory the 'instrumental accompaniment' (*SainsburyD*); by 1791 13 numbers from this opera had, however, already been published in reduced score. Mazzinghi remained at the Pantheon until 1792, thereafter working only occasionally for the Italian opera house. He arranged and contributed at least six numbers to an adaptation of Monsigny's *La belle Arsène* (1795). The libretto, originally by C.-S. Favart, was adapted and translated into Italian by Da Ponte; the English translation was by John Mazzinghi. Joseph Mazzinghi's comic opera, *Il tesoro* (1796), again with a libretto by Da Ponte, had only three performances and the music was never published.

From 1791 Mazzinghi increasingly turned his attention to English opera, composing a number of works for the Theatre Royal, Covent Garden, and collaborating on several operas with William Reeve. Mazzinghi's first commission for Covent Garden was to write the incidental music for Hannah Cowley's play *A Day in Turkey* (1791), which was followed by the full-length opera *The Magician no Conjurer*. The latter work included what was probably Mazzinghi's best overture and an elaborate aria (manuscript in *GB-Lcm*) with a concertante part for the oboe, composed for Elizabeth Billington and W.T. Parke. Mazzinghi's first and most successful collaboration with Reeve was on the comic opera *Ramah Droog* (12 November 1798). There appears to have been no clear working pattern for their joint works, with both Mazzinghi and Reeve composing serious and comic numbers. Mazzinghi, however, usually supplied the lengthier and weightier numbers, such as the finales. The afterpiece *The Chains of the Heart* (1801), reportedly a favourite with King George III, was the last work on which Mazzinghi and Reeve collaborated. Another two afterpieces, and one full-length opera written with Henry Bishop followed, but after 1810 Mazzinghi appears to have withdrawn from composing for the theatre. As an adapter and imitator of other composers' music, Mazzinghi was highly competent. However, his own operatic music, based on slight melodic ideas and simple harmonic and formal structures, is rather unremarkable.

Mazzinghi was a prolific composer for the ballet, having written some two dozen works for the King's Theatre and Pantheon. As was customary, Mazzinghi was required to arrange existing music for the ballet as well as compose new works. One of his more interesting, though unpopular, adaptations was *Zémire et Azor* (1787), a *ballet d'action* based on Grétry's opera of the same title.

of symbolist elements, the impersonality of characters – whose unwitting actions seem to be governed by a fatal destiny – and the trance-like suspended sonorities. The subtle orchestration is indebted to both Wagner and Debussy, while simple thematic references, consisting mainly of rhythmic ostinato figures, carry a leitmotivic function; the plot is advanced through dialogue, the 'hidden arias' typical of early 20th-century Italian opera occurring only rarely. In *La nave* there are also traces of the influence of Richard Strauss. In D'Annunzio's frenzied text, and especially in the hysterical and lascivious central character of Basiliola, who seeks vengeance through seduction, Montemezzi has a chance to create a character reminiscent of Salome and Electra: there are echoes of expressionism in the frequent parlando passages for the chorus and in the animated vocal writing. The later operas add nothing new to Montemezzi's style, and embody a traditional type of drama with a retrospective musical idiom. Among the few non-operatic works of Montemezzi, a certain renown was won by two symphonic poems, *Paolo e Virginia* (from J.H. Bernardin de Saint-Pierre's novel) and *Italia mia! nulla fermerà il tuo canto*, a patriotic elegy for his distant homeland destroyed by fascism.

Montero. Venezuelan family of musicians.

(1) José María Montero (*b* 1782; *d* 1869). Composer and violinist. He studied with J. Luís Landaeta and from 1816 worked with the Venezuelan musicians José de Jesús Alas and Manuel Peña. From 1822 to 1851 his name appeared in account books indicating his service to churches and confraternities in Caracas, such as the church of Altagracia (1822), S Mauricio (1824, 1826, 1842) and Divina Pastora (1842). At Altagracia he worked with the musicians Josef Marquez and Ramón Lozano. In 1824 he was employed by the Confraternity of the Holy Rosary for the important feast of Naval. He also worked for the confraternities of the Blessed Sacrament (1822) and S Juan Bautista (1824, 1826, 1842).

WORKS

Trisagio, 3vv, 1814; 2nd Lesson of the Dead, in honour of Bolívar, 1842; Tono, 3vv, for the Society of S José; Vexilla regis; O sacrum convivium; Pange lingua (Sp.), 3vv; Tono para le fiesta de Nuestra Señora de Candelaria; Libera me; Quae est ista, grad; Salve; Canto a María; Versos a Jesús crucificado; Versos a la virgen del carmen; Aria a la virgen (?spurious); Versos a la virgen para la pesta (?spurious)

(2) José Lorenzo Montero (*b* ?Caracas, *fl* 1842–5). Composer, teacher and music director, son of (1) José María Montero. He formed and directed a music group that was first announced in *El venezolano* on 17 December 1844 and 7 January 1845. The group was qualified to play for churches, theatres, and dances and other occasions. He also collected newly composed Venezuelan music and foreign works. His own compositions are both lyrical and dramatic. He had a penchant for melodic variation, chromatic word-painting and madrigalisms. His works are formally well structured, and there are many points of imitation within the sections. Soloistic writing and pairing of voices contrast with homophonic blocks, and he favoured elided resolutions and mediant shifts.

WORKS

Sacred: Tantum ergo; 3rd Lesson of the Dead, in memory of Bolívar, 1842; Funeral March; Mass of the Dead; Pange lingua; Trisagio; Tollite portes, grad; Ave Maria, off; Credo; Grad for the Holy Cross; Jerusalem; O María, soberana reina del cielo; Salve; Gozos a San Francisco de Paula; Benedicta, grad; Ave maris stella
Other works: March, F; Himno for 5 July; Andante; Patriotic Song for 19 April

(3) Ramón Montero (*b* ?Caracas, ? early 19th century; *d* after 1878). Composer, son of (1) José María Montero. He is mentioned in a document of 17 February 1851. Among the musicians who knew him were Manuel Peña and José de Jesús Alas. His most active years musically were 1863–79, when he was in the employ of Caracas Cathedral as a church musician, receiving payments in

ROGER FISKE/GABRIELLA DIDERIKSEN

Mazzocchi, Domenico (*b* Civita Castellana, bap. 8 Nov 1592; *d* Rome, 21 Jan 1665). Italian composer, brother of VIRGILIO MAZZOCCHI.

1. LIFE. After studying at the seminary at Civita Castellana, Mazzocchi took lower orders in 1606 and was ordained priest on 30 March 1619. In 1614 he went to Rome, where he obtained the right of citizenship, and in, or shortly before, 1619 he was made a Doctor of Laws. He entered the service of Cardinal Ippolito Aldobrandini, probably in 1621. Mazzocchi has sometimes been wrongly described as a musical dilettante. He acted as secretary to the cardinal (a type of position often occupied by poets), and was free to write music on special occasions for the Aldobrandini and other noble Roman families. His professionalism is exemplified by the fact that his brother Virgilio, who served as *maestro di cappella* at prominent Roman churches from 1626, would delegate to him the composition of music for certain important religious feasts.

The entrance of Domenico into the household of Cardinal Ippolito Aldobrandini was the start of a long association with that family. His opera *La catena d'Adone*, performed during Carnival 1626 at the palace of Evandro Conti, Duke of Poli, was commissioned by the cardinal's brother Prince Giovanni Giorgio Aldobrandini. From spring to autumn 1626 Mazzocchi undertook a journey to Parma and Milan, accompanying Cardinal Ippolito. From this period we have a series of important letters written by Domenico to the wife of Prince Aldobrandini, revealing the exact itinerary of the excursion. In June or July 1626, at Parma, single scenes of Mazzocchi's *Catena d'Adone* were performed for Odoardo Farnese and his mother, born an Aldobrandini. Perhaps in late summer Mazzocchi went to Venice to oversee the printing of his opera, which was published in October 1626. After the death of Cardinal Ippolito in 1638, Mazzocchi became a familiar of the latter's niece Princess Olimpia Aldobrandini-Borghese-Pamphili. Important also is the protection that the Barberini family extended to him. In 1637 Pope Urban VIII (Maffeo Barberini) secured a lifelong benefice for the composer, who in the following year dedicated to him his *Poemata*, settings of Latin poems by the pope himself. Around this time, in the famous academies that Cardinal Francesco Barberini arranged for the papal court, there were performances of Mazzocchi's madrigals, accompanied in part by a consort of viols. Mazzocchi also received financial support from the next pope, Innocent X (Giambattista Pamphili), and the Aldobrandini family arranged to get him an additional benefice. Thus he was able to live in some style in the four rooms he occupied with his servant in the Palazzo Aldobrandini-Pamphili, and he kept also two additional rooms for his adopted son in the Palazzo Mancini opposite. Mazzocchi acquired considerable wealth, but his financial obligations were multiple: he was generous to his family in Civita Castellana and to the young Roman boy he adopted about 1640. According to G.B. Doni (*Annotazioni sopra il Compendio*, Rome, 1640, p.339) he had a 'natural modesty and gentleness of manner'.

It was unfortunate for his musical productivity that Mazzocchi became involved in controversy and spent more than ten years, from 1642 at the latest to 1653, trying to prove that Civita Castellana was the site of the ancient Etruscan town of Veii; during this period he published polemical writings on this subject but virtually no music. Eventually he returned to music and published his *Sacrae concertationes* in 1664. But even this collection seems to date, at least in part, from a much earlier period; some of the works were apparently composed in the 1630s or early 1640s. The motets and oratorios contained in the print were written mainly for Roman oratories, including the Oratorio del SS Crocifisso, and perhaps also for the Confraternita della SS Trinità dei Pellegrini, beloved of Cardinal Ippolito Aldobrandini, and the houses of the Augustinian nuns of Santa Maria Maddalena delle Convertite al Corso favoured by Cardinal Francesco Barberini.

2. WORKS. Mazzocchi's one surviving opera, *La catena d'Adone* (1626), to a libretto by Ottavio Tronsarelli, is based on sections 12 and 13 of the *Adone* by Giambattista Marino. It has been suggested on insubstantial grounds (by Reiner) that the music may be not all by Mazzocchi, but his authorship of all of it is well affirmed by Witzenmann (1970, pp.13ff) and can be taken as established. The opera consists of a prologue and five acts. Mazzocchi's recitative style is still close to that of early Florentine monody, but the distinction between the narrative and the lyrical elements is more pronounced. Declamation is expressive and highly rhetorical. Arias, made up of short phrases sensitively linked together, serve to 'break the tedium of recitative'. Mazzocchi did not describe recitative as tedious in itself (as is often asserted), but criticized recitative that lasted too long without interruption. The chorus performs an important function, creating imposing blocks of texture at the ends of each act.

Mazzocchi was more prolific as an oratorio composer. Seven Latin oratorios, published in his *Sacrae concertationes*, probably date from the 1630s. Some were perhaps performed in Lent 1634 at the oratory of S Marcello, under the direction of Virgilio Mazzocchi. Domenico also composed (perhaps in collaboration with Virgilio) an Italian oratorio, the *Coro di profeti*, which survives incomplete: it was written about 1635 for a Marian feast at the oratory of the Filippini, directed presumably by Virgilio Mazzocchi. The texts of Domenico's Latin oratorios are based on biblical passages, usually from the New Testament. In each there are parts for the different characters, a narrator sung by one or more voices, and a double choir. Recitative and arioso prevail in the solo writing; the ensembles and choruses are well varied in size, style and texture. The settings of Latin works by Pope Urban VIII (1638) are not pieces for the Church: they belong rather to the realm of vocal chamber music, though the subject matter is religious or moral.

Mazzocchi's other collections of vocal chamber music date from about the same time as the *Poemata*. The *Dialoghi, e sonetti* (1638) contain two Latin dialogues taken from Virgil's *Aeneid* (a third was printed separately in 1641). The remaining pieces have Italian texts written mostly by authors of the time, including Prince Giovanni

Giorgio Aldobrandini; one comes from Tasso's *Gerusalemme liberata*. The print ends with the sonnet *Lagrime amare*, a lament of Mary Magdalene famous in its day: the entire second section is quoted in Kircher's *Musurgia universalis* (Rome, 1650). The lament is written in a flexible arioso style, the highly expressive vocal part being supported by most affective harmonies.

The *Madrigali* (1638) consist of settings of poems by Marino, Guarini, Tasso and authors contemporary with Mazzocchi. In the preface he indicated the signs for *piano*, *forte*, *echo* and *messa di voce*, as well as others for less familiar devices. There are 24 madrigals altogether, arranged in three groups of eight: for five voices and continuo; five voices without continuo; and four to eight voices and continuo. On the whole, they are a successful blend of old and new techniques. Mazzocchi's mastery of textures is matched by his careful rendering of the text. His tribute to the ideals and traditions of the Renaissance madrigal is sincere – at a time when, as he said, madrigals generally had been almost completely removed from academies. The influence of Gesualdo appears to be strong, but chromaticism is more rationally handled by Mazzocchi. It is important to mention that the cultivation of Gesualdo's music was paramount in the academies of Cardinal Francesco Barberini.

It is a feature of all Mazzocchi's published collections that indications are given for changes of dynamics and tempo. In a similarly careful spirit he tried to indicate all the accidentals that he wished to be applied. His signs are not always as clear or as complete as he intended, but his attempt to indicate such details is exceptional.

WORKS

DRAMATIC

La catena d'Adone (favola boscareccia, prol, 5, O. Tronsarelli), Rome, 1626 (Venice, 1626)

GLORIA ROSE/WOLFGANG WITZENMANN

Mazzocchi, Virgilio (*b* Civita Castellana, bap. 22 July 1597; *d* Civita Castellana, 3 Oct 1646). Italian composer, brother of DOMENICO MAZZOCCHI.

1. LIFE. Mazzocchi studied at the seminary in Civita Castellana and took lower orders in 1614. He moved to Rome, where, according to Pitoni, he studied music with his brother Domenico, who from 1621 was in the service of Cardinal Ippolito Aldobrandini. It was probably as a result of the cardinal's influence that Virgilio, about 1625, entered the service of Cardinal Francesco Barberini, and it was without doubt Francesco Barberini who opened the way to Virgilio's career as a church musician. From perhaps 1626 until 1629 he was *maestro di cappella* at the Gesù and taught at the Jesuit Collegio Romano. For this college in 1628 he wrote musical *intermedi* for the Latin play *Crispus* (1597) by Bernardino Stefonio. In 1629 he was briefly *maestro* at S Giovanni in Laterano and in the same year he was appointed to the Cappella Giulia at S Pietro, where he served until his death.

From about 1630 Mazzocchi's duties as *maestro* and court musician increased rapidly, and he sometimes delegated to Domenico the composition of music for religious feasts. He was active at several minor churches, especially those under the patronage of the Barberini family, including S Agata, S Giacomo alla Lungara delle Suore Convertite, S Chiara and S Maria in Aquiro, and at the more important churches of S Lorenzo in Damaso and S Maria in Vallicella (the Chiesa Nuova). But his main efforts were naturally directed towards S Pietro, where large musical forces were called for, particularly for the feasts of St Peter and St Paul (29 June) and the Dedication of S Pietro (18 November). For the feast of St Peter and St Paul in 1637 Mazzocchi used six choirs and six instruments in the lantern at the very top of the dome; in about 1640, according to Della Valle, there were as many as 12 or 16 choirs and an echo choir in the lantern. The echo choir was Mazzocchi's own idea and was acclaimed by his contemporaries.

Mazzocchi was active also in the new and rapidly evolving genre of oratorio. In Lent 1634 he directed the music for the Arciconfraternita del SS Crocifisso at S Marcello: ten Latin dialogues on five consecutive Fridays, four of which were possibly by Domenico Mazzocchi, whose *Coro di profeti* for the Congregazione dell'Oratorio (*c*1635) was also directed by Virgilio. In 1640 Mazzocchi performed in the *Dialogo di Esther* by Pietro Della Valle, playing the *cembalo triarmonico*, an instrument that

produced, according to G.B. Doni, the ancient Greek tone genera.

As *maestro di cappella* to Francesco Barberini (from 1636) and the papal court, Mazzocchi also had to provide operas. Barberini preferred stories of the saints, but eventually admitted classical and humanistic plots, as well: Mazzocchi's first production, *L'Egisto* (or *Il falcone*, 1637), was based by the librettist Giulio Rospigliosi on a story by Boccaccio. In 1639, for the opening of the new Barberini theatre, the opera was repeated in a somewhat different form as *Chi soffre speri*, with *intermedi* by Marco Marazzoli. The *rappresentazione sacra San Bonifazio* was given in the Palazzo della Cancelleria during Carnival 1638 (libretto by Rospigliosi). The main action was performed by boys of 10 or 11, some of them from Mazzocchi's music school at S Pietro. There are 19 solo roles, and each act closes with a chorus, which was probably formed by singers from the papal chapel and S Pietro. In 1640 Cardinals Antonio and Francesco Barberini produced, in the Palazzo Rusticucci, Seneca's tragedy *Troades*, with a prologue and four *intermedi* by Rospigliosi; all the music (except perhaps one *intermedio* by Marazzoli) was by Mazzocchi. For the main plot, following the theories of Doni, he wrote music only for the choruses and soliloquies, employing ancient Greek rhythms and tone genera, and he again played the *cembalo triarmonico*.

In 1641, grand spectacle was called for by Francesco Barberini for the marriage of Marc'Antonio Colonna and Isabella Gioieni (sister-in-law of Anna Colonna Barberini). The first performance of *La Genoinda, ovvero L'innocenza difesa* took place in the Palazzo della Cancelleria at the end of January before about 100 Roman ladies and a few gentlemen; the music for both the main plot (with 17 solo roles and a four-part choir, all for boys) and the *intermedi* was by Mazzocchi. Observers emphasized the marvellous scenic effects in the manner of Bernini, created by a young nephew of Monsignor Fausto Poli. For Carnival 1643 Francesco Barberini produced a Latin play, *Sancta Susanna*, given by students of the seminary of S Pietro in the Palazzo Rusticucci. There was music only for *Sant'Eustacchio*, conceived as a series of Italian *intermedi* for *Sancta Susanna*.

From 1636 Mazzocchi also directed musical academies for Francesco Barberini and the papal court in the Palazzo del Quirinale. There he probably performed his own madrigals and cantatas, along with other music by, for example, Gesualdo and Domenico Mazzocchi. The singers were mainly boys, the preferred instruments viols. Mazzocchi was known as an excellent teacher; his pupils included G.A. Bontempi, Francesco Benedetti, Giovanni Carpano and M.A. Giroppi. According to Bontempi (p.170), Mazzocchi's choirboys received a profound and comprehensive training which equipped them for taking part in academies and operas.

In September 1646 Mazzocchi went with his singers from the Cappella Giulia to Civita Castellana, where he became suddenly ill and died. Pitoni described him as 'amiable in manner, small in height and full in body'. Doni wrote that, like his brother Domenico, he was remarkable for a 'natural modesty and gentleness'.

2. Works. Fine examples of Mazzocchi's church music for large forces are to be found in the *Psalmi vespertini* (1648). In *Beatus vir*, an outstanding masterpiece, he used in places closely interlocking imitative counterpoint. Rhythmic and dynamic contrasts are sharp, brief tutti passages occur within solo sections, and the choral arias in ternary metre sometimes recall Gastoldi. Other psalms, such as *Laudate nomen Domini*, are less complex; they show a practical attempt to provide easier music for the more common liturgical occasions. The *Magnificat* from the 1648 collection occupies a middle level of complexity, balancing musical quality with practical considerations. The exordium exemplifies free homophony, pure (homorhythmic) homophony being also present in the sections that follow, and the imitative counterpoint is seldom very involved. The verse 'Fecit potentiam' receives emphasis from its cantus-firmus structure.

Examples of Mazzocchi's motets for smaller forces may be seen in the *Sacrae flores* of 1640. Vocal virtuosity resides here largely in the older traditions of *gorgheggi* and *passaggi* (as in the motets of Domenico); more modern, short concertante motifs play as yet little part. Some of these motets may have had a didactic as well as a liturgical purpose. Sequences made up by scales, as in *Ideo jure jurando*, are often in the nature of vocal exercises. Worthy of mention is the presence of ostinato basses, as in *Ecce radix Jesse*. Especially in the *Piae meditationes* (1648) Mazzocchi succeeded in matching practical with liturgical demands. These little motets for *a cappella* choir alternating with plainchant served a particular purpose. They were written for the Chapel of the SS Crocifisso at S Pietro, where each Friday the seminarists of the Vatican sang a meditation on the Passion. Intended for non-professional singers, they are particularly easy but never tedious. Mazzocchi's only surviving oratorio, *Ego ille quondam*, is entirely reflective, with choruses, recitatives and ariosos, but no fully developed arias.

Mazzocchi's most important operatic work is *Chi soffre speri* (1639), with *intermedi* composed by Marazzoli. The Boccaccio plot was enriched by the librettist Giulio Rospigliosi with an allegorical framework (for Ozio, Sentimento and Virtù) and *commedia dell'arte* characters – the Neapolitan Coviello, the Bergamasque Zanni, Moschino and others – using dialect. Mainly because of its *commedia dell'arte* elements, *Chi soffre speri* has been considered an early example of comic opera. Recitative is generally in a lively parlando style nearer to *recitativo secco* than to Florentine monody. But there is also, in Act 3, an expressive soliloquy showing a masterly formal disposition. The arias are characterized by relaxed counterpoint and lovely sweet melodic contours.

WOLFGANG WITZENMANN

Mazzolà, Caterino (*b* Longarone, 18 Jan 1745; *d* Venice, 16 July 1806). Italian poet and librettist. About 1767–8 his family moved to Venice, where Caterino's firm grounding in Latin and the classics began at a Jesuit school before he moved on to a Somaschi institution in Treviso. By the time he married, in 1780, his career as a librettist had already begun. He had also become a known figure in the houses of men of letters in Venice, where he met Casanova in 1774 and Lorenzo da Ponte in 1777. The following year the composer Joseph Schuster helped to secure an appointment as Italian poet at the court in Dresden, a position Mazzolà held from 1780 to 1796. For six months in 1780 Mazzolà was joined in Dresden by Da Ponte who, in addition to gaining insight into the work of a librettist, received from his host a letter of introduction to Salieri which led to his first appointment in Vienna as librettist to the newly revived Italian opera. That the inaugural performance (1783) was a production of the Salieri-Mazzolà opera *La scuola de' gelosi* was probably no mere coincidence. From 1790 Da Ponte began to fall from favour in Vienna, and it is likely that both he and Salieri were instrumental in gaining the position of court poet for Mazzolà for a brief period early in 1791 through their influence with Count Rosenberg, the court theatre director. Rosenberg was replaced, however, and Giovanni Bertati was subsequently named to the position. When Mazzolà left Dresden in 1796, Friedrich August III obtained diplomatic work in Venice for him and also requested that some of his writings be sent back to the Saxon court each year.

Most of Mazzolà's librettos are of the *opera buffa* type, set mainly by the Dresden composers Naumann, Schuster and Seydelmann. Salieri's interest in his friend's texts was to be expected, but Mazzolà librettos were also set by other important composers of the time. Da Ponte described him as 'possibly the first to know how to write a comic libretto', and *La scuola de' gelosi* bears a striking resemblance to *Le nozze di Figaro*, not only in its similarities of plot and characters but also because of its rapid pace, clear delineation of characters and sectional Act 1 finale. Mazzolà's masonic opera *Osiride* was known to Mozart, with whom Mazzolà may have discussed *Die Zauberflöte* while in Vienna from May to July 1791. His collaboration with Mozart in adapting Metastasio's *La clemenza di Tito* for Prague in 1791 produced a libretto that vividly reflects contemporary trends in the content and structure of Italian serious opera. These trends, often originating in *opera buffa*, include the two-act structure, opening duet, medial ensembles, rapid pace and directness of emotional expression, characteristics to be found in Mazzolà's earlier librettos. *Il mostro*, a text that antedates *Tito* by five years, provides a particularly clear example.

DON NEVILLE

Mazzoleni, Ester (*b* Sebenico (now Šibenik), Dalmatia, 12 March 1883; *d* Palermo, 17 May 1982). Italian soprano. She studied with the soprano Amelia Pinto and made her début in 1906 in *Il trovatore* at the Teatro Costanzi, Rome. She became well known throughout Italy, appearing at La Scala first in 1908. Her roles there included

Medea in the first Italian performances of Cherubini's opera (1909) and the heroines of Spontini's *La vestale* and *Fernando Cortez*. She also sang Isolde, Norma and a wide range of dramatic roles, travelling occasionally to Spain, France and Hungary. In 1913 she sang Aida at the opening of the Verona Arena, to which she returned for the commemorative ceremonies 50 years later. She retired in 1926 and then taught in Palermo. She sang and acted in a highly charged, emotional style, her voice vibrant and her treatment of the vocal line emphatic, so that her many recordings offer some excitement as well as instructive demonstration of the methods of another age.

J.B. STEANE

Mazzoleni, Ettore (*b* Brusio, Switzerland, 18 June 1905; *d* Toronto, 1 June 1968). Canadian conductor and teacher of Swiss-Italian parentage. Educated in England (Oxford and the RCM), he moved to Toronto in 1929 to be a schoolmaster but was soon drawn into the city's musical life. He was appointed conductor of the orchestra at the conservatory, lectured in the history of music there, and wrote witty and literate programme notes for the Toronto SO. As his reputation as a conductor grew he became much in demand as a guest, conducted many broadcasts and instituted conducting classes at the conservatory. In 1943–4 he was associate conductor of the Toronto SO.

In 1945 Mazzoleni became principal of the Toronto Conservatory (now the Royal Conservatory of Music of Toronto), a post he held until his death. A reorganization of the conservatory put the opera school under his vigorous direction, and out of this sprang the Opera Festival Company, the forerunner of the Canadian Opera Company. Mazzoleni conducted the North American premières of Arthur Benjamin's *A Tale of Two Cities* (in 1954) and Willan's *Transit through Fire* and *Deirdre*, and first performances in Canada of works by Vaughan Williams, Butterworth and Hanson. Among his many pupils were George Hurst and Victor Feldbrill.

GODFREY RIDOUT

Mazzone, Marc'Antonio (*b* Miglionico, province of Matera, ?1540–50; *d* in or after 1593). Italian composer and poet. In the dedication of his canzoni (1591) he described himself as being 'of a more mature age' than in 1569, when he published his two books of madrigals, so he was probably quite young at that time. He was then living in Venice and probably continued to do so. He taught the Neapolitan noblemen Tommaso Salernitano and Antonio Grisone, whose protection he enjoyed. He was also on friendly terms with Giovanni Leonardo dell'Arpa, Stefano Landi, Giovanni Domenico da Nola and Rocco Rodio, and his anthology of *napolitane* of 1570 includes pieces by them. He believed strongly in the close identity of music and text, whose links he stressed in the dedication of his madrigals for four voices: 'the body of music is the notes, and the words are the soul', resulting in the priority of the text, which 'the music should follow and imitate'. He held up Arcadelt as an example of a composer whose music expresses the meaning of the words. He applied his theories in his canzoni, whose words he wrote, as he stated in the dedication (but Schmidl was wrong in saying that he wrote the texts of all his secular works). In the dedication of his five-voice madrigals he offered a useful interpretative indication when he recommended performance 'with the very sweet sound of the string viols'. The dedication of his canzoni shows that he consciously cultivated religious music in his later years. He explained that the secular canzoni prefacing the spiritual canzoni in praise of the Virgin Mary were intended to entice singers towards the religious works.

PIER PAOLO SCATTOLIN

Mazzoni, Antonio (Maria) (*b* Bologna, 4 Jan 1717; *d* Bologna, 8 Dec 1785). Italian composer. A pupil of L.A. Predieri, he presented his first composition, a sacred work, in 1735. In 1736 he was admitted to the Accademia Filarmonica as a tenor and was later promoted to composer. His first opera, *Siroe, re di Persia*, was performed in Fano in 1746; two years later he was there as *maestro di cappella*. In 1751 he held the same position at S Giovanni in Monte, Bologna. He was coadjutor to Angelo Caroli at the cathedral of S Pietro in 1757, and became *maestro* in 1759. He served as *principe* of the Accademia Filarmonica in 1757, 1761, 1771, 1773 and 1784, and was one of the examiners of the young Mozart when he was admitted to that institution. A letter to Padre Martini places him in Lisbon in 1753, where he was called to assist David Perez in composing two operas for the opening of the magnificent new Teatro dos Paços da Ribeira in 1755; some of the greatest singers and theatrical personnel in Europe were present. Since Mazzoni provided the opera for the autumn, he was undoubtedly still in Lisbon on 1 November, when a great earthquake destroyed most of the city, reducing the new theatre to a pile of rubble. He was back in Italy by 1756 to prepare an opera for Treviso. There is no evidence to substantiate reports that he travelled to Russia. In 1763 he was *primo maestro al cembalo* at the inauguration of the Teatro Comunale in Bologna for the production of Gluck's *Il trionfo di Clelia*. At this time Dittersdorf heard his sacred music and pronounced it not equal to Mazzoni's reputation as an opera composer.

Mazzoni's operas show originality and a graceful, elegant style. Both the comic and the serious works consist mainly of recitatives and arias, and are representative of mid-century classical style. The serious works follow Metastasian texts closely, with some arias cut or replaced, and may include choruses, depending on the theatre; the comic works incorporate modest introductions and

finales. The late works in both genres generally include a few ensembles. *Arianna e Teseo* reveals a willingness to move beyond the ordinary: wind instruments have solos within arias and appear in obbligato recitatives, sometimes occupying entire scenes; and the march provides genuine programmatic 'battle' music.

MARITA P. McCLYMONDS, ANNE SCHNOEBELEN

Mazzoni, Francesco (*b* Abruzzo; *fl* 1569–76). Italian composer and singer. He was a singer and priest at Treviso Cathedral from *c*1569 to 1576, during which time he published two books of *napolitane* for three voices (Venice, 1569, 1570). Both books are dedicated to patrons in Treviso. The first includes works by Cesare Tudino, Lorenzo de Egidio, and Massimo Troiano; the second is entirely devoted to Mazzoni's own works. They contain strophic settings of fashionable Arcadian lyrics composed of changing rhymed couplets and a significant number of humorous poems, such as *Un ape esser vorrei* in the first book. Parallel 5ths and awkward progressions characterize his musical style.

DONNA G. CARDAMONE

Mazzucato, Alberto (*b* Udine, 28 July 1813; *d* Milan, 31 Dec 1877). Italian composer, conductor and singing teacher. He studied mathematics, intending to become an astronomer, but gave it up to study music at the Padua Conservatory. In 1834 while he was still a student his first opera, *La fidanzata di Lammermoor*, was performed in Padua with some success; it was followed in 1836 by *Don Chisciotte* in Milan. According to Fétis, he then visited Paris, where performances of Beethoven, the French operas of Meyerbeer and Halévy's *La Juive* made a deep impression on him; this is reflected in his next operas, *Esmeralda* (1838) and *I corsari* (1840). Some critics had considered his earlier works too modern, and the more conservative ones now accused him of writing noisy, difficult music lacking in melody. Public reaction was mixed: *Esmeralda* was widely performed but not always well received, while *I corsari* was a fiasco at La Scala, as was *Hernani* at Genoa. Fétis attributed his abandonment of operatic composition in the late 1840s to the advent of Verdi. A revival of his *Luigi V* at La Scala in 1852 had only a succés d'estime. His other works include sacred music and songs.

From 1839 Mazzucato taught singing at the Milan Conservatory, and later composition, music history, aesthetics and instrumentation; he was director from 1872 until his death. Among his pupils were Boito, Amintore Galli and Gomes. He translated treatises by Garcia on singing, Berlioz on instrumentation and Fétis on harmony, and he was on the editorial staff of the *Gazzetta musicale di Milano* from its inception, as editor from 1856 to 1858. From 1854 to 1857 he was 'maestro al cembalo' (and for one season also impresario) at La Scala; from 1857 to 1868 he was 'maestro concertatore'.

In 1871 he was a member of the commission headed by Verdi for the reform of musical institutions.

His son Gian Andrea (*b* Milan; *d* London, Aug 1900), was music critic for the *Corriere della sera* and in 1878 succeeded his father as professor of aesthetics at the Milan Conservatory. In 1880 he moved to London, where he was a teacher and translator of Italian, and occasional music critic.

Alberto's daughter, Elisa, composed the opera *Mr Sampson of Omaha* (1888, Omaha, Nebraska).

ANDREA LANZA

Mazzucato, Gian Andrea. Italian musician. He was the son of MAZZUCATO, ALBERTO.

Mazzuoli, Giovanni [Giovanni degli Organi] (*b* Florence, *c*1360; *d* Florence, 14 May 1426). Italian organist and composer. He doubtless had his earliest training from his father Niccolò, whom he was assisting in 1376, when Niccolò was dismissed as organist at the church of Orsanmichele. Appointed organist there in his own right in 1379, he remained in the post until 1412, though concurrently organist at S Felìcita from 1385 to 1390, when he became organist at Florence Cathedral. He remained there, assisted in his last years by his son Piero, until his death. Mazzuoli is remembered today primarily because a section was reserved for his works (but never entered) in the Squarcialupi Codex (ff.195*v*–216), where the only known likeness of him is preserved. The palimpsest manuscript *I-Fl* S Lorenzo 2211 contains more than ten of his works, but they are largely indecipherable. Two pieces, one a rather lame ballata ascribed to 'Gian Toscan', and another from the now lost Roquefort Codex ascribed to 'Johannes Florentinus', have been tentatively attributed to him by Pirrotta (ed. in CMM viii/5, 1965, and PMFC x, 1977). The Roquefort piece also appears with the more plausible French text 'Souviengne vous' in the Berkeley theory manuscript (ed. in PMFC xxii, 1989). Giovanni's son Piero (*d* 10 Sept 1430), recorded as organist at S Lorenzo from 1403 to 1415, was a Florentine notary, judge and composer; about a dozen of his works, most of them imperfectly preserved, are also found in *I-Fl* S Lorenzo 2211. He is not to be confused with GIOVANNI DA CASCIA.

FRANK A. D'ACCONE

Mbalax. A Wolof music of Senegal. *Mbalax* is rooted in the rhythms played by medium-sized closed *sabar* drums and *bugarabu* drums, punctuated by the proverbs and phrases produced by the *tama* (a small, double-headed, hourglass talking drum). Dancing, resembling traditional *m'balah* (wrestling), accompanies many *mbalax* performances. The music of Youssou N'Dour and his band, the Super Étoile de Dakar, epitomizes the highly charged rhythmic energy produced in *mbalax*, as does that of Thione Seck and his band. In the 1970s Ismael Lô and Super Diamono played a variation called *mbalax* blues that appealed to younger audiences. Additionally, the Xalam band introduced an extremely popular variation called *zouk-mbalax*.

GREGORY F. BARZ

Mbaqanga. Term used to describe two developments in black South African urban popular music.

(1) During the 1940s South African big bands started performing local melodies in swing style, evolving a style that became known as *mbaqanga* or African jazz.

(2) In the early 1960s a second style called *mbaqanga* evolved from 1950s pennywhistle *kwela* and sax jive, a transition best exemplified by the Hollywood Jazz Band. It was the first South African style to be fundamentally created in the recording studio for a mass media audience rather than for live performance and came to dominate popular music in South African townships during the 1960s and 70s. Like that of its antecedents, the harmonic base of *mbaqanga* is the cyclical repetition of four primary

il Seicento, ed. D.A. D'Alessandro and A. Ziino (Rome, 1987), 105–24

THOMAS WALKER/TIM CARTER

Montesarduus, Hieronymus. *See* MONTESARDO, GIROLAMO.

Montes Capón, Juan (*b* Lugo, 13 April 1840; *d* Lugo, 24 June 1899). Spanish composer, organist and conductor. He completed his ecclesiastical studies at the Seminario Conciliar de S Lorenzo in Lugo (1850–63), but chose music as his profession. He served as pianist for two music societies in Lugo and in 1876 founded the city's municipal band. Three years later he founded the Orfeón Lucense choral society, which achieved immediate acclaim; in 1887 the society became the Orfeón Gallego, for which Montes earned numerous prizes, including first and second prizes at the Gran Concurso Internacional de Orfeones in Bilbao (1892). He was also choirmaster and second organist at Lugo Cathedral for many years, and founder and director of the Schola Cantorum of the Seminario Conciliar.

As a composer Montes was the only Spaniard to win three first prizes at the same competition (in La Coruña in August 1890). He collaborated on two folksong collections, the *Cancionero musical de Galicia* (with C. Sampedro Folgar) and the *Cancionero musical popular español* (with F. Pedrell), and had an intimate knowledge not only of Galician folk music but also of the music of other regions of Spain. His most outstanding compositions are his *6 baladas* for voice and piano, of which *Negra sombra*, a setting of a poem by the Galician poet Rosalía de Castro, was performed throughout Europe and Latin America at the beginning of the 20th century. Among the best of his other secular works are the orchestral *Fantasía*, *Maruxiña* (a *muiñeira* for voice and piano), *Alborada gallega*, written for the Lugo municipal band, and the *Sonata descriptiva gallega* for string quartet. He also wrote almost 200 sacred works, of which the *Oficio de Difuntos y Misa de Requiem* and *Misa en Honor del Apóstol Santiago* are especially notable. His collected works, edited by J. López-Calo, have appeared as *Obras musicales de Juan Montes* (Santiago de Compostela, 1991–9).

JUAN BAUTISTA VARELA DE VEGA

Montesdoca, Martín de (*b* Utrera, nr Seville, 1525/6; *d* ?Yçalco [now Izalco, El Salvador], after 1583). Spanish music printer. He studied at the Colegio de María de Jesús at Seville, but after his father's death in 1547 he returned home; within two months he married a wealthy distant cousin, resident at Seville, and had two children, Pedro (*b* 1548) and Leonor (*b* 1552). He signed a contract on 27 April 1551 with the type founder and printer Antonio de Espinosa, who was leaving for Mexico City. On 8 May 1551 he rented a shop in Seville from the book dealer Francisco Gutiérrez, who on 1 November 1559 bought Montesdoca's press and began printing music in 1560.

On 29 March 1554 MIGUEL DE FUENLLANA's father-in-law, the Sevillian physician Juan de Salazar, signed a contract with Montesdoca for the printing of 1000 copies of the important vihuela tablature, the *Orphenica lyra* (colophon date, 2 October 1554). When an unscrupulous employee ran off additional copies, Fuenllana had to send a scout throughout Spain in search of the pirated copies.

Montesdoca also published the five partbooks of Francisco Guerrero's *Sacrae cantiones*. Again, the contract signed on 23 August 1555 illustrates the conditions of printing Guerrero's first collection (sole complete partbooks are in *US-NYhsa*). In 1556 Montesdoca published the first polyphonic choirbook issued in Spain, Juan Vasquez's *Agenda defunctorum* (copies in *E-Bbc* and *E-V*).

After his wife's death in 1557, Montesdoca was ordained priest, and in January 1561 contracted the removal of himself with at least one of his children (Pedro) to Honduras. Assigned first to minister at Tuxtla (Chiapas), he was installed as *chantre* in Guatemala City Cathedral by 17 October 1572. His years at the cathedral overlapped with those of Hernando Franco (*maestro de capilla* by about 1570). In 1584 Montesdoca resigned as *chantre* and settled as a curate at Yçalco.

ROBERT STEVENSON

Monteux, Pierre (*b* Paris, 4 April 1875; *d* Hancock, ME, 1 July 1964). American conductor of French birth. He was the father of Claude Monteux. He began learning the violin when he was six and at the age of nine entered the Paris Conservatoire, where he studied the violin with Maurin and Berthelier, harmony with Lavignac and counterpoint with Lenepveu; in 1896 he shared with Thibaud a *premier prix* for violin. When he was 12 he conducted an orchestra in Paris and elsewhere with Cortot as soloist, and in 1890, while still a student, he was engaged as violist at the Opéra-Comique (where he led his section at the première of *Pelléas et Mélisande*), and for the Concerts Colonne, of which he became assistant conductor and choirmaster in 1894. That year he also joined the Quatuor Geloso as violist, remaining with it until 1911; he took part in a performance of a Brahms quartet in the composer's presence. He was conductor of the Orchestre du Casino at Dieppe, 1908–14, and conducted at the Paris Opéra in the 1913–14 season. In 1911, as well as founding the Concerts Berlioz, Monteux was appointed conductor of Diaghilev's Ballets Russes, and thereby became responsible, between 1911 and 1914, for the premières of *Petrushka*, *The Rite of Spring* and *The Nightingale*, *Daphnis et Chloé* and *Jeux*. Each was an outstanding contribution to 20th-century music and dance, and brought Monteux into close contact with Debussy, Ravel, Stravinsky and other composers, giving him the basis of his lifelong support and understanding of their music in particular, as well as of French music in general.

Recalled from wartime military service, Monteux went in 1916 to the USA and took up a post at the Metropolitan Opera (1917–19) in charge of the French repertory. Among other works he conducted the American première of *The Golden Cockerel*. He moved to the Boston SO in 1920, where he introduced a number of recent works to

obscene; the group was then taken up by Atlantic Records, for which it recorded two albums, the first (*Back in the U.S.A.*, 1970) produced by the former critic Jon Landau and the second entitled *High Time* (1971). After moving to England in 1972 the MC5 disbanded for financial reasons and because of problems arising from drug addiction. Several of the members then pursued solo careers or formed other groups. The MC5's chief importance lies in its having laid the conceptual and musical groundwork for the punk rock of the late 1970s, primarily through its influence on the New York Dolls.

MD. *Mano destra* (It.: 'right hand'). An instruction found in keyboard music.

Mdegella, Gideon (Moses Mwalikatage) (*b* Fikanu parish, Iringa district, 23 Nov 1946). Tanzanian composer. After bush school he attended primary school, where in 1964 he began performing and training Christian school choirs and jive groups. Mdegella moved to Dar es Salaam in the 1970s and began training and organizing youth and adult choirs in 1978. Under his leadership the Azania Front Lutheran Cathedral's Kwaya Kuu won many choir competitions, coming first in the diocese in 1986. In 1988 he was appointed head of the music and choirs committee of the Eastern and Coastal Diocese of the Evangelical Lutheran Church in Tanzania for two four-year terms.

Mdegella's KWAYA compositions have been performed by the leading choirs in Dar es Salaam. Carrying messages of praise, worship and hope, his unaccompanied choral works draw on biblical verses and often on his own texts. His few non-sacred works concern special events such as visits by state guests to churches. Though rooted in the European hymnody with which he grew up, his compositions often integrate regional East African rhythmic, harmonic and melodic elements. Mdegella is involved with the Tanzanian government in reviving the country's conservatory, originally established in 1965. In the late 1990s he established the Christian Music Association, a non-governmental organization designed to promote music and other arts in Dar es Salaam, to study, record and conserve Tanzanian music history and to defend the rights of artists and composers by enhancing direct access to the music markets, thereby addressing the abuse of copyright in contemporary recording markets. Further information is given in G.F. Barz: *The Performance of Religious and Social Identity: an Ethnography of Post-Mission 'Kwaya' Music in Tanzania (East Africa)* (diss., Brown U., Providence, RI, 1997).

GREGORY F. BARZ

Mdzivani, Andrey Yur'yevich (*b* Tbilisi, 1 Oct 1937). Belarusian composer. He studied at the Belarusian Conservatory with Bogatïrov until 1969 and then went on to the Moscow Conservatory as an assistant lecturer and to study with Peyko. He taught at the Minsk Music School and, upon his return from Moscow in 1972, was the music director of the Yanka Kupala National Theatre in Minsk. From 1978 he has been on the staff of the Belarusian Conservatory and was later appointed professor of composition. It was in the 1970s that he attracted attention for his sensitive use of folksong and Belarusian choral music in his compositions, commencing a trend which continued over the following two decades. Having written a number of works based on his country's folklore and history, he is considered an important representative of the 'folklore style' and has been accordingly awarded the State Prize of Belarus' (1987). An acknowledged master of writing for an orchestra of folk instruments, he is at his best in his symphonic works which are notable for their thematic specificity, colour, sense of theatre, emotional temperature and use of contrast. In tandem with contemporary techniques, Mdzivani has shown interest in the baroque and the music of the Orthodox Church in addition to various aspects of Belarusian folklore including ancient calendar and ritual songs, forms of horizontal and vertical structuring, and polyphonic traditions.

VALENTINA ANTONEVICH

Me. The mediant of a major scale or the fifth degree of a minor scale in TONIC SOL-FA.

Meacham. American family of wind instrument and piano makers. John Meacham jr (*b* Enfield, CT, 2 May 1785; *d* Albany, NY, 8 Dec 1844) and Horace Meacham (*b* Enfield, CT, 19 July 1789; *d* Albany, NY, 1861) were brothers, and were among the first American wind instrument makers. They may both have served an apprenticeship with George Catlin (*fl* Hartford, CT, 1799–1814, and Philadelphia, 1814–?1852); John almost certainly did and is by far the more important. The only Meacham instruments known to have been made in Hartford are a boxwood 'straight' model two-key oboe with ivory mounts, the earliest known American oboe, and a handsome four-key bassoon, which is one of the earliest American bassoons (for illustrations, see Eliason,

1979–80). In either 1810 or 1811 John moved to Albany, and was soon followed by Horace; in 1814 they bought a store and workshop for $7000. They used a number of different stamps, of which three are clearly from the period 1811–27: Meacham, J. Meacham, and J. & H. Meacham. When Sylvanus Pond (later of Firth, Hall & Pond) was taken on as a partner the firm became known as Meacham & Pond (1828–32), and after his departure as Meacham & Co. (1832–*c*1850). The Meachams eventually began also to make pianos, apparently under the influence of Horace's son Roswell. It is doubtful if any instruments were made after about 1850, although Roswell maintained a 'music and military store' until about 1860. 48 Meacham woodwind instruments survive; these are mainly boxwood flutes and clarinets (see *YoungHI*). There is also a drum, a copper key bugle and a few pianos bearing the Meacham label. It is significant that of nine known American bassoons made before 1860 six were made by Catlin and three by his probable protégés, the Meachams. Another interesting Meacham instrument is the four-key flute once owned by Henry David Thoreau (now in the Antiquarian Society at Concord, Massachusetts), who carved his name and the date 1845 on the instrument.

PHILLIP T. YOUNG

Meadows White, Alice Mary. *See* SMITH, ALICE MARY.

Meale, Richard (Graham) (*b* Sydney, 24 Aug 1932). Australian composer. Largely self-taught as a composer, he studied the piano, the clarinet, the harp and theoretical subjects at the NSW (now Sydney) Conservatorium but did not complete a diploma. Working in a Sydney record store during the early LP era afforded him an opportunity to keep abreast of the newest musical developments in Europe and the USA. Many of his earliest works, most now withdrawn, have a Hindemithian or late Brahmsian gait, with much use of enharmonic shifts. He reports to have stuffed a more adventurous score down the lavatory for fear it should be thought evidence of some derangement in his artistic make-up. Radical examples in musical creation excited him, however, particularly the kind of ecstatic stasis (or sudden immobilization of impetus) audible in the music of Messiaen and Boulez.

Meale was eventually emboldened to startle his Australian contemporaries with *Orenda* for solo piano (1959) and the Flute Sonata (1960). In the first movement of the sonata, one set of piano chords proceeds through a series of expanding durations; similar principles in the flute part produce controlled decelerations and accelerations. In the third movement the piano moves through chords of decreasing duration (a controlled accelerando), but is also instructed to accommodate the pace of the flute line. The fourth and final movement is an exercise in raw excitement, fuelled by the flautist's repeated production, in its closing bars, of the highest E obtainable on the instrument. (The score includes a note of reassurance to the flautist not to worry if the note is sharp: the effect of forcing the pitch is exactly what Meale intended.) The sonata was the most stylistically advanced music by an Australian composer heard in Australia up to that point, earning Meale the position of leader of the local avant garde. A Ford Foundation grant, awarded on the basis of the score, took him briefly to UCLA, where he studied Asian musics; in transit, he visited Spain, a country for which he experienced an immediate artistic sympathy. The composition was also chosen for performance at the 1963 ISCM festival in Amsterdam.

The first work Meale completed after his return from UCLA, *Las alboradas* (1963), demonstrated his ability to employ the vocabulary of postwar dodecaphony without necessarily adopting serial procedures in a systematic way. A much stronger, even violent, impression was made by *Homage to García Lorca* (1964), a five movement work for double string orchestra that displays his preoccupation with Spanish subjects. The strength of the piece, which achieves a sublimation of the disjunct gestures of its opening paragraphs in an emotionally anguished postlude, lies in its stereophonic fracture of chordal aggregates and its layering of breathlessly articulated textures. *Images* (1966) makes reference to elements of Japanese theatre music and briefly releases its gestural constriction in a passage for trumpets reminiscent of Giovanni Gabrieli's brass writing. (Meale's Japanese homage came at a time when other Australian composers, notably Peter Sculthorpe, were also turning to Asian musics.) Orchestrally, Meale proceeded to speak in at least three contrasting voices: the moist, glittering profuseness of his *Nocturnes* (1967) with their glinting solo vibraphone, celeste and harp accents, often considered his

Richard Meale

orchestral masterpiece; the understated elegance and quietness of his two tributes to the economy of Japanese haiku, *Soon it will die* and *Clouds now and then* (both 1969); and the almost Berliozian grandeur of instrumental confrontation in *Very High Kings* (1968), the first in a series of projected works on Christopher Columbus.

Meale's next major creative adventures were the aptly named solo piano piece *Coruscations* (1971), and a series of pieces for chamber ensembles in which *Interiors/Exteriors* (1970) and, above all, *Incredible Floridas* 'Homage to Arthur Rimbaud' (1971) stand out for their elated fluency and energy of invention. *Incredible Floridas*, commissioned for the Fires of London, represents the finest achievement in Meale's advanced and eventful style. It can be seen, in retrospect, as the climax and end of his career as leader of avant-garde composition in Australia. In opting for greater linear fragmentation than ever before, Meale linked the music to its inspirational source, the tumult of images thrown up by Rimbaud's writings. The title is taken from Rimbaud's most famous poem, *Le bateau ivre*, the title of which is itself appropriated as the subtitle of the third section of the work, Sonata I; the titles of three pieces from *Les illuminations* are used as subtitles of the Interlude, the fourth section of the score; *Une saison en enfer*, the title of Rimbaud's second collection of prose poems, is borrowed for the fifth section, Sonata II, and appears as part of the cluster of titles of the Postlude. Meale's comments on the work indicate, however, that any attempt to interpret the music in the light of specific passages of Rimbaud's texts would be misguided; instead it forms a general and intuitive response to the spirit of Rimbaud's words. Nevertheless, Meale's use of serial procedures in the Interlude offers a musical parallel to the formulas of magic and alchemy on which Rimbaud draws in sections of his work.

Once a symbol of musical radicalism, Meale began in the 1970s to turn away from his advanced style. He started to cultivate melody and harmony in a way that reflected a greater reliance on empirical exploration at the keyboard. The warming and simplification of his manner can already be heard in *Evocations* (1973), written for Heinz Holliger, but does not become fully apparent until *Viridian* (1979). Featuring sustained melodies and traditionally coherent successions of harmonies united with beautifully judged instrumental colour, *Viridian* has been recognized as one of his finest achievements. His stylistic journey was not to end there, however. Its surprising trajectory announced itself more fully in the differences between the First (1975) and Second (1980) string quartets. The earlier work is a kind of Carteresque critique of the genre, separating the players on the platform and making them direct their contributions away from one another; its manner is restless, its texture fragmented. The Second Quartet, embodying elegiac feelings for a friend, is by no means timid in its Bartókian moments of rhythmic forcefulness, or in its Debussian refrain figure. In its third and fifth movements, however, the lyricism is intense and sustained, representing Meale's readiness to be judged by the quality of his invention in the simplest of textures. The final movement '*Cantilena pacifica*', escapes a cloying sweetness by balancing long melodic lines (subdivided within a 4/4 time signature) with a wash of 12/8 metre in which the accents of accompaniments and melody rarely coincide.

Meale's rediscovery of sustained melody in his instrumental works of the late 1970s and early 1980s may have influenced the style and textures of his first opera, *Voss* (1979–86), based on the novel of the same name by Patrick White. Unlike a number of works commissioned by the Australian Opera (now Opera Australia) in earlier years, Meale's score received enthusiastic backing from within the company (notably from musical adviser Stuart Challender) and was performed almost as soon as it was ready. *Voss* is a suprarational work in which the central character (like the historical figure Ludwig Leichhardt) is a German-born explorer of high ideals, ardent temperament and erratic methods. While he is exploring the Australian interior and moving towards a visionary identification with the landscape, his mystical communications with the Sydney-based heroine, Laura, are sustained through a vocal simultaneity that links the characters, despite their separation by many hundreds of miles of unmapped terrain. In scenes associated with Sydney's colonial society, Meale has been criticized for his extensive and literal use of a set of quadrilles (based on themes from Adolphe Adam's *Giselle* and elsewhere) published in the 1840s, the period of Voss's fictional journey, which use Aboriginal place names as titles of individual sections. While other composers might have quoted these pieces tangentially, Meale supplies not merely a nostalgic reference to traditional music of the period but a reinvention of the tradition itself. Chorus comment and individual snatches of dialogue are set over sprightly dance music in a quasi-Verdian fashion. The tone of these passages is later contrasted with music representing the explorer's progress through a strange land and the theatrical-symbolic consequences of a curiosity that pushes towards martyrdom. *Voss* might be less than completely successful in matching the strangeness of the landscape with music of a sufficiently distinctive character, yet its musical vocabulary is accessible and its representation of colonial society persuasive enough to offer its audiences the chance to become reacquainted with some of their own history. The garden scene in Act 1, in which Voss and Laura state their notions of love, is of a lyrical consistency and memorability that surpasses questions of musical modernity.

The favourable reception of *Voss* from performers and audiences alike encouraged Meale and Opera Australia to create and stage a second opera almost immediately. *Mer de glace* (1986–91) is based on the circumstances surrounding Mary Shelley's writing of *Frankenstein*. In the opera, Mary's husband Percy, Lord Byron and Dr Polidori are deemed to have figured prominently in the creative process. Meale's score, endlessly inventive in instrumental colour and powerful in imagination, seems well matched in style and scope to the story. Byron's transformation into the idea of the monster, however, proved difficult to establish in a staging burdened with incidental distractions.

Although Meale's stylistically advanced music is characterized by a counterpoint of gestures and small, disjunct incidents, his more traditional music of later years appears strikingly unconcerned with counterpoint, preferring homophonic-chordal, or melody-and-accompaniment textures. This is true even of the Symphony, commissioned for the 1994 Adelaide Festival. Representing a reversion to traditional practice more thorough than any of his previous major scores, the work begins with a passage

reminiscent of Brahms and proceeds through music that recalls several early Romantic masters. Its act of reconciliation is to link its Brahmsian inflections with a paragraph for brass instruments that acts like a Brucknerian refrain. The Symphony ends with this refrain, followed by string figurations that rustle into silence. If Meale outdistanced his Australian contemporaries in the speed with which he flourished in a technically advanced style, his return to more traditional textures and themes was also more drastic than that of any of his rivals. *Mélisande* (1996) for solo flute, apart from beginning and ending with the same notes as Debussy's *Syrinx*, quotes a thematic fragment associated with the first appearance of Debussy's operatic heroine, finding in the extension of this reference a stylistic link between Meale-the-radical and Meale-the-traditionalist.

Mealli, Giovanni Antonio Pandolfi. *See* PANDOLFI MEALLI, GIOVANNI ANTONIO.

Meane [mean, mene] (from Old Fr. *moien*, or *meien*: 'middle'). English term referring originally to the middle part of a three-voice polyphonic texture. R. Brunne's *Chronical of Wace* (*c*1630) refers to 'the clerkes that best couthe synge, wyth treble, mene & burdoun'. In discussions of discant, 15th-century theorists (Leonel Power, Pseudo-Chilston) applied 'mene' to the part sounding a 5th or a 3rd above the plainchant. In the Mulliner Book ten compositions by John Redford (*d* 1547) bear such titles as 'Lux with a meane'; these are three-part keyboard works in which the middle part is ingeniously passed back and forth between the two hands, the notes being written in black to guide the eye. Morley (*A Plaine and Easie Introduction*, 1597) used 'mean' synonymously with 'altus', while Campion (*A New Way of Making Fowre Parts in Counter-Point*, *c*1615) and Playford (*A Breefe Introduction to the Skill of Musick*, 1654) spoke of the 'Mean or Counter-tenor'. Playford also stated that in his time the second and third strings of the viol were called the small and great mean. As late as 1721 Alexander Malcolm (*A Treatise of Musick*) spoke of the movable C clef as the 'mean clef'. The interpretation of 'meane' as a cantus firmus, found in some writings, is not historically valid.

OWEN JANDER

Mean-tone. A system of temperament or a tuning of the scale, particularly on instruments lacking any capacity for flexibility of intonation during performance, which differs from the equal-tempered system normally used on such instruments today. In its most restricted sense the term refers, like its German equivalent *mitteltönige Temperatur*, to a tuning with pure major 3rds (frequency ratio 5:4) divided into two equal whole tones (whereas in JUST INTONATION there are two sizes of whole tone corresponding to the ratios 9:8 and 10:9); to achieve this the tuner must temper the 5ths and 4ths, making the 5ths smaller and the 4ths larger than pure by a quarter of the syntonic comma, hence the label '$\frac{1}{4}$-comma mean-tone', a more specific name for the same kind of tuning.

A broader and equally legitimate use of the term (dating back to such 18th-century writers as Sauveur and Estève) includes any Renaissance or Baroque keyboard tuning in which a major 3rd slightly smaller or, more often, slightly larger than pure is divided into two equal whole tones (see Table 1). In $\frac{2}{7}$-comma mean-tone temperament, for example, the major 3rds are $\frac{1}{7}$-comma smaller than pure, whereas in $\frac{2}{9}$-comma mean-tone they are $\frac{1}{9}$-comma larger and in $\frac{1}{6}$-comma mean-tone they are $\frac{1}{3}$-comma larger. In

TABLE 1: Tempering of triadic concords, measured in cents

A negative number means that the interval is smaller than pure. For comparison the equivalent figures are included for equal temperament and Pythagorean intonation

	4ths	major 3rds	major 6ths	wolf 5th
1/3-comma mean-tone	7	–7	0	56
2/7-comma mean-tone	6	–3	3	44
1/4-comma mean-tone	$5\frac{1}{2}$	0	$5\frac{1}{2}$	36
2/9-comma mean-tone	5	2	7	29
1/5-comma mean-tone	$4\frac{1}{2}$	$4\frac{1}{2}$	9	24
1/6-comma mean-tone	4	6	10	$19\frac{1}{2}$
equal temperament	2	14	16	no wolf
Pythagorean intonation	0	$21\frac{1}{2}$	$21\frac{1}{2}$	$-23\frac{1}{2}$

each case the major 6th (or minor 3rd) is perforce tempered the sum of the amounts by which the major 3rd and 4th are rendered larger than pure; and a 12-note scale will include one sour 'wolf 5th' considerably larger than pure because the other 11 are tempered more than enough to make a 'circle' of identical 5ths as in equal temperament. Hence the tuner about to set a mean-tone temperament must choose not only a particular shade of mean-tone (e.g. $\frac{1}{4}$- or $\frac{1}{5}$-comma) but also a particular disposition (e.g. with the wolf 5th at C♯–A♭, G♯–E♭ or D♯–B♭).

In all mean-tone temperaments the diatonic semitone is larger than the chromatic semitone, so that E♭ is higher than D♯, A♭ higher than G♯ and so forth; and a diminished 7th (e.g. G♯–F) is larger than a major 6th (A♭–F), a diminished 4th (G♯–C) larger than a major 3rd (A♭–C), etc. Triads generally sound more resonant in a mean-tone temperament than in equal temperament, though in varying degrees depending on the musical style, the instrument, the acoustical circumstances and the precise shade of mean-tone used. The most resonant shades are generally those in which the major and minor 3rds are tempered least; but these ($\frac{2}{7}$- or $\frac{1}{4}$-comma mean-tone) also have the largest diatonic semitones and hence the lowest leading notes.

Although some 17th-century musicians considered the large diatonic semitone of $\frac{1}{4}$-comma mean-tone to be, as Mersenne (1636–7) put it, one of the greatest sources of beauty and variety in music, most musicians today would be likely to prefer the smaller diatonic semitones of equal temperament or Pythagorean intonation; a modern connoisseur might therefore find in $\frac{1}{5}$- or $\frac{1}{6}$-comma mean-tone a nice compromise between the relative virtues of $\frac{1}{4}$-comma mean-tone and equal temperament. For the history of mean-tone temperaments in performing practice, *see* TEMPERAMENTS, §§3 and 6; see also Padgham, Collins and Parker (1979).

Various shadings of regular mean-tone temperament correspond closely to certain divisions of the octave into more than 12 equal parts. A number of 18th-century theorists aware of these manifold possibilities sought to show that some particular division of the octave with intervals approximating to some shade or other of mean-tone was better than all the others. In the 16th and early 17th centuries Salinas, Costeley and Titelouze had used the 19-tone division (equivalent to $\frac{1}{3}$-comma mean-tone), and in 1691 Christiaan Huygens had advocated the 31-part division (corresponding to $\frac{1}{4}$-comma mean-tone), which Vicentino may have used in the 1550s (see Lindley, 1982). Sauveur (1701) preferred the 43-part division (corresponding to $\frac{1}{5}$-comma mean-tone); Henfling (1710) and Smith (1749) the 50-part division (corresponding to 5/18-comma mean-tone); Telemann (1743) and Romieu (1758) the 55-part division (corresponding to $\frac{1}{6}$-comma mean-tone); and Riccati (1762) the 74-tone division (corresponding to $\frac{3}{14}$-comma mean-tone). Estève (1755) said that the most perfect system was 'between that of 31 and that of 43', by which he meant some shade of mean-tone between $\frac{1}{4}$- and $\frac{1}{5}$-comma.

The term 'mean-tone temperament' and its Italian equivalent *systema participato* have sometimes been used to refer to certain schemes in which only the seven naturals of the keyboard (and perhaps not even all of them) conform to any of the regular mean-tone patterns discussed above; the characteristics of such irregular tunings are described in TEMPERAMENTS, §§4 and 7, and in WELL-TEMPERED CLAVIER.

MARK LINDLEY

Meares [Mears, Meers]. Two English instrument makers, music publishers and sellers, father (*d* ?London, ?1722) and son (*b* London, ?1671; *d* London, ?1743). They were active in London from the 1660s to 1743. Richard Meares the elder was possibly the leading maker of viols of his time; he also made lutes and other string instruments. His instruments are usually distinguished by their tasteful purfling and woodwork, and high-quality varnish. He may have been the teacher of Edward Pamphilon, Barak

Opening of Act 2 of Handel's 'Radamisto' (London: Meares, 1720), 44: engraving by Thomas Cross

Norman and Nathaniel Cross. Instruments can be seen at the Victoria and Albert Museum, London (bass viol, *c*1677), the Metropolitan Museum of Art, New York City (bass viol, *c*1682), and the Dolmetsch Family Collection, Haslemere (alto viol, *c*1668). Richard Meares the younger is credited with few instruments, and these tend to be of the violin family, then newly fashionable in society.

The firm sold music, and advertised it from at least 1699, but seems not to have begun publishing (defined as being named in the imprint) until 1714, when it issued Mattheson's *Pièces de clavecin*, as Hawkins records; Hawkins also suggests that it was the eponymous son who developed the publishing side of the business. From 1717, when publishing began in earnest, to 1724 the Meares firm was one of Walsh's rivals, and each copied the other's publications. The firm's best publications rank among the finest of the period, and include Croft's *Musicus apparatus academicus* (1720), Handel's *Radamisto* (1720; see illustration) and *Suites de pièces pour le clavecin* (1720), Ariosti's *Il Coriolano* (1723), John Church's *An Introduction to Psalmody* (*c*1723), and sonatas by Castrucci, Corelli, Geminiani and others. THOMAS CROSS often engraved the plates of the firm's publications.

The two Richard Meares should not be confused with a typographical music printer named H. Meere, who printed one or two works for Walsh in 1716–19, or with W. Mears, a bookseller active about 1713 to 1734, who published the text and music of several ballad operas and some editions of the Psalms with music.

PETER WARD JONES, DAVID HUNTER

Mears & Stainbank. Firm of bell founders, since 1968 called the WHITECHAPEL BELL FOUNDRY.

Measure (i). A term used, sometimes in its plural form, in a variety of senses in England in the 16th century and the early 17th with reference to both music and dance. As a musical term it was used to denote mensuration and tempo, and appeared in the title of a number of duple- and triple-time pieces. As a choreographic term it is used to indicate a manner of performing dances, their spatial measurement, the name of a choreographic unit of the basse danse, a type of dance, and as a general term for dancing (e.g. 'to tread a measure').

As a dance form, the measure replaced the basse danse as the principal social dance type of its time. The term derives from the sections of the basse danse which were called 'mesures' in French or 'measures' in English, and, like the pavan, the 'measures' was a slow dance in duple time. They were, however, more elaborate: whereas in the pavan the dancers simply moved forwards and backwards, in the measures they also moved sideways and in circles. In contemporary sources the measures are much more frequently cited than the pavan.

The best example of the measures as a social dance is the double suite of eight dances known as the 'Old Measures'. The choreography for this suite is first recorded, albeit imperfectly, in a manuscript from about 1570 (*GB-Ob* Rawl.Poet.108, ff.10*r*–11*r*). There are seven manuscripts from the 1570s to the late 17th century, and a printing of a putative manuscript by the literary forger John Payne Collier. Although all the sources are in some way defective (the best is *GB-Lcm* 1119, ff.1*r*–*v*), it is possible to reconstruct the choreographies. The dances are the Quadran Pavan, Turkelony, The Earl of Essex' Measure, Tinternell, the Old Almain, the Queen's Almain, Cecilia Almain and the Black Almain. Although the first four are supposedly of the pavan type and the other four are entitled 'almain', there is no readily discernible musical or choreographic difference between them; in fact, in one source the Cecilia Almain is called 'Madam sicillia pauin'.

Only the Quadran Pavan and The Earl of Essex' Measure have their own music; the other choreographies share their tunes – Turkelony with Tinternell, the Old Almain with the Queen's Almain, and Cecilia Almain with the Black Almain. The requisite music survives in only one choreographic source (*GB-Lcm* 1119, ff.23–4), but this offers inaccurate versions of only three of the tunes. Otherwise the music is to be found in arrangements for instrumental ensemble, keyboard, lute or cittern; in practice these measures were probably accompanied on most social occasions by instruments of the violin family.

The term 'measure' is found in plays and masques of the period generally as a synonym of 'dance', except in the Revels of Jacobean masques where it probably signifies the Old Measures.

The measures declined in popularity around 1630, except as an entertainment at the Inns of Court, London, where they survived until the last decades of the 17th century.

ROBERT MULLALLY

Measure (ii). A term in American usage equivalent to 'bar' in English usage when referring to a metrical unit rather than 'bar-line'. For 'bar-line' the American term is 'bar'. *See* BAR.

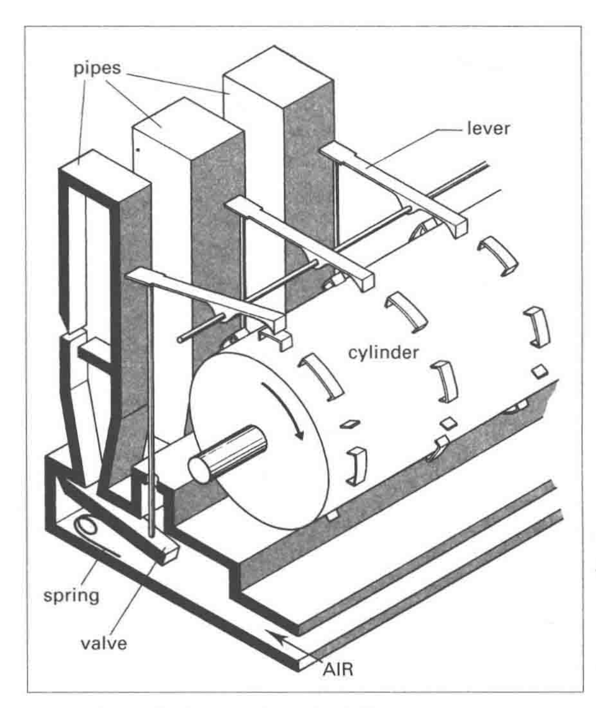
Meat Loaf [Aday, Marvin Lee] (*b* Dallas, 22 Sept 1947). American rock singer. He has been the principal interpreter of the songs of Jim Steinman. In California in the late 1960s Meat Loaf had led the bands Meat Loaf Soul and Popcorn Blizzard. He and Steinman first collaborated in New York in the early 70s when Meat Loaf appeared in Steinman's stage show *More than you Deserve*. He subsequently appeared in the film version of Richard O'Brien's cult musical *The Rocky Horror Show* before recording the hit album *Bat out of Hell* (Epic, 1978). Produced by Todd Rundgren, this included songs from another Steinman show, *Never Land*, among them 'Two out of three ain't bad', 'Paradise by the Dashboard Light' and 'You took the words right out of my mouth'. His

powerful tenor was perfectly suited to Steinman's almost operatic rock ballads and on tour, the large singer enthralled audiences with flamboyant and outrageous stage shows. During the 1980s Meat Loaf made further recordings including *Dead Ringer for Love* (a duet with Cher), *Midnight at the Lost and Found* and *Modern Girl*. In 1993 he resumed his partnership with Steinman who produced the album *Bat out of Hell II: Back into Hell* which included the international hit single 'I would do anything for love (But I won't do that)'. Meat Loaf's delivery of this rock ballad highlighted his and Steinman's tongue-in-cheek attitude to the generic clichés of heavy rock.

DAVE LAING

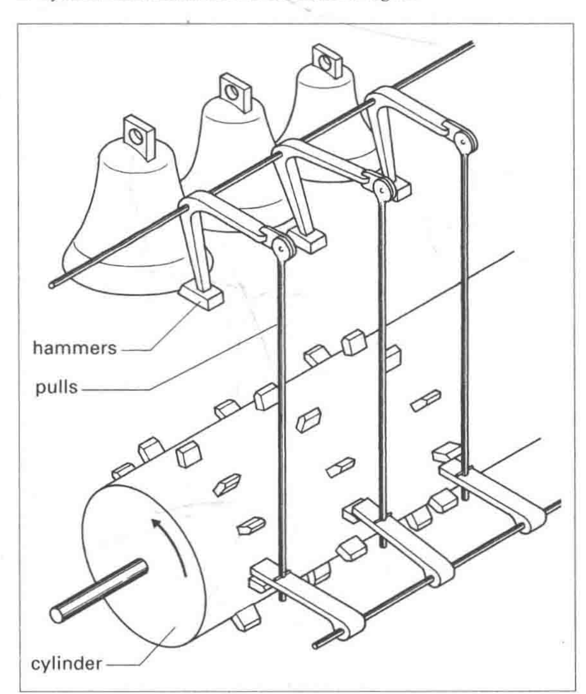
Meccanica (It.). *See* ACTION.

Mechanical-Copyright Protection Society [MCPS]. *See* COPYRIGHT, §III, 16(ii).



Mechanical instrument. A musical instrument which is enabled to play music automatically from a predetermined and repeatable mechanical programme. Some mechanical instruments operate without human participation (beyond setting the instrument in motion); others require some degree of manual or pedal control (turning the playing mechanism, working bellows or operating expression devices). This definition excludes sound reproduction machines such as the gramophone.

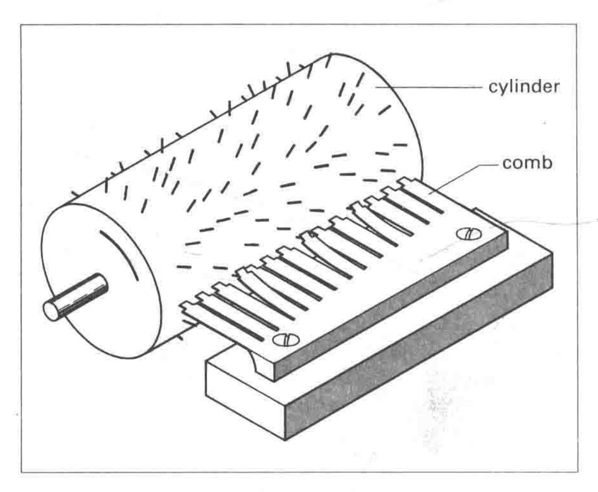
1. Types of musical movement. 2. History to the early 19th century. 3. Types of instrument: (i) Bells and chimes (ii) The musical comb (iii) Mechanical organs, reed organs, pianos and composite instruments (iv) Mechanical miscellany. 4. Decline and revival.



1. TYPES OF MUSICAL MOVEMENT. The most important part of a mechanical instrument is the device for regulating the musical sounds. The oldest and most common form is a close-grained wooden (traditionally poplar) cylinder, the surface of which is provided with projections representing the particular note sequence to be played. In organs metal pins are driven into the barrel for short notes, and staples of various lengths for longer ones (fig.1). The pipes sound when levers controlling the valves of the pipes are lifted by the pins or staples. In non-sustaining instruments (carillons, musical boxes, player pianos, etc.) only studs or pins are needed (figs.2, 3 and 4). Metal cylinders are commonly used for large church carillons, and for small musical clocks and musical boxes. The technique of noting music onto the barrel, though mentioned in texts from the 9th century onwards (*see* §2 below), was first described in detail in the 18th century by M.D.J. Engramelle and F. Bédos de Celles (*see* ENGRAMELLE, MARIE DOMINIQUE JOSEPH).

The disadvantage of cylinders is that they are of limited duration, and instruments with exchangeable cylinders tend to be subject to damage during the change-over process. Later musical boxes used interchangeable steel discs with projections or slots (fig.5; *see also* MUSICAL BOX). Strips of card or paper can, of course, be of any length, and are easily exchangeable. In his Antiphonel of 1846, designed as an automatic player of pianos and organs, the French instrument maker A.-F. Debain used, instead of a cylinder, *planchettes*: lengths of wooden board studded with pins.

Programming in the form of perforations in zig-zag folding strips of card had been used in mechanical looms since the early 19th century. Perforated cardboard books



1. *Cylinder mechanism used in mechanical organs*

2. *Cylinder mechanism used in carillons and chiming clocks*

or paper rolls were adapted to mechanical instruments in two ways: with mechanical or pneumatic action. In 1852 Martin Courteuile took out a patent for a perforated cardboard strip in which the jacks of the instrument were operated by a linkage controlled by the holes in the strip. A later development of this system was invented for the 'Cartonium', an instrument made in 1861 by J.A. Testé of Nantes, and was adopted in many mechanical instruments using free metal reeds (*see* ORGANETTE and PLAYER

3. Metal comb and cylinder of a musical box

ORGAN). In this system, shown in fig.6, levers controlled the valves that allowed wind to reach the free reeds (*see* FREE REED). At the other end of the levers jacks were placed in a row protruding slightly above the lid of the box. In this position the valves were open, and if the pedals operating the bellows were pumped all the reeds would sound simultaneously. The jacks fitted into grooves in a round metal ledge (not shown in fig.6). If a strip of cardboard was passed between the ledge and the jacks, the latter would be forced down, closing the valves. Jacks could only open the valves when so permitted by a hole passing in the strip above. An instrument using this system is shown in fig.7.

In 1842 Claude-Félix Seytre of Lyon adapted the pneumatic perforated card system of the Jacquard loom (invented 1801) to a pneumatic piano called the Autophon. The holes were linked with pipes which conducted compressed air from the pedal bellows to the small cylinders attached to each of the keys of the instrument. In each of the cylinders there was a small air-driven piston which moved a jack, which in turn made the hammer strike the string from below. It was not until the 1880s that pneumatic systems were systematically applied to mechanical instruments, firstly to organettes, then to larger player reed organs.

By 1890 pneumatically operated mechanisms using paper music rolls were being used in the push-up PIANO PLAYER and facilitated, after the turn of the century, the development of the PLAYER PIANO with its internal mechanism. The most sophisticated application of this technology was in the REPRODUCING PIANO, first introduced by Welte in 1904, on which the performance of the pianist, with all its nuance of expression, could be recorded on the music roll and then played back. Pneumatic systems, usually powered by electricity (hence 'electro-pneumatic action'), were also applied to many varieties of orchestrion and piano-orchestrion (see §3(iii) below); the technology made possible the creation of piano-orchestrions combined successfully with violins played by pneumatically-operated mechanical 'fingers'.

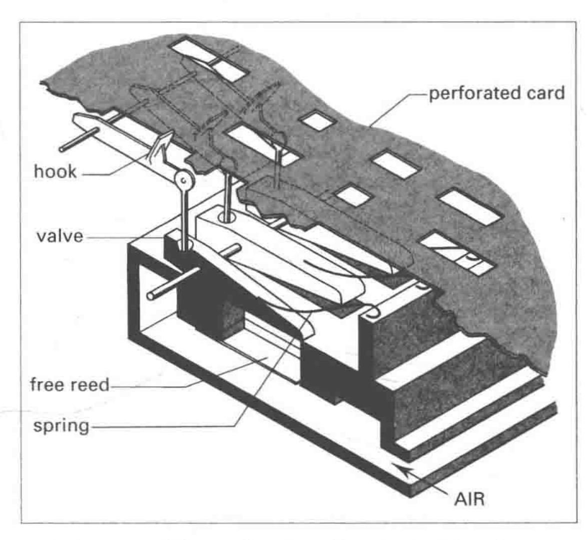
In 1892 the Parisian firm GAVIOLI patented a folding cardboard book playing organ with a pneumatic action

4. Mechanism of a barrel piano

5. *Double-disc musical box (the 'Symphonium'), German, late 19th century (private collection)*

to replace the cumbersome wooden barrel, and soon afterwards the majority of makers of fairground and dance organs used this kind of action; it shares with the paper roll an unlimited length of playing time but has the advantage, for instruments designed for outdoor and heavy-duty use, of the greater durability of cardboard over paper. Electro-pneumatic action was the ultimate development of automatic musical movement before the application of digital technology in the late 1970s (see §4 below).

2. History to the early 19th century. The endeavour to create sound by mechanical means can be traced to the remote past. At first these efforts had practical purposes (e.g. for signalling) or religious connotations (e.g. to create voices as of the dead). On the Indonesian paddy fields water currents in the irrigation channels are still used to set in motion tuned bamboo tubes, which strike rhythmically against stones and produce repeating musical phrases.



The earliest mechanical instruments seem to have been flutes or organs driven by continuously flowing water and often attached to automata such as singing birds. They were first described in texts originating in Greek sources of the 3rd century BC, particularly those of Philo of Byzantium and Apollonius of Perga. (For discussion of these instruments and sources see Hydraulis; Organ, §IV; and Water organ.) Hero of Alexandria (*On pneumatics*, 1st century CE) described various applications of the water organ, including automaton singing birds and 'trumpet-playing' temple doors. He also described how the bellows of a hydraulis could be pumped by a windmill rather than by hand.

The first description of a mechanical instrument with a musical programme was written between 812 and 833 by three brothers, Muḥammad, Aḥmad and Al-Ḥasan, known as the Banū Mūsā, who were then leading the organizers of Arab science in Baghdad. They described a hydraulically-blown flute to which they added a rotating cylinder on the surface of which were projecting pegs to lift levers which uncovered the apertures in the body of the flute. Also in the first half of the 9th century two automata with artificial trees and singing birds were devised by Leo the Mathematician for the Emperor Theophilus of Byzantium (for a 12th-century drawing of this, *see* Organ, fig.24). A similar device appeared in western Europe in about 1250, mentioned by the poet Konrad von Würzburg.

Rotating cylinders were first applied to church-clock chimes (*see* Chimes, §2; and Musical clock) in the early 14th-century; the simple chimes were developed into fully chromatic carillons in the 16th and early 17th centuries (*see* Carillon). From the 15th to the 17th centuries the principal forms of mechanical instrument were the carillon and the Barrel organ. Elaborate out-door water organs also enjoyed a renewed vogue among the nobility (*see* Water organ). In the late 15th century Leonardo da Vinci proposed a spinet and two drums apparently played from a cylinder; a century later spinets that could be played either manually or by a clockwork-driven pinned barrel were being made, especially in Augsburg by the Bidermanns (*see* Bidermann family) and Viet Langenbucher. Mechanical organs and spinets were built into elaborate cabinets and musical clocks, complete with automata.

The Thirty Years War (1618–48) put an end to this industry, and it was not until the beginning of the 18th century that mechanical instrument manufacture flourished again. The period 1720–1820 is sometimes regarded as the 'Golden Century' of mechanical instruments. Elaborate organ- or flute-playing musical clocks (so-called – they were clockwork-driven, but may or may not have a timepiece attached) became fashionable, especially in London, Vienna and Berlin (where they were known as *Flötenuhr*), and attracted compositions by many major composers, including Handel, C.P.E. Bach, Haydn, Mozart and Beethoven. Extant barrels from these instruments preserve important musicological evidence of contemporary performance style, regarding, for example, tempos and ornamentation.

Until the end of this 'Golden Century' period, apart from large carillons and occasionally barrel organs at

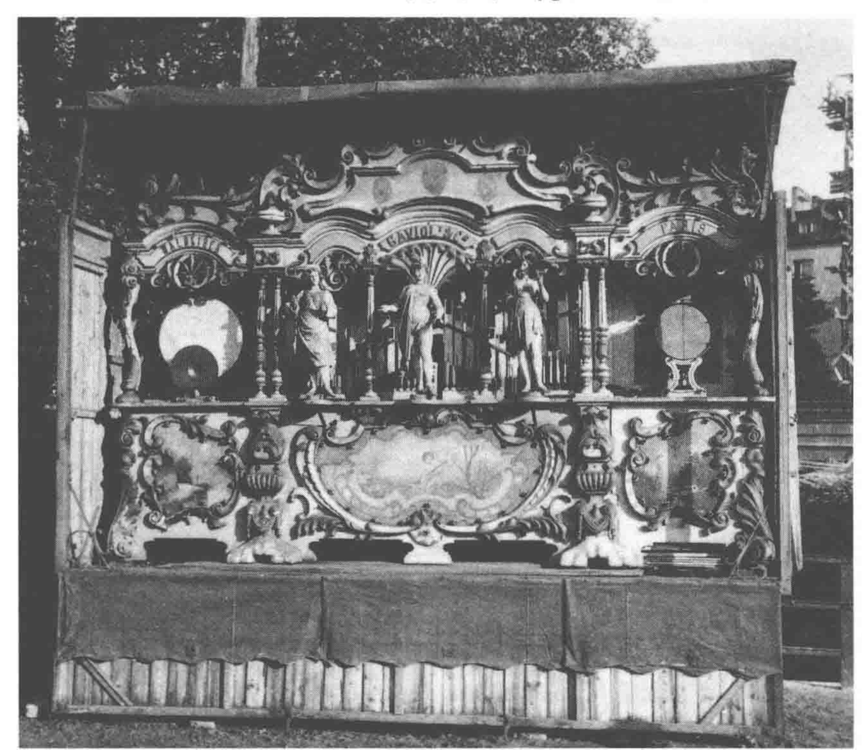
6. *Mechanism with free reeds activated by a perforated card*

7. Manopan with perforated card after Testé's model (Národní Muzeum, Prague)

churches, mechanical instruments were expensive novelty items for the wealthy – gifts exchanged between rulers (e.g. the musical clock containing a carillon, barrel organ and singing-bird automata given to the Sultan of Turkey by Elizabeth I in 1599), or magnificent creations for the aristocracy to surprise and delight their friends. Little expense was spared, and there was no limit to the ingenuity of makers. Late 18th-century examples include small organs built into decorative urns, and even a musical settee. The Royal Palace in Madrid holds a chandelier with two separate barrel organs concealed in its lustres. By the end of the 'golden century', however, musical clocks were being heard playing popular music in fashionable public places such as cafés and pleasure gardens. In the early 19th century portable barrel organs and barrel pianos had been developed (*see* BARREL PIANO), and by the 1830s they had become widely popular; in 1834 *The Penny Magazine* estimated that four-sevenths of the music heard by people in the majority of towns and cities came from mechanical instruments played in the streets by itinerant musicians.

3. TYPES OF INSTRUMENT.

(i) Bells and chimes. Since the 14th century tunes have been played automatically on stationary hanging bells in church towers, called chimes (*see* CHIMES, §2), using a large drum of iron or later of bronze. In the 16th and early 17th centuries fully chromatic carillons were developed which could either be played by hand or with a barrel. Attempts to replace the barrel with perforated-card playing mechanisms (as installed but no longer used at Bourneville, Birmingham) began in the 1950s. Modern carillons, such as the one in Leicester Square, London (1988), use solid-state electronics and solenoid-driven bell hammers. (*See* CARILLON.)



Smaller chimes or carillons were also used in musical clocks and boxes, although from the end of the 18th century they were often replaced by the more compact musical comb (*see* §3(ii) below). Bells or chimes, as well as glockenspiels or xylophones, are often incorporated in all kinds of mechanical organs and pianos.

(ii) The musical comb. The steel-comb-playing MUSICAL BOX was developed at the end of the 18th century in Switzerland, where miniature mechanisms with 15 to 25 tuned teeth (lamellae) were built into various luxury articles such as clocks, watches, seals, walking-sticks, jewel caskets and snuff boxes. Good tone, small size and reasonable price made the musical box available to the wider public in a way that other mechanical instruments perhaps were not until the great popularity of the player piano in the early 20th century. Some models were sold in their thousands. Later models were made with interchangeable cylinders or, by the late 1880s, steel discs (see fig.5); and the most sophisticated music could be reproduced, including hymn tunes, popular songs and dances, and operatic overtures and arias.

(iii) Mechanical organs, reed organs, pianos and composite instruments. Many automatic instruments are simply attempts at adding a self-playing mechanism to ordinary, familiar manual instruments. Some aim simply to reproduce automatically a fine performance on an instrument, such as an organ or piano, in the absence of a competent player; in the days before the wide availability of radio and gramophone these instruments were able to disseminate all sorts of music to a wide population who would otherwise not have been exposed to it. Larger barrel organs were often used in poorer churches from the mid 18th century, where they replaced the manual organ in leading the congregational singing; they were still being offered for sale by organ builders in 1860. Barrels could also be built into manual organs, or alternatively an external mechanism enclosed in a box (a 'dumb organist') could be placed on the organ console to play the keyboard by means of wooden fingers operated by the barrel. The earliest piano players were of the 'push-up' type. Some instruments, such as the Hupfeld 'Phonoliszt Violina', seem to revel in their own stunning technological wizardry.

Other automatic instruments aim to imitate other sounds, such as whole bands of different instruments. From the early 17th century, small barrel organs ('serinettes') were designed to imitate birdsong (*see* BIRD INSTRUMENTS, §1). These became particularly fashionable in the second half of the 18th century and the first half of the 19th. The larger and more complex barrel organs were developed in two directions: the ORCHESTRION, which was intended to be capable of imitating and reproducing the music of an entire orchestra (orchestral voicing was also a concern of manual-organ builders in the 19th and early 20th centuries; *see* ORGAN, §VI); and the fairground or dance organ (fig.8; and *see* FAIRGROUND ORGAN), which was designed to perform popular music and dances, often in the open air. Both instruments continued to evolve with the advances of technology (see §1 above), and at various times were made to read metal discs, perforated cardboard strips or paper rolls using mechanical or pneumatic actions. Both could also incorporate varieties of imitative organ pipes, bells, xylophones and other percussion effects, and sometimes piano actions. But orchestrions, being intended exclusively for indoor performance (many were designed for domestic use, albeit usually by wealthier families), tended to have more sophisticated voicing and use lower wind pressures than fairground organs. In addition to organ-based orchestrions, many varieties (called piano-orchestrions) were made centred on a mechanical piano (which could also, in turn, incorporate ranks of organ pipes). Some makers in the early 20th century successfully added as many as six self-playing violins to the mechanical piano (*see* VIOLIN PLAYER, AUTOMATIC).

The zenith of popularity of mechanical instruments was from about 1890 to the early 1930s. During this period

8. Fairground organ by Gavioli & Cie, Waldkirch and Paris

they could be found in all kinds of public places and also in the home. Coin-operated instruments of all kinds could be found in cafés and restaurants. In 1920, 70% of the 364,000 pianos manufactured in the USA were player pianos. Mechanical organs, orchestrions and pianos also found a home in the theatre and the cinema where, cheaper to run than a real orchestra, they could be used to provide interval entertainment or accompaniment to a silent film. The very large and complex automatic theatre orchestra or 'fotoplayer' could be played by hand or from one or two special music rolls, and included a variety of sound effects such as sleigh bells, locomotive whistles, pistol shots and horses hooves in addition to the full piano and pipe organ (*see* SOUND EFFECTS, fig.1).

The player piano attracted works from many composers, including Stravinsky, Casella, Goossens, Hindemith, Howells and Malipiero.

(iv) Mechanical miscellany. Almost all kinds of instruments have had mechanical versions made of them at one time or other, including the trumpet (actually a reed or free reed instrument), many kinds of zither, and in the USA in the 1890s electric-driven roll-playing mechanical banjos (Encore Automatic Banjo) and harps (invented by Whitlock in 1899 and manufactured by Wurlitzer).

The gramophone was also incorporated into mechanical instruments. Player pianos were made with gramophones built into the upper part of the case, and the *Phonopectine* was a disc-playing musical box that could also play gramophone records.

4. DECLINE AND REVIVAL. In the 1930s the mechanical instrument industry began a near terminal decline, hit by the increasing availability of radio and gramophone and by the Depression, then by World War II. Most of the old firms closed. Starting in the 1960s, however, there has been a growing revival of interest both in the restoration of old instruments and in building new ones. Music rolls, books and discs continue to be manufactured, especially in America, Australia, Japan, Britain and the Low Countries, including re-cuts of old ones and new arrangements of the most up-to-date music. One American company, QRS Music Rolls, Inc., has continued to produce new and traditional piano rolls since it was established in 1900 by Melville Clark, one of the pioneers of the player piano with an internal mechanism. The composer Conlon Nancarrow was devoted, from the late 1940s until his death in 1997, to writing music exclusively for the player piano about 50 studies.

After the War the Swiss musical box industry consisted of a number of makers making small, mass-produced items for the tourist market. The majority of these small firms either went out of business or were amalgamated. The surviving Reuge firm has embraced modern manufacturing processes for its mass-produced items, while at the same time continuing to produce some high-quality limited-edition musical boxes for the collectors' market. A larger musical box industry built up in Japan starting in the 1950s, ranging from the mass-producing Sankyo Seiki to a number of small firms making both traditional disc machines (with high-quality new musical arrangements) and new models.

In the 1960s a number of American piano makers launched small, so-called 'spinet' player models, and several styles of key-top player to mount onto an ordinary piano; but their compact size could not generate enough operating power and they were not successful. Digitally-operated self-playing mechanisms have given the player piano a new lease of life. The first of these, initially operated from cassette tapes and offering live recording and playback facilities, was the Superscope Marantz 'Pianocorder', launched in the USA in 1978. Piano players operated by solid-state electronics with pre-recorded programmes on floppy disk are now produced by such manufacturers as Yamaha and Baldwin. Street organs

continue to be manufactured, particularly in the Low Countries, mostly using paper rolls or digital programming to operate otherwise fully mechanical organ actions.

ARTHUR W.J.G. ORD-HUME

Mechanik [Mechanismus] (Ger.; Fr. méchanique). *See* ACTION.

Mechelen [Mechlin] (Fr. Malines). City in Belgium, situated on the river Dijle. Ecclesiastically Mechelen belonged to the See of Kamerijk (Cambrai) until 1559. It then became the seat of an archbishopric, with Cardinal Antoine Perrenot de Granvelle, state secretary of Emperor Charles V and Philip II, as the first holder of the title of Archbishop.

The collegiate church of St Rombout was founded about 992, perhaps from the abbey of the same name. A number of the canons were musicians. For example, Johannes Augustini de Passagio, canon from 1412, was a tenor at the Burgundian court. Polyphonic music was sung in the church at least as early as 1313 or 1314, when three singers sang for the Bishop of Cambrai. In 1342 there is a report of a sung mass *te singhen met noten* ('to be sung with notes'). Singers were required during the annual procession for St Rombouts (1 July), as in the mass with *discanteerders* (descant singers) performed in 1441. In 1480 the number of permanent adult singers was nine and on special occasions this rose to as many as 21. The number of permanent singers (*vicarissen*) increased around 1571, after the church was raised to cathedral status, to 12 (four basses, four tenors and four countertenors).

Although it is not known precisely when the choir was founded, the choirboys' residence, the *Sanghuys*, was already undergoing restoration in 1448. There were four choirboys in 1471 and six in 1474, a number which, partly due to various foundations, remained almost constant until the mid-16th century. With the encouragement of Archbishop Granvelle, the number had grown to ten by 1570, but during the course of the 17th and 18th centuries it declined to five (1787) or six (1796). Among these choirboys were several well-known musicians: François Richafort (1509), brother of the composer Jean; the composers Jacobus Peetrinus (1561) and Rinaldo del Mel (1562); Guillielmus Nick (1564), later choirmaster in Lier and Brussels; Jacob Vredeman (1572), music theorist and composer; and Ludwig (Louis) van Beethoven (1717), later an adult singer at St Rombouts and grandfather of the composer.

Many of the choirmasters who trained the choirboys were composers. Those active at St Rombouts in the first two decades of the 16th century included Antonius Divitis (from 1504), Jean Richafort (1507), Noel Bauldeweyn (1509) and Jacques Champion (i, 1513). After the chapter was raised to a metropolitan chapter in 1559 composers of note at St Rombouts included Séverin Cornet (1564), George de La Hèle (1572), Jan van Turnhout (1577) and Nicolas Rogier (1585). In the 17th and 18th centuries no significant composers were attached to the cathedral.

The first mention of an organ in St Rombouts dates from 1330. Instruments were made or restored over the centuries by Gillis Brebos (1565), Franchois van der Elst (1586), Willem van Lare (1588), Balthazar Rutgeerts (1612) and Egidius Franciscus van Peteghem (1781), among others.

The Habsburg Burgundian court was established in Mechelen for several decades. Philip the Fair and Archduke Charles received part of their education there, and it was the residence of Margaret of York from 1477 to 1503 and Margaret of Austria from 1507 to 1530. The latter, in particular, surrounded herself with the best musicians, including the composer Marbrianus de Orto, the organist Henry Bredemers (who was also the teacher of Archduke Charles and his sisters) and the singer and composer Pierre de La Rue.

Mechelen initially employed two musicians as tower warders. From 1432 to 1433 two municipal horn blowers were engaged, making an ensemble of permanent town musicians. On special occasions (such as the St Rombouts procession) a large number of itinerant minstrels were engaged (130 in 1391–2). Mechelen was also a centre for

the building of various musical instruments, including organs. Numerous precious manuscripts, many of them still preserved, originated in the city, particularly after the arrival in 1516 of the copyist and singer Pierre Alamire.

Professional ecclesiastical musical life collapsed completely after 1797. Church music in St Rombouts only recovered in the early 20th century with the arrival of Jules van Nuffel (1883–1953). The best-known musician associated with St Rombouts in the 20th century was the organist and composer Flor Peeters (1903–86), who was in the service of St Rombouts from 1923 to 1963.

Professional music instruction was provided from 1879 to 1968 at the Hoger Instituut voor Kerkmuziek, the first director of which was the organist and composer Jaak Nikolaas Lemmens. He was succeeded as director by the composers Edgar Tinel (1854–1912), Aloys Desmet (1867–1917), Jules van Nuffel, Jules Vyverman (1900–89) and Jozef Joris (*b* 1923). The composer Marinus de Jong (1891–1984) was attached to the teaching staff of the Lemmens Institute, which in 1968 moved to Leuven. The journal *Musica Sacra* (65 volumes) was published within this institution from 1881 to 1964.

In 1922 the well-known carillonneur Jef Denyn (1862–1941) founded a carillon school in Mechelen. Other carillonneurs associated with the school have included Staf Nees (1901–65) and Jef Van Hoof (1886–1959).

EUGEEN SCHREURS

Mechetti. Austrian firm of music publishers. It was established in Vienna. Carlo Mechetti (*b* Lucca, 1748; *d* Vienna, 30 Jan 1811) was for many years a steward in the service of Count Karl Colloredo. His associations with members of the higher aristocracy benefited his business transactions to such an extent that he soon acquired a considerable fortune, and on 3 November 1798 he took out an art dealer's licence. He appointed as his assistant his nephew Pietro Mechetti (*b* Lucca, 20 April 1777; *d* Vienna, 25 July 1850), whom he subsequently adopted. The deed of partnership (28 February 1807) made Pietro a public partner in the firm of Carlo Mechetti e Nipote, which was by then publishing music. Pietro Mechetti was granted a new art dealer's licence on 10 July 1810. His uncle made him sole inheritor and, after Carlo's death, Pietro showed his gratitude by always signing the name of the firm (registered on 18 February 1811) as Pietro Mechetti qdm. Carlo. The publishing of music gained impetus only after the Napoleonic wars. Through reliable business management the firm of Mechetti was always able to hold its own against its larger competitors, Haslinger and Diabelli. Pietro's son Karl (1811–47) became a manager of the firm but died at the age of 37; Pietro survived him by three years, his widow Therese continuing the firm under the name Pietro Mechetti sel. Witwe until her death (28 June 1855). The publishing rights then passed to C.A. Spina.

The publication programme was generally above average and included the first edition of Beethoven's *Polonaise* op.89, new editions of opp.10 and 13 and some of his arrangements; the firm also issued first editions of Mendelssohn, Moscheles, Otto Nicolai, Schubert (D356), Schumann and Spohr, and numerous works by Czerny, Donizetti, Fahrbach, Friedrich Fesca, Nikolaus von Krufft, Leidesdorf, Hieronymus Payer, J.P. Pixis, C.F. Pohl, Rossini, Vanhal and Voříšek. Like Haslinger and Diabelli, Mechetti was obliged to publish light music in order to finance the less commercial publications, and thus became the principal publisher of Joseph Lanner and the younger Johann Strauss. The firm ran several important series, including the Aurora d'Italia e di Germania (352 numbers), containing separate pieces from the most popular Italian and German operas, the Anthologie Musicale (over 100 numbers), Der Musikalische Sammler (95 numbers) and three series of Terpsichore, which included dance and ballet music. Among the firm's catalogues are the *Verlags-Katalog* (1846, 1st suppl. 1847) and two publishers' reports issued by Therese (1853–4), all in the Gesellschaft der Musikfreunde, Vienna.

ALEXANDER WEINMANN

Měchura [Miechura], **Leopold (Eugen)** (*b* Prague, 2 Feb 1804; *d* Otín [Votín], nr Klatovy, 11 Feb 1870). Czech composer. A lawyer by profession, he also studied music; his teachers included Tomášek and B.D. Weber. During the early 1820s he appeared as pianist, composer and conductor with the household orchestra of Prince Lobkowitz. In 1824 he became provincial magistrate in Klatovy; there and at Otín he spent the rest of his life, devoting himself to composition. Despite his provincial isolation, a fear of critics and a reluctance to allow his works public performance or publication, he was one of the most significant Czech composers of the mid-19th

century. An admirer of Beethoven, Weber and Wagner, he was a prolific composer and his output spanned almost 50 years, culminating in a period (*c*1858–1870) of marked originality. During the 1860s he was drawn into the national revival which, combined with his artistic maturity, inspired a series of minor masterpieces, notably the cantatas *Pohřeb na kaňku* ('Burial on Kaňk Hill', 1866–7), *Štědrý den* ('Christmas Eve', 1866–7) and *První májová noc* ('First of May Night', 1867), and a Czech opera, *Marie Potocká*. In certain stylistic details, including assimilation of folksong characteristics, melodic construction and use of pentatonism, these late works startlingly anticipate Dvořák.

WORKS

KARL STAPLETON

Meck, Joseph [Giuseppe] (*b* probably at Knöringen, nr Günzburg, 1690; *d* Eichstätt, 2 Dec 1758). German composer. He probably attended a Jesuit Gymnasium in south Germany and studied music in Italy. From about 1711 until his death he was in the service of the Eichstätt court, at first as a violinist, from February 1714 as a chamber musician and valet, from 1715 (while continuing as a valet) as vice-Hofkapellmeister and from 1721 as Hofkapellmeister. With the modest forces at his disposal, he was responsible for all aspects of music at the court. Concertos form the most important element in his surviving output. All of them – 17 for violin, one for oboe – are solo concertos of the Vivaldian type. Along with such men as Heinichen, Pisendel and Stölzel he was thus one of the earliest composers to disseminate Vivaldi's style in Germany; indeed his op.1 is the first published collection of solo concertos by a German composer. The wide cultivation of his concertos testifies to his contemporaries' high opinion of them. His vocal music, on the other hand, is of little interest; neither his cantata-like works, which aspire to virtuosity, nor his hymns, which are simple pieces for everyday use, rise above a pedestrian level. Though his music was known to Corrette (*Art de se perfectionner dans le violin*, 1782), he was generally forgotten after his death.

WORKS
catalogue in Beckmann, 1975

12 concerti, 3, 4 vn, va, vc, bc, op.1 (Amsterdam, 1720–21) [no.12 identical to G. Taglietti, op.8 no.1 (Venice, 1710)]
Conc., 3 vn, va, bc, anon. in 6 concerti … del sig. F.M. Veracini, A. Vivaldi, G.M. Alberti, Salvini e G. Torelli (Amsterdam, *c*1717) [wrongly attrib. Vivaldi = P217]
4 vn concs., G, A, *D-Bsb*, *S-Uu*, g, *D-F*, *SWs*, B♭, *A-Wgm* (inc.); ob conc., F, *S-L*; conc., C, probably vn, lost, transcr. org by J.G. Walther, *D-Bsb*, ed. in DDT, xxvi–xxvii (1906/*R*), ed. H. Lohmann in J.G. Walther: *Ausgewählte Orgelwerke*, iii (Wiesbaden, 1966), ed. K. Beckmann in J.G. Walther: *Sämtliche Orgelwerke*, i (Wiesbaden, 1998)
2 partitas, a, lute, vn, bc, *A-Su*

Offertory, 4vv, vn, bc, 1742; Miserere, 5vv, 2 vn, org (inc.): Diözesanarchiv, Eichstätt; Pater mi, 4vv, 2 vn, bc, 1743; Vesperae breves, 4vv, 2 vn, bc, 1754; 42 hymns, mostly 4vv, org: St Walburg Abbey, Eichstätt
2 occasional works, 30 pieces for Jesuit school dramas, music lost

KLAUS BECKMANN

Meckenheuser, Johann Georg (*b* Goslar, 1666; *d* after 1726). German organist and theoretician. He was educated at the monastery at Hamersleben, where he was later organist. In 1727 he is known to have been the organist at the church of St Wiperti in Quedlinburg.

Meckenheuser's one known work, *Die sogenannte: Allerneueste, musicalische Temperatur* (Quedlinburg, 1727), expounds a temperament based on an arithmetical division of the ditonic (Pythagorean) comma. Although

seven of the 12 notes of the octave are slightly sharp, the division produces an adequate equal temperament. Meckenheuser, however, encountered difficulties in the practical application of his temperament. Adlung recounted a disastrous episode experienced by Meckenheuser when he tried to tune the organ at Goslar to his monochord: a fault not of the temperament, but of technique. The treatise was directed with considerable bitterness at Mattheson, who Meckenheuser claimed knew nothing of calculation and even less of musical temperament.

CECIL ADKINS

Meco, Richard. *See* MICO, RICHARD.

Medek, Ivo (*b* Brno, 20 July 1956). Czech composer. He studied computer engineering, then composition at the Janáček Academy in Brno (1983–9) where his teachers were Alois Piňos and Miloš Ištvan. Since 1990 he has taught composition and electronic music at the Janáček Academy (doctorate in composition, 1998). Medek's compositional language is influenced by elements of the 'new simplicity' and minimalist music, but avoids trivialization. Medek also applies the montage and shows a preference for the rhythmic parameter over that of pitch. He has written more than 15 works for percussion instruments, ranging from solo works to pieces for percussion and orchestra. Medek's works have won several prizes, for example the Czech Music Fund Foundation Prize for *Uplývání* ('Flow'). In 1985 he founded the Brno ensemble Art Inkognita, one of the first groups in the Czech Republic to devote itself exclusively to avant-garde music. He is a member of the group Camerata Brno, is co-editor of the music journal *Ticho* and is a representative of the Czech Music Information Centre for Moravia.

WORKS

Orch: Pán much [Lord of the Flies], Pf. Conc., 1988; Triady [Triads], Conc., perc, orch, 1989; Uplývání [Flow], Mez, elec, orch, 1992; Persofonie [Persophonie], perc, str orch, 1994
Chbr: Odrazy [Reflections], 4 tubas, 1985; Adai, pf, 3 perc (with D. Dlouhý and A. Kubíček), 1986; Adledai van, vn, vc, pf, 4 perc, 1988; Zlomený kříž I–II [Broken Cross I–II], 3 perc, pf, synth, 1989; Cepheidy [Cepheids], mar, vib, pf, 1991; Fests, 3 perc, pf, 1993; Tamtamania, tam-tam, tape, 1993; 11 Gestalten des Mondscheins, fl, cl, pf, perc, vn, va, vc, 1998; Zvětšenina [Enlargement], fl, cl, pf, vn, vc, 1999
Vocal: Hora ruit (Latin proverbs), chorus, 1989; Postludio (J. Valoch), Mez, elec vn, perc, 1994
Stage: Věc Cage aneb Anály avantgardy dokořán [The Cage Affair, or the Annals of the Avant-garde Flung Open], (chbr op, M. Štědroň), 1995, collab. A. Piňos and M. Štědroň
Multimedia projects: Světy bez hranic I [Worlds without Bounds I], 1993 (collab. D. Dlouhý); Adam a Eva – Planetární oratorium [Adam and Eve – Planetary Orat.], 1994 (collab. Piňos, Dlouhý, Z. Matějů, J. Kollert and D. Forró); Absurdarium, 1996; The surface roughness check, 1998; Křížení [Crossings], 1999

Principal Publisher: Divertimento

IVAN POLEDŇÁK

Medek, Tilo (*b* Jena, 22 Jan 1940). German composer. His father was the composer Willy Müller-Medek (1897–1965). From 1959 to 1964, he studied at Humboldt University with Walther Vetter, E.H. Meyer and Georg Knepler (musicology), and at the Berlin Hochschule für Musik, where his teachers included Wagner-Régeny (composition); he also attended Wagner-Régeny's composition masterclasses at the Akademie der Künste (until 1967). In 1977 he lost his East German citizenship and subsequently transferred to the Federal Republic of Germany, where he received numerous international distinctions.

Medek's work embraces many musical genres. His output includes three symphonies, 15 solo concertos, two large-scale choral works and five operas, as well as much chamber music. He has also composed music for children; in 1992 he was named honorary composer of the 8th International Festival of Children's Choirs in Nantes. Apart from an early phase (1962–6) during which he was influenced by dodecaphonic styles, Medek's works have been determined by tonal elements. His style aims at intelligibility and sets out to create a close relationship with its audience. The expressive means through which he woos his listeners are songlike forms, a disciplined attitude to rhythm and an infusion of the spirit of 'applied music'. His neo-tonal vocabulary is controlled by an alert historical consciousness and an objectification of his material. He has described himself as a 'composer who tells stories' and texted works make up a large part of his oeuvre. Early milestones in this genre include a setting of Paul Celan's *Todesfuge* for soprano and chorus (for which he won the Gaudeamus Foundation composition prize in 1967) and *Die betrunkene Sonne*, a melodrama for children (1968).

WORKS
(selective list)

Todesfuge (P. Celan), S, chorus, 1966; Die betrunkene Sonne (melodrama, S. Kirsch), spkr, orch, 1968; Einzug (Kurzoper, after I. Babel), 1969; Conc., org, orch, 1977–80; 3 Conc., vc, orch, 1979–82; Gethsemane (R.M. Rilke), S, T, chorus, orch, org, 1980; Sym. no.1 'Eisenblätter', orch, 1983; Katharina Blum (op, D. Medek, after H. Böll), 1991; Der Frieden wird immer gefährlicher (F. Dürrenmatt), T, chorus, orch, 1996; film scores, incid music, numerous song cycles, chbr works, solo org works

MSS in *D-Bsb*, *D-Dl*

REINHARD ERMEN

Meder, Johann Gabriel (*b* Zimmernsupra, nr Erfurt, 27 July 1729; *d* Amsterdam, bur. 3 Dec 1800). German composer, active in the Netherlands. His relationship, if any, to Johann Valentin Meder has not been established. About 1760 he settled in Amsterdam, where he organized concerts, often working with Italian singers. Several concerts included his own works, particularly his cantatas and oratorios. He composed the cantata *La contesa e la pace* for the marriage of Stadholder Willem V to Wilhelmina of Prussia in 1767, and a symphony to be performed during their visit to Amsterdam the following year. None of Meder's larger vocal works has survived, nor his singing method *Principes de musique pour le chant* (1800). His symphonies, however, are well written in a mature pre-Classical style.

WORKS
printed works published in Amsterdam, some also in Berlin

Vocal: Zangwijzen tot de nagelatene stichtelijke gezangen (B. Elikink) (1769), collab. B. Ruloffs; La contesa e la pace (cant.), 1767, only ov. extant, pubd as Symphonie pérodique, no.1 (1769)

Inst: 6 sinfonie, op.1 (c1764); Symphonies périodiques, nos.1–2 (1769); 3 simphonies, op.3 (c1783); Simphonie périodique, op.4 (c1786); 6 marches, 2 cl, 2 hn, bn (c1794), also for hpd (c1794); L'illusion de printemps, hpd/pf, vn, vc, op.6 (1797)

Lost works: Giuseppe riconosciuto (orat), 1779; La primavera (pastorella), 1765; Cantata, 5vv, 1766; Cantata, 3vv, 1768; Recueil d'airs (1797)

RUDOLF A. RASCH

Meder, Johann Valentin (*b* Wasungen, nr Meiningen, bap. 3 May 1649; *d* Riga, end of July 1719). German composer, organist and singer. He came from a musical family, his father and four brothers all being organists or Kantors. He studied theology at Leipzig in 1669 and then at Jena but soon became a professional singer. He was employed as court singer at Gotha in 1671, Bremen in 1672–3, Hamburg in 1673 and Copenhagen and Lübeck (where he met Buxtehude) in 1674. From 1674 to 1680 he was Kantor at the Gymnasium at Reval (now Tallinn). After a sojourn in Riga in 1685–6 he succeeded Balthasar Erben as Kapellmeister at the Marienkirche, Danzig, in 1687. In 1698 Danzig city council refused to allow a performance of his opera *Die wiederverehligte Coelia*. He had it performed instead in the nearby town of Schottland, which led to his being dismissed from his post. After briefly being employed as Kantor at the cathedral at Königsberg, he went in 1700 to Riga, where he held a similar position until his death.

According to Mattheson, Meder was a singer of repute, an excellent organist and a notable composer. He knew Italian in his youth and was familiar with the music of Italian composers such as Carissimi and Antonio Cesti. But for the wars in which the Swedish king was involved for so many years, Meder, as Mattheson pointed out, would probably have become director of music at the Swedish court in Stockholm.

Of four stage works that Meder is known to have written only *Die beständige Argenia* survives, performed in Reval in 1680 by the students of the Gymnasium. Dedicated to the newly married Swedish king, Carl XI, and his queen, it reveals his skilful handling of recitative and arioso, and of strophic songs which predominate over larger forms such as the through-composed aria. His *Nero* was the first German opera to be performed in Danzig, in November 1695; it was indebted to N.A. Strungk's opera of the same name (1693), for he used not only the same text but a few of Strungk's arias too.

As a composer of sacred music Meder shows to some extent the influence of Buxtehude. Much of his output in this field is lost. Of the surviving works one of the most notable is his *Passions oratorium* of 1700. It includes a number of interpolated chorales, set as solos, duets and choruses; and, anticipating Bach's treatment, the words of Jesus are normally set as arioso. The work includes a good deal of lyrical writing and is far removed from the more formal North German style.

WORKS

MOTETS

Ach Herr, mich armen Sünder, 4vv, vn discordato, 2 va, vle, *PL-GD*

Ach Herr, straffe mich nicht, 1v, 2 vn, vle, bc, Reval, 1679, *S-Uu* (holograph)

ERIK KJELLBERG

Mederitsch(-Gallus), Johann (Georg Anton) (*b* Vienna, bap. 27 Dec 1752; *d* Lemberg [now L'viv], 18 Dec 1835). Austrian composer and teacher. He was the son of Gallus

Anton Mederitsch (1710–74), a native of Götzendorf on the Marchfeld, who was a leading double bass player in Vienna. After study with Wagenseil, Johann became Kapellmeister of the Olmütz (Olomouc) theatre (1781–2), then returned to Vienna, where he was a double bass player in the orchestra of the German theatre as late as 1792. His years in Vienna saw the successful production of a number of Singspiele, and in about 1800 he was piano teacher to the poet Grillparzer, then nine years old. He was Kapellmeister at Ofen (Buda) in 1793–4 and from 1817 he lived at Lemberg. The poverty and sadness of Mederitsch's old age were touchingly described in a letter to Moscheles from Mozart's son, written on 25 October 1827; his summary of Mederitsch ('perhaps the greatest contrapuntist of our age') may be set against his father's frivolous comments (letter of 5 February 1783). Mederitsch's gratitude to the younger Mozart is attested by his bequeathing to him the autograph scores of his works, some 80 in all, which after Mozart's death passed to the Mozarteum, Salzburg. Mederitsch was well known and respected in his day: his incidental music to *Macbeth* (Pest, 5 May 1974; Vienna, Kärntnertor, 13 February 1808) was known even in London, and continued to be played in Budapest for many years, both with productions using the older German prose translation and using Schiller's poetic version. He is now remembered mainly as the composer of Act 1 of *Babylons Pyramiden* (Act 2 was by Winter), one of the works in which Schikaneder tried in vain to repeat the success of *Die Zauberflöte*.

WORKS

stage works first performed in Vienna, unless otherwise stated; most works MS in A-Sm, complete list in Aigner 1995

Der redliche Verwalter (J.F. Schmidt), Bauernfeindscher Saal, 26 Aug 1779

PETER BRANSCOMBE

Medesimo tempo (It.: 'the same pace'). A direction to maintain a tempo in spite of apparent disturbances, particularly changes of time signature or note value. The term *l'istesso tempo* was also used. By the later 19th century these directions were increasingly replaced by equivalence equations. □

Medial cadence [inverted cadence]. A CADENCE whose penultimate chord is in inversion, as opposed to a 'radical cadence', whose chords are in root position. In some American writings the medial cadence is regarded as a type of imperfect cadence. The term is also sometimes applied to endings in plainchant and modal polyphony that are not on the final of the mode. □

Mediant. (1) The third DEGREE of the major or minor scale, so called because of its intermediate position between the key note, or tonic, and the 5th degree, or dominant. It 'determines the mode' of a scale (Rousseau, *Dictionnaire de musique*, 1768), since the interval it makes with the tonic – major or minor 3rd – determines whether the scale is major or minor.

(2) In any of the four authentic church modes, the scale step that lies a 3rd below the tenor (sometimes called the dominant), namely *f* in the Dorian mode, *a* in the Phrygian and Lydian, and *b* in the Mixolydian. □

Mediation (Lat. *mediatio*). In Latin monophonic psalmody, the median cadence, or inflection, halfway through a psalm tone. *See* PSALM, §II, 7(iii) and INFLECTION, (1). □

Médiator (Fr.). *See* PLECTRUM.

Medici. Italian family of music patrons. They were renowned for their patronage of learning, literature, the arts and science.

1. Introduction. 2. Beginnings to 1537. 3. 1537–1737.

1. INTRODUCTION. The Medici ruled Florence with few interruptions for more than 300 years. Their political genius, as well as their enormous wealth, played no small part in their rise from principal citizens (1434–1532) to absolute rulers of Florence and its Tuscan dominion (1532–1737). The international influence achieved by several members of this family of merchant princes (among them Lorenzo the Magnificent, Popes Leo X and Clement VII and Queens Catherine and Marie of France) and a series of astute dynastic marriages also help explain the Medici's prominent position in the social and cultural history of Italy and the rest of Europe.

The two main branches of the family were founded by Cosimo (1389–1464) and Lorenzo (1395–1440), both of them the sons of the banker Giovanni di Bicci de' Medici (1360–1429), whose ancestors had settled in Florence as early as 1201. Cosimo's line included all of the famous Medici of the earlier Renaissance; the last member of this branch of the family, Alessandro, was created Duke of Florence in 1532 and assassinated in 1537. On his death the succession passed to Lorenzo's line, which carried on the family through six more generations. At the time of the succession (1537) Lorenzo's line was represented by yet another Cosimo (1519–74), who reigned first as Duke of Florence (1537–69) and then as Grand Duke of Tuscany (1569–74). On his mother's side this Cosimo was a direct descendant of the first Cosimo, and thus both branches of the family were united in his person.

2. Beginnings to 1537. The humanistic, artistic and literary interests of the first Cosimo and his line have long been celebrated, though information about their patronage of music and musicians has only recently been brought to light. Under Cosimo's aegis the first musical chapels, emulating those of northern Europe, were instituted in 1438 at the cathedral and baptistry at Florence. He was also apparently responsible for selecting the musicians engaged at the time, among whom was the Avignon composer Beltrame Feragut. An active policy of recruiting northern musicians for the new chapels was carried out by Cosimo's sons Piero (1416–69) and Giovanni (1421–63). Both were friends of Du Fay, who in a well-known letter to them of 22 February 1456 promised to send them some chansons and four Lamentations for Constantinople that he had recently composed. Giovanni, who was a lutenist, was a close friend and early patron of the great Florentine organist Antonio Squarcialupi. Piero is important in music history because of his acquisition, some time before 1456, of the famous collection of Notre Dame polyphony still housed in the Biblioteca Mediceo-Laurenziana, Florence (Plut.29.1).

Florentine musical life flourished with unprecedented vigour during the reign of Piero's son Lorenzo the Magnificent (1449–92). Through his own efforts, Lorenzo succeeded in attracting to the city's chapels as well as to his private service some of the most famous singers and composers of the time, including Isaac, Alexander Agricola and Johannes Ghiselin. Lorenzo was an accomplished singer and instrumentalist, capable of accompanying himself on the 'viola' (lira da braccio) as he improvised verse, a talent that was inherited by his eldest son Piero, who, according to Poliziano, also performed written polyphony. Lorenzo's collection of musical instruments, exceptional for the time, included a number of organs and keyboard instruments, as well as lutes, 'violas', a harp and several bagpipes. As a youth Lorenzo had sought to have one of his poems set by Du Fay, of whose music he was an ardent admirer. Later in life he had several of his *canti carnascialeschi* set by his favourite musician, Isaac. Isaac subsequently composed the music for Poliziano's lament on Lorenzo's death, *Quis dabit capiti meo aquam*, as well as a motet, *Optime pastor*, honouring the accession in 1513 of Lorenzo's second son Giovanni (1475–1521) to the papal throne as Leo X. Lorenzo's work *Trionfi di Bacco e d'Arianna*, is preserved in Serofino Razzi's collection of *laudi* (1563).

Medici patronage of music and musicians reached its apogee during Leo's reign. He was a thoroughly trained musician, as is shown by a few of his extant compositions, and his knowledge of music theory reputedly was exceeded only by his love of musical performance, both his own – he was a lutenist and also played the harpsichord – and that of others, particularly of the famous Jewish lutenist Gian Maria Giudeo, whom he later ennobled, and the lutenist-composer Francesco da Milano. Under Leo's guidance the papal chapel reached unprecedented heights, employing at times as many as 32 musicians, notably composers such as Gaspar van Weerbeke, Antoine Bruhier, Andreas de Silva, Carpentras, Jean Conseil, Marbrianus de Orto, Francisco de Peñalosa, Bernardo Pisano and Costanzo Festa. Several works by these men are found in the famous Medici Codex of 1518, a decorated manuscript commissioned for the wedding of Leo's nephew Lorenzo, Duke of Urbino, and Madeleine de la Tour d'Auvergne. The wedding was one of several sumptuous private celebrations and public festivities honouring various members of the Medici family during these years in which music and spectacle were prominent. At Leo's court musical activities included both solo and ensemble performances by voices and instrumental groups in concert. Plays and religious services in which the pope himself participated were adorned with musical performances such as had rarely been heard at the Vatican.

Leo's cousin Giulio (1478–1534) succeeded to the papacy as Clement VII in 1523. As a cardinal, Giulio had taken a great interest in Florentine musical matters, and he seems to have been responsible for the appointments of Verdelot, Charles d'Argentille, Mattio Rampollini and several other outstanding musicians to the city's chapels. Despite the many political vicissitudes of his pontificate he remained an avid patron of music and sought to maintain the standard of excellence in the papal chapel that had been established by Leo some years earlier. Among the musicians employed by him were Conseil, Festa, Pisano, Pierre Fontaine, Pernot Vermont, d'Argentille and Ivo Barry. Instrumentalists such as Francesco da Milano and Laurentius da Gaeta were also given favours by this last Medici pope. The last scion of the senior Medici branch, Alessandro, who became the first Medici duke of Florence, had a number of instrumentalists in his personal employ as well as the composer Arcadelt.

3. 1537–1737. With the accession of Duke Cosimo I in 1537 official Medicean patronage of music in Florence was resumed on a broad scale. At his instance the chapels at the cathedral and baptistry were reorganized and enlarged, and his favourite musician, Francesco Corteccia, appointed to direct them. Cosimo and his immediate successors – Francesco I (ruled 1574–87), Ferdinando I (ruled 1587–1609) and Cosimo II (ruled 1609–21) – maintained an active interest in the chapels as well as the prerogative of nominating their choirmasters, the most famous of whom after Corteccia were Cristofano Malvezzi, Luca Bati and Marco da Gagliano. At court, Cosimo I began the practice of retaining singers, instrumentalists and dancers, and it was continued on an even more lavish scale by his sons and grandson: in the first decades of the 17th century in particular innumerable ballets were performed. Musicians associated with the court in this period include Alessandro Striggio (i), Marenzio, Giulio and Francesca Caccini, Peri, Antonio and Vittoria Archilei, Cavalieri, Francesco Rasi, Lorenzo Allegri, Antonio Brunelli and Vincenzo Calestani; the last two worked at Pisa. Several of these composers were among the earliest and most persuasive monodists.

Cosimo I also initiated the policy of associating important family and state occasions with extraordinary musical festivities. For his own wedding to Eleonora of Toledo in 1539 he commissioned several occasional pieces from Corteccia, Festa and others and also had Corteccia compose music for the *intermedi* of Antonio Landi's comedy *Il commodo*. Other events during his reign, such as the baptisms and weddings of his children or the arrivals of distinguished visitors, were observed in a similar manner. The most elaborate of the Florentine *intermedi*, those for Girolamo Bargagli's *La pellegrina*, were presented in 1589 as part of the festivities attending the marriage of Ferdinando I and Christine of Lorraine. Much of the music for these *intermedi* was composed by

Ferdinando de' Medici and his musicians: painting by Anton Domenico Gabbiani, c1685 (Palazzo Pitti, Florence); those identified include the prince (2nd from right), Pietro Salvetti (seated left, with cello), Giovanni Battista Gigli, called 'il Tedeschino' (centre, with theorbo), Vincenzo Olivicciani, the singer (4th from right), and probably Antonio Rivani, the harpsichordist (extreme right)

Malvezzi and Marenzio. In 1600 the union of Maria de' Medici and Henri IV of France was celebrated with performances of Giulio Caccini's *Il rapimento di Cefalo* and Peri's *Euridice*, the first complete extant opera. Notable works presented later in the 17th century include Marco da Gagliano's *La Flora*, on the occasion of Margherita de' Medici's marriage to Duke Odoardo Farnese of Parma in 1628, and Jacopo Melani's *Ercole in Tebe*, for the wedding of the future Grand Duke Cosimo III and Marguerite Louise of Orléans in 1661.

Medici patronage of music and musicians followed a somewhat erratic course during the reigns of the last three grand dukes. Under Ferdinando II (ruled 1621–70) the chapels at the cathedral and baptistry, comprising 32 singers and directed by G.B. da Gagliano until 1651, continued to flourish, as did the ensembles of voices and instruments maintained by the court. Official rosters show that a notable number of virtuoso singers and instrumentalists were attached to the court, though many of them, of course, also performed in some of the city's other musical venues. Invitations to visit Florence were extended to prominent composers such as Luigi Rossi and Frescobaldi, and magnificent court productions were arranged of operas, mascheratas, equestrian ballets and aquatic spectacles with music. The Medici, including Ferdinando himself and his brothers Prince Mattias (1613–67) and Cardinal Gian Carlo (1611–63), also lent their support to the establishment of academies which produced new operas and revived others by Tuscan musicians and librettists, among them Antonio Cesti, the Melani brothers, Domenico Anglesi and G.A. Moniglia.

During the reign of Cosimo III (1670–1723) court-sponsored musical events declined steadily, since he cared little for music. Court indifference notwithstanding, some members of the ducal family, notably Cosimo's brother Cardinal Francesco Maria (1660–1711) and his son, the heir apparent Prince Ferdinando (1663–1713), indulged their love of music by supporting both private and public performances of operas, ballets and oratorios. As a youth, Ferdinando had studied counterpoint with G.M. Pagliardi and acquired a passion for music that remained with him throughout his life (see illustration). Among the musicians he patronized were Bartolomeo Cristofori, Handel, Pasquini, Veracini, G.M. Casini, Pietro Sanmartini, and Alessandro and Domenico Scarlatti. Alessandro Scarlatti composed several operas and sacred works expressly for him. Medici rule petered out with Gian Gastone (ruled 1723–37), whose notorious indolence, allied to the troubled political conditions of the time, precluded notable musical activity at his court, though he employed a few prominent musicians such as the lutenist Carlo Arrigoni and the composer G.M. Orlandini; he also continued the traditional Medici policy of subventions to the Florentine Accademia degli Immobili for opera performances at their Teatro della Pergola.

Medici Quartet. English string quartet. It was founded at the RAM in 1971 by Paul Robertson, David Matthews, Paul Silverthorne and Anthony Lewis. Coached by Sidney Griller, it gave a début concert at the Wigmore Hall, London, in 1973 which was well received; 25 years later it celebrated its silver jubilee at the same hall with the identical programme. In 1985 it toured the USA for the first time and since then it has enjoyed an international reputation. Its members have been artists-in-residence at a number of institutions: York University; Kingston University; Lancaster University; Swansea University; and since 1996 at Surrey University. Silverthorne was replaced by Ivo-Jan van der Werff in 1983 and in the 1990s Matthews was succeeded by Colin Callow, Cathy Thompson and (in 1998) by Steven Morris. The Medici has long been one of the more thoughtful British ensembles, capable of profound, stylistically conscious performances. Elisabeth Lutyens wrote four quartets for the group, which has also given the premières of works by Alan Bush, John Tavener, Peter Maxwell Davies, William Mathias, John Joubert, James Patten, Richard Rodney Bennett, Sebastian Forbes and Nigel Osborne. It has given successful presentations, in collaboration with Royal Shakespeare Company actors, on the lives of composers as revealed through their chamber music. Its many recordings include a Beethoven cycle, Vaughan Williams's chamber music for strings, sensitive accounts of Elgar's Quartet and Piano Quintet (with John Bingham) and Wajahat Khan's Sitār Quintet, a work it has often played in concert with the composer. Paul Robertson has done much research into the connection between music and the human brain and has both lectured and written on the subject; in 1996 he presented four TV programmes, entitled 'Music and the Mind', on Channel 4. This activity has led to the quartet's establishing links with major medical research institutions in London, Amsterdam and Geneva. Ivo-Jan van der Werff, well known as a recitalist and recording artist in his own right, teaches the viola at the RCM. The ensemble's instruments are violins by Domenico Montagnana (1729) and Nicolas Lupot (1809); a viola by Giovanni Grancino (*c*1690); and a cello by Matteo Goffriller (1695).

TULLY POTTER

Medieval. The broadest definition of the medieval period encompasses all the centuries between 'antiquity' and the 'Renaissance'. The earliest writer to evoke this intermediary phase was FILIPPO VILLANI, who observed in a treatise of 1382 that the islands in the Mediterranean had borne different names in 'ancient, middle and modern

times' (*priscis mediis modernisque temporibus*; see McLaughlin). Such a division of the past into antiquity, the present and the times in between may seem unremarkable, but the Trecento discernment of 'middle times' has shaped Western conceptions of the past for 600 years. The need to acknowledge a comprehensive shift somewhere between 1350 and 1550 that affected the arts, technology and the large political configurations of states and nations has rarely been disputed, but the appropriateness of the terms 'medieval' and 'Renaissance', with the value judgments they imply, has been contested many times. Music historians now have a complex transaction with them, for the discernment of 'medieval' and 'Renaissance' phases in the continuous tradition of Western music is a legacy from the 19th century when few compositions from either period had been made available for study. Those interested in the history of music were not then in a position to challenge the views that historians of the Italian visual arts and culture, notably Jakob Burckhardt, had developed so persuasively, especially since Burckhardt and others expounded them with materials that had been fundamental to the experience of educated men and women in Europe since the days of the Grand Tour.

1. Terminology. The adjective 'medieval', formed on the basis of the neo-Latin *medium aevum* ('the middle age'), was slow to gain currency in English. As late as 1874 the distinguished Anglo-Saxonist Henry Sweet still referred to 'middle-age Latin', but by the 1880s the rule of 'medieval' had begun. In English this put an end to a flexibility of terminology that reached back to the Trecento in neo-Latin. *Medium aevum*, first recorded in 1604, was one of many different nouns used between the 14th and 18th centuries to denote the 'middle' period; others included *media tempora* (1382), *media tempestas* (1469), *media aetas* (1518), *media antiquitas* (1519), *medium tempus* (1586) and *medium saeculum* (1625). The corpus of terms employed in the European vernaculars grew from the neo-Latin and shares its movement between singular and plural. Singular forms include the German *Mittelalter*, Italian *medioevo*, Spanish *edad media*, Greek *mesaionas* (demotic form), Danish and Norwegian *middelalderen* and French *moyen âge*, while plural forms include the English 'Middle Ages' (first recorded in the singular, however, in 1611), Dutch *middeleeuwen* and Icelandic *miðaldir*. Robinson deemed it 'almost providential' that the English language uses a plural form, but it would be fanciful to suggest that the plural forms express or encourage a relatively nuanced view of the medieval centuries.

2. Historiography. The *Mappa mundi* at Hereford Cathedral, drawn around 1300 by Richard of Haldingham, shows the Emperor Augustus commanding his officials to chart the Roman dominions. Long after its decline and fall the Roman Empire lived in the memory of literate men such as Richard of Haldingham, reminding them that a single language and polity had once been imposed on most of the charted world. Their remembering of Rome can often be traced in what may be called a 'literary humanism'. The term 'humanism' resists concise definition, but a form of literary humanism may be said to exist wherever classical Latin is admired and imitated; there is no taste for such Latin that is not also a potentially transforming esteem for the civilization that Virgil and Cicero express (*see also* Humanism). The medieval centuries, as conventionally understood, included many times when clerics were conscious of the need to improve standards of Latin. Sigebert of Gembloux (*d* 1112) revised an earlier Life of St Maclovius and found the Latin 'archaic, disordered, confused with barbarisms and solecisms, fit for the ears of nobody and thus forgotten' (*PL*, clx, 729). Many of the chant composers, like Sigebert, who were active in the great monasteries and cathedrals of France, Lotharingia and Germany between 800 and 1100 were probably impelled to compose as much by their proud sense of improving upon Merovingian Latin as by any other motivation. However, the period when Italian writers, conscious of their renewed connoisseurship of classical Latin style and civilization, first distinguished *media tempora* deserves to be regarded as exceptional among these phases of revival. Villani's evocation of those *tempora* was made during a formative stage in the process that Lévy and others have called the 'bifurcation' of Europe. Placed between 1300 and 1500, when Europe began to separate from other civilizations participating in the world system, this stage brought new technology (the shipbuilding of the Venetians and Genoese is a striking example), opened new commercial channels and hastened the expansion of many cities. The profound significance of these developments gives exceptional potency to the Trecento discernment of *media tempora* in the heart of the bifurcation period, and in the place where so many of its effects were felt at an early date. As Stock observes, the potency was such that the humanists established a vital point of reference in Western thought:

> The Renaissance invented the Middle Ages in order to define itself; the Enlightenment perpetuated them in order to admire itself; and the Romantics revived them in order to escape from themselves. In their widest ramifications 'The Middle Ages' thus constitute one of the most prevalent cultural myths of the modern world.

In Protestant countries such as England this 'cultural myth' drew strength not merely from 'rediscovered' Latin texts but also from the upheavals of the Reformation. As early as 1580–90 Roger Martin, a member of a gentry family, compiled a book detailing what he could remember about the church at Long Melford in Suffolk 'as I did know it', before the assaults of the reformers. The dissolution of the monasteries, hospitals and other religious houses was accompanied by what John Bale called a 'lamentable spoyle of the lybraryes of England' (*Scriptorium illustrium Maioris Brytanniae catalogus*, Basle, 1559/*R*) impelling a tide of medieval manuscripts into the hands of parish priests, higher clergy and landed gentlemen throughout England. The great collections of men such as John Stow (*d* 1605), Robert Cotton (*d* 1631) and Robert Harley (*d* 1724) began here, and once deposited in the British Library were of great value to the Enlightenment pioneers of music history in Britain, Charles Burney and Sir John Hawkins. The scholarly *Itinerary* of John Leland, appointed 'King's antiquary' in 1533, is justly famous, and is paralleled somewhat later by the travels of continental Catholic scholars in religious orders. These monks were sustained by a sense of continuity that stimulated their interest in the *medium aevum* as a phase of their order's history, and perhaps as the period when that history began. Linked by the traditional bonds of monastic friendship, enhanced by shared antiquarian interests, they were animated by the

passion for manuscripts, inscriptions, seals and architectural remains that is such a striking feature of European culture from the late 16th century onwards. The Maurists Jean Mabillon and Edmond Martène were particularly outstanding as travelling antiquaries. In 1717 Martène and Ursin Durand published the results of their visits to hundreds of religious houses, many of them medieval, noting details of architecture, copying inscriptions on tombs and 'blowing the dust off the archives' to gather material for a revised edition of *Gallia Christiana*, still an important source of information for music historians. By 1676 it was already possible for a compendium such as Cristoph Keller's *Nucleus historiae inter antiquam et novam mediae* to treat *historia media*, 'middle history', as a rudiment of historical thought, while two years later Du Cange consolidated the field with his monumental *Glossarium ad scriptores mediae et infimae latinitatis*. The reference to a 'middle Latin' on the title-page of this prestigious (and still indispensable) dictionary inspired other scholars such as Polycarp Leyser (*Historia Poetarum medii aevi*, 1721) and Fabricius (*Biblioteca latina mediae et infimae aetatis*, 1734–46). Together with the *Glossarium* of Du Cange, citation of these works by title accounts for a high proportion of references to the *medium aevum* and *media aetas* in Enlightenment scholarship.

3. Defining 'medieval music'.

(i) Scholarship and chronology. The titles of the works cited above are a reminder that in the 17th and 18th centuries scholars frequently (perhaps mostly) referred to the medieval period when they were editing or studying Latin texts whose spelling, vocabulary and cultural reference constituted, in their judgment, a specific project: the study of writers from the *medium aevum*. This emphasis is apparent in Gerbert's collection of Latin music treatises published in 1784, *Scriptores ecclesiastici de musica sacra potissimum*. This collection, of seminal importance for the subsequent image of music from the *medium aevum*, is resolutely philological, alluding to all the 16th- and 17th-century scholars mentioned above but making almost no reference to musical sources. Until the end of the 19th century the scholarly study of medieval music owed much to Gerbert and the tradition of Latin scholarship to which he assimilated the subject. The account of music between the 12th century and the 15th given by Burney is essentially a history of theory, while the greatest single contribution of the 19th century, at least before the final decade, was Coussemaker's *Scriptorum de musica medii aevi nova series* (1864–76). This collection names Gerbert on the title-pages and extends his work of editing the theorists. At that time the number of medieval compositions, excluding chant, known to scholars cannot have exceeded 50 or so. Seminal figures at the dawn of medieval musicology possessed a relatively extensive knowledge of theory but little access to the music that the theory addressed. The French Ars Nova, for example, was unknown before about 1900.

The extraordinary work of scholars after 1900 towards establishing 'medieval music' as a field of knowledge and study contributed to a major change in the structure of thought about the musical past. The art of composed, written polyphony is generally regarded as the principal glory of Western musical history, but after its birth its practitioners experienced something of a disintegration of historical sense in relation to their craft. Music theorists of the 15th and 16th centuries had at their disposal very little information about the history of polyphony, scarcely knowing (or caring to know) any music composed more than a generation before their own time. In a sense, this reflects a positive aspect of European culture, for the changeableness of polyphonic music and its notation reveals the desire for technical innovation that is a characteristic feature of the West. Nonetheless, the speed of stylistic and notational change could make older music all but unintelligible, leaving musicians with a very feeble sense of the history of polyphony. To compare a late 15th-century writer such as Tinctoris, baffled by the polyphonic compositions of an earlier age, with Berno of Reichenau (*d* 1048), who may have sketched the history of the psalms and psalmody from David to his own time, is to realize how few materials were available to connoisseurs of polyphony who might wish to frame the kind of historical picture they were capable of devising in other fields of enquiry, including the study of plainchant.

As this want of primary materials, in the form of musical compositions, was gradually remedied after 1900 it became apparent that the history of music in the later 'medieval' period could not be readily accommodated to the kind of narrative presented in Burckhardt's highly influential *Die Kultur der Renaissance in Italien* (1860). There can be no assessment of the Renaissance as a periodization that does not also stir the 'medieval' question to some degree, if only by implication, and it has generally been in discussions of the Renaissance that the Middle Ages have been renogotiated as a period in music history. Burckhardt, who duly noted the importance of Flemish music and musicians in 15th-century Italy, contrasted a conservative, scholastic northern Europe with a humanistic, individualistic Italy. Dissatisfaction with this model (here somewhat crudely described) increased in the 20th century as the number of editions of compositions increased. Besseler published his formative study *Die Musik des Mittelalters und der Renaissance* in 1931; by 1966, when monumental series such as *Corpus Mensurabilis Musicae*, to which Besseler was an early and distinguished contributor, and *Polyphonic Music of the Fourteenth Century* were in progress, Besseler reflected that he had given insufficient attention to the problem of periodization and remarked, perhaps with some exaggeration, that the Renaissance is 'certainly the most problematic epoch-designation in the history of culture'. More recently Owens has argued that 'our present understanding of the Renaissance appears to have as one of its cornerstones an accident of historiography: Ambros's attempt to apply Burckhardt's notion at a time when there was no adequate understanding of music before 1450'. She proposes 'a single period extending from about 1250 or 1300 to 1550 or 1600' united by the use of the mensural system and the cultivation of counterpoint.

Although Owens does not emphasize the fact, a periodization of this kind, which undermines the medieval-to-Renaissance model, can be tied into many strands of 20th-century thought. The Italian humanists' conception of a *medium aevum* has provided a broad and tempting target for 'medievalists' (a word of recent origin) for many years (see Ferguson), but since the 1960s such assaults have become easier to mount with each passing decade, especially if the target chosen is the central point of Italian Renaissance humanism, the encounter with classical literature. The gradual decline of classics as a subject in schools and universities after World War II

made the humanists' connoisseurship of Latin style seem increasingly remote. At the same time, social and political changes from the 1950s quenched the imperialist spirit that was fired throughout the period of European colonialism by an admiration for Roman literature, government and conquest. Developments in critical theory, especially from the 1960s onwards, make it seem almost indefensible for Hale to declare that the humanists allowed the voices of ancient authors 'to speak clearly again . . . their personalities restored'; it is striking that a book seeking to constitute the Renaissance in a broad and authoritative way should make a claim about the central activity of the Italian humanists that many literary critics would reject out of hand. Most recently, the debate about the validity of acknowledging a postmodern phase in 20th-century culture has prompted the most stealthy attack of all, namely the suggestion that the old narrative of 'antiquity to Middle Ages to Renaissance' can no longer serve any kind of historical thinking unless a fourth term, 'postmodernism', be added. In an influential essay, Nichols argued that 'modernity has had to come to grips with its own historical identity. Its patterns are being surveyed, limits assigned'. Thus the postmodern observer who engages with the medieval centuries finds that the 'Modern' period has become the new 'middle age'. There now seems little room for a triumphalist account of Western achievement from the Greeks onwards in which the Middle Ages and Renaissance are 'links in a chain which includes the Reformation, the Scientific Revolution, the Enlightenment, the Industrial Revolution, and so on' (Burke).

Whatever it is to be called, there exists a body of notated music that has certain consistent features that underwent major changes as the bifurcation period 1300–1500 proceeded and that developed in relation to political and cultural circumstances that themselves underwent major changes in the same period.

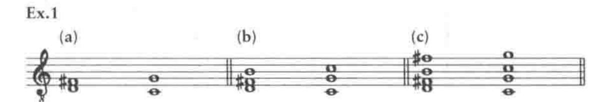
(ii) Geopolitical influences. Certain aspects of human geography are particularly important. Abu-Lughod has proposed that most of Europe's competitors in the world system declined after 1300 and that this was the principal source of the subsequent European hegemony. This is convincing in some respects, but the ascent of western Europe owes something to a friction between different languages, customs and jurisdictions in a space that presents no major barrier to the circulation of people and ideas. In western Europe no city is very far from the coast, a major river or a valley; no mountain range is impassable and much of the territory is verdant plain. After 1100 the whole area was free from the external threats that could impel an empire such as the Ottoman to become centralized and militarized. The evolution of a common musical language in the period 1380–1500, comprehensively studied by Strohm, reflects in part the gradual emergence of larger political configurations making intensified or enhanced use of Europe's natural channels of communication. The corridor of the Rhine–Alps–Po river plain, for example, began to supersede the Meuse–Saône–Rhône highway, one of the great pathways of medieval civilization; it was the former that led to the great conciliar venues of Basle and Konstanz, whose importance in the rise of a 'European' musical language in the 15th century has been urged by Strohm. The medieval period reveals many configurations of space, power and musical repertory that differ from those described by Strohm. It would be difficult to find a more intensely localized relation between these three factors, and one with broader consequences, than the case of Paris in the late 12th century, for the creation of the Notre Dame organum repertory (*see* NOTRE DAME SCHOOL), which is the matrix of the motet and of much else besides in later music history, is hard to imagine without the decision of the Capetian kings to establish a royal capital in the best natural fortress in their domains. Paris lies at the centre of a series of concentric escarpments that provide good natural defences to the east (where the contested borders with the counts of Flanders and with the Empire lay) and that can draw upon a fertile hinterland. By the 16th century, when the domain of the French kings was much larger, there were many more defensive options.

It is possible to expand such considerations to distinguish three medieval Europes, and so three musical zones whose distinctiveness is perhaps most easily shown by reference to courtly song. One, in the south, comprises northern Spain, Languedoc, Provence, Italy and Sicily. Another lies in what are now France and Germany. The third, to the north, comprises the lands of the present United Kingdom and Ireland, Scandinavia and the Baltic seaboard. The southernmost territory was a pluralist zone where the song culture of the troubadours in Old Occitan (*see* TROUBADOURS, TROUVÈRES) was admired and shared by Catalan, Gallego, Italian and Sicilian poets who either wrote in a literary form of Old Occitan or used a high-status form of their native Romance language. Until the late 14th century the influence of this southern territory upon the development of polyphonic song was slight. In the northernmost territory, in the Atlantic or around the Baltic, many languages were in use, mostly either Celtic or Germanic, but there is no evidence that any written tradition of monophonic or polyphonic courtly song was developed there. The exception is England, annexed to the French heartland by the Normans in 1066, but the very scant remains of vernacular song in English and Anglo-Norman provide a clear illustration that a written tradition of courtly monody arose only when a prestige form of the vernacular was available or could plausibly be created on the basis of a recognized 'court' usage. It is part of what makes the 'medieval' music history of this northern zone that no vernacular achieved this status. In contrast, the sacred polyphony in British sources before 1400, an astonishingly rich and self-contained repertory, absorbed influences from abroad but transmitted very few, and appears to have been associated with a fundamentally different sense of the basic materials of composition (see below on the use of just intonation in England). The vogue for English polyphony abroad between approximately 1420 and 1440 is an exceptional departure and of primary importance in the rise of a 'European' music (*see* DISCANT, §II).

This leaves the 'central' zone: the area between the Loire and the Rhine, understood to form a corridor that reaches down to embrace northern Italy, has many claims to be regarded as the metropolitan area of medieval civilization before the 15th century (see Bartlett). The desire to live the eremetical life in the desert, so important to the monastic life of the 12th century, was first strongly registered in northern Italy where the rapid process of *incastellamento* had been proceeding apace throughout the 11th century. This is where the fundamental

technology of Western music, the staff (*see* NOTATION, §III), was invented by a monk, GUIDO OF AREZZO, whose contacts with the eremetical movement of his day were close. To the north-west, on the European Plain, lay the heartland of heavy cavalry, castles and superior ballistics. From here the French language, originally the Romance dialect of the royal domains around Paris, expanded its territories as the Capetian kings pursued a vigorous policy of enlarging what they (like most medieval kings) regarded as a family domain. By 1500, 80% of Europe's kings and queens were French in the broadest sense of the word, and already in the late 13th century Martino da Canal wrote his history of the Venetians in French because 'the French language runs through the world'. The gradual decline of monophonic song in the pluralistic southern zone – there are no musical sources of this art in any southern Romance language after about 1350 – has as much to do with the complex geopolitical changes that advanced the hegemony of French as with single, often cited causes such as the Albigensian Crusade or the rise of polyphonic secular repertories in Italy and France. By the later 14th century, French had become the language of polyphonic art song in the south, as ARS SUBTILIOR sources such as the Chantilly Manuscript (*F-CHd* 564), associated with the court of Foix, and the various early 15th-century sources from the Veneto, plainly show, (*see* SOURCES, MS, §§II–VIII).

(iii) Musical developments. There are other criteria which impart a special significance to musical developments in the period 1300–1500.



(a) Construction on a tenor. There has been much debate about the compositional procedures of late medieval musicians, especially concerning the method of simultaneous as opposed to layered composition. Leech-Wilkinson and Bent represent the current axes of the discussion in English. There seems no need to enforce a firm distinction between these methods, since it is possible to imagine a composer foreseeing and drafting at least the occasional possibility for third- or even fourth-voice counterpoint while composing an indispensable and self-sufficient superius-tenor duet. Nonetheless, composition upon a tenor part is fundamental to all medieval music. The gradual evolution of the *contratenor bassus* in the later 15th century, and subsequently of a functioning bass, modified the sonorous and eventually the contrapuntal structure of polyphony, altering the play of harmonics in the sound and introducing contrasting vocal colours and techniques of production (*see* CANTUS FIRMUS; COUNTERPOINT; TENOR, §2).

(b) Exploration of tessitura. In England the irruption of something akin to the modern bass voice into written polyphony appears to have taken place between the death of Dunstaple in 1453 and the compilation of the Eton Choirbook (*GB-WRec* 178) around 1500. The evidence of *contratenor bassus* parts in continental music suggests a broadly similar chronology. Although the compass exploited by composers of polyphony had been gradually expanding throughout the 14th century, the decisive quality of the later 15th-century developments is shown by the unprecedented response of instrument makers. Towards the last quarter of the 15th century craftsmen began to scale down various kinds of musical instruments, creating alto, tenor and bass sizes so that consorts might play vocal music. Once again, the evidence suggests a considerable evolution in the sound world of composed polyphony in the second half of the 15th century.

(c) Pythagorean tuning. Before the mid-15th century (that date is somewhat arbitrary) polyphony was based on the way the notes of the diatonic scale strike the ear when sounded simultaneously in pairs ('diads'), some diads being judged more stable than others and the criteria of judgment lying principally with PYTHAGOREAN INTONATION. Treatises on the monochord and other instruments explain how the seven naturals A, B, C, D, E, F, G and B♭ are established, in the Pythagorean manner, in steps of pure octaves and 5ths. This must be the scale that boys learning chant heard repeatedly when set to study at the monochord or organistrum. Contrasted with the intervals offered by equal temperament, the Pythagorean tone appears slightly wide (204 cents not 200), the major 3rds more strikingly so (408 cents not 400, far from pure), as are the major 6ths (906 not 900, again far from pure). The minor 3rds are comparatively narrow (294 cents rather than 300) and so are the semitone steps medieval polyphony exploits most (the diatonic semitone, 90 cents not 100).

There is evidence in musical compositions that French and Italian musicians conceived their intervals in Pythagorean terms. The cadential patterns of ARS NOVA polyphony, both in French practice (ex.1*a*–*c*) and in

Ex.1

Italian (primarily ex.1*a*), clearly exploit the straining effect of wide major 3rds, and the familiar rule requiring a perfect consonance to be approached by the nearest imperfect one suggests that this tension and release was regarded as an indispensable source of impetus in the flow of sound. English usage appears to have been somewhat different: WALTER ODINGTON (*Summa de speculatione musice*, *c*1300; ed. CSM, xiv, 1970), report that Pythagorean 3rds are not consonances, but 'the voices of men, through their subtlety, draw them into a sweet and thoroughly consonant mixture' (Hammond, 70–71). This may be construed as a reference to the just tuning – or at least to the adjusted tuning – of 3rds, and it may be possible to argue for a 'mixed' intonation in England. The anonymous *Singularis laudis digna* (ex.2), a virtuoso

Ex.2 *Singularis laudis digna*

composition in honour of King Edward III (*d* 1377), begins with the kind of precocious gesture sometimes found in the English repertory, and one may imagine the 3rds in the two initial chords 'drawn into a sweet and thoroughly consonant mixture', in Odington's phrase, for no traction outwards seems required. In the third bar, however, the parts move towards the 6-3 established in bar 4 (the *f*♯′ is signed in the source), which resolves

conventionally. Here the major 3rd and 6th would surely have been widened to Pythagorean size or beyond.

Pythagorean tuning gradually waned during the later 15th century (see Lindley for an investigation of the process on the basis of both practical and theoretical sources and with special reference to music for keyboard, where in polyphonic playing, the implications of any tuning system chosen are necessarily far-reaching; *see also* TEMPERAMENTS). The theoretical evidence is clear: a sheet appended to the manuscript of Henri Arnaut de Zwolle (*F-Pn* lat.7295, *c*1440), for example, gives a recipe for establishing a just scale with pure 3rds. Other evidence might be cited, both from treatises and from musical compositions, and it is tempting to suppose that an impression of English tuning, among other things, is embodied in the famous reference by the poet MARTIN LE FRANC to a *contenance angloise*.

(iv) Current approaches. A central preoccupation of later 20th-century thinking in the humanities, perhaps its most significant legacy to the 21st, was the impulse to historicize current codes of understanding, exploring the penumbra of meanings around current ways of reasoning and explaining. This legacy is apparent in the far-reaching changes that have affected the transcription into modern notation of music from the 12th to the 16th centuries, probably the fundamental way of constituting a repertory as a source of critical, historical and aesthetic issues to be addressed. There has been an erosion of confidence in certain notational conventions primarily associated with later music, particularly the reduction of note values, barring in accordance with modern practice and the transference of music notated without measure into a mensural form on the grounds that it must have been that way even though the scribes did not, or could not, record it so. This last convention, which often entailed the first two, has greatly affected the appearance of early monophonic song, both in Latin and in the vernacular, and of organum. The tide of change is beginning to reach the Notre Dame conductus. For these and many later repertories, the possibilities offered by computer setting of music and computer graphics will surely prove to be of seminal importance.

In retrospect, the rise of interest in historical performance may count as one of the most significant developments in modern and (if there is such a thing) postmodern negotiations with medieval music (*see* PERFORMING PRACTICE, §I, 2–3). Medieval harmony, which proved so distressing to many scholars until at least the 1930s, has now become a fairly familiar corner of the vast landscape of commercially recorded sound; establishing the concept of 'medieval' music throughout the world, it has been allied to social and cultural changes. These plainly include the developments of Modernism in music, which make medieval harmony seem less shocking than it did two generations ago, but it is also important to cite the increase in standards of living since World War II, which is ultimately responsible for the proliferation of domestic sound reproduction equipment and the large body of journalism now associated with home listening.

The increasing familiarity of an entity on record that is performed, marketed and reviewed as medieval music has caused a certain uneasiness among scholars. Sometimes regarding themselves, with justice, as the ones best equipped to interpret the historical, critical and aesthetic issues presented by the shifting phenomenon of 'medieval' music, they will surely continue to raise the important philosophical question of whether medieval music in modern performance, or in a modern edition, really is 'medieval' music in any appreciable sense. It remains impossible to predict whether the terms and concepts 'medieval' and 'Renaissance' will be retained in the long term. Only now are the materials widely available to assess them. It is noteworthy, however, that the most sophisticated treatment of these issues yet written avoids the terms 'medieval' and 'Renaissance' wherever possible, both in its title and in much of its discussion, preferring for the former *The Rise of European Music, 1380–1500*.

Medieval drama.

I. Introduction. II. Liturgical drama. III. Vernacular drama. IV. Medieval drama in eastern Europe. V. The end of the Middle Ages.

I. Introduction

1. Definitions, genres and scholarship. 2. Elements and traditions of medieval music drama.

1. DEFINITIONS, GENRES AND SCHOLARSHIP. The many Latin terms used by medieval writers to refer to dramatic representations include *ordo*, *officium*, *ludus*, *festum*, *miraculum* (rare), *misterium* and, most frequently, *representatio*. Each vernacular has an equivalent variety. None of these terms is used consistently, nor is any used exclusively (cf English 'play') to denote a drama. The terms 'tragedy' and 'comedy' are very rare and are not applicable in their traditional meanings. Of the above terms, *ordo* and *officium* are commonly used to describe liturgical ceremonies as well as plays; this draws attention to a fundamentally important but elusive distinction between ritual and drama. When describing vernacular plays, medieval writers used the terms 'miracle' and 'mystery' without distinction; in this article, 'miracle' denotes a play based on the life of a saint, 'mystery' a play on a biblical or apocryphal subject. These may both be categorized as 'historical' as opposed to the 'fictional' character of the morality plays (see Knight, 1983).

The corpus of medieval drama in Latin and the major European vernaculars is huge. It comprises, essentially, two types of religious drama. In the first, traditionally called the 'liturgical drama', music is integral: the whole text of the play is sung monophonically and the language is Latin. In the second, vernacular drama, the main action is conducted in the spoken vernacular, with songs and instrumental music, plainchant and polyphony, introduced as appropriate. The principal vernaculars to be considered are English, French, German, Italian and Spanish, in all of which a substantial repertory of plays has survived; there is a smaller corpus from the Netherlands and another from eastern Europe. In addition to these religious plays there are isolated secular plays of various types from the 13th century onwards. It is not until the end of the Middle Ages that coherent traditions of secular drama can be traced (English interludes, French farces and *sotties* etc.). In all medieval secular plays the music is incidental.

An older generation of scholars (including Chambers and Young among others) believed that the liturgical drama, starting in its simplest form as the QUEM QUERITIS dialogue, evolved over the centuries until it took on more realistic forms such as the mystery cycles of the later Middle Ages. This metaphor of organic growth has been increasingly questioned over the years (see Hardison, 1965). Unfortunately, a consideration of both the nature and function of music in medieval drama has not played much part either in the formation or in the critique of the traditional interpretation.

The first substantial collection of the musical texts of liturgical plays, Coussemaker's *Drames liturgiques du Moyen-Age* (1860), still holds the field, despite its inaccuracies; but numerous single plays are available in scholarly periodicals and separate editions (e.g. Lipphardt, 1963, Krieg, 1956, Vecchi, 1954) and in performing editions with English translation (see Smoldon, 1960 etc., Greenberg, 1959, and Bailey, 1965). The ten plays of the important Fleury Playbook are published in an edition by Tintori and Monterosso (1958). The musical insertions into vernacular plays are rarely notated (but see Dutka, 1980, for music from the English biblical cycles and Brown, 1963, for a late French secular repertory).

Musical study of the drama still lags behind the literary; but the studies and articles of Lipphardt (especially his 'Liturgische Dramen' in *MGG1*), of Corbin (in *LaMusicaE*, on the Song of the Sibyl (1952), and on the planctus, in *La déposition*, 1960) and of Smoldon (1980) are the necessary starting-point for serious study of the sung drama; for the vernacular spoken drama in English see Rastall, 1996. On the literary side the works of fundamental importance in English are E.K. Chambers's *The Medieval Stage* (1903/*R*), still unsurpassed as a general survey, and Karl Young's *The Drama of the Medieval Church* (1933/*R*), which gives the literary texts of almost the entire corpus of Latin religious drama. Young's work must now be supplemented from Walther Lipphardt (1975). Grace Frank's *The Medieval French Drama* (1954) and N.D. Shergold's *A History of the Spanish Stage* (1967) are the only scholarly books in English covering their subjects; there are no equivalents for German or Italian plays. Muir (1995) provides a study of all European biblical drama, however.

In this article plays from the 10th century up to the Reformation are surveyed. The ecclesiastical upheavals of the 16th century brought about the suppression of medieval traditions of religious drama in Protestant countries and modified them severely in countries which remained Catholic.

Controversy has gone on for years as to what constitutes drama. For some inquirers dialogue has been essential; for others, impersonation (pretending to be someone in the story). Thus, for Young (1933/*R*), the moving ecclesiastical ceremonies of Holy Week are only in the loosest sense dramatic, since the element of impersonation is almost lacking. For present purposes, and indeed for the medieval period in principle, the concept of impersonation cannot be regarded as crucial – except in monologue. In this article the widest definition is used, admitting as drama any action in which the speeches, or songs, of two

or more personages (realistic or symbolic) are opposed or juxtaposed.

2. ELEMENTS AND TRADITIONS OF MEDIEVAL MUSIC DRAMA. No-one now believes either that European drama perished utterly with the destruction of the Roman theatres in the 6th century, or that it had to be invented again in the 10th. All the evidence, fragmentary as it is, testifies to a wealth of dramatic activity of various kinds in the early Middle Ages, much of it involving music. Travelling minstrels, variously designated in Latin as *mimi*, *histriones*, *joculatores*, *menestrelli*, *lusatores* and so on, combined music and acting with other sorts of entertainment – tumbling, bear-leading, juggling, puppetry (*see* MINSTREL). These were professionals, playing (in many senses) for hire. Their repertory may have included simple pieces of the *fabliau* type (a comic tale, often grotesque or obscene), such as the *Interludium de clerico et puella* (13th century) and *Le garçon et l'aveugle* (13th century; see Axton, 1974); mimed monologues, such as Rutebeuf's *Dit de l'herberie* (13th century; cf the sales talk of the spice merchant in the Resurrection plays); scolding matches, 'flytings', *estrifs*, or demonstrations of clever repartee, such as *Le roi d'Angleterre et le jongleur d'Ely* (13th century); courtly narratives with interpolated song, such as the *chante-fable* AUCASSIN ET NICOLETTE (13th century); and semi-dramatic lyrics, such as *Mei amic*, an 11th-century Provençal song dialogue for the Annunciation. To have some cognizance of this professional and of other traditions is essential if the musical elements of the drama are to be seen in their proper nature.

One important tradition is that of the dance-song, both courtly and popular. The dancing by courtiers and their ladies of 'rondets de carole' was described by Jehan Bretel in the *Tournoi de Chauvenci* (13th century); and scraps of (apparently) courtly dance-song are preserved in *Guillaume de Dole* (*c*1228) by Jehan Renart and in other courtly poems (refrains; *see* REFRAIN). Knowledge of popular dance-song is gained chiefly from courtly adaptations or imitations – though in this early period the distinction between two 'cultures', courtly and popular, is far less sharp than later. Such miniature song-dramas include versions of *Bele Aelis* (e.g. that by the trouvère Baude de la Kakerie); the Provençal song of the April queen, *Al'entrada del tens clar*; perhaps *Tempus est jocundum* from the CARMINA BURANA (*c*1230); and the English *Maiden in the mor lay* (Dronke, 1968, 3/1996). In German drama especially (from the later Passion play of the *Carmina burana* onwards), Mary Magdalen's sinful life is depicted as a dance with her in the centre; she buys cosmetics, sings and dances to entice her lovers. A different type of courtly activity produced the Teutonic warrior-play; its existence and the presence of musical effects in it were mentioned by the German chronicler Gerhoh of Reichersberg (*c*1160), and its influence can be traced in the sung liturgical-political play *Antichristus* (*c*1160) from Tegernsee (Axton, 1974). A later courtly milieu delighted in the dramatic spectacle of the chivalric tournament, a species of mimed heroic drama at which ladies were present and music and dancing added to the social delights (Wickham, 1959–72, 2/1980–81).

Other types of lyric besides dance-song may have sprouted into drama. These include the *aube* or ALBA (lovers' dawn-song), the CHANSON DE TOILE ('weaving-song'; usually a woman's dramatic monologue), the *bergerie* (shepherds' games) and the pastourelle (knight encounters maiden). The two last, for instance, with associated music, form the basis of Adam de la Halle's *Robin et Marion* (see §III, 2(iii) below). Another lyric type, the debate (Provençal *joc-partit*; Fr. JEU-PARTI) is self-evidently a dramatic form and has a long musical as well as poetic history (*see* TROUBADOURS, TROUVÈRES). Sung dramatic debates range from the sublime (Hildegard of Bingen's *Ordo virtutum*, ?1150s, in the morality tradition) to the near-ridiculous (some of the courtly riddles of Adam de la Halle and his contemporaries in 13th-century Arras). However, of all European song forms, that which most specifically contributed to the drama is the Italian LAUDA; the earliest Italian vernacular plays are *laude* in dialogue (see §III, 3(iv) below). But the tradition of the Latin PLANCTUS or lament was even more widespread, and some historians have seen the whole of medieval drama embryonically in the scene where Mary sorrows at the foot of the Cross. In German drama the *Marienklage* is of central importance (see §III, 2(i) below). The planctus naturally developed as sung dialogue between the lamenter and the bystanders (Mary and the apostle St John; Rachel and her consolers).

Another element of importance particularly for the formation of the religious drama was the SONG OF THE SIBYL, a prophecy of Christ's birth, of great antiquity. It found its way into the Christmas liturgy in the 8th century and in the drama belongs with the *Ordo prophetarum*, the Procession of the Prophets. Its music as well as its words are traditional (Corbin, *RdM*, 1952). The Procession of the Prophets originated from a famous sermon, *Contra judeos*, attributed to St Augustine, which was read at Christmas Matins and incorporated the Song of the Sibyl and many other prophecies. Other sermons, such as the Spanish *Castissimum Marie virginis*, may also have been dramatized (Donovan, 1958).

However, the most imaginative and impressive form of drama in the early Middle Ages remains the liturgy itself. Honorius of Autun, in *Gemma anime* (*c*1100), described the Mass as a drama analogous to ancient tragedy (trans. Hardison, 1965; Latin text in Young, 1933, i, 82):

> our tragic author [i.e. the celebrant] represents by his gestures in the theatre of the Church before the Christian people the struggle of Christ ... By the extension of his hands he represents the extension of Christ on the Cross. By the chant of the Preface he expresses the cry of Christ on the Cross.

More strikingly dramatic than the Mass in their imaginative impact are, in particular, the ceremonies of Holy Week. The blessing of palms, for instance, on Palm Sunday was followed by a procession to a place symbolizing the Mount of Olives, to the singing of *Gloria laus*. Sometimes, especially in Germany, a figure representing Christ riding on an ass (the *Palmesel*) was brought into the church. (A procession is part of the action in many liturgical plays; the Corpus Christi procession, instituted in 1264 (confirmed 1311), contributed to the growth of vernacular drama.)

Two ceremonies are particularly dramatic: the *Depositio crucis*, commemorating the burial of Christ; and the *Elevatio crucis*, celebrating the Resurrection (Young, 1933, i, 112ff; Corbin, *La déposition*, 1960). A striking liturgical action, which was to have a long history both in the liturgical drama and in the mystery cycles and Passion plays, was sometimes combined with these two ceremonies and sometimes with the return of the Palm Sunday

procession to the church; this was the Harrowing of Hell, in which Christ descends to hell, calls on Satan to open the gates ('Tollite portas'; cf Psalm xxiv) and releases the imprisoned souls of the patriarchs. At the abbey of Barking, Essex, in the 14th century these souls were represented by the members of the convent who were 'imprisoned' in the chapel of St Mary Magdalen. The existence of such a wide variety of dramatic and semi-dramatic ceremonies within the authorized liturgy of Mass and Office should be some safeguard against placing too high an importance on the single dialogue-trope, the *Quem queritis*, as the source of everything that can truly be called drama inside and outside the medieval church.

II. Liturgical drama

1. Chronology and distribution. 2. The repertory: dramatic and musical material. 3. The repertory: dramatic presentation. 4. Sources. 5. Notations and problems of transcription. 6. Musical style and musical structure. 7. Interpretation and performance: (i) The Padua 'Annunciation' (ii) Mézières' 'Presentation' (iii) 'Play of Daniel' (iv) Fleury 'Play of the Innocents'.

1. CHRONOLOGY AND DISTRIBUTION. Scholars have continued to use the traditional term 'liturgical drama' to describe the corpus of sung religious dialogues, ceremonies and plays in Latin since it was first coined (Clément, 1847–51). Despite its drawbacks – many of the plays are paraliturgical rather than strictly a part of the liturgy – the term has more than one appropriateness: the plays are found for the most part in liturgical books, and they are animated by the spirit of the liturgy and not by that of the theatre, a totally anachronistic term and concept. Their liturgical spirit, a spirit of ceremonial reverence and joy, adds to the difficulty already discussed of distinguishing between liturgical drama and the drama of the liturgy, between play and ceremony. On the evidence of text and music alone the distinction is often impossible. Helmut de Boor (1967) defined ceremony (*ordo*, *officium*) as 'everything that was created for presentation within the limits of ecclesiastical ritual'; play, as everything outside the realm of liturgy, whether in Latin or in the vernacular, whether performed in church or out. But a distinction that is so hard to draw in practice perhaps does not matter greatly. What matters is to regard each piece as an entity, combining in itself the elements of text, music and drama. Unless special circumstances are involved, all types of text are here referred to as 'plays'.

The complexity of the repertory can be gauged by considering as a starting-point some manuscripts associated with one of the main dramatic centres, the abbey of St Martial at Limoges. They were formerly in the abbey library and reflect the intense musical activities of an 'école aquitaine' (Chailley, 1960). Out of a group of nearly 20 manuscripts, three are of special interest. *F-Pn* lat.1154 (9th–10th century) contains (among other items, liturgical and non-liturgical) planctus (laments) on the death of Charlemagne and others, pieces on the Last Judgment, hymns, a prose to St Martial and the Song of the Sibyl (*see* EARLY LATIN SECULAR SONG). *F-Pn* lat.1240 (10th century) contains the earliest surviving version of the *Quem queritis* (facs. in Young, 1933, i, pl.6; conjectural transcr. in Smoldon, 1968). *F-Pn* lat.1139 (1096–9) contains an isolated version of the *Quem queritis* (i.e. without liturgical context), with rubric 'Hoc est de mulieribus'; the play *Sponsus*, followed by a prophet play; and an *Ordo Rachelis*, a short liturgical play of the Holy Innocents containing Rachel's dramatic lament. (For this repertory as a whole *see* ST MARTIAL and SOURCES, MS, §§II–III.)

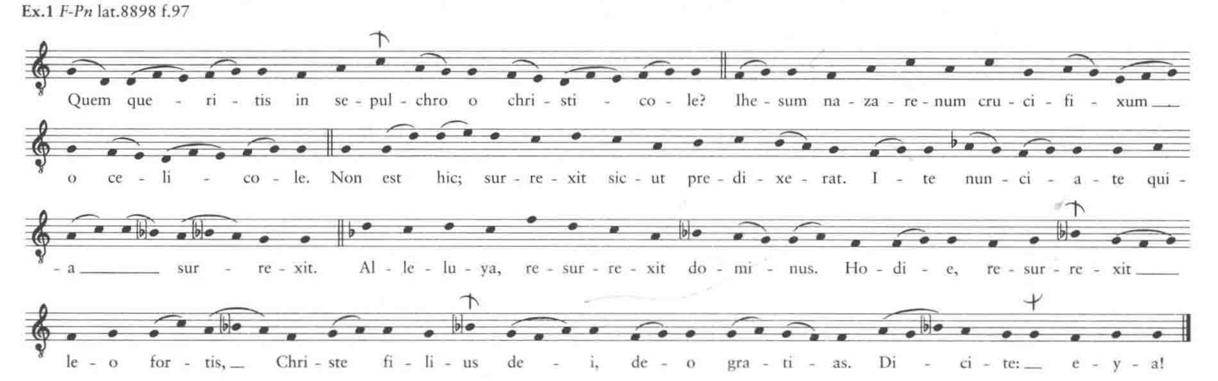
These three manuscripts alone provide an ensemble of items, all of them written down by the end of the 11th century and some much earlier. They show how diverse elements can be found in the same milieu (allowing for a range of date) and, in the case of the third manuscript, how at an early date the same compiler would collect plays both 'rudimentary' (*Quem queritis*) and 'advanced' (*Sponsus*, which contains vernacular stanzas and refrains) with a liturgical ceremony (*Ordo Rachelis*) which is in effect no more than a simple dramatic trope of two speeches to the responsory *Sub altare Dei*. It cannot be too often emphasized that there is no orderly chronological development to be discerned in the liturgical drama. The fact that the well-known description of a quite elaborate *Visitatio sepulchri* play at Winchester (see Young, 1933, i, 249) dates from the 10th century is a further reminder. A useful chronological index of liturgical plays, based on Young, was compiled by Hardison (1965, appx II); and Smoldon compiled a list of manuscripts arranged by countries within each century (1980, appx).

The complexity of time is matched by a complexity of place: the liturgical drama was not diffused in equal richness all over Europe. In addition to the 'school' of St Martial already mentioned, St Gallen (Switzerland) and Winchester were important early centres. The latter may have derived ceremonies from Ghent and Fleury (St Benoît-sur-Loire); and Fleury was sufficiently active in the 12th century to have produced the playbook that now bears its name. In France 'the greatest number of texts and the longest plays come from the northern provinces of Reims and Sens' (Wright, 1936). Here, as elsewhere, both monasteries and cathedrals contributed. An expanded Easter dialogue is associated with the region of Passau (south-east Germany), the Mary Magdalen scene (with introductory laments) with Normandy and Norman Sicily (Lipphardt, *MGG1*). In Italy, Padua and Cividale were especially productive; and in Spain, the cities of Catalonia and the island of Mallorca (Donovan, 1958). The liturgical drama, despite its early start in 10th-century Winchester, is not widely represented in the records of medieval England; but Lichfield, Barking, Lincoln, Malmesbury and York are known to have had plays. It should further be remembered that England was a hub of Norman culture in the two centuries following the Norman Conquest; and the widespread appointment of Norman abbots and bishops is likely to have stimulated the introduction of liturgical ceremonies and plays from one of the liveliest dramatic regions in Europe. However, no single extended dramatic representation survives.

2. THE REPERTORY: DRAMATIC AND MUSICAL MATERIAL. The analysis of the repertory by type and subject has the authority of Young (1933/*R*). His analysis has been followed by most later scholars of the drama and by musicologists and is still a convenient frame of understanding. Its neat and helpful divisions and the orderliness with which simple examples precede complex ones must not, however, mislead the inquirer into false assumptions, already referred to, about orderly chronological development. As liturgical drama is in the strictest sense music drama, to describe the repertory of some 600 texts assembled by Young (1933/*R*) and Donovan (1958, from

north-east Spain) is in fact to describe the scope of the musical repertory.

The simplest forms of dramatic ceremony or play are dialogue tropes of the introit of the Mass. By far the most important and common are the *Quem queritis* dialogues of Easter (fig.1; see also ex.7 below) and Christmas. At Easter the dialogue is between 'Christicole' (worshippers of Christ) and 'celicole' (dwellers in heaven); in many texts the former are precisely identified with the three Marys visiting the tomb of Christ and the latter with angels at the tomb. At Christmas the dialogue is between the shepherds seeking the crib and the midwives (non-scriptural). Other dialogue tropes exist: for example, a 14th-century Spanish one for the Assumption of the BVM (Donovan).



Particularly in its enlarged forms the Easter dialogue is frequently found, from the 10th century to the 16th, in a different liturgical position. Instead of being attached to the introit of the Mass, it is placed after the third responsory of Matins of Easter, *Dum transisset sabbatum*; it is also amplified by prefatory and concluding sentences, mostly well-known antiphons. The enlarged dialogues are known generically as the *Visitatio sepulchri*; they account for over 400 surviving texts, about two-thirds of the total repertory. Three degrees of dramatic elaboration are normally distinguished: 'one in which the dialogue is conducted by the Marys and the angel, a second in which are added the apostles, Peter and John, and a third which provides a role for the risen Christ' (Young, 1933, i, p.239). The *Visitatio sepulchri*, it is essential to realize, is never extended backwards to include scenes from the Passion and Crucifixion; it exists solely to celebrate the joy of the Resurrection.

Musically, these elaborations call for additions of various kinds. Traditional antiphons, already mentioned, are added, such as *Alleluia, Surrexit Dominus de sepulchro* (found in such early books as Hartker's Antiphonary, *CH-SGs* 390–91; PalMus, 2nd ser., i); *Venite et videte locum* (Hartker, and Winchester Troper); *Currebant duo simul* (Hartker); and, by way of preface, [*Et dicebant ad invicem:*] *Quis revolvet nobis lapidem ab ostio monumenti?* (Hartker). The Easter sequence *Victime paschali* (11th century, attributed to Wipo, an imperial chaplain) is sung in various dramatic arrangements but always to the traditional melody (*LU*, 780). Hymns, for example *Jesu nostra redempcio*, are sung by the Marys or by the apostles, and *Christ ist erstanden* by the congregation near the end (before the final *Te Deum*). Laments (planctus) are sung by the three Marys as they approach the tomb, the most common set of three being the 15-syllable *Heu, nobis internas mentes*, *Jam percusso ceu pastore* and *Sed eamus et ad eius*; the music of these is thought to be non-Gregorian (see §II, 6 below). Accompanying examples give transcriptions of (1) the introit trope in its simplest form to the traditional melody (*F-Pn* lat.8898; 12th-century rituale from Soissons; ex.1); (2) an expanded dialogue with dramatization of the *Victime paschali* (*Pn* lat.10482; 14th-century breviary from Paris or Melun; ex.2); (3) the opening of a *Visitatio sepulchri* with the laments of the Marys, in which the traditional words are modified and a new melody provided (*CH-EN* 314, from Engelberg; ex.3).

Four liturgical plays celebrating the Resurrection in even more elaborate forms were assembled by Young under the title *Ludus paschalis* (the nearest manuscript title is *Ordo paschalis*); they are from Klosterneuburg, Tours, ?Origny-Ste-Benoîte (near St Quentin) and ?Fleury. The longest of these, from Tours, unfortunately incomplete, includes scenes between Pilate and the Roman soldiers, between the Marys and two merchants, the appearance of Christ to the disciples, and the incident of doubting Thomas. The play in the Origny manuscript has rubrics and some portions of the dialogue in French. Seven further plays of the Easter season celebrate the journey to Emmaus (the Peregrinus plays). The feasts of the Ascension and of Whitsuntide were celebrated with dramatic liturgical ceremonies and, often, ingenious machines; they do not, however, seem to have developed as drama, except perhaps in Catalonia (see Donovan).

The most complex of all liturgical plays related to Easter are Passion plays (two in the *Carmina burana* manuscript, one from Sulmona and one from Monte Cassino; see Sticca, 1970). The most interesting is the longer of the two Passion plays in the *Carmina burana*. Although normally classed as liturgical drama, this and the other lesser Passions are borderline cases. They are almost entirely in Latin and set to music throughout (there is no such thing as a spoken religious drama in Latin at this period, except for the moral, pseudo-Terentian plays of the 10th-century nun Hrotswitha of Gandersheim), but they have no demonstrable connection with the liturgy. Musically there is a difference too: 'The number of liturgical pieces incorporated [in the major *Carmina burana* Passion] is relatively small, and ... these

Ex.1 *F-Pn* lat.8898 f.97

['Whom do you seek in the tomb, o followers of Christ? Jesus of Nazareth who was crucified, o celestial ones. He is not here; he has risen as he foretold. Go and tell that he is risen. Alleyua, the Lord is risen. Today a strong lion is risen, Christ the Son of God, thanks be to God. Sing: eya!']

1. Version of the 'Quem queritis' dialogue from a Ravenna troper, 11th–12th century (I-MOd O.1.17, f.104v); the dialogue leads via the trope 'Alleluia resurrexit' into the introit 'Resurrexi' and the Mass; the neumes are heighted around a single line

Ex.2 *F-Pn* lat.10482 ff.176*v*–177

[*The angels sing to the women:* 'Whom do you seek in the tomb, O followers of Christ?' *The women sing to the angels:* 'Jesus of Nazareth who was crucified, O celestial ones.' *The angels sing:* 'He is not here; he has risen as he foretold. Go and tell that he is risen.' *Then the women turn to the choir and come singing the prose:* 'Christians offer a sacrifice of praise to the paschal victim. A lamb has redeemed the sheep, sinless Christ has reconciled sinners to the Father. Death and life contended in that stupendous combat; the Lord of life, who died, reigns immortal.' *Then the cantor stands in mid-choir and sings to the women:* 'Tell us, Mary, what did you see in the way?' *The first woman:* 'The tomb of the living Christ and the glory of the resurrection.' *The second woman:* 'The angels as witness, the shroud and the napkin.' *The third woman:* 'Christ our hope is risen, and will go before his own to Galilee.' *The cantor:* 'Truthful Mary alopne is more to be believed than the crowd of deceitful Jews.' *Choir:* 'We know Christ is indeed risen from the dead; have mercy upon us, victor King.']

are used chiefly as choral introductions to separate scenes' (Young, 1933, i, 533). Unfortunately the neumes of this play are unheighted in the manuscript; most of the music is therefore locked up in a code that cannot be broken. There are, however, a number of identifiable melodies (see Lipphardt, *MGG1*), including those of the laments *Planctus ante nescia* and *Flete, fideles anime*. These well-known compositions in sequence form had an independent existence which is well attested (ex.4 gives the opening of the melody of *Flete, fideles* from *I-Pc* C.56). The planctus is a non-liturgical genre. Its performance in a liturgical context was invariably on Good Friday (Corbin, *LaMusicaE*), a day on which liturgical plays like those so far described were never presented. Its use here, and frequent occurrence in vernacular Passion plays (see §III, 2(i) below), show the introduction of an important new musical element. It has also led to the question, fascinating but insoluble, as to which came first, Passion play or planctus. (If an origin for the Passion play is to be sought, the most obvious – the traditional liturgical recitation of the Gospel accounts during Holy Week – must apparently be discounted, since until the 15th century the recitation was performed by a single deacon (Young, 1910).)

The other great season of liturgical rejoicing, Christmas, also produced its plays. The dramatic centre of these is again the moment of celebration – the adoration of the shepherds (*Officium pastorum*) and the adoration of the Magi (*Officium stelle*). In comparison with those of Easter, few introit tropes survive for the Mass of Christmas. Once again, the documents do not support any theory of gradual evolution or of regular imitation by 'Christmas playwrights' of Easter successes. Some 20

Ex.3 *CH-EN* 314 ff.74 *v*–75*v*

[*Antiphon. One woman:* 'Alas! what deep sighs rack our inmost souls on account of our Comforter, of whom we unfortunates are deprived, whom the cruel race of Jews gave to be slain.' *Antiphon.* [*Another*] *woman:* 'As, when their shepherd is struck down, the sheep wander in distress:,so now the disciples are troubled when their master goes away, and in his absence no-one's grief is greater than ours.' *Antiphona.* [*Another*] woman , that is Mary Magdalene: 'But let us go and hurry to his tomb; if we rejoiced in him when he was alive, let us also care for him now hhe is dead.' *Allthree:* 'Who for us will roll away from the entrance the stone which conceals the holy tomb from our eyes?' *Angels:* 'Whom do you seek, O fearful women, weeping by this tomb?' *Antiphon. All three:* 'Jesus of Nazareth who was crucified, O celestial ones']

Christmas plays can be dated as early as the 11th century: about half are fairly simple dialogues (shepherds and midwives, the latter not usually identified by name); the others are elaborately developed plays about the Magi and Herod (*Ordo ad representandum Herodem* is the Fleury title), sometimes including a meeting with the shepherds as well, and presented at the end of Matins. Following the *Officium stelle* of Laon (*F-LA* 263) in unbroken sequence is the scene of the Slaughter of the Innocents (no music in the manuscript); in other sources the scene is a separate play-unit, as required by its liturgical affiliation – Holy Innocents Day (28 December), nine days before the Magi feast, Epiphany (6 January).

Ex.4 *I-Pc* C.56 ff.32–32*v*

Incipit lamentum Beate Marie Virginis:

Fle - - - - te fi - de - les a - ni - me; fle -
- te so - ro - res op - ti - me: ut sint mul - ti -
- pli - ces do - lo - ris in - di - ces plan - ctus et la -

- ra; Ma - ri - e vul - ne - ra ma - ter - ne do - le - o que
di - ci so - le - o fe - lix pu - er - pe - - ra.

[*Here begins the lament of the Blessed Virgin Mary:* 'Lament, O faithful in heart: lament, O best sisters: that lamentation and tears, these tokens of grief, may be multiplied. Let the womb of the mother lament; I suffer the pangs of Mary the mother, I who used to be counted happy in the child I bore.']

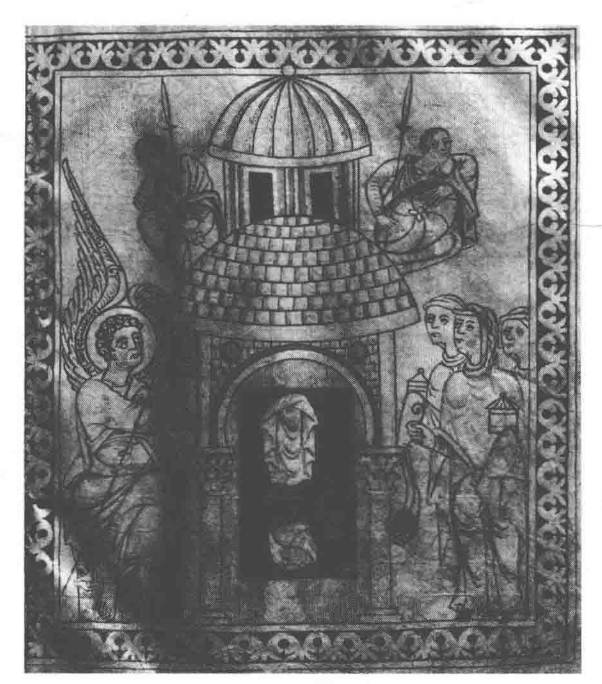
Musically as well as textually the elements of the Christmas plays are analogous to those of Easter: an introit trope using an 'original' melody (the Christmas melody usually differs from the Easter one); traditional antiphons (e.g. *Venite, adoremus eum*, of Epiphany); melodies of apparently secular character and/or origin (see the exchange *Salve, pater inclite* between Herod and his son in the Fleury play); sequences (e.g. Notker's *Quid tu, virgo* – Fleury and Freising); hymns (e.g. *Hostis Herodes impie, Salvete, flores martyrum*); a formal planctus, Rachel's lament, the centrepiece of liturgical plays on the Slaughter of the Innocents, in the Freising text entitled *Ordo Rachelis*. Exx.5 and 6 give a Christmas dialogue headed 'Quod fit in nocte natalis Domini', from Padua (*I-Pc* C.56, a processional); and the dramatic exchange between Herod and Archelaus, from the Fleury Playbook.

Ex.5 *I-Pc* C.56 f.1

[*What is done on Christmas Eve:* 'Whom do you seek in the manger, O shepherds, say? Our Saviour, Christ the Lord, a child wrapped in swaddling clothes, as the angels told.']

The only fully comprehensive Christmas play is that in the *Carmina burana*; the greater part is notated, but in unheighted neumes without indication of pitch or rhythm. The play contains all the episodes discussed above and opens in addition with an *Ordo prophetarum*: Augustine sits enthroned with Isaiah, Daniel, the Sibyl and Aaron on his right, and their opponents, the leader of the Synagogue with a group of Jews, on his left. The Procession of the Prophets has already been mentioned (§I, 3 above); it was dramatized many times as a separate Christmas play (see also §III, 2(ii) below).

The plays of Easter and Christmas account numerically for nearly the whole repertory of liturgical drama. The few other plays, however, include some of the most remarkable as individual compositions: on an Old Testament subject, the *Play of Daniel* from Beauvais; from the New Testament, the Fleury *Raising of Lazarus* and *Conversion of St Paul*; of plays dealing with the end of all things, the Provençal *Sponsus* and the Tegernsee *Antichristus*; and a group of saints' plays (miracles), all honouring St Nicholas (Fleury Playbook and elsewhere).



With the plays of the saints should perhaps be classed those that honour the greatest saint of all, the Blessed Virgin, at her four major feasts – the Presentation in the Temple, the Annunciation (then celebrated in December), the Purification (presentation of Jesus in the Temple) and the Assumption. Of these, two Annunciation plays from northern Italy (Padua and Cividale) have musical notation, while Philippe de Mézières' play for the feast of the Presentation gives elaborate musical directions (§II, 7(ii) below).

3. The repertory: dramatic presentation. The presentation of these dramatic ceremonies and plays was essentially all of a piece with their nature and purpose – liturgical. (The concept of 'theatre' is totally anachronistic.) This means that all the subsidiary terms normally used to describe dramatic events are to some extent misleading – 'stage', 'properties', 'scenery', 'costumes', even 'actors' and 'audience'; they imply a type of dramatic experience that may be quite alien to the liturgical or near-liturgical occasion. At the same time one must beware thinking that all liturgical plays were the same and that the kind of dramatic mimesis involved was consistent and unchangeable. The more elaborate plays, for example, often 'seem to have been composed in their extant forms in a spirit of literary and dramatic independence, and to have been attached to the liturgy as appendages rather than as intimate accompaniments of central acts of worship' (Young, 1933, ii, 399). It is only in these more ambitious presentations, like the Fleury *Conversion of St Paul*, that the staging plan is implied that was to become standard for the medieval vernacular dramas in their larger forms: the plan of *sedes* and *platea* (see fig.6 below). The *sedes* ('seats') or *loci* ('houses', 'mansions') were structures or raised platforms identifiable with specific localities – Jerusalem, Saul's house and so on; the *platea* ('place') was an unlocalized acting area between and in front of the *sedes*. In §II, 7 below, some remarkable, and remarkably varied, individual plays are discussed; the present section describes general principles based on simpler plays.

The 'stage' is the church itself, which is also the 'auditorium'. The two are not always clearly distinguished from a spatial point of view; a procession moving from station to station creates its own 'stage' locality as required. For the *Visitatio sepulchri* no 'houses' are required, unless the sepulchre to which the Marys go to find Jesus can be so called. It should be noted that the Easter sepulchre was not a piece of scenery for a play but a normal part of the Holy Week and Easter ceremonies (fig.2). It could be a temporary wood or canvas structure, or (especially in England) a permanent erection in stone (Brooks, 1921; Sheingorn, 1987). The sepulchre proper might be a chest or coffer placed within the larger structure (the *monumentum*). But even this degree of representation was not strictly necessary; the altar could, and often did, represent the sepulchre. In Christmas ceremonies and plays the dramatic object of comparable importance to the Easter sepulchre was the crib (*presepe*). As a focus for popular devotion the crib owes much to St Francis of Assisi, who in 1223 obtained papal permission to erect a crib (with live ox and ass) at Greccio; but it had been in use before this for centuries. Once again, it is not

Ex.6 *F-O* 201 p.211

2. The Three Marys approaching the sepulchre: illumination from the Hartker Antiphoner, c980–1011 (CH-SGs 391, f.33r), perhaps showing the kind of erection used in churches for the play/ceremony 'Visitatio sepulchri'

in the narrow sense a stage property; if no crib had been erected, the altar would serve.

A 14th-century *Visitatio* from Essen (in the Münsterarchiv) with remarkably full rubrics ('stage directions' only anachronistically) brings other features to notice, of which one is very unusual: the collegiate church at Essen was for both canons and canonesses, so in their *Visitatio* the parts of the Marys were taken by women, those of the angels by men. Normally all the roles, male or female, were taken by persons of the same sex. Another characteristic follows traditional practice – the 'costuming': the angels wear ecclesiastical vestments and do not 'pretend' to be other than clerics (this, however, varies from play to play). A third feature, confirming the absence of full dramatic illusion, is that they are allowed a book to sing from 'if they do not have it by heart' and there is light to read it by (Young, 1933, i, p.333). The degree of 'let's pretend' varies, and phrases such as 'in the likeness of those who are searching', 'in imitation of an angel', 'in a high [or loud] voice as if rejoicing', occur in early and late texts and do indicate some move towards dramatic illusion.

The general style of 'acting' must also have varied somewhat from place to place, and from century to century. But it is a safe conjecture that it was generally restrained and formal even in the larger plays. One remarkable and fully rubricated text, with music, throws some light on this (Young, i, pl.12): a 14th-century *Planctus Marie* from Cividale del Friuli (*I-CFm* CI). Over each phrase of text and music is written a direction to the singer such as: 'Here shall she turn to the men with arms outstretched', 'Here shall she wring her hands', 'Here shall she point to Christ with open palms', 'Here with head bowed she shall throw herself at the feet of Christ'. The verbal text is highly patterned and elaborately rhetorical; some of the gestures and movements are clearly liturgical – 'here he strikes his breast', for example – and it is probable that liturgical gesture and movement is a guiding principle in the play (see Coussemaker, 1860).

The style of singing, the use (or not) of instruments and other matters of musical presentation are considered in §II, 7 below.

4. SOURCES. The liturgical plays are found in a variety of sources, mostly liturgical service-books (fig.3), but also playbooks, poetic anthologies and miscellanies. The huge majority of *Quem queritis* dialogues is found in tropers such as the St Martial troper (*F-Pn* lat.1240) mentioned in §II, 1 above and the Winchester Troper (*GB-Ob* 775). The extended dialogue *Visitatio sepulchri* occurs in a wider variety of service-books. The so-called Dublin play, for example, is found in two manuscripts, both processionals (*IRL-Dm* Z.4.2.20; *GB-Ob* Rawl.liturg.d.4); another version, headed 'In Resurrectione Domini', comes from a *Liber responsalis* in the monastery of Einsiedeln, Switzerland (*CH-E* 300), where, however, it is not liturgically placed. The tendency to detach the more elaborate dialogues and plays from their liturgical context is most marked in the case of three highly individual manuscripts. The first and most famous is the *Carmina burana* manuscript from the monastery of Benediktbeuern (*D-Mbs* 4660), which contains among many remarkable items a fragmentary play, *De rege Egipti*, a *Ludus paschalis*, two Passion plays, a *Peregrinus* and an elaborate Christmas play. The second manuscript, also well known, can be claimed as the most truly 'dramatic' of all the sources: the Fleury Playbook (*F-O* 201). The manuscript itself is a large 13th-century religious miscellany; but in the midst of it are inserted four gatherings containing ten plays – the first playbook of its kind. The third manuscript is that rare thing in medieval times, a book to which an author's name can be attached: that of Hilarius, a wandering scholar and pupil of Abelard. His book (*F-Pn* lat.11331, 12th century) contains poems, verse letters and three plays, but without musical notation. Sometimes even a quite elaborate play is substantially the same in several sources. Such is the case with the *Officium stelle* of Rouen (*F-Pn* lat.904, with music, *Pn* lat.1213, *R* 222, *R* 382, *R* 384). But generally the more elaborate the play, the less likely this is to occur.

The entire, or partial, absence of musical notation from sources of liturgical plays does not mean that they were not sung. Nor does the use of the Latin verb *dicere* in rubrics, instead of *cantare*, imply the spoken word, since both verbs are used, apparently interchangeably, in the texts of plays with music throughout and also in liturgical books. (The sources of the liturgical drama are listed comprehensively by Lipphardt in 'Liturgische Dramen', *MGG1*, where a distinguishing asterisk is given to those that contain music. The sources are listed there by provenance or present location but without shelf-marks, for which Young or Smoldon (1980) must be consulted; see also Lipphardt, 1975.)

Ex.7 *GB-Lbl* Egerton 2615 f.94

['To the ruler of the stars, to the all-powerful one, this host of men and assembly of youths give honour.']

3. Opening from a 'Liber responsalis' from Strasbourg, c1200 (GB-Lbl Add.23922, ff.8v–9r), showing the way most liturgical 'plays' (here a play of 'The Three Kings') are embedded in liturgical service-books; at the Octave of Epiphany at Vespers, after the 'Magnificat', the play begins (left-hand page) with one Magus singing 'Stella fulgore mimio'; the music is written in unmeasured, unheighted neumes

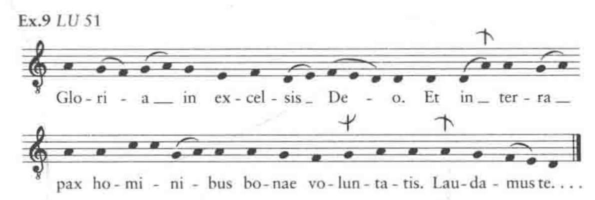
5. NOTATIONS AND PROBLEMS OF TRANSCRIPTION. Medieval church plays are written in a great variety of notations corresponding to the notations of other melodic music of the period *c*900–*c*1500. In the case of plays closely attached to the liturgy of Christmas or Easter (i.e. the huge majority of surviving musical texts), the notation of the play is identical to that of the liturgical context and presents the same difficulties. Thus the 10th-century St Gallen version of the *Quem queritis* is in Franco-German unheighted neumes; the St Martial in Aquitanian with some indication of comparative pitch by heightening. The clarification of pitch is carried one stage further in, for example, a troper from Ravenna (*I-MOd* O.1.17, 11th–12th century), in which the north Italian neumes are almost precisely heighted by the use of a single line (with faint subsidiaries), with F clef (see fig.1 above). Two lines, usually F and one other, are given to help the singer in a gradual-troper from Piacenza (*I-PCd* 65, 11th–12th century). Finally (though the sequence is not neatly chronological), most of the longer plays, except those in the *Carmina burana* manuscript, are written in a notation that clearly indicates pitches on a four-line staff; the Fleury Playbook is written in the neumes characteristic of northern France in the 12th century (fig.4); they, like the neumes of Gregorian chant in the same period, are beginning to approximate to the now familiar square shapes. These are more evident still in the *Ludus paschalis* of Origny-Ste-Benoîte (*F-SQ* 86). A style of notation slightly less liturgical in its associations is found in the early 13th-century manuscript *GB-Lbl* Eg.2615 (containing the *Play of Daniel*; fig.5); but even there the notation is nearer to that of the liturgical monophonic than to that of the polyphonic pieces in the same manuscript (the characteristic canted *punctum*, a rhomboid form, is much used in both sections).

The satisfactory transcription of the liturgical drama is bedevilled not only by the problem of pitch but also by the other problem that besets the study of early monody in general – that of rhythm. It presents itself in two forms: briefly, how should the liturgical chants and melodic passages modelled freely on them be interpreted, and how should melodies of a more secular character be interpreted? In answer to the first question, there is no reason to think that in their somewhat enlarged and freer context the liturgical chants in any way changed their style. If the chant was normally sung rhythmically in a modified equal-note style, then certainly it was so sung in a dramatic setting. On the other hand, melodies such as *Astra tenenti, cunctipotenti* or *Jubilemus regi nostro, magno ac potenti* (from the *Play of Daniel*) with their strongly accentual Latin verse texts seem to invite the metrical interpretation that most editors give them – triple in the first case (ex.7) and duple or triple in the second (ex.8). More complicated melodies, such as the planctus of Rachel in the Fleury *Play of the Innocents*, need, as do other melismatic songs (e.g. of the troubadours and trouvères), more flexible treatment. There is no agreed style for the transcription and editing of liturgical plays. Weakland (1961) proposed,

and in his edition of the *Play of Daniel* exemplified, the above distinction between unmeasured liturgical and metricalized 'secular' melody. Tintori and Monterosso (1958) rendered the whole text of the Fleury Playbook according to the principles of pre-Franconian, modal notation.

Krieg (1956) adopted a more flexible but continuously modal interpretation for the whole of the Tours Easter play, prose and verse passages alike. The solution adopted by Coussemaker (1860) of transcribing the music of the plays into traditional Gregorian square notation is non-committal but practical, as is the modern equivalent of unmeasured note heads. Each play presents its individual problems; but it seems both unhistorical and unmusical not to recognize in many plays the co-existence of different melodic styles, whose proper interpretation is bound up with that of Gregorian chant in the Middle Ages and of other monophonic music (in Latin and in the vernaculars).

6. Musical style and musical structure. The way in which both the simplest and the more complex liturgical plays incorporate material direct from the seasonal liturgy has already been briefly described (§II, 2 above). However, research is still needed on the sources of the melodies used in the plays. A common extension, for instance, to the basic *Quem queritis* dialogue consists of the trope *Alleluia, Resurrexit Dominus, hodie resurrexit leo fortis, Christus, filius Dei* (e.g. in *F-APT* 4). As this has different music from the antiphon *Alleluia, Resurrexit Dominus* (Smoldon, 1980), some confusion has arisen in tracing the sources of the Fleury and Rouen plays, which use this trope.



The analysis of the musical style and structure of these melodies is also not far advanced. The assimilation round the newly composed basic dialogues of Easter and Christmas of known liturgical or paraliturgical material (e.g. sequences) from varied contexts posed problems of dramatic and of musical unity. The musical problem resolves itself into various related questions. How was the deviser or arranger (the words 'composer' and 'playwright' are best avoided) to achieve a consistent musical style? What devices of melodic repetition (sequence, 'rhyme', motif) were admissible? How could modal congruity, tonal unity, be achieved? What dramatic criteria did the musician have to satisfy?

A consistent musical style was achieved, no doubt almost unconsciously, by the use of the idiom of Gregorian chant. In the case of the simplest dramatic ceremonies, mere dialogue tropes, the whole intention of the arranger was in any case liturgical. The fact that the musical phraseology of the *Quem queritis* itself is analogous to that of other liturgical melodies should cause no surprise. From Brandel (1966/*R*) it appears that the closest analogy is that of the Whitsuntide antiphon *Paraclitus autem* (*LU*, 900); the fact that liturgically the two are not at all closely connected makes it likely that the borrowing was unconscious. Brandel further noted that the chant of the Marys as they approach the sepulchre, 'Ad monumentum venimus gementes' (see ex.3 above), has a close parallel in Gloria XIII (*LU*, 51, 'Et in terra') and that its main melodic marking (rising 3rd superimposed on rising 5th) occurs appropriately in the Easter Tuesday alleluia verse *Surrexit dominus de sepulchro* (*LU*, 790; exx.9 and 10).

['Let us rejoice in our great and powerful king. Let us sing fit praises with tuneful voices.']

In his thorough study of the 13th-century Tours *Ludus paschalis* Krieg (1956) showed the extent of the melodic

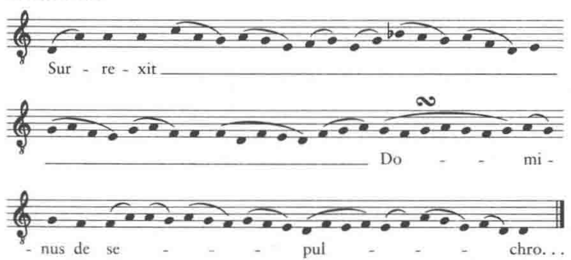
['Glory be to God on high. And on earth peace, goodwill toward men. We praise thee . . .']

debt in unidentified chants, by approaching the problem from the opposite angle. The parts of the liturgy most familiar to the medieval singer were the Ordinary of the Mass and the Requiem Mass. Musical thoughts were naturally taken from these as well as from the chants of the most important season of the Christian year – Passiontide and Easter. One of the haunting cadences of the Easter sequence *Victime paschali* mentioned above, 'quid vidisti in via?' (C–F–E–D–E–C–D), recurs over 15 times in the Tours play; the descending phrase 'Christus innocens patris' (A–G–A–G–F–E–C) ten or eleven times; 'gloriam vidi resurgentis' (G–F–G–A–G–F–G–F–E–D) again more than 15. Phrases from the Lamentations of Jeremiah, the Gloria, Sanctus and Benedictus of Mass I (*in tempore paschali*) and the *Populе meus* are also taken from the Lent and Easter liturgies; and the sequence *Dies irae*, the responsory *Libera me, Domine*, and *Fac eas, Domine* (from the offertory *Domine Jesu Christe*) from the Requiem Mass (Krieg, 1956). The arranger-composer of a play such as this from Tours must have been a cleric who lived this music throughout the year in a singing community. He put it together ('com-posed' it) with intellectual control certainly, but out of a teeming hoard of deeply known and only half-consciously transmuted material.

However, the presence in a play of a large number of known liturgical melodies and the widespread use of innumerable known motifs to form 'new' melodies do not in themselves bring about musical unity in a continuous composition. The problem of tonal, or more specifically modal, unity has to be solved. The subtle adjustments, for example, demanded by the shift of the Christmas dialogue from the beginning of Mass to the end of Matins were analysed by Lipphardt (*MGG1*, col.1022). In a play as long as the Tours *Ludus paschalis* the problem is on a

4. Page from the Fleury Playbook, 12th century (F-O 201, p.217), showing Rachel's lament (beginning 'Heu! teneri partus' on the 3rd staff) from 'The Slaughter of the Innocents'; it is preceded by the rubric 'Tunc inducatur Rachel et due consolatrices, et stans super pueros plangat cadens aliquando dicens' ('Then Rachel should be led on with two consolers, and, standing over the boys, she should lament, falling as she speaks'); the neumes, approximating to square shapes, are written on a four-line staff

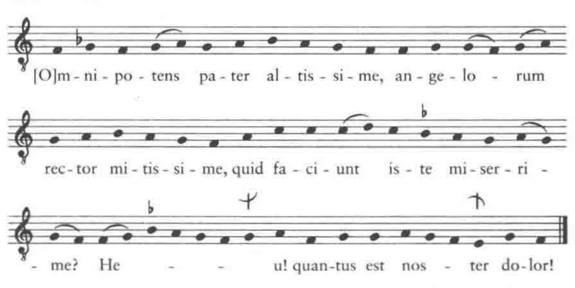
bigger scale. In this play the predominant mode is the D mode; but the quite long scene in which the Marys buy spices from the merchant is entirely in the F mode (or, more exactly, as it requires B♭s, in the transposed C mode).



There may be a deliberate choice here, since the musical content of the scene is a single melody repeated some ten times (ex.11). The D mode predominates also in the Fleury *Visitatio sepulchri*; but here a big shift occurs in the middle of the play for the scene in the garden, starting with the angel's question 'Mulier quid ploras?'. This is in the E mode and opens a series of 'speeches' all in this mode. At the end of the series, when the linen cloths are placed on the altar, there is a brief interlude of six phrases oscillating between finals on F and G (as the Marys celebrate the Resurrection) and two familiar antiphons [*Nolite timere vos;*] *ite nunciate*, on E, and the final triumphant *Resurrexit hodie Dominus, leo fortis Christus filius Dei*, on D. More needs to be known about the emotional effects associated with different modes before the precise intention behind these changes can be defined. Their nature at least is clear. Lipphardt (1963), from a modal analysis of the Le Mans *Versus ad faciendum Herodem*, concluded that 'the musical technique which can here be characterized as adaptation is one that has been many times described – it is that of the psalm "differences" [the variant endings which ensure smooth transitions between psalm and antiphon] and it is in keeping with the liturgical character of the play' (*see* PSALM, §II).

Analysis of the musical structure of the plays has to take two other aspects into account: the frequent use of what may be called 'narrative melody', and the presence of contrasting material (melodies not modelled on plainchant). The first feature is most evident in such a play as the Fleury *Tres filie*, a 'miracle' of St Nicholas. The story

5. Page from the 'Play of Daniel', from Beauvais, early 13th century (GB-Lbl Eg.2615, f.105v), in which the king's counsellors are accusing Daniel, in his absence, of persisting in forbidden worship; the notation is characterized by rhomboid puncta (not to be confused with mensural semibreves) written on a four-line staff

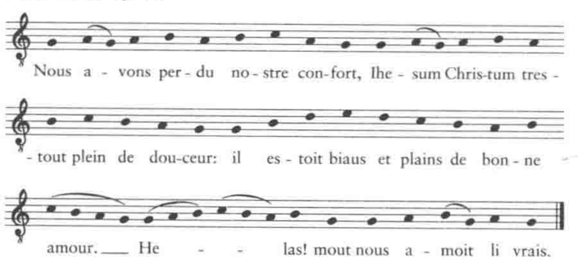


is not lacking in dramatic possibilities; it tells how the saint 'by timely gifts of gold to an indigent father, rescues the three daughters from careers of prostitution' (Young, 1933, ii, 311). Yet it is sung throughout almost entirely to the same melody. This could be interpretated as a special technique for a special purpose, were it not that, as already seen, episodes in fully dramatic and musically developed liturgical plays, such as those from Tours, Origny-Ste-Benoîte and Fleury, could be presented in a similarly stylized way – for example the lively merchant scene in the Origny *Ludus paschalis*, which uses one tune

Ex.10 *LU* 790

['The Lord is risen from the tomb . . .']

Ex.11 *F-TOm* 927 f.1*v*



['All powerful, most high father, most gentle ruler of the angels, what can we do in this dreadful plight? Alas, what grief is ours!']

16 times (ex.12). Possibly this was the sort of melody to which narrative poems (*chansons de geste* and saints' lives) were sung. There are certain obvious similarities between it and the melody of the Tours merchant scene (see ex.11 above). Each tune hovers around the major 3rd or 4th above the final, making only brief flights above this, and has an impersonal, yet malleable, character analogous to, though musically distinct from, psalm tones.

The presence of contrasting (i.e. non-liturgical) material has been most convincingly demonstrated in the case of the planctus. 'In the melodies of [the developed Easter plays] the different music worlds of the Middle Ages are ... harmoniously juxtaposed. In the figure of Mary they are indeed knit together into the unity of a dramatic action' (Lipphardt, 1948). One mark of 'secular' influence in the planctus is the characteristic fall of a 5th as at the phrase 'Sed eamus' in ex.3) above. Such a fall is also found, however, in the very same D mode, in the liturgical antiphon *Ad monumentum venimus* (see above). Its secular nature is more apparent when it occurs in the C or G modes, as in Rachel's lament from the Fleury *Slaughter of the Innocents* (ex.13: 'Heu! teneri partus'). This progression has something in common with, for instance, melodies in one of the most popular planctus of the period, the *Planctus ante nescia*; see, for example, the phrase 'Reddite mestissime' (ex.14). The tradition of the planctus was one that came ready-made, or ready at least for adaptation, to the arrangers of the more complex liturgical plays and provided a corpus of melody different from, but assimilable to, Gregorian chant.

7. Interpretation and performance. These linked aspects will be discussed with special reference to a few plays of marked individuality which have received less than their due above. The problem of musical interpretation cannot be considered in isolation from other aspects, though attempts to do so have been common enough. The whole style and meaning of the liturgical drama depend on non-realistic conventions of staging, properties and costumes, on a relationship unfamiliar in modern times between actors and 'audience' (?congregation, ?bystanders – *populus* is the neutral term most frequent in the texts), on a style of acting (movement and gesture) and doubtless of singing far removed from modern styles. Music is not only an inseparable part of this complex but a major one – principally in the form of song, but also as the music of instruments. The questions which need to be considered concern music and character, music and 'atmosphere', music as expression and music as symbol, an iconography in sound.

Ex.12 *F-SQ* 86 p.611

['We have lost our solace, Jesus Christ, all full of sweetness: he was fair and full of kind love. Alas! the true one loved us well.']

(i) The Padua 'Annunciation'. This play (in *I-Pc* CI, 13th century) is a tellingly simple dramatic ceremony which, although of a rare genre, is thoroughly typical in its general style (see Vecchi, 1954). It took place on the day of the feast 'after dinner', as an addition to the authorized liturgy, not as a dramatization of part of it. It opens with a procession of the main characters from sacristy to church. It uses expected liturgical material – the epistle for the day (called the 'prophecy'), the gospel (*Missus est angelus Gabriel*), antiphons (*Ave Maria, gratia plena*, *Ecce ancilla domini*, *Benedicta tu in mulieribus* etc.). It ends with an *alternatim* performance of the *Magnificat* for choir and organ.

The central action of the play is symbolic: the dove, immemorial symbol of the Holy Spirit, plunges from the roof of the church and is received by Mary under her cloak. This symbolic use of 'properties' is paralleled by a symbolic use of space (Gabriel comes from the choir, the 'heavenly' part of the church, to visit Mary in the nave, the 'earthly' region), a symbolic time (Mary's journey to Elizabeth's house takes only a few seconds), and symbolic gesture (Mary is to stand and welcome the dove with, literally, 'open arms'). This dramatic style may be summed up not as realism but as realization. The deviser of such a ceremony aimed not to reconstruct a dimly grasped historical event but to honour the Virgin by realizing, making real, a truth about her in the most vivid terms available. His most vivid terms were not, even in drama, naturalistic and causal, a copy of everyday life, but typological and symbolic.

The most important points to be made about the function of the music are negative. First, the music has nothing to do with the presentation of character in the sense of individual personality. Gabriel, the Virgin Mary and Elizabeth all sing in the same style – the style of singing plainchant in 13th-century Padua, whatever that may have been. Moreover, the two principal women's parts were sung, as nearly always, by grown men. Their musical utterances are no more personal than their formal gestures. Working powerfully against any concept of musical 'personality' for the singers is the very fact that the music for the play is a potpourri of familiar chants, associated for the congregation with a liturgical solemnity and communal rejoicing, not with the expression of individual feeling. A second negative point is that the music is not concerned with creating or reinforcing 'atmosphere' – not in the sense that, for instance, Debussy could create through music the sunless atmosphere of underground caves in Act 3 of *Pelléas et Mélisande*. There is, of course, a legitimate sense in which the music of the Padua play 'creates an atmosphere' – one of restraint and dignity, a liturgical atmosphere, helping to give the play a significance beyond the merely temporal and occasional. What is certain, however, is that in this and other small-scale plays the atmosphere is not peculiar to the play – it is an intensification of the liturgical experience proper to the feast.

(ii) Mézières' 'Presentation'. One noticeable feature of the Padua play and of the great majority of liturgical plays is the complete absence of any reference to the playing of instruments. Since the method of staging the plays is described very fully in some instances, this negative evidence must be given weight. A remarkable *ordo*, however, written by the French nobleman Philippe de Mézières (*F-Pn* lat.17330), prescribing in the fullest

detail for his *Festum Presentationis Beate Marie Virginis*, is one of the few which do mention instrumental music. It helps to clarify the problem. (For a complete text of Mézières' *ordo* see Coleman, 1981.)

This ambitiously conceived liturgical ceremony, which has impersonation, action, dialogue and all the usual features of a play, was composed for the introduction into the Western Church of the feast of the Presentation (Avignon, 1372); it had the approval of the pope and the ecclesiastical hierarchy at Avignon, a fact which gives the *ordo* unusual authority. The ceremony is based on an apocryphal story; its climax comes when Mary, impersonated by a 'very beautiful little girl' three or four years old, climbs the Temple steps to the altar and is presented by her parents, Joachim and Anna, to the bishop, who receives her 'in the person of God the Father'. Structurally the play is in three parts (Procession, Praises [*Laudes Marie*] and Presentation); it is followed without a break by the Mass (during which Mary sits on a special platform), by a short civic procession and by a banquet. There is a great deal of singing (the *ordo* does not provide notated melodies) of the usual kind. And in addition 'two young men who shall play sweet [?soft] instruments' are named in the cast and frequently referred to in the rubrics as *pulsatores*. Their instruments are never specified; the verb 'pulsare' was used in medieval Latin for the playing of drums, trumpets, plucked instruments and, with great frequency, bells. Perhaps the young men played more than one kind of instrument; this seems likely, since their main function was the usual function of instrumental musicians – to accompany movement. They played processional, 'escort' music, as the characters went from place to place. For this loud instruments must have been required. But when they played for an angel singing 'some song in the style of a *rondellus* ... in the vernacular', string music would have been more appropriate. The musicians were also required to quieten the populace down after the expulsion of the character Synagogue from the church, which was expected to cause noisy laughter.

There are one or two points of particular interest. The instrumental music was not, except in the unusual case of the devotional vernacular song, used to support singing; the liturgical items were apparently unaccompanied. Only two instrumentalists were employed for a dramatic ceremony of great magnificence, although all the resources of the papal court were presumably available. The musicians are specifically required to be silent during the Presentation scene itself, the liturgical climax; and they retire altogether, escorting the main actors, before the introit of the Mass is sung. From the limited use of musical instruments on such a grand occasion, it can perhaps be inferred that the liturgical drama as a whole did not often have occasion to employ them. The only frequent known exceptions are organs and bells.

(iii) 'Play of Daniel'. There is, however, another play, of equal though different magnificence, the celebrated early 13th-century Beauvais *Play of Daniel* (*GB-Lbl* Eg.2615; see fig.5 above) which must be taken into consideration; this play, the opening lines state, was devised by the young people (*juventus*: ?students of the cathedral school) of Beauvais 'in honour of Christ'. In fact, it celebrates Christmas; at the end an angel 'shall suddenly cry out "Natus est Christus"'. Daniel was chosen as the subject not out of a historical whim but because he was a prophet of Christ's coming. The play tells the familiar Bible story (*Daniel* v.1ff).

There are at least 50 distinct melodies in the play, unrepeated and untraced in other sources. These are largely syllabic and seem to fit naturally into the patterns created by the accentual Latin verses. One or two pieces are in a florid plainchant style, but only the last item, the Christmas hymn *Nuntium vobis fero*, can be identified liturgically. These facts alone make it unique.

Relevant to the problem of instrumental music is the large number of processional items, all with text: 'conductus regine'; 'conductus Danielis venientis ad regem'; 'conductus referentium vasa ante Danielem' and so on. But only one rubric in the whole play specifically mentions instrumental music; it announces the coming of Darius who will kill Belshazzar and seize his throne – 'At once King Darius shall appear with his princes, and the *cythariste* and princes shall proceed before him singing [*psallentes*] these words'. The term 'cythariste' suggests that an element of scriptural stylization, based on Old Testament writings, can creep even into stage directions. The reference in the poetic text itself is even more stylized: 'let drums resound; let the harp players pluck their strings; let the musicians' instruments sound his praises'. Nevertheless, there is no reason to believe that the students of Beauvais were more restrained than Philippe de Mézières; the nature of the play, depicting the glory and the fall of kings, indeed calls for fanfares and the like. But neither text nor liturgical tradition supports the idea of lavish and continuous musical accompaniment. The only other play of comparable magnitude on a comparable subject, the 12th-century Tegernsee *Antichristus* (*D-Mbs* lat.19411), is full of regal characters, but instrumental effects are nowhere specified. It is easy to be misled by the appeal of colourful modern productions of such plays.

Among the numerous rubrics of the *Play of Daniel* are two that raise a further large problem of interpretation – that of the actor's proper singing style. The rubrics are 'stupefactus clamabit' and 'dicens lacrimabiliter'. Were Belshazzar's astonishment and Darius's grief to appear in their voices? It certainly seems so. But these are the only stylistic suggestions in 392 lines of text. Some plays, however, are more explicit. The common rubrics 'alta voce', 'mediocri voce' and 'humili voce' are found also in the liturgy proper, referring rather to loudness or pitch than to style. But other rubrics seem to require a distinct emotional colouring to be given to the chant in performance. Examples taken from texts of the *Visitatio sepulchri* alone are: 'mediocri voce dulcisone' ('in a medium voice, sweetly'); 'submissa voce quasi in aurem dicentes' ('in a low voice as if speaking into [his] ear'); 'voce sonora' ('in a resonant voice'); 'cantantes multum suppressa voce (? 'in a very hushed voice'); 'alte vociferantes' ('shouting out loud'); 'devote ... aliquantulum remisse' ('with devotion and rather gently'). Other adjectives and adverbs applied to singing are *simplex*, *blande*, *lenis*, *auctorabilis*, *alacris*, *querulus*, *lentus*, *flebilis* and *moderatus et admodum gravis*. This aspect of the plays is insufficiently studied; but there appears to be an unexpected dimension of psychological realism here. The problem is how the implications of these rubrics can be squared with other indications in the plays of formality, impersonality and emotional restraint.

(iv) Fleury 'Play of the Innocents'. Problems of interpretation and performance must be solved separately for

Ex.13 *F-O* 201 pp.216–19

each individual play. But to formulate true generalizations about the function of music in liturgical drama, plays more typical than the *Play of Daniel* and *Antichristus* must be chosen for analysis. A play that sums up the central traditions of liturgical drama is *The Slaughter of the Innocents* from the Fleury Playbook (see fig.4 above). It opens with the Innocents (the choristers of the choir) processing through the church singing *O quam gloriosum est regnum* (antiphon of Vespers, Vigil of All Saints). Then 'a lamb, suddenly appearing, bearing a cross, shall go before them ... and they following sing, "Emitte agnum, Domine"' (antiphon of Lauds, second Sunday before Christmas). This procession continues during the angel's warning to Joseph, Herod's attempted suicide on hearing the news of the escape of the Magi, and his command for the slaying of the children. As the slayers approach, the Innocents salute the lamb once more, 'Salve, Agnus Dei'. The distraught mothers are allowed a prayer of five words for mercy. Immediately an angel appears and exhorts the slain children to rise and cry out. Dead on the ground, they sing a sentence from a responsory of Matins of Innocents' Day, 'Quare non defendis sanguinem

[*Afterwards, when the children have been slain, an angel counsels them from on high, singing:* 'You who lie in the dust, rouse yourselves and cry out!' *The slain children:* 'O our God, why did you not defend our blood?' *Angel:* 'Wait a little while, and the number of your brethren shall increase.' *Then Rachel is led in, and two women consoling her; and standing over the children she weeps, sometimes falling down, singing:* 'Alas! tender children, whose torn limbs we see! Alas, sweet sons, your throats cut in a single fit of rage! Alas, neither pity nor your age could protect you! Alas, wretched mothers, that we should be compelled to see this thing! Alas, what can we do now, why should not we too undergo the same! Alas, for our bitter memories cannot be relieved by joy now that our pledges of sweetness are no more!' *The consoling women raise her when she has fallen, singing:* 'Young wife Rachel, sweetest mother, stop; restrain the tears of your grief at the slaying of the little ones. As you have sorrowed, rejoice as you have wept: for your children live in bliss above the stars.' *Then Rachel sings, lamenting:* 'Alas! alas! alas! how shall I rejoice when I see the dead limbs; when I am thus stricken to the heart? The children will cause me to lament for evermore. O grief! O, the joy of fathers and mothers changed into sorrow! Pour forth floods of tears, weeping in grief for the flower of the land of Judah!' *Then the consoling women:* 'Why do you weep, O fair young mother Rachel, whose countenance delighted Jacob? As if the reddened eyes of an old woman please him! Dry your weeping eyes, O mother. How can these streaming cheeks become you? *Then Rachel:* 'Alas! alas! alas! how can you reproach me for pouring forth vain tears, when I am bereft of my child, who would have cared for me in poverty, guarded from foes the little plot Jacob bestowed on me, who would have helped the strong brothers whom, alas, I have borne?']

nostrum, Deus noster?' ('Why dost thou not defend our blood, O our Lord?'). They continue to lie prostrate during the long fourfold lament of Rachel, but rise to their feet when the angel sings the antiphon 'Sinite parvulos' ('Suffer the little children', antiphon of Lauds of Innocents' Day) and process to the choir, praising Christ in the words of the sequence *Festa Christi*. Archelaus succeeds Herod as king (in dumb-show), the angel summons the holy family back to Galilee, Joseph sings *Gaude, gaude* (antiphon of the Assumption of the BVM), and the play ends with the *Te Deum*.

Ex.14 *F-EV* 39 f.2

['Restore the body to this most sad and fainting woman, so that the crucified one in his humiliation may be enriched with kisses and embraces.']

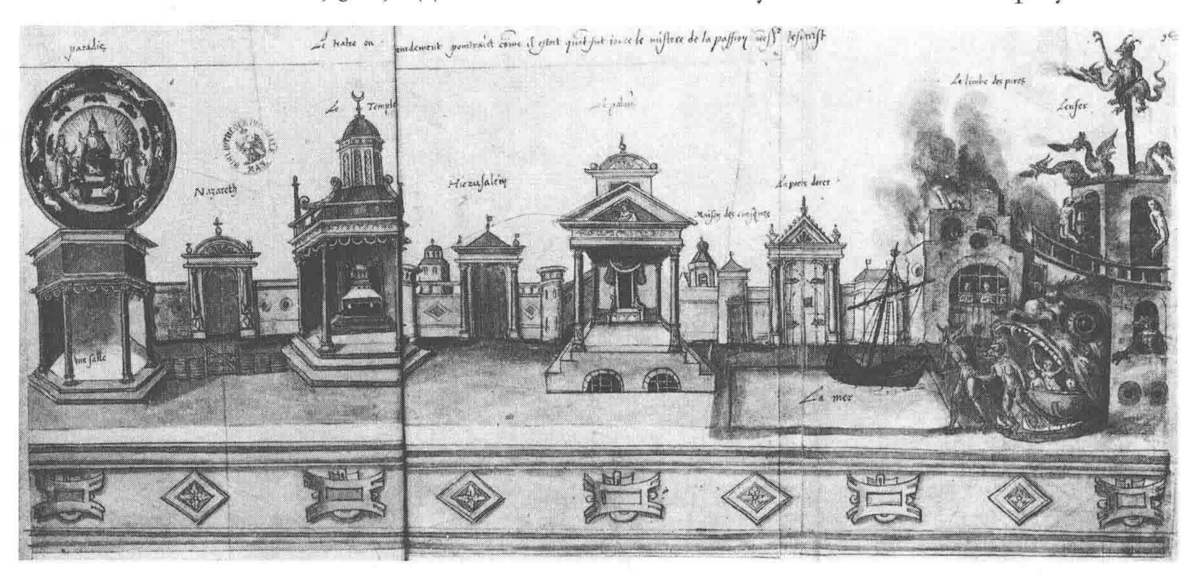
This brief summary cannot do justice to the skill with which the deviser has blended three planes of reality – a traditional historical story (entirely scriptural), a liturgical celebration (for the feast of the Holy Innocents) and a planctus of typological significance (Rachel is the Old Testament type of the mourning mother; *Jeremiah* xxxi.15). But it demonstrates the typically non-realistic character of the play. The slaughtered children are not little Jewish two-year-olds but the Innocents of *Revelation* xiv.1ff, the 144,000 virgins who follow the lamb, singing in procession in the heavenly city. When they are swiftly and decorously slaughtered, they are not so dead that they cannot continue to sing.

The music of the play, like the text, is a mosaic of passages from the service-books: at least ten separate liturgical chants are quoted from half a dozen different services; they are mostly traditional antiphons. Rachel's lament excepted, the music was borrowed or adapted from, or composed in imitation of, liturgical plainchant. The measure and restraint of the liturgical utterances are exemplified in the angel's exhortation to the slain children to be patient until the time appointed, 'Adhuc sustinete modicum tempus' (see ex.13 above); there is nothing more violent in this G mode melody than one rising triad, and almost all movement is by step. Rachel's lament, on

the other hand, belongs to the musical tradition of the planctus, with roots in secular ceremonial and affinities to courtly song; its words are highly emotional and rhetorical: 'Alas, delicate children, whose torn limbs we see! Alas, sweet sons, your throats cut in a single fit of rage'. The melody is correspondingly less restrained and more patterned than plainchant. Various features are notable: the melismatic exclamations of grief, the sequential setting of 'Heu! heu! heu!', the recurrence of musical 'rhyme' at the end of each hexameter, and the occasional bold melodic jumps. The transition from this comparatively extroverted, emotional style back to authentic liturgical chant at the end of the play is beautifully accomplished by the antiphon that Rachel sings as she falls on the bodies of the children, *Anxiatus est in me spiritus meus* (antiphon of Lauds of Good Friday).

The contribution of music to the dramatic experience can be summed up as follows (see Stevens, 1968). First, the composition is singularly unified in tone. There is variety in the music, not only between the planctus and plainchant (traditional or newly composed) but also, within both of these, between a melismatic and a syllabic style. The final impression, however, is of unity. Second, the use of known chant has what might be called an 'iconographic' power. Through the psalm-antiphon *Anxiatus est* the grief of Rachel, already generalized through the symbolism of her character, is identified with the sorrows of the psalmist and (by recalling the liturgy of Good Friday) with the sufferings of Christ himself. Melodies sung at memorable moments of the church year bring a wealth of reference and meaning to the drama. Finally, the liturgical music proper has a direct emotional effect in contrast to the human suffering conveyed in the central scene of Rachel. Negatively, in its grave restraint and complete lack of flamboyant emotion, it prevents the listener becoming too involved in the human situation for itself. Positively, it lifts him or her with its serene movement above temporal anxieties into that other world, beyond time, the truths of which the liturgical drama was created to celebrate.

III. Vernacular drama



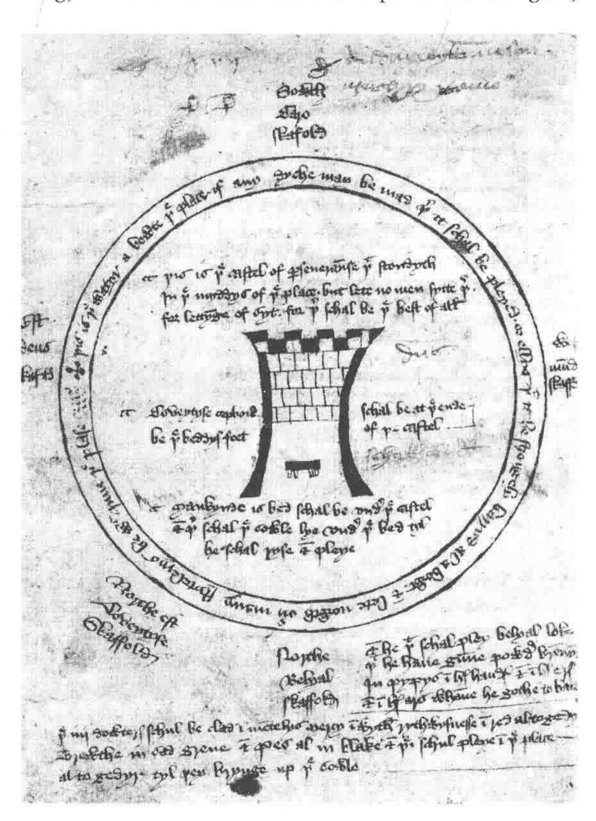
1. Introduction and presentation. A broad division between vernacular, spoken plays and Latin, sung plays is obvious and necessary (see §I above); and to postulate two traditions of medieval religious drama is a necessary corrective to the old one-line evolutionary theory. But it would be wrong to suggest that these roughly parallel lines could never meet. There are a number of plays, especially in German (the *Marienklagen*; see §III, 2(i) below), the Innsbruck *Osterspiel* and so on (see §III, 3(iii) below), but also in other vernaculars (e.g. the 'Bodleian' *Burial and Resurrection*; see §III, 3(i) below), for which the term 'vernacular liturgical drama' is appropriate. The *Marienklagen*, at least, and the English *Burial and Resurrection* seem relatively unaffected by the more obviously secular elements, sometimes less so than some Latin 'liturgical' dramas. Above all, one must bear in mind the extraordinary variety of vernacular drama in every European country (even though the surviving sources may not do justice to it), compared with which the Latin ecclesiastical drama is almost monolithic. Moreover, it was not entirely a religious drama (see §III, 2(iii) below) even if most of the plays that survive are religious.

Despite this variety, certain general propositions about the staging of medieval vernacular plays hold true: the presentation of time and place was non-naturalistic; 'scenery' was a matter of a few 'houses' (*sedes*, *lieux* etc.) and properties were of an emblematic kind (an arch to represent a temple, a tree to represent a garden etc.); costume was generally more naturalistic and 'in character' than in the liturgical plays, but contemporary and not historical (Annas and Caiaphas were dressed as medieval bishops, not as Jewish priests of the pre-Christian era); the great majority of performances took place out of doors by daylight, and the audience was far less insulated from the actors than it is in a modern theatre with footlights and spotlights. In short, the medieval vernacular drama was part-formal, part-naturalistic, but always contemporary.

Most medieval plays are rather sparsely provided with directions for their performance. For instance, it is not known where and when, let alone how, the *Sponsus* (§III, 2(ii) below) was performed. The picture has to be built up from one or two well-documented plays, such as the *Play of Adam* (§III, 2(ii) below) and from the voluminous but disconnected information that can be pieced together from texts and archives about the major forms of religious drama.

As in liturgical drama the basic means of presentation for all forms is an unlocalized acting area, or 'place' (Lat. *platea*; Fr. *place*), around which, or behind, or in which, are a number of localized 'houses', 'scaffolds' or 'pageants' (Lat. *sedes*; Fr. *lieux*, *estages*, *sièges*: fig.6). The 'houses' sometimes completely surrounded the 'place' (diagrams survive for the Cornish *Ordinalia*, for the Cornish *Life of Meriasek* and for the morality *The Castle of Perseverance*, fig.7); on other occasions a half-circle was perhaps set up (the Anglo-Norman *La seinte resureccion*, on the basis of a detailed prologue; the miniature by Jean Fouquet of a play on the martyrdom of St Apollonia (fig.8; see Southern, 1957, 2/1975)). In so far as there was a special 'house' for musicians, it was likely to be God's 'house' (i.e. heaven).

The presentation of the English mystery cycles has been a matter of debate. At one time it was thought that processional performance on waggons, each playlet or scene being acted in turn at a large number of stopping-places, was the normal mode. It is now recognized that place-and-scaffold staging, as shown by the N-Town plays' elaborate stage directions and by the plans for performances of certain English and Cornish plays 'in the round', was a more common staging-mode, while some multi-day continental Passion plays were performed in a market-place, as at Lucerne. Nevertheless, the Records of Early English Drama project (REED, 1979–) has shown that, contrary to the belief of Nelson (1974) and others, some cities did use the processional mode – York, Chester, Coventry, Norwich, Beverley and Newcastle upon Tyne among them. Such staging is now recognized as being closely related to the waggons and other movable platforms still used for processions and *tableaux* on the Continent. The debate continues, however, about the numbers of plays performed and stations played at in late medieval performances at York and elsewhere.



6. *'Set' for the 'Mystère de la Passion', Valenciennes, 1547, showing medieval 'simultaneous' staging where each 'mansion' represents a different locality: illustration by Hubert Cailleau, 1577 (F-Pn fr.12536)*

General types of medieval dramatic activity and their presentation were described at length by Wickham (1959–72, 2/1980–81); the staging of the Towneley plays by Rose (1961/*R*); *The Castle of Perseverance* by Southern (1957, 2/1975); the staging of several individual French plays by Axton (Axton and Stevens, 1971); the French *mystères* by Cohen (1906, 3/1951); the German plays by Michael (1963); and a huge amount of information about dramatic representations in Spain was collected by Shergold (1967). For an overview of staging methods and techniques see Meredith and Tailby (1983). In the last 20 years scholars have tended to work on individual plays: see, for instance, essays in Dutka, ed. (1979); Lumiansky and Mills (1983); Mills, ed. (1985); Briscoe and Coldewey, eds. (1989); and various issues of *Medieval English Theatre* (1979–). The thesis that the visual arts (ivories, carvings, stone-bosses) depict properties, costumes and décor was most persuasively argued and illustrated by Hildburgh (1949) and Anderson (1963). This work has been continued in Davidson's series *Early Drama, Art, and Music* (EDAM, 1977–), for instance.

2. Early and miscellaneous plays.

(i) Complaints of the BVM: 'Marienklagen'. The complaint of Mary is a unique form of the Passion play and one in which music plays a prominent part. The planctus of the Blessed Virgin was sung beneath the crucifix of many German and north Italian churches on Good Friday. The event was extra-liturgical and had therefore no fixed time, but often nevertheless took place during the Office itself (Corbin, 1960). Some 50 *Marienklagen* survive in German manuscripts; they differ in extent and in detail but are essentially identical, even in their musical substance. There is no full-length musical study of the *Marienklagen*. Essential information is found in basic articles by Lipphardt (1932; 1933; 1934; 1948), in editions (especially Kühl, 1898), and in the studies of Schönbach (1874), Wechssler on Romance vernacular 'complaints' (1893), Corbin (1960) and Sticca (1984, Eng. trans., 1988).

Two *Marienklagen*, one from Munich and one from Bordesholm, Lower Saxony, are of special interest. The Munich text (*D-Mbs* Cgm 716) shows the vernacular 'lament' emerging, as it were, from the Latin planctus, in this case from the best known of all, the *Planctus ante nescia*; here it occurs in its simplest form, a monologue chanted by the Virgin. The Bordesholm text, on the other hand, is almost 900 lines long, but still almost entirely sung, and has elaborate directions for performance. Again,

7. *Diagram of the staging of 'The Castle of Perseverance' showing medieval dramatic presentation 'in the round', ?East Anglia, c1425–40 (US-Ws V.a.354, f.191v)*

8. *'Martyrdom of St Apollonia': illumination (detail) by Jean Fouquet from the Hours of Etienne Chevalier, begun c1452 (F-CH 71)*

no orderly chronological development can be inferred; the 'simple' Munich text dates from the 15th century. The remaining sources range between these extremes of dramatic monologue and extended Passion play. The Munich text starts with the words and melody of the *Planctus ante nescia* and later quotes from another famous sequence, *Flete, fideles*; the rest of the text is in German, with very few rubrics (e.g. 'Quum vadit ad crucem': 'he advances towards the cross'). Towards the end the melody departs entirely from its model and from any liturgical pattern, becoming extremely animated and florid, with extended melodic exclamations. 'The supposition that here we have to do with common courtly formulae of the chivalric *Totenklage* [death lament] is confirmed by the introduction of the Nibelung strophe as the highest expression of lamentation in the Trier *Marienklage*' (Lipphardt, *MGG1*; Geering, 1949). Such a melody as that shown in ex.15 would be in the sharpest contrast to its Good Friday liturgical context. Lipphardt and Corbin have both emphasized the non-liturgical spirit of the planctus tradition; it is most clearly evinced in these vernacular 'complaints'.

The Bordesholm *Marienklage* shows how wide the range of musical material could be. There are liturgical chants, especially from Holy Week (the hymn *Crux fidelis*; the responsory *Tenebrae factae sunt*, at the end; the antiphon *Anxiatus est*, occurring in seven other *Marienklagen*, at the beginning). There are also known melodies from the repertory of Minnesang, for example Neidhart von Reuental's *May hat wunniglich entsprossen* and Walther von der Vogelweide's *Kreuzfahrerweise* (Abert, 1948). And there may be additional echoes of the chivalric *Totenklage*.

There is a further interest in the Bordesholm manuscript, not in the text itself but in a most unusual preface:

Ex.15 *D-Mbs* cgm 716 ff.151*v*–152

Here begins the most devout complaint of the most Blessed Virgin Mary with the most pitiful and most devout music [*cum misericordissima et devotissima nota*]: the Blessed Virgin delivers this complaint most devoutly, with the assistance of four devout persons. It takes place on Good Friday before dinner, in the church in front of the choir on a slightly raised platform – or outside the church if the weather is good. This complaint is not a stage play [*ludus*] nor a sport [*ludibrium*] but indeed a complaint and a lamentation; it depicts the deep shared sorrow [*compassio*] of Mary, glorious Virgin. When it is done by good and sincere men ... it truly arouses the bystanders to genuine tears and compassion ... This complaint can easily be performed in two and a half hours. Everything that these five persons have to do shall be done without haste and without undue delay, in good modest fashion. The man who takes the part of Christ is a devout priest [*devotus sacerdos*]; Mary is a young man [*juvenis*]; John the Evangelist, a priest; Mary Magdalen and the mother of John, young men.

The preface speaks for itself, but two points are particularly worth noting: the insistence that the play is neither *ludus* nor *ludibrium*, that it transcends the categories of fiction and of entertainment and that it is true; and the evident paradox of presenting a highly emotional and deliberately emotive situation in a restrained and measured manner. This clearly raises problems of musical interpretation relating not only to the *Marienklagen* but also to the religious drama as a whole. (There is no easy translation for *juvenis*. As it can imply an unbroken voice or an adolescent, it should perhaps be rendered 'youth' rather than 'young man' with its implication of post-pubertal status.)

(ii) 'Sponsus', the 'Play of Adam', 'St Agnes' and the Shrewsbury fragments. A number of isolated religious plays survive from the Middle Ages that do not belong either to the liturgical drama or to the main traditions of vernacular drama. Like the *Marienklagen* and, indeed, many German Passion plays, they mingle Latin and vernacular and give music an important place. They differ widely in date and in general style.

The first, *Sponsus* (see §II, 1 above), comes from a well-known late 11th-century manuscript of St Martial (*F-Pn* lat.1139); it is just under 100 lines long. The play dramatizes in a mixture of Latin and Provençal the parable of the wise and foolish virgins (*Matthew* xxv.1–13) and ends with the coming of the bridegroom (*sponsus*). The play differs from the parable in putting more emphasis on the distress of the foolish and less on the joy of the wise; in introducing new characters – the angel Gabriel, *demones* (the earliest devils of medieval drama) and merchants, who refuse to sell oil to the foolish; and in being more radically an allegory of advent and judgment (Christ is bridegroom and judge; heaven is the marriage feast).

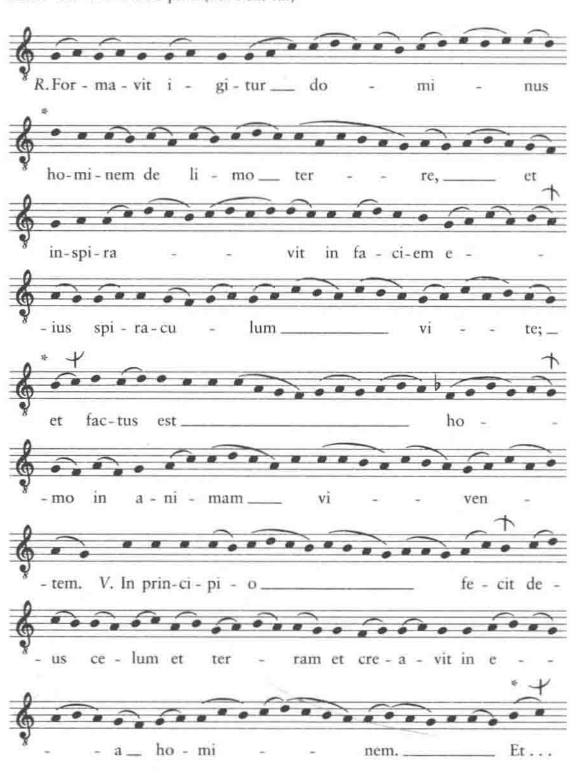
Although *Sponsus* is often classed as a liturgical play, the text 'bears no evidence of attachment to the liturgy, or having developed from liturgical pieces', or of having been performed in church (Young, 1933, ii, 361). Chailley (1960), on palaeographical, metrical, musical, thematic (literary) and other grounds, believed it to belong with the prophet play which follows it in the manuscript. Advent seems to be its proper season (see, further, Thomas, 1951). The standard scholarly editions (with music) are by Thomas (1951) and Avalle and Monterosso (1965); there is a practical edition, by Smoldon (1972), with comments on the musical notation.

Musically, also, *Sponsus* has nothing in common with other Latin church plays: it uses no liturgical chants but relies entirely on four melodies of a non-Gregorian character, which may or may not be metrical in keeping with the accentual Latin verse texts. Ex.16 gives the opening melody of the play in the alternative transcriptions adopted by Smoldon and Avalle. The unfortunate ambiguity of pitch further clouds the issues of interpretation. However, the fact that a melody may have to serve the purposes of more than one character (e.g. melody 3, for merchants as well as the foolish virgins) means that theories of leitmotifs must be regarded as strained as well as anachronistic (cf St Nicholas plays, §II, 6 above). The music helps the listener to stand away from the characters, not to identify with them.

The second isolated drama, the *Play of Adam*, is in fact three plays in sequence: Creation and Fall of Man, Cain and Abel, and prophet play. The sole surviving manuscript (*F-TOm* 927, 12th century) is in Anglo-Norman and the play is generally thought to have been written in England. It differs from *Sponsus* in that the action is conducted entirely in the spoken vernacular; there is no musical notation in the text, but the singularly detailed Latin stage directions require the singing of two Latin lessons and seven responsories. Studer's edition (1918) has been superseded by those of Aebischer (1963), Sletsjoe (1968) and Noomen (1971). The basic musical study is by Chailley (in Cohen, 1936). Chailley supplied contemporary responsories from an antiphoner of St Maur-des-Fossés (*F-Pn* lat.12044); Doyle (1948) supplied them from the Worcester Antiphoner (see PalMus, 1st ser., xii). Muir's monograph (1973) is the only full-length study, but somewhat neglects the music.

The *Play of Adam* is remarkable in several ways: for a depth of psychological penetration almost unrivalled in medieval European drama; for the fullness of its stage directions; and for its unique combination of musical and spoken dramatic effects. The power and subtlety with which the myth is re-created as a human drama is in the strongest imaginative contrast to the effect of the liturgical chants. In ancient use all these responsories belonged to the nocturns of Matins of Septuagesima (formerly of Sexagesima) and it is to this liturgical season, though not

['The Bridegroom that is Christ is here: be watchful, O virgins! men rejoice and will rejoice in his coming.']



precisely (it is thought) to this liturgical Office, that the play pertains. There is another reason for not overestimating, with older scholars, the new 'freedom' and 'emancipation' of the play: like *Sponsus* and the *Play of Daniel*, the *Play of Adam* leads to the prophecies of Christ's coming, and like almost all medieval religious drama on Old Testament themes is a play about Christ. Adam's formal lament after the Fall is directed partly against his wife's treachery, but above all it proclaims Man's redemption.

The dramatic method of the play of the Fall (which contains six of the responsories) is generally to announce themes in the chanted responsories and then to work them out in the form of dramatic 'tropes'. Thus the responsory *Formavit igitur Dominus* ('And the Lord God formed man of the dust of the ground ...') precedes God's speech describing the creation of Adam (ex.17). In a reading of the play it is easy to overlook the 'primary, framing power of liturgical music in and around the play' (Stevens, 1968): these majestic responsories, unfolding at length, need to be heard. The singers are named as the *chorus*, probably the choir of the church. They take no part in the dramatic action themselves but clearly in some sense represent the heavenly host. Their plainchant singing is always associated with God's own appearances and actions (this is why there is only one responsory in the Cain and Abel play) – a fact that relates the musical dramatic technique of the *Play of Adam* to the technique of the later mysteries (§III, 2(i) above).

The Provençal saint play *St Agnes* contrasts with both *Sponsus* and the *Play of Adam*. It was copied in the 14th century (*I-Rvat* Chigi C.V.151) and probably written not much earlier. The most convenient modern edition is by Jeanroy (1931) with musical appendix by Gérold (see also Hoepffner, 1950, and Monaci, 1880, with facsimiles). The unoriginal story, full of the sensational clichés of medieval hagiography, tells of Agnes's refusal to marry the son of the Roman prefect, Simpronius, and of the consequence: she is brought to trial and sentenced to be put in a brothel. Her hair grows miraculously to cover her nakedness, an angelic light repels all advances, and the brothel becomes a house of prayer. In the end, having survived burning at the stake, she dies calmly and is escorted to paradise by angels.

There are 19 or 20 musical (i.e. sung) passages in the play, of which almost all are called planctus, irrespective of whether they are so or not. 15 of the melodies are notated, in square (unmeasured) notation on a four-line staff (i.e. in the style of the troubadour chansonniers); of these three are incomplete, and for another the staff has not been filled in. In addition two liturgical antiphons are given, both from Vespers of the Common of Virgins. A typical Latin stage direction (the text is liberally supplied with them) reads: 'Mater facit planctum in sonu albe Reis glorios, verai lums et clardat' ('The mother makes her complaint to the tune of the dawn-song *Reis glorios*'). This celebrated *alba* by Giraut de Bornelh (*c*1140–1200) survives; most of the other named tunes do not. Ex.18 gives the two versions. The freedom with which the known melody has been modified does not encourage belief that (for instance) the other versions are necessarily very close to those current two centuries earlier. The dramatic function of the music in the play is unusually varied. There are the expected associations with divine action ('Angelus facit planctum in sonu Veni creator

Ex.17 *GB-WO* F.160 p.72 (Pal Mus xii)

[*R.* 'And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul.' *V.* 'In the beginning God created the heaven and the earth, and in them he created man.']

Ex.18

(a) *F-Pn* fr.22543 f.8*d*

(b) *I-Rvat* Chigi C.V.151 f.72

spiritus') and with lamentation (the mother's planctus and others); but music is also a vehicle for prayer (e.g. of the prostitutes after their conversion and baptism). The instrumental music of *tibicinatores* is also required for an angelic *silete* (see §III, 3(ii) below).

The so-called Shrewsbury fragments (*GB-SHRs* VI; discovered in 1890) present unsolved problems, especially musical ones. The text provides a single actor's part (with cues) for three plays: an *Officium pastorum*, a *Visitatio sepulchri* (the manuscript has the title *Officium Resurrectionis in die Pasche*) and a *Peregrinus*. The English passages are in a north-west Midlands dialect and were spoken; the Latin passages were evidently sung and nine of them are notated in black mensural notation on a five-line staff. The manuscript was copied in about 1430 (Rankin, 1975–6) almost entirely by one scribe (see Davis, 1970). The first thorough edition of the text was made by Young (1933, ii, appx B); that by Davis has musical transcriptions by Harrison. The other contents of the manuscript are mostly processional pieces (listed by Young, and by Rankin) but ff.8–14 contain the part of the Jews from the Passions of Palm Sunday and Holy Week. Rankin (1975–6) showed that the existing book contains processional music; that two companion books, now lost, probably contained the rest of a three-part musical texture; and that the book was used in Lichfield Cathedral, where, it is known, liturgical plays on precisely these three subjects were performed.

The actor-singer of this manuscript was the Third Shepherd, the Third Mary and, probably, the disciple Cleophas. Of the nine notated items, six are known texts from liturgical plays or from the liturgy. 'Mane nobiscum', for example, in the *Peregrinus* play is an ancient antiphon (Hartker etc.) which was used in plays at Saintes, Fleury, Benediktbeuern, Frankfurt and elsewhere (Schuler, 1951). The main musical problem, articulated by both Harrison and Rankin, is the precise relationship between the chant and the existing line, and thus the type of compositional process concerned. Possible solutions are discussed by Rastall (1996), but without the companion manuscripts the problem is perhaps insoluble.

The Shrewsbury fragments have been regarded as an essential link in the 'evolutionary' theory of medieval drama showing the emergence of vernacular plays from liturgical (some parallel between the English speeches of this *Officium pastorum* and York play no.15 is unquestioned). However, that theory is now discredited, and the Shrewsbury plays should perhaps be regarded as a late survival of a rare genre that also includes the *Play of Adam*.

(iii) Early secular drama. There is only one surviving secular play with a significant amount of music, Adam de la Halle's *Robin et Marion*; its quality makes the loss of others regrettable. It appears to have been written in about 1283, when Adam was in the service of Robert II, Count of Artois. At that time the count was in southern Italy, but the play is thoroughly 'Artesian', not Italian in any sense; it was written to amuse expatriate northern French soldiers as part of the Christmas festivities. It is a sophisticated piece of light entertainment consisting of a dramatized pastourelle (a lyric depicting an amorous encounter between a shepherdess and a roving knight) with a dramatized *bergerie* (a lyric describing the songs, dances and games of a group of shepherds). The materials are traditional, but their combination into this musical comedy is Adam's own achievement. The play survives in three manuscripts, the earliest and most authoritative being *F-Pn* fr.25566 (the 'complete works' of Adam de la Halle, *c*1300); *F-AIXm* 572 also contains the music, but *F-Pn* fr.1569 has only empty staves. There have been numerous editions of the play from 1822 onwards. Varty's (1960) lists previous editions and prints the music, which is also available in a modern English translation of the play (Axton and Stevens, 1971). Essential information from the musical point of view is provided by Gennrich's edition (1962) and Chailley's article (1950).

The music consists of 16 melodies dispersed throughout the play. (Adam's other play, *Le jeu de la feuillée*, contains only one, but of the same type, sung by three fairies.) They are short, rhythmical and syllabic; the notation, in complete contrast to that of Adam's courtly chansons (*F-Pn* fr.25566), is clearly metrical though not totally unambiguous. It is rather unlikely that Adam wrote any of them himself; they belong to the category of courtly popular melodies known as *refrains* (*see* REFRAIN) and several of them are found elsewhere. The melody of *Robins m'aime*, for instance, is also used as the motetus of a three-voice motet; that of *Avoec tele compaignie* occurs in the narrative poem *Renart le nouvel* and elsewhere (Gennrich, 1962). The melodies in fact belong with the words, and the author-composer has imported both together into the play. In this he followed the courtly fashion of the times. 'The melodies of the play of *Robin et Marion* possess practically all the characteristics of the "refrain-centos" of the *romances* and chansons of the period – especially of the pastourelles and *bergeries*' (Chailley, 1950) (in particular they are metrically independent from their context). The instruments introduced – a *chievrete* (a species of bagpipe) and two *cornes* (horns) – are also entirely in keeping with the lighthearted aristocratic stylization of country life.

One must not make heavy weather of the musical side of this delightful and essentially traditional entertainment; *Robin et Marion* is indeed a *jeu*, a playing. The element of dramatic illusion is very lightly handled, and the play has something of the nature of a revue (though without the overt topical references of *Le jeu de la feuillée*).

3. THE MAIN TRADITIONS.

(i) English. Fewer plays survive from medieval England than from France or Germany, but they are probably representative of dramatic activity at least in the Midlands and the north. Complete mystery cycles survive from the Wakefield area (the 'Towneley' plays), York, Chester and (probably) the Norfolk-Suffolk border (the 'N-Town' plays, formerly known as the 'Hegge' plays and published under the misleading title *Ludus Coventriae*). Two plays remain (of a likely ten or so) from the real Coventry cycle. A cycle in medieval Cornish also survives in three sections: an *Origo mundi*, a Passion and a Resurrection (no events after the Ascension are represented). No texts survive of the Passion plays known to have been performed in London and southern England, although the Passion sequence of the N-Town plays evidently started life as a two-part drama of this type. Discussion continues about the nature of the lost 'Creed' and 'Pater noster' plays. Isolated biblical plays survive from Norwich, Newcastle, Northampton, Brome (Suffolk) and elsewhere. Performances of saint plays are recorded but very few survive; a fine 15th-century play of St Mary Magdalen and an early 16th-century play of the conversion of St Paul are all that

remain. In addition, however, the 'Contemplacio' group from the N-Town plays probably originally formed a play on the early life of the Virgin, and the N-Town Assumption play apparently started life as an independent drama (see Meredith, 1983). The tradition of folk drama rests almost entirely on 19th- and 20th-century evidence, apart from the remarkable discovery of an early 16th-century Scottish Plough Play in a musical version (ed. in MB, xv, 1957). The four main cycles each contain plays covering the history of the world from the Creation to the Last Judgment. The contents of the cycles and the location of their manuscripts are listed in Chambers (1903, ii, appx X); his appendix Y (pp.329–406) lists representations of medieval plays from all over Britain (see also Stratman, 1954, 1972, i, pp.345ff; Lancashire, 1984). Recent work by REED editors has, however, uncovered evidence of considerable dramatic activity at parish level, still largely to be explored.

Little actual music is given in the English manuscripts: there are two English songs in the Coventry Plays, some two-voice Latin polyphony in the York cycle and a short monophonic Gloria in the Chester cycle (all discussed in Rastall, 1996). The number and usefulness of musical stage directions varies from cycle to cycle, but the Chester and N-Town cycles each contain over 30. Beuscher (1930) listed and analysed the musical repertory; Moore (1923), Stevens (1957–8), Carpenter (1968), Dutka (1973) and Rastall (1996) describe the dramatic functions of the music.

Most of the musical directions require the singing of liturgical Latin texts, presumably to plainchant (canticles, antiphons, hymns, sequences, communions, offertories and *versus alleluiatici*). These pieces are often liturgically appropriate. Thus the Digby *Candlemass Day Play* (Slaughter of the Innocents combined with Purification) contains the stage direction: 'here shal Symeon bere Iesu in his armys, goyng a procession rounde aboute the tempill; and al this wyle the virgynis synge nunc dimittis'. The *Nunc dimittis*, besides being the canticle of Compline, was special to the feast of the Purification, when it was sung with its antiphon *Lumen ad revelationem* at the blessing of the candles (Sarum Processional). The hymns include: *Veni, Creator* (Chester, *Play of the Holy Ghost*; York plays of the Baptism, the Temptation and Pentecost); *Jhesu, corona virginum* (N-Town, *Presentation BVM*); *Stella celi extirpavit* (N-Town, *Shepherds' Play*); *Gloria laus* (N-Town, *Entry into Jerusalem*); *Salvator mundi* (Towneley, *Harrowing of Hell*; Chester, *Last Judgment*). There is one striking exception to the general observation that the liturgical songs are unconnected with the liturgical drama. The isolated *Christ's Burial and Resurrection* (*GB-Ob* E.museo 160; ed. Baker, Murphy and Hall, 1982) makes extensive use of the Easter sequence *Victime paschali* (see above). The play is in effect an English *Marienklage*, with a *Visitatio sepulchri* added to it as second part ('This is a play to be played, on[e] part on Gud Friday afternone, & the other part opon Ester Day after the resurrection, in the morowe'). The Latin sequence is sung in dramatic dialogue by the three Marys, Peter, Andrew and John. The rubric is of unusual interest: 'These three [Marys] shall sing it right through to "Dic nobis" in polyphony [*cantifracto*] or at least antiphonally [*in pallinodio*]'.

Indications of Latin polyphony are rare and seldom unambiguous. But such directions as 'the hefne syngynge',

Ex.19 *GB-Lbl* Harley 2124 f.42

'they shal synge in hefne this hympne: "Jhesu corona"' may well refer to professional polyphonic singing (by the 'angels' on the scaffold of 'Heaven'). The elaborate vocal style of the angelic musicians (perhaps the clerks or children of the local cathedral) is invariably the subject of comment by the shepherds ('I dar say that he broght/foure and twenty to a long': Towneley, *Second Shepherds' Play*). The measured monophonic *Gloria in excelsis Deo* of the Chester plays (ex.19, from *GB-Lbl* Harl.2124) does not seem adequate to the occasion, and may be simply a cue for a known polyphonic setting (Rastall, 1996).

Play 45 of the York cycle (*GB-Lbl* Add.35290; text ed. Beadle, 1982) is uniquely valuable as containing the only fully notated Latin polyphonic music in an English dramatic source (see fig.9; colour facs. in Beadle and Meredith, 1983): it is *The Assumption of the Virgin*, staged by the Weavers' Guild. Three songs are sung by angels in the course of the Blessed Virgin's Assumption witnessed by the apostle Thomas: *Surge, propera mea*, *Veni de Libano sponsa* and *Veni, electa mea*. The texts are derived mainly from the *Song of Songs*, with material also from the Psalms: *Veni, electa mea* is liturgical, but no use is made of the chant. Each text is set twice, once in the course of the play (notated in score), once at the end of the play (each part written separately and not aligned with its fellow). The music is in a characteristic but not common 15th-century style (ex.20), for two equal voices of limited range, with long melodies, a strong metrical pulse, marked cross-rhythms, and a non-expressive relationship between the words and the music. The settings in the second group are rather more ornate. For transcriptions of this music see Wall, 1971, with transcriptions by Steiner; Dutka, 1980; Beadle, 1982, with transcriptions by Stevens; and Rastall, 1984. The pieces are discussed in Rastall, 1996.

Part-singing to vernacular texts certainly took place as well. The *Second Shepherds' Play* (Towneley) contains a three-voice song, the first shepherd taking 'the tenory', the second 'the tryble so hye' and the third 'the meyne'; although neither music nor text is given, this seems likely to have been a vernacular song. In the Towneley *First Shepherds' Play* the further remark 'Syng we in syght' suggests a style of improvised singing such as English discant (Carpenter, 1951; *see* DISCANT, §II). The Cornish plays require part-singing from Beelzebub, Satan and Tulfric. But vernacular singing is not synonymous with part-singing even in late manuscripts. In the Chester *Deluge* the psalm Noah and his family sing in the Ark is *Save mee, O God* (probably Psalm xlix, in the metrical version of Sternhold and Hopkins), probably to be sung in unison; and it is even less likely that the drinking-song of Noah's wife and her 'good gossips' was a contrapuntal artefact.

Once again a single survival helps to fill the gap. The Coventry *Shepherds' Play* is the only dramatic source of vernacular partsong with music. Unfortunately, the

9. *One of the two-part songs given in the text of the play 'The Assumption of the Virgin' from the York cycle, 15th century (GB-Lbl Add.35290, f.236r)*

original manuscript (completed in 1534) was burnt in 1879; the songs have to be reconstructed from Sharp (1825/*R*). There are only two musical settings in three parts: *As I outrode this enderes night* (a refrain-song using imitative entries), and *Lully, lulla … O sisters too* (in chordal style). The play requires other songs for which music has not survived.

Concerning instrumental music the English sources are disappointingly silent. The very late Chester manuscripts (five of the complete cycle, all from about 1600; see Lumiansky and Mills, 1974) give some idea, especially in the *Creation and Fall of Man*, how frequently the minstrels may have been called on. They are to play music (unspecified) when God creates the world, when God takes Adam to paradise, when God re-enters after the Fall, twice when Adam and Eve are expelled, and when God appears to Cain. But this evidence may be valid only for Elizabethan performances. No English 'director's copy' survives comparable to (for example) the documents of Frankfurt and Mons (ed. Cohen, 1925). Information about instrumental music has to be pieced together from the texts, from the stage directions and from account books (the records of Chester and Coventry are especially helpful). N-Town stage directions refer to trumpets ('hic dum buccinant'), harps or lutes (*citharis*) and ?organs (*organa*). The colourful mid-16th-century Coventry accounts list payments: to 'the trumpeter', for regals, for 'dromming', to 'six musicissions', to 'two clarks for singing', 'to Thomas Nycles for settyng a songe' (Ingram, 1981). Directions such as 'fluryshe' and 'pipe … that we may dance' (especially at the end of Cornish plays) indicate what *haut* musicians were principally required for – fanfares and dance music.

Religious plays in the vernacular raise problems about the dramatic function of music which do not exist in liturgical drama. No set of vernacular plays, and in particular no English cycle, is sufficiently well rubricated to show exactly the occasions on which music was required, the precise nature of the pieces, or the effects they were intended to produce. Certain broad uses of music emerge, however, as well-established principles. Music assists stage-business and provides dramatic symbolism. The stage-business principally required music to cover the exits and entrances (i.e. the movements of main characters to and from their 'scaffolds', 'pageants', 'houses', 'stages' etc.). After the Prologue of the Croxton *Play of the Sacrament* (by two *vexillatores*, banner-bearers), the minstrel is exhorted to 'blow up with a mery stevyn' (a cheerful sound), probably to announce the entry of the first player, Aristorius Mercator. This 'fanfare' could, however, also be a call for silence (cf the *silete* of the French and German plays). Such music was not necessarily instrumental: *Mary Magdalen* contains the curious direction 'here shall entyr a shyp with a mery song' (however, 'song' could mean simply 'music' in this period). In the N-Town Magi play Herod tells his minstrel to 'blowe up a good blast' while he goes to his chamber to change his clothes. This is evidently a short musical interlude marking the end of a scene.

Ex.20 *GB-Lbl* 35290 f.235*v*

The music of stage-business merges naturally with the music of dramatic naturalism. That King Herod has a minstrel (the trumpeter?) in attendance at court imitates the conditions of actual medieval life, while religious ceremonies, Christian, pagan or Jewish (e.g. in the N-Town plays, the blessing of Mary's parents Joachim and Anna in the Temple) are enriched with appropriate liturgical chants and actions ('There they shal synge this sequens. "Benedicta sit beata Trinitas", And in that tyme Ysakar with his ministerys ensensyth the Autere'). At the entry into Jerusalem 'myghtfull songes' are sung 'here on a rawe' (cf the 'royal entries', 'joyeuses entrées', of medieval city life). Music is also used to depict misery. The tradition of the planctus does not appear to have taken root in England, and there are no surviving settings of laments that can be connected with plays; formal laments do however appear in play texts and are sometimes directed to be sung (e.g. Norwich, *Fall*; Cornish, *Resurrection*).

The boundary between naturalistic imitation and dramatic symbolism is equally hard to draw precisely (this applies to the whole dramatic technique, not simply the music). The trumpeters 'blow up' while Herod changes his clothes, play as the 'servyse' of the feast comes in, and entertain Herod and his knights by celebrating the imagined death of the Christ-child; they also symbolize the pretensions of earthly kingship, the lust of the eyes and pride of life. The startling irruption of Death into this scene makes it, in effect, a Dance of Death in which music (especially that of trumpets) is a principal symbol of illusory power (as the dance is of youth and vitality): 'At this point whilst the minstrels are trumpeting [*buccinant*], let Death kill Herod and two of his knights, suddenly; and let the Devil take them' (N-Town, *Death of Herod*). The most important and perpetually recurrent symbolism, however, is that of music as an image of the divine. 'When God appears on a "scaffold" between two angels, or more, playing musical instruments [or singing], we know that God is in his heaven ... a place of order and harmony'. He would be literally in 'heaven', too – the usual term for his 'scaffold' (see York, *Creation*; Chester, *Fall of Lucifer* etc.). 'Music is never employed in the English drama "for atmosphere"; it is never there for an emotive effect. It is there, like God's beard of gold, or the horned animal heads of the devils, because it signifies something' (Stevens, 1957–8). By a natural extension of the symbol, music is used to signify the divine authority of God's messengers, the angels. A further extension enables music to represent human gladness and gratitude in response to God's acts of power and love: that of Adam and the prophets released from limbo (Harrowing of Hell plays); Mary's humble acceptance of Gabriel's message (Annunciation plays); and above all the shepherds', whose glad songs have been discussed above (there is no shepherds' play without music).

A further function of music, hinted at by Carpenter (1951), Wall (1971) and Dutka (1980), is to aid or supplement numerological structures in the design of the drama. This is discussed by Rastall (1996), in respect of the York cycle.

(ii) French. The earliest religious plays, after those discussed (§III, 2(ii–iii) above), are miracles, plays based on miraculous incidents in saints' lives. Two of the earliest are *Le jeu de Saint Nicolas* by JEHAN BODEL and Rutebeuf's *Le miracle de Théophile*; neither text contains music or directions for music. However, a collection survives from the 14th century, *Les miracles de Notre Dame* (20 dramatized miracles in *F-Pn* fr.819–20, the 'Cangé Manuscripts'); in each play the Virgin works a miracle of salvation for a miserable sinner (a pregnant abbess, a child handed over to the Devil, a bribed pope etc.). As in other European countries, the 14th and 15th centuries saw the growth of massive religious play cycles in France. Unlike the surviving English cycles the French ones do not usually cover all history from the Creation to the Last Judgment; their distinguishing feature is often a framework of the Trial of Man. The earliest is *La passion du Palatinus* (14th century; ed. Frank, 1922), which opens with the entry into Jerusalem; *Le jour du jugement* (14th century; ed. Roy, 1903–4) deals only with Antichrist and the Last Judgment but has 94 characters, imposing theatrical effects and music. The 15th-century plays of most interest to the music historian are *Le passion de Semur* (Creation to Ascension, 9582 lines, performed in two days; ed. Roy, 1903–4, and Durbin and Muir, 1981); *La nativité, la passion et la résurrection de nostre Saulveur Jhesu-Crist* of ARNOUL GREBAN (including also Creation, over 30,000 lines, four days; ed. Jodogne, 1965); the Rouen *L'incarnation et la nativité* (1474; 12,800 lines, two days; ed. Verdier, 1884–6); and the *Vie* (or *Mystère*) *de Saint Louis* (before 1472; 224 characters, three days; ed. Michel, 1871). Each play in the large repertory of *mystères* and miracles is analysed in detail in Petit de Julleville's *Les mystères* (1880, ii). Only *Le jour du jugement* (*F-B* 579) and *La passion de Semur* (*F-Pn* fr.904) contain musical notation; the Rouen *Incarnation* has room for part-music to be filled in (by hand – the text is printed). For accounts of music on the medieval French stage, see especially *PirroHM* and Brown (1963). Editions of French vernacular plays are listed in Stratman (1954, 2/1972, ii, items 7050–7661).

As in other vernacular dramas the principal music is plainchant. In the *Mystère de Saint Louis* a litany is sung by a bishop, an abbot and a dean. Hymns are frequent: *Vexilla regis* (*Saint Louis*), *Veni Redemptor gentium* (*Mystère de Saint Vincent*, 1476), *Gloria tibi Domine* (*Martyre de Saint Denis*), *Aurora lucis* (*Résurrection de Jesus-Christ* by Eloy du Mont). Liturgical chants include the *Stabat mater* (Jean Michel's *Passion*, based on Greban's), *Regina celi*, antiphon of the BVM (Du Mont) and, expectedly, the concluding *Te Deum*. The fact that choirs of angels are the most frequent singers does not mean that such music was sung polyphonically. Some hymns, however, may have been sung in fauxbourdon (*ReeseMR*), and elsewhere there is incontrovertible evidence for polyphonic singing. In Arnoul Greban's *Passion* a 'motet d'onneur' is sung in hell: Lucifer assigns the tenor to Satan, the 'contre' to himself, 'le dessus' to Beelzebub, the 'haulte double' to Berich and 'un trouble' to Cerberus. Eventually they sing the rondeau 'La dure mort eternelle/ c'est la chançon des dampnés'. Further infernal counterpoint occurs in Arnoul Greban's brother Simon's *Actes des apôtres* (see Lebègue, 1929), where however Cerberus 'mon gros garcon' is assigned to the 'bazitonans' with 'two really thunderous devils'. The learned compiler of the Rouen *Incarnation* required three-voice performance of angel song (tenor, contratenor and concordans); and, with trinitarian symbolism, the utterances of God in the Greban and Michel Passion plays are also for three voices

(in Michel's, 'haut dessus, une haute contre, et une basse contre bien accordés').

One important distinguishing feature of French religious drama, in marked contrast to the English, is its association from at least the 14th century with a tradition of musical and literary competitions, the PUY. The most informative early document is *Les miracles de Notre Dame*, written between about 1339 and 1382 by members of the Guild of Goldsmiths in Paris. As Frank (1954) stated:

> The 23 lyrical serventoys [sirventes; *see* TROUBADOURS, TROUVÈRES] in praise of the Virgin which appear between certain plays point to a kind of poetical contest fostered by the religious and literary members of the puy that sponsored the Miracles: these pieces refer to the prince du puy at times and once to a serventoys couronné au dit puy.

At Amiens 'ung jeu de mistère' was performed at the annual Candlemas banquet; this suggests how the Parisian miracles may have been done. The interspersed serventoys are in a favourite troubadour-trouvère form (five stanzas of ten lines with envoi) and were presumably set to music. The songs within the plays give the same impression of literary sophistication and were certainly sung. In accordance with a recurrent pattern, when miraculous intervention is necessary, the Virgin summons the archangels Gabriel and Michael to escort her to earth: they do this singing a rondeau, and the Virgin's return to the skies is often similarly accompanied. The rondeaux, then, function as a sort of conductus. The tradition (as it seems to be) of interpolated art song continues in the big Passion plays of Greban and Michel. In the shepherd scene (Greban, day 1), four shepherds, apparently singing (perhaps only reciting) in dialogue, perform a string of rondeaux. Even the farcical *Le garçon et l'aveugle* (13th century; ed. Roques, 1911, 2/1921/*R*) incorporates a song in honour of the Virgin. In the Rouen *Incarnation* spoken rondeaux in dialogue introduce the composed songs at important moments; and in one shepherd scene a 'champ [?chant] royal' is performed with an envoi apparently addressed to the 'princes' of a *puy*.

A last type of vernacular song is the planctus (*complainte*). The Autun *Passion* twice signifies 'La complainte Nostre Dame', and the early *Passion du Palatinus* has laments as do the liturgical plays for Mary Magdalen repentant, for the Virgin at the Cross and for the three Marys visiting Christ's tomb. No music survives, and the tradition never acquired the importance that it did in German-speaking countries with the *Marienklage* (§III, 2(i) above).

Instrumental music enlivened the plays from the earliest onwards. One of the *Miracles de Notre Dame* (play no.3) contains parts for three minstrels, and in the same play the wicked bishop sends for 'les jugleurs' for a celebration. Practically every *mystère* or miracle demands some kind of instrumental support, provided by the local waits or town band, or hired from outside. The Montferrand *Passion* in 1477 evidently had a total performing ensemble of 'two organists, seven trumpeters, and four unspecified ménétriers, to which should be added two more "tronpetes de la tour"' (Brown, 1963). The composition, if not the size, of the group seems to have been standard. The unspecified musicians would probably play *haut* wind instruments – shawms and sackbuts – combining to provide the usual dance band. The dance of Salome was an expected feature of the St John the Baptist scenes; sometimes a tambourin (drum) accompanied her, or pipe and tabor (Mons, *Passion*). Elsewhere dances are indicated: the *morisque* (Michel's *Passion*; Semur etc.), the *orliennaise* (? the basse danse 'Orleans') and a 'sauterelle' (*Mystère de Saint Louis*). The stage directions of the Rouen *Incarnation* require instrumentalists to join the singers in the chansons which decorate the play, but in each case they alternate with the singers; they do not accompany them.

The dramatic function of music in the plays conforms to international patterns. The function is threefold: to imitate naturalistic effects in stage terms, to further the stage-business and to act as symbol. These categories inevitably overlap. The naturalistic effects include music for feasts (*Miracles de Notre Dame*), for a coronation (*Mystère de Saint Louis*: all the instruments available played for the Sultan's), for a royal entry (e.g. *La vengeance nostre Seigneur*: trumpets and clarions) and for royal proclamations (*Mystère des trois doms*). The feigned naturalism of the angel musicians in the Rouen *Incarnation* is especially interesting. These particular musicians could evidently only sing, but when the 'joueurs d'instrumens' played behind and out of sight, the angels were to 'act as if they were playing'. The stage-business includes the entrances and exits of important characters, for which fanfares were commonly used. But perhaps the most common signals for a musical event of some kind are the directions 'pause' (or 'pose') and 'silete'. The latter originated as a call for order – 'Keep silence, keep silence' (see §III, 3(iii) below), and was sung by angels, the principal musicians available. Thence it became the generic term (with 'pause') for a musical interlude, often marking the end of one scene and the beginning of another. In the Greban *Passion* (to choose one out of scores of examples) the creation of Eve ends with God saying: 'Arise my angels, legion by legion, ... and sing a joyous *silete*' – God the Father retires to his 'siège' and the angels sing. Such interludes covered the movement of actors about the 'place' (the main acting area) and in and out of their 'houses' (*sièges*, *lieux*, *mansions*, *estages* etc.). The director's book for the Mons *Passion* of 1501 (*Le livre de conduite du régisseur*; see Cohen, 1925) says 'If God takes too long [i.e. in getting from one position to another], *silete*'. The same book requires a *silete* during the mimed building of Noah's Ark. On this occasion the alternative to a *silete* is a 'poze d'orghues', or minstrel music 'de quelque instrument'. Elsewhere a 'poze de menestraux' is specified. The French documents, unlike the German, never specify, let alone notate, the precise music to be performed. Minstrels presumably played pieces from their regular repertory on these occasions (Brown, 1963).

The symbolic effects of music in the French plays correspond to those described for the English cycles. Music symbolizes first and foremost the joy and order of heaven and heavenly truth; it therefore accompanies the appearances and acts of God and his messengers, the angels. So frequent and expected is this function of dramatic music that in the plays from the Bibliothèque Ste Geneviève (ed. Jubinal, 1837/*R*) the angels are sometimes told to come and go 'sans chanter'. Only the best music is good enough for heaven; hence, perhaps, the requirement (Mons, 1501) that the angels in paradise should sing 'en chose faicte' (i.e. *res facta*, thus 'counterpoint'). The divine significance of music can be transferred to a pagan temple ('pose d'orgues': Mons, 1501). The

obverse of heavenly music is hellish din. Hell is the place for thunders and tempests: after the Fall of Lucifer, 'here they must make a great storm' (Greban). Polyphonic singing in hell has already been noted, from the same Passion. Infernal singing could evidently take on a deliberately discordant aspect: in the *Liber beate Barbare* (Petit de Julleville, 1880, ii) Lucifer orders a chanson 'with unmelodious music'.

Once again, however, the difficulty and danger of establishing hard and fast categories to describe dramatic function are evident. They can be illustrated from the shepherds' plays. Of these one of the most extended and sophisticated representations is in the Rouen *Incarnation*, 1474. The shepherd scenes occur on the second day. At their first entrance four individually named shepherds sing rondeaux in dialogue (see above); a little later they sing 'Requiescant in pace'. Their next scene is, most unusually, a music lesson. Anathot, a young shepherd, asks his elder, Ludin, what the art of singing is called. Ludin replies 'Music'. Anathot exclaims 'Music, what a frightful word!'. At this Ludin instructs him in music with frequent reference to the theory of Johannes de Muris. They finish with a two-part song. At the crib five shepherds sing *En paissant nos brebis* (printed staff left void). Further episodes contain a 'praise' of great shepherds of the past and the long three-voice chanson that Ludin and Anathot compose to conclude the whole play (no music).

In these scenes music is presented as part of the natural (naturalistic, in dramatic terms) presentation of shepherd life – pipes and tabors, and dancing and singing, inevitably go with them; as an extension of the shepherds' poetic creativity (the shepherd David is a type of the poet-musician and often appears as a minstrel with harp in vernacular drama); and as a symptom and symbol of their simple integrity and devotion (pastoral idealization of religious experience).

(iii) German. The surviving repertory of plays in the German vernacular is larger, more varied and musically more interesting than that of any other language. The five main types of play are: Easter plays in which the central scene is the visit of the three Marys to the sepulchre; Easter plays in which the complaint of Mary (the *planctus Marie*) is extensively developed – the *Marienklagen*; Passion plays (*Passionen*) treating the events of Holy Week more comprehensively; Corpus Christi plays (*Fronleichnamspiele*) somewhat similar to the English mystery cycles in their scope; and Christmas plays. There also existed in parts of Germany, as elsewhere, a tradition of folk plays. These were associated principally with the celebrations (revels) of Shrove Tuesday (*Fastnachtspiele*). Music and dance certainly played some part in them, but their study belongs rather to folklore and anthropology.

The vernacular religious drama of Germany (i.e. of the German-speaking countries) is generally said to begin with the *Osterspiel* of Muri (13th century). The drama was still flourishing in the early 17th century (e.g. in Lucerne) and is demonstrably the same in essentials, though influenced by the events and the theological upheavals of the Reformation. As in England, the plays reached their peak of popularity and creativity in the 15th and early 16th centuries. From the 14th century onwards certain districts were particularly active in play production: the mid-western districts around Frankfurt and, later, the Tyrol; but the religious drama was widespread and plays survive from many towns, including Breslau, Regensburg, Augsburg and Konstanz.

There is no complete collected edition of German medieval plays. The most substantial collections are by Mone (1841; 1846), Froning (1891–2) and Hartl (1936–42); the latest edition does not always provide the best text. None of these contains music. A useful up-to-date account of the drama from a literary and dramatic standpoint is W.F. Michael's *Das deutsche Drama des Mittelalters* (1971), with bibliography, descriptions of the contents of the plays and full details about editions. The sources of all liturgical and vernacular Easter plays are described, and their contents listed (by song incipit) and cross-referred in Schuler's *Die Musik der Osterfeiern, Osterspiele und Passionen des Mittelalters* (1951). His 50-page introduction is the longest single account of the music of the Easter plays (Christmas and other plays do not figure in his book). More comprehensive and up to date, though inevitably compressed, is the appropriate section of Lipphardt's fundamental article in *MGG1*. Editions are listed in Stratman (1954, enlarged 2/1972, ii, items 7992–8184); see also Muir, 1995.

The five principal sources of information about music in the plays are: accounts of payments to performers (e.g. Lucerne, 1571); documents relating to their production (e.g. the 'Frankfurter Dirigierrolle', early 14th century, ed. Froning); stage directions, normally in Latin; references in stage directions or in the text to the required music; and actual notated music. Music was evidently required for all productions, but unfortunately only a few play manuscripts fall into the fifth category. In the comprehensive list of sources given by Lipphardt (*MGG1*) those containing written music are asterisked; of these the most important, *Marienklagen* excepted, are the Alsfeld *Passion* (see Dreimüller, 1936), the Vienna *Passion* (see Orel, 1926) and the Erlau Plays (see Osthoff, 1942). The music is generally monophonic, whether its origin is ecclesiastical or secular, and even in quite late sources is written in *Hufnagel* neumes, the characteristic unmeasured German notation. Some sources contain some mensural notation (e.g. Erlau) and a few have part-music in the form of rounds or canons (Osnabrück, Lucerne). In the late plays (or rather, late versions of plays) more elaborate part-music was certainly called for. A simple two-voice *Silete, silete* from the Trier play *Theophilus* (ed. Bohn, 1877) and a vernacular *Nu hört, wo sik Theophil gaf* in the same style survive. In the Lucerne plays the Kantorei (choir of professional singers) sang 'figuraliter' (usually interpreted as polyphonic music) and 'devota cantio ad organum' (elsewhere a 'Positif' is named) and 'brevis moteta' (Evans, 1943; Schuler, 1951). Such musical requirements belong, however, to the very end of the medieval dramatic tradition. In general the play music belongs to the history of monophonic music, but the surviving evidence does not allow of any dogmatic assertion to this effect, and earlier fashions of polyphony may have served earlier generations.

The different musical traditions that come together in the vernacular drama cannot be understood without reference to the curious dramatic amalgam that occurs in many plays. A fair sample of the potpourri is provided by the late 14th-century 'Innsbruck' *Osterspiel* (*A-Iu*, ed. Meier, 1963; the manuscript is of mid-German provenance). In this the often grotesque comedy is quite naively juxtaposed with liturgical, or quasi-liturgical, action and

music. It has the interest of being the earliest surviving *Osterspiel*, apart from the *Osterspiel* of Muri, the unique early vernacular play (13th century). Unlike the Muri play, the 'Innsbruck' play set a pattern: the Vienna and Erlau plays are closely related to it. It may therefore fairly be taken as displaying the essential features and raising the essential problems of the vernacular music drama. These features can be summarized as the alternation or juxtaposition of song and speech, the wide range of musical material, and the equally wide range of musical function.

The bizarre contrasts of mood and treatment that occur in most German vernacular plays (except the *Marienklagen*) are mirrored not only linguistically in the use of various kinds of Latin (liturgical prose, rhymed hymns and sequences, goliardic verse) and of German (from doggerel narrative to laments in a high style), but also musically in the combination of very different musical traditions. They are, briefly: the old liturgical plainchant, together with newer pieces from the repertory of tropes and sequences; 'quasi-plainchant' from the repertory of the liturgical drama itself; the planctus; courtly and 'clerical' song (i.e. epic song, Minnesang and goliard song); and popular song, religious and secular. To these should be added a category of professional instrumental music about which regrettably little is known.

The variety of Latin song and plainchant is exemplified by the Wolfenbüttel *Osterspiel* (ed. Schönemann, 1855). Among the various items are familiar antiphons (e.g. *Quis revolvet*), hymns (e.g. *Jesu, nostra redemptio*), laments of the Marys (*Heu, nobis internas* etc.; cf Origny *Ludus paschalis*), the Trisagion ('Sancte Deus ... sancte fortis ... sancte et immortalis') and the Easter sequence *Victime paschali*. As this brief list shows, a vernacular *Osterspiel* is inevitably closely linked both to other *Osterspiele* and to the larger plays within the Latin liturgical tradition – in particular the *Ludi paschales* of Origny, Klosterneuburg and Tours. Basically there is only one *Osterspiel*, in a number of variant forms. This comment applies equally (perhaps more) to their music. Every single piece of liturgical or quasi-liturgical chant from the Wolfenbüttel play can be paralleled elsewhere, commonly in ten or 12 sources (Schuler, 1951, listed 31 occurrences of the antiphon *Mulier quid ploras*); antiphons and hymns (or hymn-like strophic songs) are especially frequent, and the Trisagion formula from the Good Friday liturgy occurs in no fewer than 19 vernacular plays (like a number of other Latin chants it does not seem to appear in liturgical drama). Until all these plays are available in sound scholarly texts with their music, it will be impossible to say how wide the musical variations are and what their significance is.

Not all the music in the Wolfenbüttel *Osterspiel* is of liturgical origin or shows liturgical affinities. Lipphardt (1948) argued that the three strophes *Heu nobis internas*, *Jam percusso* and *Sed eamus* have no relation to hymn, sequence or any other form. Melodies of this type belong to the planctus tradition whose development in German drama has already been sketched (§III, 2(i) above, *Marienklagen*).

One recurrent scene in vernacular drama especially encouraged the introduction of worldly song (far more worldly than the serious melodies just discussed) – the sinful early career of Mary Magdalen. In the Erlauer *Mary Magdalen Play* (Erlau IV; see Osthoff, 1942) there are 713 German lines and ten Latin; 90 lines are musically notated; 26 have void staves. The text is full of remarks such as 'Ich will preisen meinen leib mit tanzen und mit raien', and 'wir schullen singen, springen, raien den maien auf der Strasse'. The melodies have a 'popular' lilt and the rich individual character of late medieval song. The Alsfeld *Passion* (*c*1500) also has some notated songs, one being strongly reminiscent, verbally at least, of the songs of the goliards; Rubin, the merchant's man, sings it to advertise his master: 'Hic est magister Ypocras/de gracia bovina'. A slightly less blasphemous version is sung by the same character in the 'Innsbruck' *Osterspiel* and in other plays.

To draw sharp distinctions between the different sources of songs in the vernacular drama is unrealistic; but the range of non-liturgical song is wide. The 'Hessische' *Weihnachtsspiel* (? from Friedberg; see Lipphardt, 1958) is of particular interest, for it contains Christmas songs, some of them still sung today, of a kind different from and more artless than any previously mentioned. One stage direction runs: 'And so the serving-man and Joseph dance around the crib singing: *In dulce jubilo*. And then the angels begin *Sunt impleta*'. Other popular religious songs include *Eya, eya, virgo Deum genuit*, *Puer nobis nascitur* and *Eyn Kint geborn zu Bethleem*.

It is one thing to identify the different musical traditions – liturgical and paraliturgical, courtly and popular – that contribute to the vernacular drama; it is another to describe the dramatic function of the music in all its variety. It is clear that, in the first place, music had some strictly practical uses. The most striking is the use of angel song, as in the French plays, to keep the audience quiet, or rather to bring them to order. The song *Silete, silete, silentium habete* appears from the early 14th century onwards and is associated with the larger plays. A change from one acting-place to another causes disturbance and noise, the *silete* quells it. In the St Gallen *Passion* almost every 'entrance' is heralded by the *silete* (Schuler, 1951). They were doubtless usually monophonic. Ex.21 gives a setting from the Vienna *Osterspiel* (1472) edited by Osthoff.

These angels are scarcely part of the dramatic action at all, though it is interesting that angels are in fact chosen.

Ex.21 *D-TRs* 75

(It is also interesting that 'duo pueri', for example, could quell the noise of a holiday crowd; but the vision of heaven was no doubt largely responsible, even before they began to sing.) Music employed to create an illusion – of social pomp, good cheer, conviviality – is more clearly part of the action. The marriage feast at Cana called for music; so, in the Lucerne Passions, did the entourage of Goliath and the travels of Joseph and his brothers. There are comparatively few German Christmas plays, and of these none has music-making by shepherds 'in the fields abiding', unlike the English plays.

As a dramatic symbol (rather than as a mimetic aid in the simpler sense) music has several functions: first and foremost, to represent divine order (as in the French and English plays); second, and paradoxically, as an image of sin (the Jews frequently sing and dance in their idolatry; Mary Magdalen finds 'mundi delectatio' in the same; Herodias dances); third, as an image – as well as a direct expression – of human happiness (the 'Hessische' Christmas play); and last, as part of the representation of human sorrow and pain (the planctus of the three Marys and of the Virgin Mary).

(iv) Italian. The medieval Italian drama can be distinguished from the drama of England, France and Germany by two characteristics: an early tendency towards spectacular visual effects, and the strong influence of a tradition of popular religious song. The combination of spectacle with music was described by a Russian visitor to the 1439 Council at Florence who saw a representation of the Annunciation at the Chiesa dell'Annunziata: 'God the Father was surrounded by an angel choir and by children with various kinds of musical instruments ... Gabriel hovered on a cable from God's throne to the Blessed Virgin, waving his wings and uttering a song of joy' (Lipphardt, *MGG1*). This spectacular element developed later in the large-scale *rappresentazioni sacre*.

More austere, to judge from the texts, was the tradition of popular *laude*. The LAUDA received powerful impetus from the hysterical religious revivalism of 1260 in Perugia. When the hysteria died down and the processions of flagellants ceased, the *laude* fostered by the Franciscans were taken up by fraternities, such as the Disciplinati di Santa Croce in Urbino. The earliest 'dramatic' *laude* come from a songbook of this guild – *De compassione Filii ad matrem tempore Passionis sue* and *De compassione matris ad Filium*. These are strictly monologues; but dialogues followed: *De mutua compassione* and *De planctu Virginis* (Bartholomaeis, 1943, i). A famous early *lauda* in dramatic form is the *Donna del Paradiso*, attributed to JACOPONE DA TODI. It opens with John telling 'the Lady of Paradise' that her son has been taken prisoner and Mary asking how this could be. John tells her of Judas's betrayal, and Mary asks Mary Magdalen to help her. The scene changes (no explicit directions for dramatic performance are given in this or any other manuscripts); Mary begs Pilate not to allow Christ to be tormented, the Jews cry out 'Crucifige! Crucifige!' and so on, in formal couplets and quatrains, through a brief narrative of the Crucifixion. The only other speaker is Christ himself who urges his mother to serve his disciples and to take John as her son:

> Mamma, col core aflitto
> entro a le man te metto
> de Joanne mio diletto.

No music survives for this or any other *laude drammatiche*. But it is certain that they were sung, and reasonable to suppose that, being in similar metres, they were sung to the same type of melody as survives in the two musical *laudari* at Cortona (*I-CT* 91) and at Florence (*Fn* Magl.II.1.122). The simpler syllabic melodies of the Cortona manuscript seem more appropriate than the more melismatic later ones. The function of the music in such strophically composed verse dialogues would be little more than narrative; the music would be a passionless vehicle for the story (as in a folk ballad), not an amplification of or comment on its meaning.

For the fraternities of laymen such as the Disciplinati di Giustizia, di S Fiorenzo and di S Francesco at Perugia, the *laudari* were the equivalent of missal, antiphoner, troper and so on for clerics (Bartholomaeis, 1943); they covered the whole liturgical year. Some days were set aside for the singing of *laude liriche*, others for *laude drammatiche* (also called *devozioni*), which were performed on such feasts as Sundays in Advent, Christmas Eve, Christmas Day, Epiphany, Purification, Annunciation and so on. Bartholomaeis printed a cycle of *laude* from Perugia starting *In Dominica de Adventu* (an Antichrist 'play') and ending with *Ufficio dei defunti*; 46 *laude* (*Laudes evangeliorum*) cover Lent and Holy Week. Lipphardt saw in the *laude* of the lamenting Virgin the genesis of the German *Marienklage*. The production of *laude* spread beyond Perugia, Orvieto and other smaller Umbrian cities to Aquila, Rome, Siena and Florence.

The larger form of Italian medieval drama, the *rappresentazione sacra*, flourished in Tuscany in the 15th and 16th centuries. Florence, where elaborate processions and pageants were mounted in honour of St John the Baptist, was the principal centre. With one exception, *La Passione di Gesu Cristo* from Revello (Piedmont), Italian sacred drama did not take the comprehensive, cyclic form of English mystery plays and French *mystères*. Characteristic hagiographical titles are *Rappresentazione di Santa Margherita, ... di San Giovanni e Paolo* (by Lorenzo de' Medici, performed 1489 in Florence), *... di Rosanna* (a secular story dressed up as a saint's legend) and *... di Santa Uliva* (the same). Subjects of biblical plays include the Magi (Siena), the Annunciation (Aquila), the Resurrection (Pordenone) and Abraham and Isaac (Florence).

The *rappresentazioni sacre* were magnificent productions organized by the confraternities. The *Rappresentazione di Santa Uliva* (? 16th century), for example, was performed over two days with gorgeous scenery, musical intermezzos and appearances of mythological beings somewhat loosely connected to the main plot (Bartholomaeis, 1943, iii, pp.3ff). It is rich in musical stage directions: the sung items of the play include a *lauda*, hunting-songs, psalms and the *Te Deum*; the instruments prescribed include *corno*, *tromba* and *tamburi*. The play also demanded elaborate choreography (Bartholomaeis, iii, pp.40, 61 etc.), described fully in the stage directions.

The music of these plays included, then, both secular and sacred songs, both monophony and polyphony (in the *Rappresentazione di Santa Margherita* (? early 16th century) a caccia is sung, *Iamo alla caccia*). The functions of music are the expected ones (symbolic, ceremonial etc.) common to other vernacular repertories, with perhaps more emphasis on the spectacle and dance. Even in this late repertory dance-songs are specified: for instance, at the end of the Florence *Abraham and Isaac* 'Sarah and all

the rest of the household, except Abraham, and the two angels ... all together perform a dance [ballo] singing this *lauda*'. A more theological dance is specified in the preliminary rubric to a Christmas play from Siena: the angels of the heavenly announcement are to leave their 'capanna' (? scaffold-stage) and 'faccino coro' (? make a dance); 'with great reverence they adore the Lord, and while the shepherds are on their way, they dance'. The shepherds themselves, after offering their gifts to the Christ-child, go to their station (*luogo*) 'ballando e saltando e facendo gran festa'. A last feature of the plays worth consideration is the unusual use of music during scenes of the Passion and Crucifixion. In *La Passione e Resurrezione del Colosseo* (Rome, ?1489) a 'chorus of shepherds' and a 'second chorus of kings' (? the Magi) sing songs of lament and dire prophecy as Christ is brought by the Pharisees to Herod. They sing again while Christ is put on the Cross. At the death of Christ, and the rending of the veil of the Temple, 'the angels come to the cross' and sing (presumably, rather than declaim) sentences from the Easter Preface and from the *Via crucis*. The music of the *rappresentazioni sacre* was discussed by Becherini (1951) and Reese (*ReeseMR*, pp.171ff); literary texts were provided by Ancona (1872).

(v) The Spanish peninsula. Different categories again are required to describe the drama of the Spanish peninsula, which does not obviously follow either the Italian or the French pattern. Such evidence as there is suggests that in liturgical drama French influence predominated. Ripoll and other Catalonian centres had close liturgical links with French centres such as Limoges and Fleury. Donovan's study of Spanish liturgical drama (1958) is the only major contribution to source material since Young (1933). The distribution of surviving sources seems to indicate that the Latin church drama 'penetrated Castile and non-Catalonian Spain sporadically, and on a very limited scale, rather than as a vast general movement'. It is almost totally absent from Portuguese sources (Corbin, 1952). However, many plays may simply have been lost. López-Morales (1968) held that there was no dramatic tradition, either liturgical or vernacular, in Spain before Encina. Apart from a few brief religious texts in Latin which are arguably dramatic and the *Auto de los Reyes Magos* (see below), which is probably the work of a Gascon priest who settled in Toledo, there is little evidence of dramatic activity in Spain until the second half of the 15th century. But from the 1490s onwards Madrid, Seville, Salamanca, Valencia, Toledo and many other towns are known to have had plays. The whole Spanish scene is surveyed with a wealth of detail, particularly relating to dramatic presentation, by Shergold (1967). A great deal of music and varied musical effects were involved; neither has been comprehensively studied (see, however, Salazar, 1938, and Chase, 1939).

The most striking features of the Spanish scene are: the survival of a fair number of ecclesiastical vernacular plays (many, it seems, by foreign hands) associated with church and liturgy; a rich, well-documented tradition of dramatic pageantry (as distinct from plays proper) associated with the processions of Corpus Christi; the absence of anything resembling the French and English mystery cycles; and a developing tradition of religious moralities, culminating in the *autos sacramentales* of the late 16th and 17th centuries, celebrating the mystery of the Eucharist and performed on Corpus Christi Day (*see* AUTO).

The earliest surviving play in the vernacular is the incomplete *Auto de los Reyes Magos* of the late 12th century. It is different in form and spirit from liturgical plays on the same subject: the lively realistic spoken dialogues of the three astronomers break off in a scene where the traditional gifts of gold, frankincense and myrrh are used to test, not to celebrate, the divinity of the infant Christ (Sturdevant, 1927/*R*). The fragment has no music.

After this play there is a long gap in the evidence, conceivably a break in tradition, the only exceptions being one or two isolated plays, such as the St Mary Magdalen play of 14th-century Mallorca. The earliest plays about which we have musical information are *autos*, one-act plays of the late 15th century. Unusually, by comparison with other countries, they are mostly by named authors. Gómez Manrique's *Representacion del nacimiento de Nuestro Senor* was written between 1467 and 1481 for the convent of Calabazanos. At the end the nuns sing a cradle song in chorus to what may possibly be a popular tune. At the turn of the century plays were written by several individuals of distinguished musical talent, of whom the first and best was Juan del Encina. Half a dozen of his plays were first published in 1496, having been already performed in the courtly chapel of his patrons, the Duke and Duchess of Alba. Later works were performed at the court of the Catholic Monarchs and perhaps elsewhere. The first six are little more than dialogues between mock-realistic shepherds speaking an anti-literary peasant brogue. The two earliest are Nativity *eglogas*, followed by two Easter ones and then two that are carnivalesque. These Nativity and Easter playlets combine motifs from liturgical plays (*Visitatio sepulchri* and *Peregrinus*) with autobiographical and/or secular material – the three Marys are replaced by two hermits and at the sepulchre they meet not only an angel but also St Veronica, who shows them her miraculous handkerchief. The rumbustious behaviour, crude jokes, yet naively reverent attitude of some of these personages recall aspects of the English mystery cycles. The next half-dozen introduce other figures such as a squire who falls in love with a peasant girl, peasants who are corrupted by the courtly life, a hermit who is seduced by a nymph, students who 'rag' two peasants, and finally, courtly lovers set against comic peasants, bawds, go-betweens and Venus herself. All but two of Encina's *eglogas*, to judge from the printed texts, ended with the singing of a villancico, no doubt composed by Encina himself. Four such villancicos have survived (*Cancionero musical de Palacio*, ed. H. Anglès, nos.165, 167 and 174; *Cancionero musical de Segovia*, f.207*v*: *Gran gasajo siento yo* – ex.22, transcr. J.A. Sage). These are typical villancicos of the period: four-part refrain songs of virelai pattern, three being more popular in type and no.167 more courtly. The villancicos for *eglogas* VIII and XIV, and perhaps others, were accompanied by dancing. As Encina's technique developed, the villancico was integrated more closely into the structure of the play.

'I feel a great joy.
Hey! Ho!'
'So do I, by my faith!
Ho! Ha!
For He who gave us life
has been born to save us.
Ho! Ha! Hey! Ho!
This night he was born.'

Ex.22 Juan del Encina: Eglogo II, final *villancico*

['I feel a great joy. Hey! Ho!' 'So do I, by my faith! Ho! Ha! For He who gave us life has been born to save us. Ho! Ha! Hey! Ho! This night he was born']

Encina's contemporary Lucas Fernandez was also a playwright, as well as *maestro de capilla* of Salamanca Cathedral from 1498. In 1514 he published *Farsas y églogas*, plays after Encina's manner, and with them a pastoral dialogue sung perhaps throughout to the same tune. His *Auto de la Pasión* (1514) contains a planctus of the Blessed Virgin as well as the final villancico. The Portuguese dramatist Gil Vicente, highly talented in his own right, may have followed Encina in some of his plays: he too wrote courtly-popular pieces for royalty, and versions of his plays printed later in the 16th century suggest that several were performed in chapel at Christmas Matins. But the courtliness of these playwrights must not be exaggerated. The so-called *Mystery of Elche*, in Catalan, on the Assumption of the Virgin, a 'semi-popular' religious drama still performed each August at Elche, is provided with music throughout. The music, formerly thought to be by Encina and his contemporaries (*NOHM*, iv, 1968, p.803), is of the 16th and 17th centuries.

The connection between the vernacular and the liturgical drama seems closer in Spain than elsewhere. In addition to the *Auto de la Pasión* by Fernandez, the following plays display evident knowledge of actions and motifs from the liturgical drama and some of them were performed within the liturgy itself: a 'three-act' Passion play by Alonso de Melgar, printed at Burgos, 1520, with a Resurrection 'eclogue' derived from the *Ordo prophetarum* (among the prophets, who sing plainchant, was David, with a vihuela, and the Erythrean Sibyl, settings of whose song are found in contemporary cancioneros); Gil Vicente's *Auto da Sibila Cassandra*, with Christmas crib; Jorge de Montemayor's Nativity plays 'presented in church ... each given after one of the nocturns of Matins' (Shergold); a Good Friday *auto* (Burgos, 1552) containing a planctus of the Virgin, *Ay dolo, dueñas, dolo*; such planctus are reminiscent of German *Marienklagen* and Italian *laude* discussed above (§§III, 2(i) and III, 3(iv)). This tradition of vernacular religious plays is perhaps better called ecclesiastical than liturgical; but in its breadth and variety it shows an unusual tolerance of vernacular song in church and is closely associated with the liturgy. This tolerance declined after 1568 with the reform of the breviary.

An interesting, and perhaps independent, dramatic tradition in Majorca is revealed by a manuscript (*E-Bc* 1139) discovered in 1889 and not yet published in entirety. It contains the *Consueta del Rey Asuero* (*Esther* i–vii): the dialogue is sung almost entirely to well-known plainchant hymns: Ahasuerus uses the melody of *Eterne rerum*; Vashti and Esther, *Vexilla regis*; and so on. A planctus melody is also called for; and the wise men can sing 'to the tune that they wish' (Shergold, 1967, p.61, from Diaz Plaja, 1953). A sung drama constitutes yet another link with the liturgical.

Many of the plays so far mentioned can be definitely associated, like the liturgical plays, with the ecclesiastical events of Christmas and Easter. The dramatic activities of the feast of Corpus Christi slightly more resemble those that took place in the north of Europe. The mystery plays of Valencia, for example (16th–19th century), consist, in a manuscript copy of 1672, of three plays: one of Adam and Eve, one of St Christopher and one of 'Rey Herodes' – hardly a cycle, but not obviously seasonal either. The

manuscript (*E-VAa*) gives the music for most of the passages that are to be sung (de Alcahalí y de Mosquera, 1903). The dramatic use of music follows the familiar pattern: for God's creation of Adam and Eve the sky opens 'ab molta musica'; and God ascends 'en musica'. In addition Adam and Eve sing, to express their penitence, both in Latin and in Spanish, 'a duo'.

In many instances it is very hard to tell whether references to *misteris* are to plays properly so called or simply to pageants (involving tableaux, mime, dance, music, but not spoken dialogue). The Valencian accounts for 1517 contain payments for a float called 'the *Te Deum*': the Virgin was on it, and musicians were paid the equivalent of £1 4s. (Shergold, 1967). And the *representació* of St Vincent required payments to musicians and dancers. Much research remains to be done; but it is certain that early 16th-century Spain was eminently rich in dramatic pageantry and that music was prominent in it, both for itself and as an accompaniment to procession and dance.

Finally, mention may be made of a perhaps peculiarly Spanish thing – a danced religious play. The *Danza del Santísimo Nacimiento* (*c*1560) has eight angels and eight shepherds; both groups sang villancicos and the shepherds danced, both to the singing and to instrumental music. It was performed in church, probably after Matins.

(vi) The Low Countries. The repertory of plays from the Low Countries is consistent with repertories elsewhere in western Europe, with both sung Latin drama and spoken plays in the vernacular. It has not been generally studied in relation to the region that produced it, however. There are so few sung plays (Smoldon, 1980, appx) that they have been considered only in relation to the wider European scene, while the language barrier has largely inhibited study of the vernacular plays by all but Dutch scholars until quite recently. With the growing realization of the size and richness of the vernacular repertory, the spoken plays have attracted more widespread interest.

The first important source of vernacular plays is the early 15th-century Van Hulthem manuscript, containing four secular plays (*Abele Spelen*, a term that cannot be translated precisely) and six farces (*Sotterniën*): all of these may be considerably older than the manuscript. There is no evidence that music played any part in them, but a general absence of production information suggests that this may be misleading. The secular drama in the rest of that century, and into the 16th century and beyond, is closely linked to the Rederijkerskamers (Chambers of Rhetoric), literary fraternities that grew up in the urban business and merchant classes. The Rhetoricians' production of poetry, drama and civic pageantry was backed by a devotional tradition, although the drama produced was not only religious, and included an element of competition, as in literary guilds elsewhere.

There was a strong tradition of religious drama, and it is clear that many plays have been lost. Two survive from a mid-15th-century cycle of seven on the Joys of Mary, plays which continued in production for more than a century. The stage directions *pausa* and *selete* were sometimes associated with music, as in the French plays. A miracle play, *The Play of the Holy Sacrament of Nyeuwervaert*, dates from soon after 1463, and a biblical play from the end of the century, *The Play of the Wise and the Foolish Virgins*, belongs to an interest in dramatizing the parables that continued strongly in the 16th century. Both of these have allegorical elements that relate them to the morality play; *Elckerlijc*, soon translated into English as *Everyman*, also belongs to the end of the century. The text of *Elckerlijc* demands some music, and in view of the rich musical tradition in the Netherlands at this time it would be surprising if all of these plays were not originally performed with more music than is now evident. The same is true of the early 16th-century *Mariken van Nieumeghen*, which includes a play-within-a-play, but for which there are no stage directions.

The 16th-century repertory consists of some 280 printed plays and many in manuscript. They are on a wide variety of subjects, including the historical and specifically biblical. A large proportion include allegorical characters and are most easily categorized as morality plays, even when their subject matter is not obviously religious. The use of music in these plays is paralleled elsewhere and invites study: *Man's Desire and Fleeting Beauty*, like many others, includes new song texts with directions for singing them to named tunes. Two plays about Aeneas and Dido by the *factor* (literary leader) of the Antwerp Chamber of Rhetoric *De Goudbloem* (The Marigold) were performed to celebrate the month of May in 1552. In each a sentry sings a dawn song on a named melody, late survivals of the alba in mid-16th-century morality plays on classical material.

IV. Medieval drama in eastern Europe

Although only a start has been made in bringing to light the riches of east European collections of liturgical manuscripts, enough is known to suggest that the main forms of Western liturgical drama were adopted in the East. Bartkowski (1973) discussed 29 witnesses to the *Visitatio sepulchri* found in Polish manuscripts from the 13th century onwards. Both his and Lewański's surveys are copiously illustrated. Not only the expected German traditions appear to be represented in Eastern books. Bužga ('Liturgische Dramen', *MGG1*) referred to Norman plays in 12th-century Prague. Young had already drawn attention to several individual features in the *Visitationes* of Prague books.

Apart from the *Visitatio* may be mentioned a Czech play (in fragments in Zlomek; see Černý) concerning the spice merchant, and the remains of a large-scale cycle of plays of Lucifer, Mary Magdalen, the spice merchant, the Harrowing of Hell, and the Roman soldiers at the tomb, now in Schlägl monastery (see Máchal, 1908).

For a number of political and religious reasons, vernacular civic drama developed later than in western Europe (Muir, 1995). In Bohemia, *ludi theatrales* were banned from the Corpus Christi processions in 1371, and these may be the earliest vernacular biblical plays in the East. At Eger, on the borders of the German Empire, there are records of a Corpus Christi play and the text survives of a three-day biblical cycle. In Hungary, too, it is notable that biblical drama flourished especially on the borders of the empire. These various examples may not be untypical of biblical drama in eastern Europe, and certainly there was a wide range of dramatic types there. The picture may become clearer and more detailed as the results of research become available.

V. The end of the Middle Ages

There was no neat end to the Middle Ages or to its drama. Some traditions persisted, others were suppressed,

others died a natural death. In Protestant countries, such as England, traditional religious drama was discouraged and eventually eradicated by the reformers (Gardiner, 1946); in Spain, on the other hand, not only vernacular religious plays but some liturgical plays (e.g. the SONG OF THE SIBYL) continued strongly for centuries – in some cases right through to the 20th century (Shergold, 1967).

The bewildering variety of drama, old and new, in the late 15th and 16th centuries defies adequate classification; but it is possible perhaps to distinguish three main milieux: the court; schools and colleges; and towns and cities ('popular' drama). Even this broad classification is unsatisfactory, because, although each milieu had certain distinct and unique features, the types of dramatic activity practised in the others inevitably infiltrated it.

The 'drama' of courts (ceremonies, entertainments and plays) was often sumptuous, and richly provided with music. The dramatic events that could be supported and embellished with music included (to give them their English names) mummings, masks and disguisings, royal entries, tournaments and interludes. The mumming (Fr. *momerie*; Sp. *momo* etc.) consisted simply of a visit by masked, and perhaps originally silent, dice players to someone's house (e.g. Henry VIII, with a band of courtiers pretending to be shepherds, visited Wolsey in 1536); drum and fife were the usual accompaniment. The mask (masque; It. *mascherata* etc.), clearly indigenous in northern Europe but influenced by Italian custom, had as its centrepiece a dance of courtly persons with music played by professionals on loud (*haut*) instruments. In the more complex masks, in early Tudor England often called 'disguisings', the courtly dancers were wheeled into the hall on an elaborate pageant-car, on which instrumentalists and singers might be stationed (Stevens, 1961, 2/1979, chap.11). Representative pageants were a feature, too, of elaborate court banquets in other parts of Europe (Shergold, 1967, chap.5): in Paris (1389) the city of Troy, on wheels, was attacked by a tentful of Greeks, also on wheels (Loomis, 1958). The function of music on such gaudy royal occasions was essentially to draw attention to the spectacle, and to be in itself something worth seeing (musicians were appropriately disguised). The celebrated Feast of the Pheasant (Lille, 1454) had elaborate musical-culinary effects, including 28 musicians in a pie (see *ReeseMR*). The long and detailed descriptions of festivities for Cosimo I de' Medici's marriage (Florence, 1539) show that the musical offerings could be worthwhile in themselves as well as spectacular: as the bride entered the city 'a madrigal by Francesco Corteccia was sung in eight parts by a chorus of 24 voices accompanied by 4 cornettos and 4 trombones, all placed on the top of the gate' (Dent, 1968). Royal entries such as this were a familiar part of the European scene (see Kernodle, 1944); music there had the same functions, part-visual and part-aural, as in indoor festivities. The English interlude (similar to, if not derived from, the Spanish *entremés* and the French *entremet*) probably derived its name and nature from being a 'playing' (*ludus*) between (*inter*) other things, such as the courses of a banquet. In Italy the acts of spoken drama were separated by *intermedi*, 'mainly *tableaux vivants* and dumb-shows, with or without dances' (Dent). Not only the terminology but the events themselves were variable and multiform. The invisible, hidden musicians of the *intermedi* are more reminiscent of the English mask or disguising than of the interlude. (*See* INTERMEDIO and MASQUE.)

'Interlude', in effect, like its continental equivalents, tends to mean simply a play. In England interludes were generally didactic and often allegorical. They were acted at court, but were not necessarily of the court. This brings us to the large, indefinable area of 'popular' drama – drama, that is, intended for popular consumption, usually by named authors and performed professionally or semi-professionally. (It is not to be confused with folk drama.) The moral interlude, or morality play (if it is presented allegorically), tends to use music in a predictable way – to make a moral point. 'Music and dancing are ... associated with the sinful part of man' (Stevens, 1961, 2/1979); the characters who sing have such names as Sensual Appetite, Pride, Riot, Abominable Living, and their music is taken from the popular repertory – *Jack boy, is thy bow ibroke?*, *Wassayle wassayle out of the mylke payle* – with dances to match. Rastell's *A New Interlude and a Mery of the Nature of the iiij Elements* (?1525–30) contains the only song with music for a printed English play; it is in three parts.

In France, besides *moralités*, there was a more clearly defined comic dramatic tradition, in the *farses* and *sotties*. Secular drama in France was comprehensively surveyed in detail by Brown (1963), who listed over 400 known theatrical chansons and printed from various sources the music of 60. He distinguished two main types of chanson used in plays – the *chanson musicale* (in the main literary and musical tradition) and the *chanson rustique* (originating as a single line of melody). Music is, again, associated with low life, the pleasures of the tavern and a lack of moral firmness. Other forms of 'popular' or municipal dramatic activity (they cannot properly be called plays) included: in England, civic mummings (e.g. at Kennington, 1377, 'for the disport of the yong Prince Richard' – 130 citizens, disguised, accompanied by minstrels; see Wickham, 1959); in Italy, the Carnivals of the seasons before Lent and after 1 May (Calendimaggio), involving the singing and dancing of CANTI CARNASCIALESCHI and torchlight processions with decorated pageants (*carri*) of maskers (*ReeseMR*, pp.167ff); and in France, the festivities of the *sociétés joyeuses* – 'play-acting societies' (Brown) such as the Enfants-sans-Souci of Paris, the Bazochiens (law clerks of Paris) and the Infanterie of Dijon (see Brown for a detailed description of the 'mardi gras' festival, i.e. carnival fête, put on by the Abbaye des Conards of Rouen).

Finally, there developed at the end of the Middle Ages, particularly in Germany, an 'educational' drama, the SCHULDRAMA. Under the influence of humanism, with its renewed emphasis on classical rhetoric (the mastery of the art of communication through words), a practical dramatic training in the power of language was grafted on to an already strong medieval tradition of debate, as a mode of education, as well as of business and entertainment. 'The subjects treated, both by Protestants and Catholics, were designed for moral edification and derived from the Old Testament and from classical history' (Dent). The plays commonly ended with a Latin chorus, in appropriate metre, which might be danced as well as sung. The straightforward melodies, in the style of chorales, were later harmonized in an equally straightforward style (see Liliencron, 1890, with musical examples). The composer Johann Walter (i), associate of Luther and

Kantor of the town of Torgau from 1526, wrote music for such plays.

A similar tradition, though less centrally important, left traces in other European countries (Sternfeld, 1948). In England there were plays, mostly in Latin to begin with, at universities and in schools (e.g. at Magdalen College, Oxford, from 1486). The song schools, such as St Paul's, were active from early in the 16th century and it is likely that one of the impulses behind the early Elizabethan consort song, for voice and viols, was the need to complement the rhetorical exercises of the set speeches with fittingly 'rhetorical' music (Brett, 1961–2). The music in school drama has to be educational as well as dramatically correct.

JOHN STEVENS/RICHARD RASTALL (I–III, 3(iv); IV; V), JOHN STEVENS (with JACK SAGE) /RICHARD RASTALL (III, 3(v)), RICHARD RASTALL (III, 3(vi))

Medina, Fernand Pérez de (*fl* 1477–1524). Iberian composer. He entered the Castilian royal chapel on 7 November 1477. He was a native of Seville and in July 1479 was granted tax-free status in that city by royal decree. He also received royal support in being presented to a number of ecclesiastical benefices, mostly in Seville Cathedral, some of which he appears to have held by proxy. In July 1492, following the reconquest of Granada, he was presented to a canonry in the newly-founded Cathedral of Almería, a position he must have secured, since he renounced the canonry in 1524: possibly he died shortly afterwards. He was paid as a singer-chaplain in Isabella's chapel until autumn 1504, and may have taken up residence in Almería shortly after her death in November of that year.

Medina's *alternatim* setting of the *Salve regina* is found in a small collection preserved in Seville (*E-Sc* 5–5–20) of other *Salve* settings and 'motetes de la salve' by court composers. It is marked in the manuscript 'de voces mudas' which may indicate performance by adult male voices only. Each of the polyphonic verses receives a different treatment: the setting of 'Et Jesum' is for five voices, unusual in the Iberian peninsula at that time. Two songs in the *Cancionero Musical de Palacio* are attributed to Medina: the three-voice canción *Es por vos si tengo vida* (ed. in MME, v, 1947, no.70) was included in the original layer of the manuscript (*c*1500) and is quite florid in style, while the four-voice (the contra is marked 'si placet') villancico *No ay plazer en esta vida* (ed. in MME,

v, 1947, no.56) was added later and, with its concise, syllabic setting, reflects the influence of the song idiom cultivated by Juan del Encina.

TESS KNIGHTON

Medina, Luis de (*b* 1751; *d* 1806). Mexican guitarist and composer. He was a native of Puebla, Mexico and, at the age of 19, moved to Mexico City. There he performed in *comedias* and other theatrical productions, as did his two daughters who were singers. His most notable work is *Siana y Silvio*, which received its première in Mexico City's main theatre, the Coliseo, in 1805. He excelled in other areas as well, and served as an accountant in the Royal Court of Justice. (R. Stevenson: *Music in Mexico: a Historical Survey*, New York, 1952, pp. 173–4)

CRAIG H. RUSSELL

Mediņš, Jānis (*b* Riga, 9 Oct 1890; *d* Stockholm, 4 March 1966). Latvian composer and conductor, brother of JĀZEPS MEDIŅŠ. He graduated from the First Riga Musical Institute (piano, violin and cello) in 1909. From 1913 to 1915 he was a violist and conductor at the Latvian Opera in Riga, later becoming opera conductor of the Latvian National Opera (1920–28) and chief conductor of the Latvian RSO and artistic director of Latvian Radio (1928–44). He taught in the orchestration class at the Latvian State Conservatory (1921–44), where he was appointed professor in 1929; in 1932 he became head of orchestral conducting. He fled from the advancing Soviet forces in 1944 and briefly lived in Germany before settling in Stockholm in 1948.

A composer of characteristically national neo-Romantic and Impressionist tendencies, Mediņš achieved particular success in the genres of opera and ballet, symphonic music and solo song. Alongside Alfrēds Kalniņš, he was one of the first composers of opera in Latvia. His symbolic music drama *Uguns un nakts* ('Fire and Night') concerns the people's struggle for freedom; its dramatically and powerfully drawn heroes are characterized both vocally and orchestrally. The struggle against despotism is expressed in the opera *Dievi un cilvēki* ('Gods and men'), which includes some original experiments in Egyptian colouring. *Sprīdītis* ('Tom Thumb') is based on characters from folktales, and his last opera, *Luteklīte* ('The Little Darling'), is for children. His *Mīlas uzvara* ('Love's Victory', 1934) was the first Latvian ballet. After his death his manuscripts were donated to 14 libraries in Europe and North America (see Dunkele).

JĒKABS VĪTOLIŅŠ

Mediņš, Jāzeps (*b* Kaunas, Lithuania, 13 Feb 1877; *d* Riga, 12 June 1947). Latvian composer and conductor, brother of JĀNIS MEDIŅŠ. He graduated from the First Riga Musical Institute in 1896 (violin, cello and piano) and then became a teacher and, in 1901, director of the same institute. Subsequently he worked as a conductor at the Riga Latvian theatre (1906–11) and the Baku town opera theatre (1916–22), and as répétiteur and conductor at the Latvian National Opera in Riga (1922–5). Ill-health compelled him to give up his work, but he taught the piano at the Latvian State Conservatory from 1945 to 1947, as professor from 1946. As a composer he showed a gift for lyrical drama and colourful orchestration. His greatest work was the opera *Vaidelote* ('The Priestess', 1922–4), a lyrical, psychological music drama in late Romantic style. Mediņš was also one of the first notable Latvian symphonists.

JĒKABS VĪTOLIŅŠ/ARNOLDS KLOTIŅŠ

Mediolano (*fl* late 14th century). Italian ?composer. A four-voice Sanctus is transmitted with this ascription or

designation in the Paduan fragment *GB-Ob* Can.pat. lat.229 (ff.33*v*–34; ed. in PMFC, xii, 1976, p.83). That the composer or the piece originated in Milan seems implicit in the ascription. The Sanctus is Dorian in mode, and has several instances of parallel 5ths between the upper voices.

GIANLUCA D'AGOSTINO

Medium (Lat.). Synonym for AMBITUS in Jacques de Liège's *Speculum musice* and in the work of Tinctoris.

Medius (i) (Lat.: 'middle'). In 16th- and 17th-century English music, a term sometimes used synonymously with MEANE.

Medius (ii). The name sometimes given to the highest part-book of a set, particularly in liturgical sources; the alternative terms 'cantus', 'discantus' and 'superius' are also found. *See* PARTBOOKS.

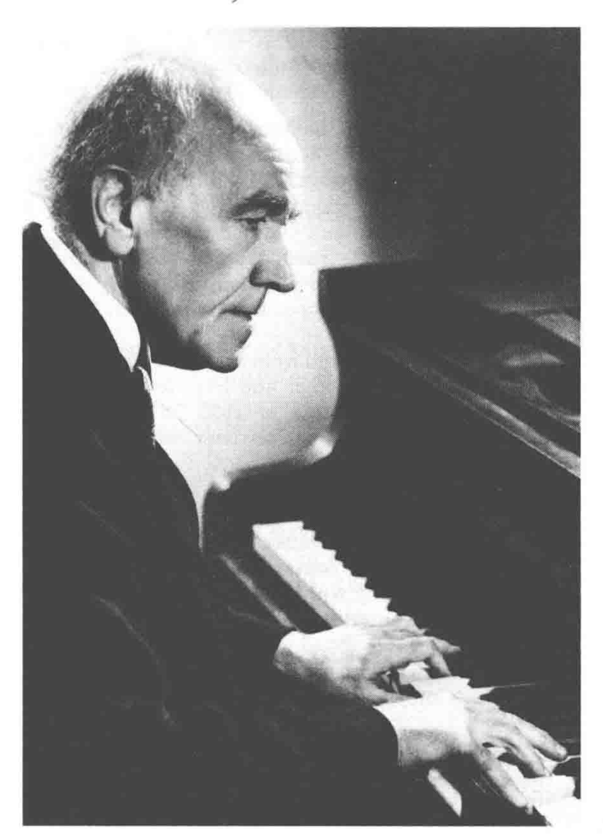
Medlam, Charles (*b* Port of Spain, Trinidad, 10 Sept 1949). British viol player, cellist and conductor. He studied at the London Cello Centre (Jane Cowan), the Paris Conservatoire (Maurice Gendron), the Vienna Hochschule für Musik (Wolfgang Herzer) and the Salzburg Mozarteum (Nikolaus Harnoncourt), and made his début in the English Bach Festival in 1977 with London Baroque, the group he formed with his wife, the violinist Ingrid Seifert. The ensemble toured extensively in the 1980s and made many recordings, including Marais' *La gamme*, Purcell's fantasias and, with augmented forces, Monteverdi's *Orfeo*. Between 1972 and 1973 Medlam lectured at the Chinese University of Hong Kong. In 1990 he conducted Purcell's *Dido and Aeneas* at the Paris Opéra and in 1993 directed Handel's *Acis and Galatea* at the Salzburg Festival. He has also appeared as conductor at the Proms (1993), the Opéra-Comique in Paris and in Germany, the Netherlands and Sweden.

LUCY ROBINSON

Medley. An English term for a succession of well-known tunes strung together, generally without any formal construction (though examples in the Fitzwilliam Virginal Book regularly repeat each tune in a varied form, and one of the vocal medleys surviving from the 16th century is built on an ostinato bass; *see* QUODLIBET). A medley is similar to a potpourri, though generally of a smoother construction. The constituent tunes are very often from a similar source, as for example 'a medley of tunes from X' or 'a medley of songs by Y'.

The 'medley overture', which might contain scraps of concerto, opera airs, folktunes and popular dance-tunes, was invented by Richard Charke; such a work by him, with others by Arne and Lampe, was published in *Six Medley or Comic Overtures in Seven Parts* (1763). The form was revived in Victorian times, but the later medley overture generally consisted of a string of tunes from the work it precedes. The term applies to opera overtures by Boieldieu, Auber and Hérold as well as those to many operettas, including some of Sullivan's.

□



Medtner, Nicolas [Metner, Nikolay Karlovich] (*b* Moscow, 24 Dec 1879/5 Jan 1880; *d* London, 13 Nov 1951). Russian composer and pianist. His ancestors came from northern Europe (his father was of Danish descent and his mother of Swedish and German extraction), but by the time of his birth the family had been established in Russia for two generations and had thoroughly assimilated a Russian identity without abandoning their German cultural inheritance.

Medtner played the piano from the age of six, receiving lessons first from his mother and later from his uncle, Fyodor Goedicke. Enrolling in 1892 at the Moscow Conservatory, he studied successively with A.I. Galli, Pabst, V.L. Sapel′nikov and Safonov, and graduated in 1900 with the institution's gold medal as the outstanding pianist of his year. As a composer he was largely self-taught. Though he wrote music throughout his student years and in his junior course had studied theory with Kashkin and harmony with Arensky, he did not follow the customary advanced conservatory regime for prospective composers, even abandoning, with his connivance, Taneyev's counterpoint class, while continuing to take him his work informally.

After heading the list of honourable mentions in the pianists' section of the Rubinstein Competition in August 1900, Medtner prepared for the launch of a career as a concert artist, but encouraged by Taneyev and his mentor in life, his eldest brother, Emil, he had a change of heart and decided that his true vocation after all was composition. Henceforth, devoting himself to his art with an almost religious zeal, he made no effort to build a career as a performer but treated his occasional concert appearances essentially as showcases for his own music, of which the bulk is for solo piano and none without a part for the instrument.

Medtner's professional career as a composer began in 1903 with the appearance in print of his first opus and the first public performances of his music. His Piano Sonata in F minor op.5 attracted the attention of the famous Polish virtuoso Josef Hofmann, and through him of Rachmaninoff, who in later years was to be a staunch friend and benefactor. Although the composer failed to make an impression on critics in Germany with performances of his music there in 1904–5 and 1907, in Russia, particularly in Moscow, he gradually built up a considerable following. There, his growing stature was recognized in 1909 by the award of the Glinka Prize for three groups of Goethe settings, by his appointment to the advisory board of the Editions Russes, and by the offer of a piano professorship at the Moscow Conservatory, which he held for one year only at this time but resumed during World War I. In 1916 he was again awarded the Glinka Prize, on this occasion for two piano sonatas (op.25 no.2 and op.27).

Medtner was unsympathetic to the Bolshevik Revolution, and in the autumn of 1921 he and his wife left Russia to begin a new life abroad. They settled first in Berlin, but at a time of intense musical experimentation there was little interest there in work in a traditional vein like Medtner's, and few engagements. However, Rachmaninoff helped out financially and organized an American tour for 1924–5, after which the composer moved to

Nicolas Medtner

Paris, where his services disappointingly proved little more in demand than in Berlin and the artistic environment no more congenial. Outside a small Russian circle he had few friends, the most notable being Marcel Dupré, who, though a composer in a very different idiom, profoundly admired his colleague's music and playing, and was a great support to him throughout this difficult period.

In February 1927 Medtner returned to his homeland for a concert tour lasting three months, and in 1928 paid his first two visits to Britain, in the course of which he was made an Honorary Member of the Royal Academy of Music and played his Second Concerto at a Royal Philharmonic Society concert. He was heartened by the enthusiastic reception and the apparent extent of his following in the country. For urgent financial reasons, in 1929–30 he undertook a second tour of North America, this time including Canada, but the cheque he received bounced, and he escaped insolvency only through the generous intervention of Rachmaninoff.

Deploring contemporary composing practice and the course of musical evolution over the previous three decades, in the early 1930s Medtner was at last spurred to write a treatise expounding his own conservative aesthetics. He made a declaration of faith in his treatise on what he saw as the eternal and immutable laws of art, and at the same time attacked both modernism and the vacant pursuit of current musical fashions as pernicious aberrations which, in his view, had destroyed the connection between the artist's soul and his art. His work was published in 1935 under the auspices of Rachmaninoff as *Muza i moda* ('The muse and the fashion').

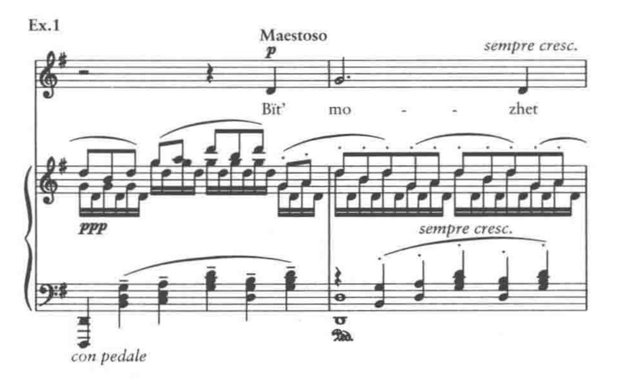
Meanwhile, after further visits to Britain, where it seemed his best prospects lay, Medtner decided at last to settle in the country permanently. In October 1935 he and his wife moved into a house in Golders Green, London, which became their home for the next 16 years. The modest success the composer now began to enjoy was cut short by the outbreak of war in 1939, when concerts, the demand for lessons, and income from his German publisher all ceased. The Medtners now depended for their survival on the generosity of friends. With the blitz making work in London impossible, in September 1940 they gratefully accepted sanctuary in Warwickshire with the family of the pianist Edna Iles, throughout her career a champion of Medtner's cause. In Warwickshire in 1942, while writing his third and last concerto, the composer suffered a serious heart attack; however, he made a slow recovery and was able to give the first performance of the new work at the Royal Albert Hall in February 1944.

Though dogged by ill-health, Medtner's last years were brightened by an unexpected turn of events. In 1946 the Maharajah of Mysore sponsored the foundation of a Medtner Society, enabling the composer over the next four years to make gramophone recordings for EMI of many of his most important works, including the three concertos, the Piano Quintet, the First Violin Sonata, and many songs and solo piano pieces. These definitive performances constitute a priceless legacy of interpretative guidance.

As one of the very last Romantic composer-pianists, Medtner has a place in Russian music alongside his close contemporaries Skryabin and Rachmaninoff, whose careers overshadowed his own. Like them he made the piano the focus of his creative activity and possessed a total understanding of its expressive possibilities; his writing, though never virtuosic for its own sake, is often complex and highly demanding of the performer. In most aspects of musical style, however, his manner is quite distinct from theirs, for, unlike all but a few of his fellow countrymen, he tempered a Russian spirit with musical thought rooted firmly in the Western classical tradition, derived from Beethoven in particular. This classical influence is to be seen in the composer's fastidious craftsmanship, his tight grasp of musical architecture, the frequent use of sonata form and his fondness for contrapuntal writing, of which he was a consummate master. Fully developed almost from the time of his first published works, his musical idiom changed very little throughout his career, and his entire output is remarkably consistent in quality.

Both the Russian and the German sides of Medtner's musical personality are apparent in his melodic construction, which ranges in style from the overt nationalism of the 'Russian Tale' to the hybrid lyricism of, say, the Second Concerto. These two aspects are most clearly distinguished in the songs, with settings of German poetry conspicuously lacking the often markedly Russian character of those in the composer's mother tongue, e.g. F.I. Tyutchev's *Chto tï klonish' nad vodami*? ('Willow, why for ever bending?'), or Pushkin's *Telega zhizni* ('The Wagon of Life').

In his harmonic language Medtner advanced but little beyond the boundaries set by 19th-century practice; in terms of rhythm, on the other hand, he was surprisingly progressive, particularly in his widespread use of elaborate



cross-rhythms. An extreme example occurs in the Pushkin setting *Elegiya* ('Elegy') from op.45, where the vocal melody in common time has a piano accompaniment with two groups of five quavers in the right hand and two of triplet crotchets in the left (ex.1).

Spanning Medtner's output are 14 piano sonatas, a cycle to be set alongside those of Skryabin and Prokofiev as the most important Russian works in the genre. In scope they range from the brief single-movement works of the *Sonaten-Triade* to the epic Sonata in E Minor, op.25 no.2, which exemplifies at its finest Medtner's natural mastery of large-scale structure and fondness for thematic integration, and which some have claimed to be the finest piano sonata of the 20th century. Of the large body of miscellaneous piano music the 38 *Märchen* ('Tales'), in Russian *skazki* (often, despite the absence of fairies in Russian folklore, misleadingly translated as 'Fairy Tales'), widely varied in character and exquisitely wrought, are the composer's most significant and characteristic miniatures.

The three concertos, whose scale and resources allow the composer's thought its fullest expression, are the only works in which Medtner uses the orchestra. He found the task of orchestration itself difficult and tedious, and his instrumentation is colourless and somewhat heavy-handed. His writing for the violin, however, is idiomatic and eloquent, and the three sonatas for the instrument are among the most important in the Russian repertory. Together with two smaller sets of violin pieces and the Piano Quintet, they make up the whole of his chamber music.

Of Medtner's 106 published songs, more than half are settings of Russian, the remainder of German, texts; Pushkin and Goethe predominate. It is perhaps from among the best of them, such as Pushkin's *Muza* ('The Muse'), *Elegiya* ('Elegy'), op.45, and Tyutchev's *Bessonnitsa* ('Sleeplessness'), in which his strengths are seen in their most concentrated form, that the composer's finest work is to be found. Though some of the most successful settings have a very simple accompaniment (Pushkin's *Roza* ('The Rose'), Goethe's *Einsamkeit*), in general the piano part has a musical role as important as that of the singer, and is often as complex and demanding as a solo piece (Pushkin's *Zimniy vecher* ('Winter Evening'), Fet's *Ya potryasen kogda krugom* ('O'er thee I bend')). This approach to song writing as music for voice and piano on equal terms reached its logical conclusion in the Sonate-Vocalise and Suite-Vocalise for voice and piano, which, except for a motto from Goethe in the former, are sung entirely without words.

SONGS

— Molitva [Prayer] (M.Yu. Lermontov), 1896, unpubd
1bis Angel [The Angel] (Lermontov), ?1901–8, v
3 3 romansa: U vrat obiteli svyatoy [At the gate of the holy abode] (Lermontov), Ya perezhil svoi zhelan'ya [Gone are my heart's desires] (A.S. Pushkin), Na ozere [On the Lake] (A. Fet, after J.W. Goethe), 1903, v
6 9 Goethe-Lieder (9 pesen Gyote): Wandrers Nachtlied II, Mailied, Elfenliedchen, Im Vorübergehn, Aus 'Claudine von Villa-Bella' (Liebliches Kind), Aus 'Erwin und Elmire' I (Inneres Wühlen), Aus 'Erwin und Elmire' II (Sieh mich, Heil'ger, wie ich bin), Erster Verlust, Gefunden, *c*1901–5, v
12 3 stikhotvoreniya Geyne (3 Gedichte von Heine): Lieb Liebchen, Lyrisches Intermezzo, Bergstimme, 1907, v
13/1 Zimniy vecher [Winter Evening] (Pushkin), 1901–4, v
13/2 Epitafiya [Epitaph] (A. Bely), 1907, v
— Epitafiya [Epitaph] (Bely) [different text], 1907, unpubd
15 12 pesen Gyote (12 Goethe-Lieder): Wandrers Nachtlied I, Aus 'Wilhelm Meister' (An die Türen will ich schleichen), Selbstbetrug, Aus 'Erwin und Elmire' (Sie liebt mich), Aus 'Lila' (So tanzet), Vor Gericht, Meeresstille, Glückliche Fahrt, Nähe des Geliebten, Der untreue Knabe, Gleich und Gleich, Geistesgruss, 1905–7, v
18 6 stikhotvoreniy Gyote (6 Gedichte von Goethe): Die Spröde, Die Bekehrte, Einsamkeit, Mignon, Das Veilchen, Jägers Abendlied, 1905–9, v
19 3 stikhotvoreniya Nittsshe (3 Gedichte von A. Nietzsche): Gruss, Alt Mütterlein, Heimweh, 1907–9
19a 2 stikhotvoreniya Nittsshe (2 Gedichte von Nietzsche): Heimkehr, Verzweiflung, ?1910–11
24 8 stikhotvoreniy (8 Gedichte) (F. Tyutchev, Fet): Den' i noch' [Day and Night], Chto tï klonish' nad vodami [Willow, why for ever bending?], Duma za dumoy, volna za volnoy [Sea-swell and Memories], Sumerki [Twilight], Ya potryasen kogda krugom [O'er thee I bend], Tol'ko vstrechu ulïbku tvoyu [When my glances thy smile chance to meet], Shopot, robkoye dïkhan'ye [Whisp'ring, Nature faintly stirring], Ya prishyol k tebe s privetom [Greeting], 1911, v
28 7 stikhotvoreniy (7 Gedichte): Nezhdannïy dozhd' [Unexpected Rain] (Fet), Ne mogu ya slïshat' ètoy ptichki [Serenade] (Fet), Babochka [The Butterfly] (Fet), Tyazhela, bestsvetna i pusta [Heavy is the gravestone] (V. Bryusov), Vesenneye uspokoyeniye [Spring Solace] (Tyutchev, after J.L. Uhland), Sizhu zadumchiv i odin [Absorbed and alone] (Tyutchev), Poshli, gospod', svoyu otradu [Send thy comfort] (Tyutchev), 1913, v
29 7 stikhotvoreniy Pushkina (7 Gedichte von Puschkin): Muza [The Muse], Pevets [The Singer], Stikhi, sochinennïye noch'yu vo vremya bessonnitsï [Lines written during a sleepless night], Kon' [The Horse], Elegiya: Ya perezhil svoi zhelan'ya [Gone are my heart's desires], Roza [The Rose], Zaklinaniye [The Call, Evocation], 1913, v
32 6 stikhotvoreniy Pushkina (6 poésies de Pouchkine): Ekho [Echo], Vospominaniye [Remembrance], Pokhoronnaya pesnya [Funeral Song], Ya vas lyubil [I loved thee well], Mogu l' zabït'èto sladkoye mgnoven'ye [The Waltz] (Del'vig), Mechtatelyu [To a Dreamer], 1915, vi
36 6 stikhotvoreniy A. Pushkina (6 Gedichte von A. Puschkin): Angel [The Angel], Tsvetok [The Flower], Lish' rozï uvyadayut [When roses fade], Ispanskiy romans [Spanish Romance], Noch' [Night], Arion [Arion], 1918–19, vi
37 5 stikhotvoreniy Tyutcheva i Feta (5 Gedichte von Tjutschew und Foeth): Bessonnitsa [Sleeplessness], Slyozï [Tears], Impromptu, Val's [The Waltz], O chyom tï voyesh', vetr nochnoy? [Night Wind], 1918–20, vi
41/1 Sonate-Vocalise mit einem Motto 'Geweihter Platz' von Goethe, 1922, vi
41/2 Suite-Vocalise, ?1927, vi
45 4 pesni (4 Lieder): Elegiya [Elegy] (Pushkin), Telega zhizni [The Wagon of Life] (Pushkin), Pesn' nochi [Night Song] (Tyutchev), Nash vek [Our Time] (Tyutchev), 1922–4, vi
46 7 Lieder (7 Songs): Praeludium (Goethe), Geweihter Platz (Goethe), Serenade (J.K. Eichendorff), Im Walde (Eichendorff), Winternacht (Eichendorff), Die Quelle (A. Chamisso), Frisch gesungen (Chamisso), 1922–4, vi
52 7 pesen na stikhotvoreniya A. Pushkina (7 Lieder nach Dichtungen von A. Puschkin): Okno [The Window], Voron [The Ravens], Elegiya [Elegy], Primetï [Omens], Ispanskiy romans [Spanish Romance], Serenada [Serenade], Uznik [The Captive], 1928–9, vi
59/1 Polden' (Midday) (Tyutchev), ?1936, vi
61 7 hinterlassene Lieder: Reiselied (Eichendorff), Nachtgruss (Eichendorff), Chto v imeni tebe moyom? [What means to thee my humble name?] (Pushkin), Yesli zhizn' tebya obmanet [If one day you're disillusioned] (Pushkin), Molitva [The Prayer] (Lermontov), O, veshchaya dusha moya [Behold my visionary soul] (Tyutchev), Kogda, chto zvali mï svoim [We lost all that was once our own] (Tyutchev), 1927–51, vi
— Wie kommt es? (H. Hesse), ?1946–9, unpubd

BARRIE MARTYN

Medtner, Nikolay Karlovich. *See* MEDTNER, NICHOLAS.

Medushevsky, Vyacheslav Vyacheslavovich (*b* Moscow, 15 April 1939). Russian musicologist. He studied musicology at the Moscow Conservatory (1958–63) under Skrebkov and completed his postgraduate degree there in 1966. In 1971 he obtained the *Kandidat* degree with a study on the relationship between how a musical work is structured and how it is heard; in 1985 he took the doctorate. He began teaching music analysis at the Moscow Conservatory in 1966 and was appointed senior lecturer in 1978 and professor in 1990.

In his writings Medushevsky examines the communicative function of music, the construction and perception of musically expressive means and the temporal organisation of a musical work. His later publications focus on the theory of 'intonational form': building on the work of Asaf'yev, Medushevsky interprets intonation as 'an indissoluble unity of all aspects of sound', such as articulation, pitch, timbre, rhythm and volume (1993, p.33). The 'intonational' musical form, according to Medushevsky, presupposes the interaction of the 'proto-intonational' form, created by the right-brain experiences of speech, the arts and culture generally, and the structural organisation, based on patterns of discontinuity and commensurability generated by the left side of the brain. Both aspects act on different formal levels, such as that of motivic organization, syntax and narrative. 'Intonation' thus gives rise to both a musical narrative by creating a meaning rich in events and the structure or 'sound skeleton' of the music, in which sound is compartmentalized into the functional and the differentiated. Medushevsky maintains that the interaction between the two types of intonational organisation may provide the key to solving problems relating to musical language, systems of genres and styles and the historical development of listening. From 1993 Medushevsky has also written on questions of spirituality in music and the synthesis of various areas of music studies.

TAT'YANA S. KYUREGYAN

Meek, Joe [Robert George] (*b* Newent, 5 April 1929; *d* London, 3 Feb 1967). English record producer and composer. Although Joe Meek created some of the more imaginative pop music of the period immediately preceding the Beatles, his principal contribution to the pop music of the 1960s lay in his innovatory studio production techniques. From 1960 he developed the practices of multi-tracking and echo at his small studio in north London. These were used to great effect on such hit recordings as the instrumental *Telstar* by the Tornadoes and *Just like Eddie* by Heinz. Perhaps the most effective of Meek's productions were a trilogy of songs by Geoff

Goddard, recorded by John Leyton in 1961–2. Using various effects, Meek created an appropriately eerie atmosphere for the ghost stories *Johnny remember me* and *Wild Wind*, and for *Son this is she*. Meek briefly operated his own label, Triumph, but generally leased his productions to larger companies. Among the other artists he recorded were the Outlaws, the Honeycombs (including the hit *Have I the Right*, 1964) and the solo singers Michael Cox and Mike Berry (notably, *Tribute to Buddy Holly*, 1961). For further information see John Repsch: *The Legendary Joe Meek* (London, 1989).

DAVE LAING

Meer, John Henry van der (*b* The Hague, 9 Feb 1920). Dutch musicologist, active in Germany. He studied law and musicology at the University of Utrecht. His teachers for musicology were Albert Smijers and Eduard Reeser and he took the doctorate in 1956 with a dissertation on Fux as an opera composer. He taught music theory and history at the Utrecht Conservatory (1946–54) and music history at the Royal Conservatory at The Hague (1949–55). He was curator of the music department of the Gemeentemuseum at The Hague (1954–63) and in 1963 he was appointed curator of the collection of musical instruments of the Germanisches Nationalmuseum at Nuremberg, a post he held until 1984. He is an authority on organology and many of his publications deal with musical instruments. He was appointed a corresponding member of the Royal Dutch Academy of Sciences in 1972 and was granted the Curt Sachs Award by the American Musical Instrument Society in 1986.

Meers. *See* MEARES.

Meerti, Elisa. *See* BLAES, ELISA.

Mees, Joseph-Henri(-Ignace) (*b* Brussels, 28 May 1777; *d* Paris, 18 Dec 1858). Flemish composer, conductor, publisher and teacher. He was the son of Henri Mees (*b* Brussels, 1757; *d* Warsaw, 31 Jan 1820), principal baritone of the Théâtre de la Monnaie, Brussels, and of Anne-Marie Vitzthumb, a singer. He showed precocious musical talent: at the age of five he sang in a church choir, at seven he began to study the violin and at ten he played in the orchestra of the Monnaie. He had further violin studies with J.-E. Pauwels and lessons in harmony and counterpoint with his grandfather Ignaz Vitzthumb. In 1794, during the second French occupation, the family emigrated to Hamburg, where Henri Mees and other Brussels artists established a theatre for the Comédie-Française; Joseph-Henri occasionally sang secondary roles and conducted the orchestra there. He also opened a music shop, from which he published works from the Parisian repertory.

In 1798 he founded a weekly musical periodical, the *Journal d'Apollon pour le forte-piano*; publication continued until 1804, even though Mees went to Brunswick in 1800 to direct the French theatre at the ducal court. There he married Mlle de Saint-Romain, a former singer at the Paris Opéra. Later he travelled to Germany, Sweden and France (residing briefly in Bordeaux and Rouen, where he became honorary president of the Philharmonic Society), and finally to England; he was one of the first exponents of the *méloplaste* method (a simplified method of reading music using numbers instead of notes) in London. In 1816 he returned to Brussels and founded a music academy, which he directed with J.F. Snel until 1830. In 1824 he established a similar school in Antwerp; both institutions used the *méloplaste* method. He was also engaged in Brussels as court composer (1819–22) and honorary violinist (1827–9) for the private music of Prince Willem of Orange-Nassau. During the Revolution of 1830 he emigrated, travelling to Paris, Italy, England and finally Kiev, where he directed a music academy and taught music at the imperial boarding-school. He conducted at the St Petersburg Opera from 1838 and in 1855 moved to Paris.

Mees's compositions include an opera, a sacred oratorio and other vocal works. He edited two musical journals in

addition to the *Journal d'Apollon*: the *Journal de chant* (Brussels, ?1817–19) and the *Maître à chanter, ou Le troubadour cosmopolite* (?Brussels, 1827). He also prepared new editions of Castil-Blaze's *Dictionnaire de musique moderne* (Brussels, 1828) and Grétry's *Mémoires, ou Essais sur la musique* (Brussels, 1829), adding to the former an *Abrégé historique sur la musique moderne*.

PAUL RASPÉ

Meester, Louis De (*b* Roeselare, 28 Oct 1904; *d* Ghent, 12 Dec 1987). Belgian composer. He began his career playing in bars and nightclubs and working with touring operetta companies; as a composer he was self-taught. From 1933 to 1937 he was director of the Meknes Conservatory, Morocco. After his return to Belgium he sought compositional advice from Poulenc, Gilson and Absil. In 1945 he became a sound engineer with the Flemish section of Belgian radio who, in 1962, appointed him artistic director of the Instituut Psychoacoustica en Elektronische Muziek (IPEM) attached to Ghent University. In 1979 he won a state prize in recognition of his artistic career and in 1980 received an honorary doctorate of Ghent University. Co-founder and leader of the composers' group Spectra, he was tireless in his electronic research, compiling a collection of sounds recorded on about 100 hours of tape. He used his technical knowledge of electronics in a major work for the first time in his radio opera *De grote verzoeking van St.-Antonius*, which won the 1957 Italia Prize. In this opera he tried to integrate electronic sounds with conventional instruments. The opera *Twee is te weinig, drie is te veel* won the Sicily Prize. De Meester's orchestral works and chamber music reveal a personality far removed from academicism. Examples are his *Capriccio* for orchestra and *Magreb*, which translates the idiom of Moroccan folk music into his own language and reveals his skill as an orchestrator. A non-conformist, he is not associated with a particular tendency, and he uses traditional elements while alluding to serialism. Each work is the result of renewed research; he was a inventive eclectic. He expressed humanity and conflict, and vehemence predominates over lyricism.

WORKS

(selective list)

Dramatic: De grote verzoeking van St.-Antonius (radio op, M. de Ghelderode, 1957), Antwerp, Koninklijke Vlaamse Opera, 11 Nov 1961; Twee is te weinig, drie is te veel (TV op, T. Brulin), 1965, Brussels TV, Sept 1966; De paradijsgeuzen (op, K. Locufier), 1967, Ghent, Koninklijke Vlaamse Opera, 2 April 1967; De tijd der waanzin (music for son et lumière, E. Saegeman), wind, elec, 1972; Xenos (op, 1, Saegeman), 1978; incid music for radio, TV, theatre and cinema
Orch: Magreb, va, orch, 1946; Capriccio, 1948; Sinfonietta buffa, 1949; Pf Conc. no.1, 1952; Musica per archi, str, 1955; Pf Conc. no.2, 1956; Amalgames, 1956; Marine, 1958; Serenade, hpd, fl, ob, str, 1959–67; Concertino, double chbr orch, 1965; Scherzettino, fl, ob, str, 1971
Vocal: Betje Trompet (R. Metzemaekers), reciter, orch, 1950; La voix du silence (cant., M. YVES KNOCKAERT

Méfano, Paul (*b* Bassorah, Iraq, 6 March 1937). French composer. He studied at the École Normale de Musique (1959–60) with Andrée Vaurabourg-Honegger, at the Paris Conservatoire (1960–64) with Dandelot, Desportes, Messiaen and Milhaud, and at the Basle Musik-Akademie with Boulez, Stockhausen and Pousseur. In 1971 he founded the instrumental ensemble 2e2m, and has since conducted over 500 first performances (especially of music by younger composers) and built up a significant discography. He is the founder of the Editions du Mordant for the publication of contemporary music, and the Editions Musicales Européennes (devoted primarily to young composers), and has produced several notable series of radio broadcasts. He is currently director of the Versailles Conservatoire. He received the Enesco Prize of the SACEM in 1971.

Méfano's works of the 1960s belong essentially in Boulez's sound world, but he has always had an individual sensitivity for the poetic in music, which manifests itself especially in his treatment of instrumental colour and in his vocal writing. To these qualities is added a sense of drama in *La cérémonie*. In the early 1970s he experimented with electronic resources and (as notably in *La messe des voleurs*), their combination with live instruments. A number of his works explore and develop contemporary flute techniques. His earliest works (such as the *Trois chants crépusculaires*) retain links with tonality, to which the later *Micromégas* returns in a refreshing manner. Since then he has been largely faithful to serial techniques.

JEREMY DRAKE

Megalynarion (Gk.). A TROPARION that accompanies the 9th ode of a Byzantine KANŌN for certain feasts; its opening phrase is taken from the Song of the Virgin Mary (Lat. *Magnificat*).

Megerle, Abraham (*b* Wasserburg am Inn, 9 Feb 1607; *d* Altötting, 29 May 1680). Austrian composer and organist. In 1617 he became a chorister in Archduchess Anna Katharina's court chapel at Innsbruck and also a pupil of Johann Stadlmayr. He was later appointed organist. In 1633 or shortly before, he left for Konstanz, where he was ordained in 1634 and became cathedral Kapellmeister. His activities during the next few years included the reorganization of the music at the prince-bishop's court in order to meet contemporary liturgical and musical needs. He also went on long journeys in the diocese. From 1640 to 1651 he was Kapellmeister to the Prince-Bishop of Salzburg, and he organized church music there in his capacity as a music inspector in and around Salzburg. In 1651 he entered the collegiate foundation at Altötting, where he remained until his death and where he taught the preacher Abraham a Sancta Clara, who dedicated a eulogy to him. The rapid and successful progress of his professional career brought him to the notice of the Emperor Ferdinand III, whose goodwill he gained by dedicating musical works to him (including an 'enigmatic little piece') and who raised him to the nobility in 1652. In 1662 he was appointed apostolic prothonotary and *notarius juratus*. His autobiography, *Speculum musico-mortuale* (1672), is of interest as a typical example of the Baroque way of thinking. Megerle was a very prolific composer: according to his own testimony he wrote some 2000 sacred works, most of which, however, are lost (see Albert; see also Pass for a further source of information). Johann Caspar Kerll thought highly of him, and he himself boasted that he was a 'world-renowned man'. Albert considered him equally adept as a composer of polyphonic and polychoral works as of monody, and drew attention to his occasional 'bold syntheses of the various practices'. Mergerle's canons, which are important documents of Salzburg musical life of the mid-17th century, reflect his predilection for secrets and mystifications; an extreme devotion to the Virgin Mary is also evident from his writings and music.

WORKS

WALTER PASS

Megli, Domenico Maria. *See* MELLI, DOMENICO MARIA.

Mehrstimmigkeit (Ger.). *See* POLYPHONY.

Mehta, Zubin (*b* Bombay, 29 April 1936). Indian conductor. Son of Mehli Mehta, a violinist and the founder-conductor of the Bombay SO, he learnt the piano and the violin as a child and formed an ambition to conduct. He was persuaded to study medicine, which he abandoned at 18 to enter the Vienna Academy, where he studied with Hans Swarowsky and played the double bass in the orchestra. After forming student orchestras to conduct, he entered the first international conductors' competition organized by the Royal Liverpool PO in 1958 and won the major prize (for British and Commonwealth entrants) of a year as musical assistant in Liverpool.

When this expired Mehta was offered no further employment in Britain, but he quickly made a favourable impression as a guest conductor with the Vienna PO, and in Montreal and Los Angeles deputizing for other conductors. His spectacular success led to his appointment to the Montreal SO (1961–67), and to the Los Angeles PO, as associate conductor in 1960 and musical director in 1962, a post he held until 1978. He was then the youngest to hold such an appointment with a leading orchestra in the USA, and the first in North America to share a joint appointment with two major orchestras. At Los Angeles he transformed an undistinguished orchestra

into a superior ensemble within a few years, spreading his own and the orchestra's reputation by some outstanding recordings.

Mehta made his début at the Metropolitan Opera in 1965 (*Aida*). He first conducted in London at an RPO concert in 1961, and later formed close links with the Israel PO, conducting it on a European tour in 1968 and becoming its chief musical adviser in 1969. In 1981 he was named conductor for life, and took the orchestra to India in 1994, bridging a political gap that had prevented it from performing there for three decades. He made his London opera début with *Otello* in 1977, and had an unprecedentedly long tenure as music director of the New York PO, 1978–91. He was later named music director of the Bavarian Staatsoper in Munich for five years from 1998. Mehta conducted the first 'Three Tenors' concert (with Carreras, Domingo and Pavarotti) at Rome in 1990 and again in Rome and Los Angeles in 1994, both televised worldwide and recorded. His numerous other discs range from a cycle of Mahler symphonies and operas by Verdi and Puccini (including an outstanding *Turandot*) to works by contemporary American composers. Mehta's performances generally favour Romantic warmth of expression and voluptuous sonority, combined with bold attack and rhythmic vigour and reinforced by boundless self-confidence; at times his concern for theatrical effect has been at the expense of musical depth. An awareness of his audience is often reflected in platform gestures indicative not so much of the musical content as of the desired response of the audience to it. He has received honours from the Indian, Italian and French governments.

NOËL GOODWIN

Méhul, Etienne-Nicolas (*b* Givet, Ardennes, 22 June 1763; *d* Paris, 18 Oct 1817). French composer. He was one of the leading composers in Paris during the Revolution, Consulate and Empire. His works for the Opéra-Comique increased the range in subject and tone of the theatre's repertory; the serious lyric *drames*, in particular, were influential models for his contemporaries and praised by later composers such as Weber, Berlioz and Wagner.

1. LIFE. Méhul was the son of the Count of Montmorency's *maître d'hôtel*, Jean-François Méhul. After studying the organ locally at the Franciscan convent, he took the opportunity to continue lessons with Wilhelm Hanser (who also taught him counterpoint) at the nearby abbey of Laval-Dieu. Soon he became Hanser's assistant. In 1778 or 1779 he arrived in Paris, and had an introduction to the harpsichordist and opera composer Jean-Frédéric Edelmann, with whom he studied while supporting himself by teaching keyboard instruments and probably playing the organ. Under his teacher's aegis, Méhul arranged popular opera *airs*, set one of Jean-Baptiste Rousseau's *odes sacrées*, which was performed at the Concert Spirituel in 1782, and wrote a set of keyboard sonatas (1783). By the mid-1780s he had made influential friends. He became a member of the distinguished society of professional musicians and amateurs, the Société Académique des Enfants d'Apollon, which performed several of his dramatic *scènes*. Another two works for the Concert Spirituel (1789) and a second set of sonatas (1788) brought him some public attention. His first major opportunity to follow a career in opera came in 1785 when Valadier offered him his prize-winning libretto *Cora*. By the end of the following year Méhul had finished the score, and the opera composer Jean-Baptiste Lemoyne and the royal censor Jean-Baptiste Suard, one of Gluck's staunchest defenders, agreed to recommend it to the Opéra administration in January 1787. Adjudications, revisions and other circumstances delayed its première until 1791 (fig.1).

By then Méhul had met FRANÇOIS-BENOÎT HOFFMAN, already a well-established librettist, who became his favourite partner for more than a decade. Their initial collaboration, *Euphrosine, ou Le tyran corrigé* (1790), was the composer's operatic début; its success was such that Méhul was quickly recognized as a leading figure in the Parisian musical scene. Although *Cora* was a failure and *Adrien* (planned for 1792) was banned for political reasons (as metaphorically favouring France's enemy, the Austrian emperor), other substantial works performed during the 1790s at the Comédie-Italienne (from 1793 the Opéra-Comique), among them *Stratonice* (1792), *Mélidore et Phrosine* (1794) and *Ariodant* (1799), confirmed and increased the public's high opinion of him. To triumph on the stage of the Opéra remained Méhul's goal. The critical and popular acclaim for the second setting of *Adrien* (1799) must have pleased him, but the success proved short-lived: it was suspended after the

1. Designs by Jean-Simon Berthélémy for Zilia (left) and Cora in Méhul's 'Cora', Opéra, Paris, 1791 (Bibliothèque et Musée de l'Opéra, Paris)

fourth performance, again for political reasons (this time for promoting the monarchy, in spite of revisions making the title hero a mere general).

During the Revolution Méhul became widely known as a composer of patriotic songs and choruses, many of them government commissions. He also wrote the overture and choruses for Chénier's *Timoléon*, the frequently performed ballet *Le jugement de Paris*, a symphony, an overture for wind band, and several romances and other songs.

Official recognition came in 1795 when he became a founder-member of the Institut de France, the first composer and the second youngest person to be named to that body. The Ministre de l'Intérieur in a public proclamation (1796) praised him for his contribution to Revolutionary *fêtes*. Méhul's friend in the Directory, Louis Marie de Larevellière-Lépeaux, cited him as a model for composers (*Essai sur ... les fêtes nationales*, Paris, 1797, pp.15–16). In 1795 the government appointed him one of the five inspectors of the newly reorganized Conservatoire, the most senior members of the staff responsible for overseeing the institution (fig.2). The Opéra-Comique expressed esteem for Méhul in a tangible way. To ensure his fidelity to their theatre, the *sociétaires* (the leading singers who owned the enterprise) paid him a special pension, over and above the performance honoraria legally due, beginning in April 1794. This was a most unusual step for them since, unlike the other prolific composer-pensioners Grétry and Dalayrac, Méhul had only three works in repertory by then.

By the time of Consulate (1799–1804), Méhul was the undisputed master of serious opera with spoken dialogue, and he continued to prefer dramatic librettos for major works. But Parisian tastes had shifted in favour of lighter, truly comic operas. Significantly, the *drame*-influenced *Héléna*, for example, was more popular elsewhere in Europe than in the French capital, while his shorter *opéras comiques* written to current fashions, *L'irato* and *Une folie* for instance, were well received everywhere. Méhul also wrote two more ballets for the Opéra (*La dansomanie*, given in 1800, was the theatre's most successful one of the period), incidental music for Alexandre Duval's play *Les Hussites* (1804), songs and other minor works, although the operatic genre remained the composer's principal concern.

2. *Etienne-Nicolas Méhul: portrait by Joseph Ducreux, pastel, 1795 (Château de Versailles)*

Méhul benefited from the friendship and support of the first consul, Napoleon Bonaparte, to whom he dedicated the printed score of *L'irato*. Bonaparte commissioned from him several large-scale works for public festivals, among them the impressive *Chant national* for soloists, three choirs and three orchestras, to celebrate the victory of Marengo and Bastille Day in 1800, and *Domine salvum fac rempublicam* for two choruses and two orchestras for the Mass following the signing of the Concordat (re-establishing Catholicism as the state religion) in 1802. His brother Lucien Bonaparte, as Ministre de l'Intérieur, personally intervened in 1800 to lift the interdiction of *Adrien*. In 1804 Méhul was named a member of the newly created Légion d'Honneur. His marriage in 1800 to Marie-Thérèse-Joséphine Gastaldy proved unhappy; by 1808 at the latest they had separated. Afterwards Méhul formed a common-law relationship with Marie-Françoise Tourette, sister of Cherubini's wife.

During the Empire (1804–1814/15) he continued to write mainly for the Opéra-Comique, although he seldom achieved the artistic or popular successes of his best works of the 1790s. Two experimental and atypical scores given premières in 1806 and 1807 (and not often performed in Paris during his lifetime) are his best-known works to modern scholars: *Uthal* (written during the Consulate), in which he tried to capture the Ossianic mood by an unusual orchestration emphasizing the sombre timbres of the violas and cellos and omitting violins altogether, and *Joseph*, whose pious subject and intentionally austere and pseudo-religious atmosphere made it a respected work throughout the 19th century, particularly in Germany.

As well as writing songs and several occasional cantatas in Napoleon's honour, Méhul composed four symphonies, 1808–10. He broke off composition of the fifth symphony in this set on receiving commissions for two cantatas, a *chant triomphal*, the ballet *Persée et Andromède* and the opera *Les troubadours, ou La fête au château* as part of the festivities to celebrate the emperor's marriage to Marie-Louise of Austria (1810). Napoleon rewarded the composer handsomely for his efforts with gifts and a pension from the imperial household accounts (the only one for a musician not directly involved in private music for the court). Furthermore, in 1810, on the recommendation of an Institut committee, Napoleon gave the prize for the best work at the Opéra-Comique during the past ten years to *Joseph*. The following year, Méhul wrote three more cantatas (one jointly with his Conservatoire colleagues Cherubini and Catel) for the birth of the emperor's son.

In spite of imperial patronage, 1810–11 was a period of crisis for Méhul. The lukewarm reception of his symphonies, some public criticism of the choice of *Joseph* for the prize, his disappointment at not seeing *Les troubadours* and *Valentine de Milan* performed, owing to factors beyond his control, and the poor state of his

health after contracting tuberculosis all led to a severe depression. Problems in revising extensively his serious opera *Les Amazones*, which he hoped would be the pinnacle of his career, and in rehearsing it aggravated the situation. Its failure in 1811 was the worst blow that the composer experienced. For a while he renounced writing for the theatre. Encouragement from friends later persuaded him to compose two more *opéras comiques*, but he left incomplete the *tragédie lyrique Sésostris*. His contribution to *L'oriflamme*, a *pièce de circonstance* commissioned by the government during the final days of the Empire when France was under attack, was limited.

Even though Méhul had close ties to Napoleon and his government, on the Restoration his pre-eminence ensured him a place in the new régime. He was named *surintendant honoraire de la musique du Roi*, and among his last works was a cantata celebrating the Bourbons (August, 1815). Terminally ill by this time, he fought hard for the preservation of the Conservatoire ('tainted' as an institution of the Revolution and Empire); its reduction to Ecole de Musique, rather than its outright abolition as advocated by influential members of the government, was due in part to his efforts. His death was mourned by friends, colleagues, students (including his nephew Louis Joseph Daussoigne-Méhul and Ferdinand Hérold) and the opera-going public of Paris. Cherubini, his close friend and sometime collaborator, paid a warm tribute to his generosity, fine character and great talent, summing up his style as 'sweeping and clear tending towards strong gestures rather than those requiring merely grace and sweetness; he was rather the Michelangelo than the Raphael of music' (Pougin, 1909).

2. WORKS. For Berlioz (*Les soirées d'orchestre*, ed. Guichard, 1968) Méhul's operas were his greatest contribution to music. Dramatic truth was the paramount goal:

> He believed that theatrical music … must be directly correlated to the sentiments expressed by the words, that it must sometimes even … seek to reproduce the intonation of speech, the declamatory accent … when the interest of a situation merits . . . sacrifices, between a pretty musical effect foreign to the emphasis of the scene or to the nature of the characters, and a series of [dramatic] strokes, true but not conducive to a frivolous pleasure, there was no reason at all to hesitate. He was convinced that musical expression … did not reside only in the melody, but that everything combined to give it life or to destroy it: melody, harmony, modulations, rhythm, orchestration, choice of high or low registers of voices and instruments, degree of speed or slowness in the performance and various nuances in sound production.

Berlioz was right. The tremendous variety among Méhul's operas and his frequently daring and innovative approaches result in part from consistently putting the requirements of the drama first.

Méhul's works of the 1790s for the Opéra-Comique were the mainstay of the Paris repertory and were often performed elsewhere. As a group they show better than the output of any other French composer the stylistic break with the works of the previous generation (best represented by Grétry), the developments contributing to their far greater dramatic impact and the musical innovations that proved to be influential precedents for Romantic music.

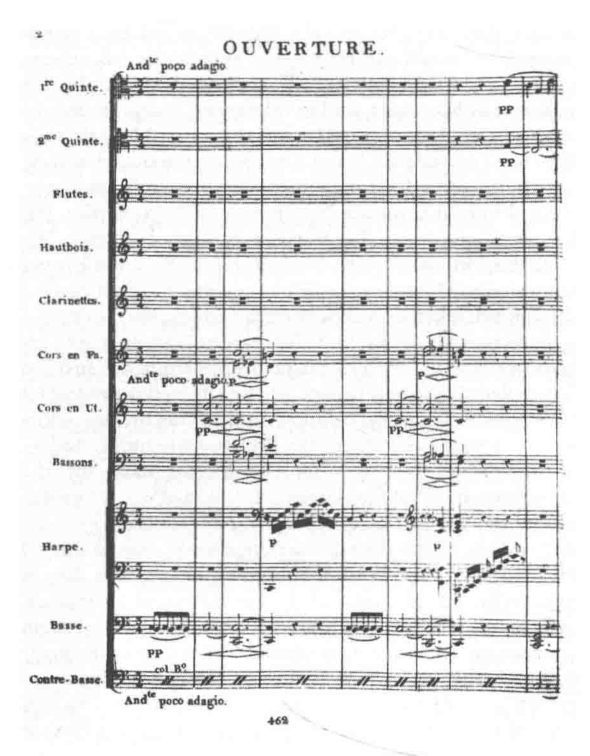
Cora and the *scènes lyriques* demonstrate not only his indebtedness to the 'reform' operas of Gluck and Salieri, but also his awareness of symphonic style (particularly Haydn's) and his interest in dynamic, large-scale ensembles – both of which are unusual for the period. In these early works Méhul experimented with new techniques that he was to use later with greater expertise.

Literary trends are also significant. The lighthearted *comédie mêlée d'ariettes* type of libretto in vogue during the *ancien régime* gradually gave way to the serious *drame lyrique*. In the 1780s developments in operas on 'chevaleresque' subjects anticipated directions that Revolutionary opera was to take. Nevertheless, Hoffman's librettos for *Euphrosine* (1790), set at the time of the Crusades, and *Stratonice* (1792), on a classical legend, mark a turning-point. Drawing on techniques in dramatic construction, characterization and versification from the spoken *comédie* and *drame*, he produced a richer, more varied and flexible form.

The change in the style and content of the libretto presented a musical challenge. The texts of individual numbers were no longer merely incidental to the plot (as was often the case in the *comédie mêlée d'ariettes*); rather, they were an integral part and frequently had a crucial dramatic function. As a result, the music became more important. Drawing in part on earlier traditions of both the Comédie-Italienne and the Opéra, Méhul provided a highly original solution to the problems that the libretto set. Though uneven, the score of *Euphrosine* is in strong contrast to those of his most gifted predecessors Grétry and Dalayrac: the melodically orientated *ariette* style, which dominates in even the exceptional works of the previous decade (such as Grétry's *Richard Coeur-de-lion* and Dalayrac's *Raoul, sire de Créqui*), is passé. For the best pieces in *Euphrosine* – significantly those with the strongest dramatic impact – Méhul developed new and more extended forms (especially in the finales of Acts 1 and 2 and the confrontation duet), a greater role for the orchestra (which at times becomes the voice's equal and even superior), an expressive recurring motif symbolizing jealousy, and a broader range of effects (achieved, for example, through a larger harmonic vocabulary, remote modulations and deliberately unmelodic writing for the voice when justified by the exigencies of the text).

Cherubini's favourite Méhul opera, *Stratonice*, shows the consolidation and polishing of techniques and approaches evident in *Euphrosine*. The result is a consistent, mature work in which attention to balance and nuance within a modern style belies common assumptions about Revolutionary music. Méhul matched the classical subject with music in a noble style inspired by Opéra models. The *air* 'Versez tous vos chagrins dans le sein paternel' with its long, lyric phrases remained a favourite with tenors throughout the 19th century. The quartet containing, as a contemporary critic noted, almost half the music of the opera is an impressive dramatic rendering of the most important scene in the work where symphonic techniques, motivic symbolism, contrasting characterizations of the individuals through their melodies, effective orchestration and an extended form akin to the sonata-rondo all serve to heighten the theatrical impact.

Méhul's experiments of the mid-1790s demonstrate how daring he was, particularly in a sometimes shocking use of dissonance, the deliberate incompletion of formal expectations for dramatic effect and the orchestral expression of extreme psychological states to a degree surpassing previous works. In *Mélidore et Phrosine* the composer achieved a musical unification through themes and motifs, tonal structures and modulation schemes not hitherto attempted in the genre. *Ariodant* is Méhul's best



work of the decade and a high point of Revolutionary opera. Another 'chevaleresque' work, it is in a serious and sentimental style throughout. The music is in turn nostalgic (the bard's *romance* 'Femme sensible', for example), intensely dramatic (the villain's outburst 'O démon de la jalousie' and the Act 2 finale) and mixed (the heroine's *air*, 'O des amans le plus fidèle', expressing her hopes and fears as her lover faces the villain's challenge). In spite of its fate *Adrien* contains much fine music, and its extensive use of chorus and ensemble as well as solos in long scene complexes set significant precedents for Spontini and for Empire opera.

Méhul's serious works for the Opéra-Comique during the Consulate and Empire (for instance *Joanna* and *Héléna*) are less experimental in terms of form, melodic style, harmony, modulation and motivic treatment than those of the 1790s, although he often refined and consolidated his earlier procedures. For the frankly comic works (*Une folie* and *L'irato*, for example) Méhul studied the then popular Italian-influenced *opéras comiques* of Isouard and others, as well as Paisiello's *opere buffe*, and distilled from them a lighter, more tuneful melodic approach. This he integrated so thoroughly into his more complex, symphonic style that to speak of imitation would be misleading. Sometimes, however, as Cherubini noted, the humour was more calculated than natural, and in places too heavy-handed.

The composer's quest for an appropriate translation of the dramatic situation and his growing interest in French music history led him occasionally to adapt traditional melodies for symbolic reasons, for example the *airs* 'Charmante Gabrielle' and 'Vive Henri IV' in *Gabrielle d'Estrées* and the *forlane* from Campra's *L'Europe galante* in *Les troubadours*. Contemporary references could serve his purpose too. Critics remarked how well the audience appreciated the bolero theme in the overture to *Les deux aveugles de Tolède* as an introduction to the work's Spanish setting.

More often, Méhul created his own unique musical atmosphere in a work through distinctive orchestrations. Sometimes he used instruments not commonly found in the opera orchestra, such as the harp, the serpent and the tuba curva, for their extra-musical associations as well as their sonorous qualities (as in *Joseph*). But more importantly, as he had begun to do in his earlier works, he emancipated whole sections of the orchestra. No longer was the violin always dominant, with treble winds occasionally providing contrast. Instruments of the tenor range, the horn, the viola and the cello in particular, were imaginatively handled and assigned prominent roles. To describe *Uthal* as 'the opera without violins', though accurate, is misleading; rather, the sombre qualities of an expanded viola section (fig.3), as well as an emphasis on male voices, reeds, horns and cellos, give the score a suitably misty and dark cast for the Ossianic subject. His achievements in this domain had a marked influence on others. Beethoven's trumpet call in *Fidelio* was inspired by Méhul's *Héléna*.

Méhul's interest in exploring the potential of the orchestra was not confined to his operas. In his ballets he worked closely with the choreographer Gardel to achieve a synthesis of action and music and a style appropriate to the subject: from pastoral (*Le jugement de Paris*, 1793) to satiric comedy (*La dansomanie*, 1800) and noble heroism (*Persée et Andromède*, 1810). Although all

3. Beginning of the overture of Méhul's 'Uthal' (Paris: Magasin de Musique (ii), c1806)

Méhul's ballets contain pieces by other composers (sometimes used for evocative reasons, e.g. the use in *Persée et Andromède* of two movements from Haydn's Symphony no.48, 'Maria Theresia', as a compliment to her granddaughter, Marie-Louise, now also an empress), the percentage of borrowed material is substantially less than most French ballets of the time.

Méhul was the most important French symphonist of the Empire. After an early experiment, the Symphony in C major (1797), which, particularly in the last movement, was quite Haydnesque in style, he planned a series of six symphonies for concerts at the Conservatoire, of which he completed four. Each has its own ethos, from the passionate energy of Symphony no.1 (1808) to the imposing ceremonial style of Symphony no.3 (1809). Perhaps the most interesting is the fourth (1810): the slow introduction to the first movement is harmonically audacious; the Andante is virtually a rhapsody for solo cellos accompanied by the rest of the orchestra (with the bass line frequently assigned to the double basses only); and, as Charlton (1997) has noted, Méhul experimented with motivic recall and transformation between movements to a degree unknown in the contemporary Viennese symphony.

For the French, however, Méhul was most famous as a composer of vocal music. His romances, often with topical overtones, touched the hearts of amateur performers and listeners in salons, and his patriotic chansons stirred the masses. An excellent example of the former is *Le petit Nantais* (1795). Jauffret's text, written in the aftermath of the Terror, is based ostensibly on an actual incident: a Jacobin's assassination of an innocent child and a defenceless old man. The syllabic melody lies within an octave, and is largely in conjunct motion, but several

expressive downward leaps of diminished intervals (supported in the accompaniment) accentuate the profound despair of the text. The highly dissonant keyboard opening sets the scene in just three bars; Méhul was later to use a variant of this striking descending figure to symbolize the villain's murderous rage in *Ariodant*.

According to numerous republicans, French armies intimidated their enemies by singing Méhul's *Le chant du départ* (1794) and Rouget de Lisle's *Marseillaise* (1792) – a hyperbole, of course, but one that sums up what for many even today best represents the music of the Revolution and its (intended) effect. For Méhul, the venue for patriotic music dictated his approach: as he noted in a 1794 letter, chansons intended for performance at the Opéra could well be treated in dramatic fashion with *récits*, solos, choruses and complex orchestral accompaniment, whereas those destined for public *fêtes*, where the people were often expected to join in the refrain, required a simpler approach. Simpler, however, had not pejorative connotations, for as he continued:

> The French are not yet musicians, although they are very appreciative of music: with time, they will sing and sing well, if professional musicians truly cognizant of the importance of their art, and above all, the influence that it may have on the public, forsake their effeminate songs in order to give new expression to the grandeur and resolve that should characterize a republican artist's soul. (See Pierre, 1904, p.330.)

Méhul's own contributions include outstanding examples of both, although during the 1790s he preferred the latter approach. The stirring *Chant du départ* with its memorable melody and martial rhythms epitomizes the best of the genre: the refrain calling the people to answer the Republic's call to arms sums up the moral and invites popular participation; the band provides a supportive accompaniment, this one with an assertive opening fanfare. The spirit of noble simplicity in choral masses left its mark on lengthier, more complex compositions. Among these the composer was especially proud of the *Chant national du 25 messidor* (1800), in which he exploited the stereophonic qualities of two full choirs and orchestras and a children's choir accompanied by obbligato horn and two harps, all strategically placed, contrasting with dramatically charged recitative-like passages for the soloists. Reaction by the choirs, representing the French people, to the soloists' exhortations to celebrate victories under Bonaparte and to remember a fallen hero leads to a rousing conclusion: peace through military strength. During the Empire, and even after the Restoration, Méhul continued to lend his musical support to major public events by building on techniques honed during the Revolution and Consulate (see Bartlet, 'Bonaparte et Méhul', 1989).

As the 20-year old Berlioz exclaimed in a letter to his father, 'I want to make a name for myself ... I'd prefer to be Gluck or Méhul, [though] dead, than what I am in the prime of life'. For the rest of his career he continued to respect both. He cited examples by Méhul as models several times in his treatise on orchestration, and echoes of the older composer's procedures can be heard in the *Symphonie fantastique*, the *Grande Messe des morts* and *L'enfance du Christ*, among other works. Weber and Wagner admired his operas and conducted several of them, and the Symphony no.1 impressed Schumann and Mendelssohn. Méhul's *opéras comiques* were mainstays of the repertory from Bordeaux and Brussels, Berlin, Vienna and St Petersburg.

Méhul was an innovator. He was far bolder than his compatriots at the time. In places, Méhul's scores are flawed; sometimes he tried for effects beyond his reach, and although he invented striking figures, by repetition they quickly became clichés. But the successes are more numerous and above all more significant. In them he left a remarkably rich creative legacy to the 19th century.

WORKS

OPERAS

for detailed information on sources, revisions and arrangements, see Bartlet (1982 and *Etienne Nicolas Méhul and Opera*, 1992).
first performed in Paris and printed works published in Paris unless otherwise stated

Title	*Genre, act*	*Libretto*	*First performance*	*Remarks and sources*
Cora [orig. Alonzo et Cora]	(opéra, 4, Valadier, after J.F. Marmontel: *Les Incas*)	Opéra, 15 Feb 1791, comp. 1785–6, later rev.; *F-Pn** (inc.), Acts 1 and 3 with autograph adds *Pn*, inc. pts *Po*		
Euphrosine, ou Le tyran corrigé [from 1795 Euphrosine et Coradin]	comédie mise en musique, 5	F.-B. Hoffman, after *Conradin*	Comédie-Italienne (Favart), 4 Sept 1790	in 4 acts, 11 Sept 1790; in 3 acts, 31 Oct 1790 (1791/*R*1980: ERO, xxxviii); with new Act 3, 13 Aug 1791, *Pn*, *Po*, new Act 3 *Pn* (*R*1980: ERO, xxxviii); 4 nos. deleted from 5-act version *Pn**
Adrien, empereur de Rome	opéra, 3	Hoffman, after P. Metastasio: *Adriano in Siria*	unperf.	comp. 1790–91; première planned for March 1792 but forbidden by the Commune of Paris; Acts 1 and 3 *Pn** (inc.), Acts 2 and 3 *Pn*; some material reused in Adrien, 1799
Le jeune Henri [orig. La jeunesse de Henri IV]	drame lyrique, 2	J.-N. Bouilly	OC (Favart), 1 May 1797	comp. 1791, rev. 1797; *Pn** (lacks ov., 1 no.), ov. (1797)
Stratonice	comédie-héroïque, 1	Hoffman, after *De Dea Syria* [attrib. Lucian] and T. Corneille: *Antiochus*	Comédie-Italienne (Favart), 3 May 1792	rev. of 1 air *Pn**; (1792/*R*1997: FO, lxxii)

Title	*Genre, act*	*Libretto*	*First performance*	*Remarks and sources*
Le jeune sage et le vieux fou	comédie mêlée de musique, 1	Hoffman	OC (Favart), 28 March 1793	4 nos. *Pn**; (1793); rev. version, OC (Feydeau), 18 Dec 1801, 1 no. *Pn**
Horatius Coclès	opéra, 1	A.-V. Arnault	Opéra, 18 Feb 1794	*Po*; (1794)
Le congrès des rois	cmda, 3	Desmaillot [A.F. Eve]	OC (Favart), 26 Feb 1794	collab. H.-M. Berton, Blasius, Cherubini, Dalayrac, Deshayes, Devienne, Grétry, Jadin, Kreutzer, Solié and Trial; Berton's duo *Pn**; suspended after second perf., later banned
Mélidore et Phrosine	drame lyrique, 3	Arnault, after P.-J. Bernard: *Phrosine et Mélidore*	OC (Favart), 6 May 1794	minor revs. to lib. by G.M.J.B. Legouvé; sketches *Pn**, 1 no. *S-Smf*; (?1794/*R*1990: FO, lxxiii)
Doria, ou La tyrannie détruite	opéra héroïque, 3	Legouvé and C.J.L. Davrigny	OC (Favart), 12 March 1795	ov., 6 nos., frags. *F-Pn**, excerpts from 1 no. *Po**
Lacaverne	comédie mise en musique, 3	N.J. Forgeot	OC (Favart), 5 Dec 1795	*Mc*, 6 nos. (1 in 2 versions) *Pn**
Le pont de Lody [orig. La prise du pont de Lody]	fait historique, 1	E.J.B. Delrieu	Feydeau, 15 Dec 1797	written to celebrate the French victory at Lodi (10 May 1796) and the Italian campaign (1796–7); not commissioned by Napoleon as sometimes assumed; *Pn* (with autograph revs.; lacks 1 no.)
La taupe et les papillons	comédie lyrique, 1	A.E.X. Poisson de La Chabeaussière	unperf. comp. 1797–8; perf. planned for April 1799 at the Montansier did not take place; 6 nos. (3 of which in 2 versions), sketches, *Pn**	
Adrien	opéra, 3	Hoffman, after Metastasio: *Adriano in Siria*	Opéra, 4 June 1799	reuses some material from the 1790–91 setting with revs.; banned after the second perf.; revived 4 Feb 1800 and (with further revs.) 26 Dec 1801; *B-Bc*, *F-Pn** (nearly complete), *Pn*, *Po*, *US-COu*
Ariodant [orig. Ina]	drame mêlé de musique, 3	Hoffman, after L. Ariosto: *Orlando furioso*	OC (Favart), 11 Oct 1799	3 nos., sketches, frags. *F-Pn**; (1800/*R* 1978: ERO, xxxix); rev. with new Act 2 finale, 30 Oct 1800, *Pn**
Epicure	opéra, 3	C.A. Demoustier	OC (Favart), 14 March 1800	collab. Cherubini; rev. version (2), 20 March 1800; 1 no., sketches *Pn**, Cherubini's autograph of ov., 6 nos. *D-Bsb*
Bion	comédie mêlée de musique, 1	Hoffman, after E.F. de Lantier: *Voyages d'Anténor*	OC (Favart), 27 Dec 1800	1 no. *F-Pn**; (1801); rev. version, 21 Dec 1802, printed score with MS adds *Pn*
L'irato, ou L'emporté	comédie-parade, 1	B.-J. Marsollier des Vivetières	OC (Favart), 17 Feb 1801	1 unperf. no. *Pn**; (1801); an orig. work although claimed to be trans. from an opera buffa by 'Fiorelli'
Une folie	comédie mêlée de chants, 2	Bouilly	OC (Feydeau), 5 April 1802	3 nos., sketches *Pn**; (1802)
Le trésor supposé, ou Le danger d'écouter aux portes	comédie mêée de musique, 1	Hoffman	OC (Feydeau), 29 July 1802	ov., 8 nos., sketches, arrs. *Pn**; (1802); rev. version, ? 7 July 1807, 2 nos. *Pn**
Joanna	opéra, 2	Marsollier, after his lib. *Emma, ou Le soupçon* [orig. set by E. Fay]	OC (Feydeau), 23 Nov 1802	complete score, sketches *Pn**, ov. pts (?1803)
Héléna	opéra, 3	Bouilly	OC (Feydeau), 1 March 1803	(1803)

Title	*Genre, act*	*Libretto*	*First performance*	*Remarks and sources*
Le baiser et la quittance, ou Une aventure de garrison	opéra-bouffon, 3	L.B. Picard, C. de Longchamps and J.-M.-A.-M. Dieulafoy, after Polier de Bottens: *L'heureuse gageure*	OC (Feydeau), 18 June 1803	collab. Boieldieu, Kreutzer and Isouard; *B-Ba*, *Bc*, *F-Pn* (3 MSS), *R*
L'heureux malgré lui	opéra-bouffon, 1	C.G. d'A. de Saint-Just	OC (Feydeau), 29 Dec 1803	complete score, frags. *Pn**
Les deux aveugles de Tolède	oc, 1	Marsollier, after *The Thousand and One Nights* and his lib. *Les deux aveugles de Bagdad* [orig. set by A.J. Fournier]	OC (feydeau), 28 Jan 1806	ov., 1 unused no., sketches, frags. *Pn**, frags. *S-Smf*; (1806)
Uthal [orig. Malvina]	opéra, 1	J.M.B. Bins de Saint-Victor, after J. Macpherson: *Berrathon* from the Ossian collection	OC (Feydeau), 17 May 1806	comp. 1803; 1 inc. no. *F-Pn**, 2 rev. nos., inc. *US-NYpm**; (1806)
Gabrielle d'Estrées, ou Les amours d'Henri IV	opéra, 3	Saint-Just	OC (Feydeau), 25 June 1806	*F-Pn** (lacks ov., no.3), sketches, frags. *Pn**); (1806); probably banned after the 6th perf.
Joseph	drame mêlé de chants, 3	A. Duval, after *Genesis* xxxvii–xlvi	OC (Feydeau), 17 Feb 1807	comp. 1805; 8 nos., sketches *Pn**, ov. *Po**
Valentine de Milan	drame lyrique, 3	Bouilly	OC (Feydeau), 28 Nov 1822	begun 1807, finished by ?1808, rev. 1815, posth rev. by Méhul's nephew L.J. Daussoigne-Méhul, who added 4 nos.; frag. *D-Bsb**, complete score, sketches, unused nos. *F-Pn**, frag. *GB-Lbl**, 1 unused no. *US-NYpm*; (1823)
Les troubadours, ou La fête au château [orig. Laurette; also as Les deux troubadours]	oc, 1	Duval	unperf.	comp. 1810, written for Napoleon's marriage to Marie-Louise of Austria, 2 April 1810; in rehearsal at the OC June 1810 but not perf.; see Bartlet (1984); ov., all but 2 nos. *F-Pn**
Les Amazones, ou La fondation de Thèbes [orig. Amphion]	opéra, 3	V.-J. Etienne de Jouy	Opéra, 17 Dec 1811	*Pn** (nearly complete), sketches, frags., *Po* (*Pn** lacks some of the material deleted after the première)
Séostris	tragédie lyrique, 3	Arnault and Jouy		comp. 1812; intended for the Opéra, inc. on composer's death; Act 3 lacking final scene *Po**, Act 2 sketched
Le prince troubadour, ou Le grand trompeur de dames	oc, 1	Duval	OC (Feydeau), 24 May 1813	*Pn** (lacks 2 nos.), sketches, frags. *Pn**; (1813); not to be confused with Les troubadours, 1810
L'oriflamme [orig. L'oriflamme de Charles Martell	opéra, 1	C.-G. Etienne and L.P.-M.-F. Baour-Lormian	Opéra, 1 Feb 1814	written as a 'pièce de circonstance'; collab. H.-M. Berton, Kreutzer and Paer; Méhul wrote music for scene i and reused ov. from Horatius Coclès, 1794 (see Banlet 1986); *Po*; (1814)
La journée aux aventures	oc, 3	P.D.A. Chapelle and L. Mézières-Miot	OC (Feydeau), 16 Nov 1816	*F-Pn** (lacks ov.), sketches, unused nos. *Pn**; (1817)

Wrongly attributed: Agar au désert [lib. submitted to Opéra in 1806 but rejected]; L'Amour et Psyché [Psyché; set by Mondonville in 1758, Saint-Amans in 1778, Candeille in 1781 and Lenoble in 1784]; Anacreon [set by Rameau in 1757, rev. by Legros in 1781]; Arminius [lib. submitted to Opéra in 1794, intended for Méhul but not set by him]; Hypsipile [lib. submitted to Opéra in 1787, intended for Méhul but not set by him]; Mézence, ou Lausus et Lydie [lib. submitted to Opéra in 1788, intended for Méhul but not set by him]; [Scipion à Carthage [lib. submitted to Opéra in 1794, set by J.N. Le Froid de Méreaux in 1795–6 (unperf.)]; Tancrède et Mélizinde [Tancrède, Tancrè de et Clorinde; lib. submitted to Opéra in 1795, set by G. Bergancini in 1806–7 (unperf.)]

OTHER STAGE

Le jugement de Paris (ballet-pantomime, 3, P.G. Gardel), 5 March 1793, *Po* [incl. music by Gluck, Haydn, R. Kreutzer, 'Michel' [Yost], I. Pleyel and others], rev. in 1 act

Timoléon (incid music, 3, M.J. Chénier), République, 11 Sept 1794, *Pcf*, *Pn*, *US-Bp*

La dansomanie (ballet-pantomime, 2, Gardel), Opéra, 14 June 1800, *F-Po*, arr. pf, vn (1800) [incl. music by Mozart and others]

Daphnis et Pandrose (ballet-pantomime, 2, Gardel), Opéra, 14 Jan 1803, *Po* [incl. music by Dalvimare, Devienne, Duvernoy, Gluck, Haydn, Himmel, R. Kreutzer, Martini, Miller, Winter]
Guillaume le conquérant (incid music, 5, Duval), Français, 4 Feb 1804, arr. from his compositions, with Chanson de Roland, hymne guerrier; arr. B, chorus, pf, *Pn**, pubd in La décade philosophique (10 May 1804), suppl.
Les Hussites, ou Le siège de Naumbourg (incid music, 3, Duval), Porte-St-Martin, 14 June 1804
Persée et Andromède (ballet-pantomime, 3, Gardel), Opéra, 8 June 1810, *Po* [incl. music by Haydn, Paer, Steibelt, Méhul (from Ariodant)]

CHORAL

wb – wind band accompaniment

Ode sacrée (J.-B. Rousseau), with 2vv, orch, 1782, lost; Duo de Zoroastre, 1786, lost; Invocation à Apollon (Quel tumulte! quel bruit!) (N.G. Léonard), scène lyrique, with 3vv, orch, 1787, *Pn* (inc.); Philoctète à Lemnos, scène lyrique, with 3vv, orch, 1788, *Pn* (inc.); Messe solennelle, A♭, orch, 1804 [for Napoleon's coronation, but not perf. there], *A-KN*, *Wgm*, *SK-BRm*, *US-NYp*, vs (*c*1789)
Chant national du 25 messidor (L.J.P. Fontanes), solo vv, 3 choirs, 3 inst ensembles, 1800; Hymne à la paix, 1801, lost; Domine salvum fac rempublicam, 2 choirs, 2 orchs, 1802, *F-Pn**; Jetez des fleurs, kbd acc., pubd in P.J.B. Chaussard: Fêtes et courtisanes de la Grèce, i, 2nd edn only (1803), 187, and in Masson (1934); Chant lyrique pour l'inauguration de la statue votée à Sa Majesté l'Empereur et Roi (Arnault), with 5vv, orch, 1807 (1807); Chant du retour pour la Grand Armée (Arnault), with solo vv, orch, 1807 (1807)
Chant funèbre (Chaussard), with 3vv, inst ensemble, 1808, *Pn**; Cantate pour le mariage de l'Empereur (O doux printemps) (Arnault), acc. orch, 1810, *Po*; Cantate [pour le mariage de l'Empereur] (Du trône ou jusqua'à Toi), with 4vv, orch, 1810, *Pn* (inc.); Comblé de bonheur (Chant triomphale) (?Arnault) [on the return of Napoleon and Marie-Louise from their tour], acc. orch, 1810, *Po*; Toi qui veilles sur cet empire (J.A. Esménard), with B, orch, 1810 [to announce Marie-Louise's pregnancy at a command perf. of Gluck's *Alceste*], *Po* (inc.)
Le chant d'Ossian (Arnault), with T, orch, 1811 [on the baptism of Napoleon's son, the King of Rome], lost; Pourquoi sous un ciel aussi beau (cant., Arnault), with 5vv, orch, 1811 [on the birth of the King of Rome and the inauguration of the new concert hall at the Conservatoire], collab. Catel and Cherubini, *Pn**; O France! à tes destins prospères (Arnault), acc. orch, 1811 [on the birth of the King of Rome], *Po*; Lève, Bordeaux, la tête altière (Chant royal), with 3vv, orch, Bordeaux, 1815 [in honour of the Bourbons], *Pn**; Salve regina, *c*1816, *Pn** (inc.); La naissance d'Oscar Leclerc (L.M. Revellière-Lepeaux), with 2 solo vv, orch

CHORAL HYMNES

wb – wind band accompaniment

Hymne à la raison [later, Hymne patriotique] (Chénier), with 3vv, orch, 1793 (1794); Le chant du départ (Hymne de guerre) (Chénier), wb, *Pn*, arr. v, pf (1794); Hymne chanté par le peuple à la fête de Barra et Viala (C.J.L. Davrigny), kbd acc. (1794); Le chant des victoires (Hymne de guerre/à la victoire) (Chénier), with insts, 1794 (1798), arr. v, pf (1794); Hymne des vingt-deux (Chénier), with 1v, wb, *Pn*; arr. v, bc (1795); Le chant du retour (Hymne pour la paix) (Chénier), with 1v, wb, 1797 (1798); arr. v, pf (1798); Enfin il est chassé de la belle Italie, 1797, *Pn** (inc.); Hymne pour la fête des époux (J.F. Ducis), with wb (1799); arr. v, pf (1799)

SONGS, REVOLUTIONARY WORKS FOR ONE VOICE

accompanied by piano or harp unless otherwise stated

wb – wind band accompaniment

Scène française, S, orch, 1789, lost; Le petit Nantais (L.F. Jauffret) (1795), pubd in Gougelot (1937–43); Hymne à l'Eternel ('Quelle solennité') (Hue) (1794); L'ordre du jour (Lille), v, bc (1794); Chant funèbre à la mémoire du représentant du peuple Féraud (Baour-Lormian), acc. wb, *Pn*; arr, v, pf (1795); Réponse du vieux pasteur (A.F. Coupigny), sung in L. Jadin: Le cabaleur (1795); Hymne du 9 thermidor ('Salut neuf thermidor') (Chénier), v, wb; arr. v, bc (1795); Loizerolles, ou le triomphe de l'amour paternel (Jauffret) (1795); L'infortunée Lyonnaise (Jauffret) (1795), pubd in Gougelot (1937–43)
Le chien victime de sa fidélité (Jauffret) (1795), pubd in Gougelot (1937–43); Oscar et Dermide (Arnault, after Ossian), pubd in 6 romances anacréontiques, ii (1796), also in Gougelot (1937–43); Hymne à la paix ('O jour de gloire') (C. Pipelet de Leury), acc. orch (1797); Théophilantropes ('O Dieu, dont l'univers publie') (J.F. de Laharpe), *c*1797, *Pn*; Anniversaire du 9 thermidor, acc. wb, 1798; Le 18 fructidor ('Un vaste deuil') (Lebrun-Tossa [J.A. Brun]), acc. wb; arr. v, bc (1798)
La naissance de mon fils Adolphe (Jauffret) (1798); Chant montagnard ('Vous qui sur ces montagnes'), *c*1799, *Pn**; Romance de Falkland (Jauffret) (1798); Ode XXXIX: Les plaisirs d'un buveur (Anacreon, trans. J.-B. Gail), Ode XIX: E g'e me lai na pi nei [La terre noire boit], both pubd in 9 odes d'Anacréon; 3 songs (Chaussard): Chant d'amour et de douleur, La chanson de l'hirondelle, Le bain, all pubd in Fêtes et courtisanes de la Grèce (Paris, 1801); Guillaume le conquérant (J. Lablée) (1804); Chanson de Roland, sung in Guillaume le conquérant (1804); Le baiser (Saint-Amand), pubd in Le chansonnier des grâces (1808), 231–2 and suppl.7
Le bouquet d'une amie (Saint-Amand), pubd in La chansonnier des grâces (1808), 26 and suppls.6–7; Stances ('Mère des braves'), 1810 [in honour of the marriage of Napoleon and Marie-Louise]; Bayard mourant (C. Brifaut), pubd in Le souvenir des menéstrels (1814), 150–51; Charles Martel!, ou La parisienne (Jauffret) (1814); Le retour de l'exilé (Brifaut), pubd in Le souvenir des menéstrels (1815), 260–63; Eginhard et Emma (Brifaut), pubd in Le souvenir des menéstrels (1816), 222–4; Ternaire (E. Deschamps): Adieux du pélerin, Retour au foyer, Le vieux pâtre, [all pubd posth. with new texts by Deschamps]
Other songs (Jauffret), probably pubd 1790–95 in the series Feuilles de Terpsichore or by Cousineau: Julie et Volmar, ou Le supplice de deux amants; La jeune Avignonaise, Ou Emilie Chaussande; La caverne de la Sainte-Baume, ou La mère malheureuse; L'orphelin adopté par sa nourrice; Victoire Négrier-Lavergne, ou L'héroïne de l'amour conjugal; Joséphine Kelly et ses deux enfants [see Gougelot, 1937–43]

INSTRUMENTAL

Orch: Sym., C, 1797, *Pn** (last 2 mvts); Sym. no.1, g, 1808 (1809), ed. D. Charlton (Madison, WI, 1985); Sym. no.2, D, 1809 (1809), ed. F. Oubradous (Paris, 1957); Sym. no.3, C, 1809, *Pn* (parts); Sym. no.4, E, 1810, *Pn* (parts); Sym. no.5, A, 1810, ed. D. Charlton (with A. Caston) (New York, 1982)
Wind ensemble: Ouverture, F, 1793, Musique à l'usage des fêtes nationales (1794), ed. W.S. Dudley (1968)
Chbr: Grande ouverture, pf, vn, 3 mirlitons, perc, 1808, *Pn** [also known as Ouverture burlesque, 1875]
Kbd: 3 sonates, pf/hpd, op.1 (Paris, 1783); 3 sonates, pf/hpd, vn ad lib, op.2 (Paris, 1788); Sonate, C, pf, pubd in Journal de clavecin par les meilleurs maîtres (1784), no.3 [last mvt used in third sonata op.2]
Kbd arrs.: 2 airs de ballet from Gossec's Thésée and gavotte from Gluck's Orphée, pubd in Journal de clavecin par les meilleurs maîtres (1782), nos.1, 4, 7; ov. and dances from Edelmann: Le feu (1782); music from Lemoyne's Phèdre (1787)

OTHER WORKS

4 contributions to *Principes élémentaires de musique arrêtés par les membres du Conservatoire* (1799–1800), 243–6, 254–5, 275–6, 294–7, and *Solfèges pour servir à l'étude dans le Conservatoire ... seconde partie* (1801–2), 202–3, 252–3, 277–8
Spurious: incl. Chant triomphal, 1809 [by Catel], Nouveau recueil de 22 canons (Brussels, n.d.) [all by Berton], several romances; many items by Méhul's student and nephew JOSEPH DAUSSOIGNE have been miscatalogued under Méhul's name in *Pn* and *D-Bsb*
Various writings

M. ELIZABETH C. BARTLET

Mei, Eva (*b* Fabriano, Ancona, 3 March 1967). Italian soprano. She studied at the Florence Conservatory and sang Aspasia in Salieri's *Axur, re d'Ormus* at Siena in 1989. She made her début at the Vienna Staatsoper as Konstanze in 1990, going on to sing Donna Anna in Zürich and Amsterdam and the Queen of Night in Budapest. She appeared in Genoa as Musetta, then sang Violetta at the Berlin Staatsoper and Norina (*Don Pasquale*) at the Staatsoper in Munich. She sang Beethoven's *Missa solemnis* at the 1992 Salzburg Festival, and the following year made notable débuts at La Scala as Amenaide (*Tancredi*) and at Covent Garden as the Queen of Night. Her other roles include Alcina, Adalgisa, Zerbinetta, Aspasia (*Mitridate*) and Fanny (Rossini's *La cambiale di matrimonio*). Mei uses her light, flexible, clearly focussed lyric-coloratura soprano with taste and a keen sense of character, as revealed in her recordings of Adalgisa, Amenaide, Norina and Salieri's Aspasia.

ELIZABETH FORBES

Mei, Girolamo [Peretola, Decimo Corinella da] (*b* Florence, 27 May 1519; *d* Rome, July 1594). Italian humanist, editor of Greek texts and historian of Greek music. His pioneering research into Greek music was of fundamental importance and a decisive influence on the emergence of monody and music drama.

1. LIFE. Mei studied with the philosopher and humanist Piero Vettori, whom he assisted in editing and annotating the tragedies of Aeschylus and Euripides and works by Aristotle, Cicero, Thucydides, Ptolemy and other classical authors. In 1540, the year of its founding, he was admitted into the Accademia Fiorentina, then called Accademia de'

Umidi. He was also a member of the Accademia dei Pianigiani, for which he wrote several treatises in its private jargon under the pseudonym Decimo Corinella da Peretola, and in 1585 he was honoured with non-resident membership of the Accademia degli Alterati. A journey to Rome in 1546 led to a position with the Bishop of Agen in France, but he was back in Florence in August 1547, then in Rome again in 1548. He departed for France a second time to serve the Bishop of Fréjus, but the job fell through, and he became a companion and tutor to Guglielmo Guadagni at Lyons. In a letter to Vettori of 3 July 1551 he announced that he had begun the study of Greek music theory because his patron loved music, but his progress was slow, as they travelled almost continuously. In 1554 Mei moved to Padua where he attended lectures at the university. In 1559 he went to Rome to seek a position and finally found one in July 1561 as one of the secretaries of Cardinal Giovanni Ricci da Montepulciano. In the same year he resumed his research into Greek music and between 1566 and 1573 wrote his major musical treatise, *De modis*, which he dedicated to Vettori. After the cardinal's death in 1574, he moved to the palace of the wealthy nobleman Giovanni Francesco Ridolfi. Between 1572 and 1581 he exchanged more than 30 letters with Vincenzo Galilei, a correspondence from which Galilei learnt much of what he knew about Greek music.

2. WORKS. *De modis* is the first conscientious study of the most difficult problem in Greek music, the history and theory of the *tonoi*. It was based on a thorough reading of all the writings on music that have survived. Book 1 (completed in 1567) describes the 15-string system, the tetrachords, the three genera and the various tunings. The second book (completed in 1568) discusses the species of consonances, particularly of the octave, and the *tonoi* according to Aristoxenus, Ptolemy, Aristides Quintilianus, Martianus Capella and Boethius. Book 3 (completed in 1571) deals with the modern theory of the modes from Boethius to Glarean. Book 4 (completed in 1573) considers the practice of the *tonoi* and *harmoniae* and their place in education, moral conduct and therapeutics, as well as their use in tragedy, comedy, satyr plays and dithyramb. It was here that Mei announced his theory that the ancient tragedies and comedies were sung in their entirety, accompanied in unison by the aulos, a theory that had wide repercussions in Florentine and Ferrarese literary and musical circles.

Mei clearly distinguished the ancient *tonoi* from the church modes. He showed that the Greek *tonoi* served to transpose the 15-note system downwards and upwards from its central 'Dorian' position. His interpretation of Ptolemy's rather special system results, however, in a different set of keys from that assumed by modern scholars. For Mei the Ptolemaic *tonoi* from Hypodorian to Mixolydian are analogous to the keys of D, F, A♭, C, E, G and B♭ because he built the characteristic octave species of each *tonos* around the dynamic *mese* instead of within the central Dorian octave, assigning, as normal, the 'lowest' octave species to the highest *tonos*. The essential feature of the Greek system for Mei was the opportunity it afforded composers to vary the range of their melodies according to the 'ethos' or emotional and moral effect that they wished to arouse, using the low *tonoi* for abject and humble subjects, the intermediate for quiet and moderate affections and the high for excited feelings. He reasoned from the evidence in the sources that the Greeks did not know polyphony; rather their music consisted always of a single line, even if several sang and played together or many sang in a chorus. As a result they recognized only the octave, 5th and 4th as consonances, the so-called imperfect consonances being a modern concept deriving from the practice of 'singing several airs together'.

His later writings include the unfinished Italian treatise that begins 'Come potesse tanto la musica appresso gli antichi', a letter to Agostino del Nero (probably similar to the *Discorso*, published in 1602, which was edited by Piero del Nero) which greatly stimulated Giovanni Battista Doni to pursue research in Greek music, and letters to Galilei and Bardi. In these works Mei drew some lessons for modern music from his findings. He concluded that the modern modes, unlike the ancient, lacked diversity of pitch and therefore of affection. Polyphony, with its many parts, 'conveys to the soul of the listener at the same time diverse and contrary affections as it mixes indistinctly together melodies and modes that are completely dissimilar and of natures contrary to each other' (Palisca, 1960, 73). Similarly contrary rhythms and tempos are also juxtaposed. Most of all Mei deplored 'the disordered perturbation, mix-up, and entanglement of the words' (Palisca, 1960, 74). Counterpoint, he maintained, had developed out of a desire of musicians to show off their prowess and was useless for anything else, particularly for the expression of the feelings and meanings of a text.

Although Mei, residing permanently in Rome, could not participate in the conversations in Bardi's Camerata, his letters were discussed there and they stirred the group's concern with the reform of modern music and led to its experiments with monody. Galilei's *Dialogo* was directly inspired by Mei's letters: its challenge to Zarlino's tuning theories, the critique of polyphonic music and the information on Greek music that it contains are partly based on Mei's letters. The Greek hymns and the tables of notation published there were also sent to Galilei by Mei, who found the hymns in a manusript in the library of Ranuccio Farnese in about 1564 (now *I-Nn* III C 4). At a time of transition in musical aesthetics he provided the impetus and the humanistic justification for explorations that led to the first music dramas, to the new recitative style and to expressive monody in general.

CLAUDE V. PALISCA

Mei, Orazio (*b* Pisa, 26 May 1731; *d* Livorno, 1 March 1788). Italian composer and organist. The son of Francesco Saverio Mei, violinist at the church of the Cavalieri di S Stefano in Pisa, he had his first music lessons from his father and from his uncle Nicola Mei, organist at the cathedral, and then studied composition under G.C.M. Clari. He was organist at the church of the Cavalieri di S Stefano in 1748, when he unsuccessfully requested leave. From 1759 to 1763 he was organist at the cathedral, succeeding his uncle, and from 1763 until his death *maestro di cappella* at Livorno Cathedral. He was also a good harpsichordist.

Gervasoni described Mei as 'a serious man, of somewhat retiring and melancholy temperament, amiable, honest, modest and highly religious'. He was best known for his church music in the severe style and for his fugues. His *Stabat mater*, which was singled out by Fétis, differs from the majority of his work in that it incorporates both Baroque and Classical elements with some success and attains a great intensity of emotional expression, largely the result of his skilful use of both melodic and harmonic chromaticism.

WORKS

Sacred: Stabat mater, c, SATB, str, bc, Brompton Oratory, London; Laetatus sum, 4vv, insts, *I-PIp*; numerous works mentioned by Gervasoni, incl. masses, 2 requiem settings, TeD, hymns, ints, grads, lits, motets, Lamentations, sacred arias; La circoncisione (orat), 4vv, insts

Other works: 3 hpd sonatas, *Gl*; 2 hpd sonatas, *US-LOu* [? identified to 2 in *I-Gl*]; 3 concs., hpd/pf, orch; 6 sonatas, hpd, vn; fugues, org/hpd; La musica a Fille (cant.); all mentioned by Gervasoni

FRANCO BAGGIANI, ELIZABETH ROCHE

Meibom [Meiboom, Meibomius], **Marcus** (*b* Tönning, Schleswig-Holstein, 1620–21; *d* Utrecht, 15 Feb 1710). Danish polyhistor. He is first heard of at Königsberg, where he enrolled at the university on 20 June 1644 to study law. On 29 September 1645, however, he matriculated as a student of medicine at Leiden. Here his age is given as 24 and his birthplace as Tönning, which at that time was under the Danish crown. However, it was as a philologist and mathematician that he was to make his mark. He dedicated his *Antiquae musicae auctores septem* (Amsterdam, 1652) to Queen Christina of Sweden, and in May of that year he arrived at her court at Stockholm. He became assistant royal librarian, but his stay in Sweden was cut short because of a violent altercation with Bourdelot, the queen's personal physician and favourite.

In 1653 Meibom went to Copenhagen, where he was taken under the protection of King Frederik III and granted a pension as a deserving scholar. On the title-page of his book *Dialogus de proportionibus* (Copenhagen, 1655) he is described as 'consiliarus regius', though it is not known whether any civil service duties were attached to the title. A number of archival references after 1660 show the king was using Meibom's great learning to order and catalogue the expanding royal library, though apparently he was not given the coveted official appointment of librarian. In 1661 he declined an approach made to him on behalf of Queen Christina to become her librarian in Rome, but at the same time he made it clear that he was not satisfied with his position. His next post was director of customs at Elsinore, from 1664 to 1668. After this he emigrated with his family to Holland, where, apart from three years (1674–7) in England, he spent the rest of his life. Except for a teaching appointment which he held for a year after arriving in Amsterdam, he seems to have occupied no official position, and he refused an invitation to become professor of Hebrew at Leiden. In 1691 it was reported that he was living in poverty, supporting himself by reading proofs. In 1705 he was obliged to sell part of his library by auction; he himself prepared the auction catalogue, in which no fewer than 5848 items are carefully classified, and on the title-page he described himself, after nearly 40 years, as 'sometime councillor to Frederik III, King of Denmark'. The rest of his library was sold in May 1711, after his death.

Antiquae musicae auctores septem is his most important contribution to musical scholarship. In its two quarto volumes he provided an edition of the Greek texts of Aristoxenus, Cleonides (under an attribution to Euclid), Nicomachus, Alypius, Gaudentius, Bacchius, Aristides Quintilianus and Martianus Capella (*Satyricon*, bk 9), with a Latin translation and commentary. *Dialogus de proportionibus*, the only other work in which he discussed music, is in the form of a dialogue between a number of Greek mathematicians, who discuss not only mathematical proportions but the musical proportions as well.

JOHN BERGSAGEL

Meier, Bernhard (*b* Freiburg, 15 Dec 1923; *d* Pfäffingen, nr Tübingen, 30 Oct 1993). German musicologist. He studied musicology with Zenck and Gurlitt and philology with Rehm at Freiburg University. He took the doctorate at Freiburg in 1952 with a dissertation on Obrecht's settings of the Mass. From 1955 he was an assistant lecturer in the musicology institute of Tübingen University, where in 1963 he was awarded the *Habilitation* on the basis of all his published writings. He was then appointed lecturer, supernumerary professor (1970–80) and subsequently professor at Tübingen. He retired in 1986. His research was chiefly concerned with Renaissance music (both vocal and instrumental) and theory. His studies on individual composers, *musica reservata*, and tonal theory and practice in the 15th, 16th and early

17th centuries reflected his close familiarity with the sources.

HANS HEINRICH EGGEBRECHT/KARL-HEINZ SCHLAGER

Meier, Johann David. *See* MAYER, JOHANN DAVID.

Meier, Jost (*b* Solothurn, 15 March 1939). Swiss conductor and composer. He studied the cello with Rolf Looser in Biel and Berne, and composition with Frank Martin in Naarden. Following a spell as a cellist in the Zürich Tonhalle Orchestra and the Camerata Bern, he was music director in Biel (1969–79) and then Kapellmeister in Basle until 1983, when he embarked on a freelance career. He also teaches at the Basle and Zürich conservatories.

He has developed an individual, non-referential style, rooted in French and German culture; his experience as a conductor informs his command of effect. Most important are his stage works. A happy collaboration with the Swiss writer Hansjörg Schneider resulted in a series of pieces combining wit with social criticism, the music being concise and punchy. His opera *Dreyfus, die Affäre* has been produced at the Deutsche Oper in Berlin, the Opera in Basel and at the City Opera in New York. Theatrical gestures and styles are also found in his chamber and orchestral pieces. (*SML*, C. Hänggi)

Principal publishers: BIM (Bulle), Schott

THOMAS GARTMANN

Meier, Peter. *See* MEYER, PETER.

Meier, Waltraud (*b* Würzburg, 9 Jan 1956). German mezzo-soprano. While studying languages at Würzburg University she took private singing lessons, making her début at Würzburg in 1976 as Lola (*Cavalleria rusticana*). Over the next few years, first at Mannheim (1976–8) and then at Dortmund (1980–83), she sang more than 35 roles, including Fricka, Octavian, Carmen, Santuzza and Azucena. Her triumphant Bayreuth début as Kundry in 1983 established her as one of the world's leading Wagner singers, subsequently confirmed in Bayreuth appearances as Brangäne and Waltraute and recordings of Wagnerian mezzo roles. She made her Metropolitan Opera début as Fricka in 1987, and her Vienna Staatsoper début as Venus (*Tannhäuser*) – her first major Wagner soprano role – in 1988. She has also enjoyed notable successes as Eboli (the role of her Covent Garden début in 1984), Tchaikovsky's Joan of Arc, Berlioz's Marguerite, Saint-Saëns's Dalila and Marie in *Wozzeck*, and as an interpreter of lieder and *mélodies*. Meier's début as Isolde in 1993 at Bayreuth, and her recording of the role with Barenboim, signalled a decisive move into dramatic soprano repertory. She is

also an admired concert singer in works such as Brahms's Alto Rhapsody, and Wagner's *Wesendonck-Lieder*. Meier has a highly distinctive voice of laser-like intensity, and is a vibrant and intelligent actress.

ANDREW CLARK

Mei-Figner [Figner, née Mei], **Medea (Ivanovna)** (*b* Florence, 4 April 1859; *d* Paris, 8 July 1952). Russian soprano of Italian birth. She married the tenor Nikolay Figner in 1889. She studied (as a mezzo) in Florence and made her début (Sinalunga, 1874) as Azucena, appearing subsequently in Turin (the Queen in *Hamlet* with Maurel), Florence, Odessa, Barcelona and Madrid. She sang in South America with Tamagno and Figner, and by 1886 she was singing soprano roles. In April 1887 she sang Valentine (*Les Huguenots*) with Figner at the Imperial Theatre, St Petersburg. After opening the summer season at Covent Garden with Gayarre and D'Andrade in *La favorite*, she and Figner returned to the St Petersburg Opera where they reigned until their divorce (1904) and where she remained until 1912. Tchaikovsky chose her as the first Lisa in *The Queen of Spades* (1890) and she was the first Iolanta (1892). She appeared in the premières of Nápravnik's *Dubrovsky* (1895) and *Francesca da Rimini* (1902). Her repertory included Tat'yana, Natal'ya (*Oprichnik*), Marguerite (*Faust*), Carmen, Violetta, Desdemona, Gioconda, Mimì, Tosca, Elsa, Elisabeth and the three Brünnhildes. Admired for her handsome presence, she combined a high degree of musicianship with a rich flexible voice. She remained in Russia until 1930, singing (until 1923) and teaching. Between 1901 and the late 1920s she made at least 23 recordings.
